Ten Things The Boss Doesn't Know About

Digitized by Google
UNIVER

There was a wise lady who lived in a shoe,
For her many small children she knew what to do:
She made them most happy with Wrigley's for all—
It kept them in trim at a cost VERY *small!*

MOTHER GOOSE UP-TO-DATE.

REAL Peppermint Flavor

Get the new Wrigley's Double Mint and have a delicious, lasting treat—*REAL* Peppermint—full strength.

Easy to remember: Double Mint. And hard to forget—once you've tried it.

The *satisfying* confection.

···After every meal···

"A wonderful achievement—of deep significance to music and musicians."
—LEOPOLD STOKOWSKI.

The symphony orchestra is *really* an orchestra on the New Orthophonic Victrola

A RUSTLE of programs . . . a dramatic hush as the conductor raises his baton . . . a faint shimmer of violins, mounting up and up . . . the symphony has begun!

Only a fortunate few can attend the concerts. But, through the Orthophonic Victrola, you can bring the great symphony orchestras to your home, *precisely* as you would hear them at the public performance!

Realistic! You can almost *see* the rise and fall of the violin-bows . . . the pulsing beat of the padded hammers on the kettle-drums!

In no other way *can* you hear music reproduced with such fidelity to tone and timbre. For the Orthophonic Victrola is based upon "matched impedance"—the new, scientific, Victor-controlled principle of smooth, uninterrupted sound-flow. The result is *flawless* reproduction, *correct* volume, *natural* tone.

Entertainment of highest quality and broadest scope

The new Orthophonic Victrola is always waiting to play for you. All the music of all the world is yours on demand, played or sung as you have never heard it before. Superb symphonies. Immortal operas. Delightful songs. Lively dance music. Choose your own program. Have as many encores as you wish. Matching the perfection of the Orthophonic Victrola are the new Orthophonic Victor Records, recorded electrically. They have new depth and richness—tones that are round, mellow, natural—neither too soft nor too loud. Unpleasant scratch has been eliminated! For music at its very, very best—the new Orthophonic Victrola and the new Orthophonic Victor Records! These records play on *any* instrument . . . and greatly *improve* it!

Near you is a Victor dealer who will be glad to demonstrate this amazing advance in the reproduction of music. See him today. It will be a musical experience. There are many beautiful models of the Orthophonic Victrola, priced at $300 to as low as $95. Silent electric motor ($35 extra) eliminates winding. You play . . . and relax.

The Orthophonic Victrola furnishes the finest music for the home. The Credenza (above) is $300.

The New Orthophonic **Victrola**

WHEN BETTER AUTOMOBILES ARE BUILT, BUICK WILL BUILD THEM

The Convertible Coupe

- - a new and very charming version of *Buick Beauty* - - -

A car in a thousand, is this princely new open-enclosed Buick—the Convertible Coupe.

The name describes its adaptability and versatility. The top lowers for fair days. It raises in a moment, when the weather blusters. An open car today. Tight, closed-car comfort tomorrow.

Either way, the Convertible Coupe is a very charming motor car—style for those who ask for the grace of the thoroughbred in the car they drive.

The colors of this newest Buick are in Coronation Duco—the year's smartest custom effects; the upperstructure is of Lenox grey, dual-texture top-weave; the upholsteries are of hand-buffed leathers, in tones to match the body colors; the windows raise even though the top is folded, and serve as wind deflectors.

The Convertible Coupe is built on the Series 128 chassis—and the engine is *vibrationless beyond belief.*

The performance, style, utility, and moderate price of this exquisite new Buick will win your warm approval.

If you are like Jane –

Betty's soap costs five times as much as Jane's.

Can it be five times as pure—or five times as dainty?

No, not one jot purer or daintier!

Then why does it cost five times as much?

Well, there will always be girls, like Betty, who are casual in their choosing and lavish in their spending. Soaps with bright colors, elaborate wrappers and "expensive-sounding" names will always be made for them.

But there are a great many girls, like Jane, who are brought up to recognize and choose the fine, the exquisite, the genuine, whatever its price may be. They instinctively look for purity, gentleness and honest value in the soap to which they are willing to entrust their precious complexions. And so, Guest Ivory is made for these girls.

This dainty, smartly turned-out feminine cake is really genuine Ivory Soap. Ivory-white, Ivory-pure, Ivory-gentle, Ivory-honest. And, with its comfortable shape, its smoothly-rounded edges, its rich, cleansing lather, an altogether perfect soap for the most fastidious of women.

Its cost? Guest Ivory's price is unbelievably low, thanks to its enthusiastic reception by millions of women. You can buy a trio of Guest Ivory cakes, in their fresh blue wrappers, for the modest sum of fifteen cents. Or, if you prefer, a single cake for five cents. You can buy no *finer* soap for a *dollar*.

In The Valley Of The Shadow I Found The Golden Key

By W. O. Saunders

I THOUGHT I was poor. I thought I was so poor, I pitied myself. And all of a sudden I find I am richer than Crœsus or Henry Ford. I have discovered the key to the greatest gold mine on earth.

I had thought I was a friendless mortal. I have actually lain awake at night oppressed by the idea of my friendlessness. I would spread my hands upon the coverlet, and try to name ten persons whom I could call friends, crooking one digit after another as I named them. I could never name more than five or six.

It happens that I occupy a very peculiar position in the town in which I live. I publish a rather fearless, outspoken, independent, weekly newspaper. It was more so yesterday than to-day, and will be less so to-morrow. The sharpest blade dulls with the years.

Most newspapers are run by fellows who have some especial qualification for newspaper making, or who have had newspaper experience, or who are in the empioy of someone with a well-defined idea of how his newspaper should be conducted.

A regular newspaper man's training consists partly of learning very well what not to print. I never had any such training. I was a country newspaper publisher at the age of nineteen, without previous newspaper training; and without even so much as a high-school education.

One idea dominated me: that was to print the news, regardless of whom it might offend, and to say exactly what I thought at the moment on any given subject, about anything or any person. Now, that was a very dangerous idea for a young and inexperienced head to set to work with. It couldn't be done very well to-day.

But one could do a lot of things twenty-five years ago that one can't do now. There have been vast economic changes in twenty-five years. A quarter of a century ago, any chap with the itch to write could get together what in printers' parlance was called "a vest-pocket printing press and a shirt tail full of type," and start a country newspaper. America was full of such newspapers, produced from hand-set type on small flat-bed presses, the editor frequently setting his own type and running his own printing press.

The inside pages of his paper were printed by a syndicate, and sold to him at about the cost of white paper, the syndicate making its profit by selling advertising space on the pages which it printed. The country publisher's complete outfit cost only a few hundred dollars.

My first printing plant I leased at a nominal rental; my next cost about nine hundred dollars brand-new, a third of which had to be paid down with three hundred dollars cash, which I borrowed somehow. How the rest was paid would make a long and embarrassing story.

To-day I have a multiple magazine type-setting machine, the operator of which draws more money in a week than I could make as publisher in a month in the old days. I have had to buy another type-casting machine that is almost a type foundry in itself. Instead of a little press printing two small pages at the rate of a few hundred impressions per hour, I have a web perfecting press printing from a continuous roll of paper, printing and folding a complete eight- to twelve-page paper at a speed of several thousand copies an hour. Any man who undertakes to publish even a weekly newspaper in any considerable small town in America to-day must have an equipment costing many thousands of dollars, and requiring a heavy pay roll to operate.

I wouldn't bother to tell all this before showing you into my recently discovered gold mine, but for the fact that it is a very significant and important economic and political fact that it might be well for you to know.

THE newspaper to-day, whether it is a big daily or a small-town country weekly, is a highly specialized business, demanding a considerable investment of capital that must be jealously safeguarded. Its business depends upon making friends of other business interests, and selling service in the way of advertising to these other interests. If it offends the banking, traction, public service, or any big real estate or mercantile interest in its field, it stands to lose heavily thereby.

That is why newspapers to-day are generally so conventional, and why they have to rely so much upon social scandals

"I No Longer Have Time for Hate"

"I STILL walk down the streets of Elizabeth City," says Mr. Saunders, "and to all outward appearances I may seem the same to my neighbors. But I am not the same. My little excursion into the Valley of the Great Shadow, and the revelation of the beauty of human nature that it brought me, has softened me, and made me a more humble, a more grateful, and a more reverent individual.

"There has come back to me a line which I read years and years ago, and which had little meaning for me at the time: 'In a world where death is, I have no time for hate.'

"I am no longer so much interested in yardsticks for measuring the mentality of folks. What they think and don't think doesn't matter so much any more. It is what they feel that matters. God grant me the wisdom and the understanding to look yet closer into the hearts of men!"

and strip comics to give occasional life to their pages. It often happens that the biggest news in any community to-day is not published, because it wouldn't be good business to publish it; the publisher has too much at stake; and perhaps the banker has a mortgage on his high-priced printing machinery.

But it wasn't so much that way when I started out twenty-five years ago as a free lance, with nothing to lose and everything to gain, and with only my own most unbusinesslike idealism to guide me. My wife never knew when she kissed me good-by as I went down to work in the morning whether I would come back that night with a broken head, a blackened eye, or some other disfigurement.

I printed the news. I exposed every malpractice and every political, financial, and social disorder in town. I made enemies of almost every important business man in town, and his hostility toward me carried his own large personal following with it. There were years when I didn't print so much as a page of local advertising in my paper.

I was beaten up time after time, ordered to leave town by a mob of angry citizens gathering unmasked in front of my home, shot at from ambush, sued for libel on numerous occasions, and once barely escaped an application of tar and feathers. Again, I was sentenced to a six-months' term to work the roads of my county with ball and chain, a sentence in those days that was inflicted only upon negro criminals.

I NEVER served that sentence, and won every one of the numerous libel and slander suits, on appeals to the Superior Court of the State, thanks to the high caliber of the Superior Court judiciary of North Carolina. I printed things recklessly, but I was always scrupulously truthful. Still, I didn't discover my gold mine; I was covering it up all the time with cinders and brickbats.

Even the preachers in my town—some of them—assailed me from their pulpits, because they represented the established and highly respectable social order which I so ruthlessly offended. That brought me into a war with the preachers, and the preachers had the long end of it for years, because they had discovered that I was, in their opinion, an infidel, an atheist, and all the rest of the eternally damned.

Now, I wasn't an atheist at all, and I think I was just as religious-minded as any of the preachers who attacked me.

Every evangelist that has been to town in fifteen years has made me the object of his special prayers or most vitriolic attacks, as the case might be. The last of the big ones became so personal in his attacks upon me that I replied in kind, with the result that it looked for a season as if I would have to leave town.

When the congregations of seven small-town Protestant churches are united against a man under the exhortations of a welkin-ringing evangelist who has had them under his spell for six warm autumn weeks, that man may well feel uneasy. I did. But I steadfastly refused to be saved by any such process. The end of me seemed near when the evangelist prayed for God to make a demonstration of his wrath and remove me from the midst. This same evangelist had made a prayer like that in the next town, and a hard-headed citizen who had refused to close his store for the revival had dropped dead.

But I didn't drop dead. Instead, two of the best and most orthodox churchmen of the town and county dropped dead within a week, while the evangelist was still exhorting God to strike down the infidel. That was somewhat disconcerting. It was also obscuring my gold mine, and I was getting poorer and feeling more friendless all the time.

IT IS hard to live in a small town where everybody knows everybody else, and publicly expose yourself as differing in your religious views from your neighbors. You can't give greater offense to a small town than that, and this was my offense.

No matter that some of the leading ministers in the town believed in me and sympathized with me; no matter that even so eminent and universally accepted a divine as Dr. S. Parkes Cadman had once said of me: "In this man Saunders, Elizabeth City has a citizen who has a passion for righteousness." No matter that I believe in the fatherhood of God, the brotherhood of man, and reverently accept the leadership of Jesus. No matter that I have tried always to deal honorably and truthfully with my fellow man and live a life so ordered that it would bear close scrutiny. No matter that I paid my debts, contributed of my time and means to every community enterprise, including the church.

The town's worst bootlegger, who had been selling poison hooch to the youth of the town for years; a vicious and intolerant old citizen, who had cheated and robbed his neighbors and led the youth of the town into gambling; another vile and diseased old debauchee who had led a drunken, dissolute, and immoral life for fifty years—these all professed to believe, and were taken into the fold of the righteous.

But I was left squarely on the outside. Some whom I had considered my best friends deserted me utterly. Others of whom I had a right to demand something of friendship assured me that I was a fool to buck the currents of conventionality. Hundreds of subscribers canceled their subscriptions to my paper. Many business houses withdrew their advertising. The fact that some assured me they would come back as soon as the storm blew over was but cool comfort.

The experience galled and embittered me. I had a lot of hard thoughts about my neighbors in those days, and would have told anyone that a small town anywhere in America is no place for an intelligent and independent spirit to abide.

But, as is usually the case, I had been guilty of misjudging my neighbors. I was sitting on a gold mine that was to yield me fabulous wealth, and I thought I was sitting on a dross heap.

And here is how I had fallen into such a colossal error and gotten into so much trouble and misunderstanding all my days: I had been mining human intellects all my life, and striking little pay dirt. I had a lot of information that most of my neighbors did not possess, and I had made the mistake of talking to them in a language they could not understand about things that had no meaning for them. I had been wearing myself out looking for something in the heads of humanity, when I had only to pause from my strenuous labors to discover that the rare gold of human nature is not in human heads at all, but in human hearts.

Now I am going to tell you how I at last discovered the golden key with which I unlocked the greatest gold mine on earth, a gold mine of inexhaustible veins that yield more treasure and reveal newer possibilities of imperishable riches the more one explores them.

There was an epidemic of influenza in town, and I thought I had been caught in it. But on the third day the doctor sent for a trained nurse from a nearby city. My fever was 104°; there was a frightful pain in my right side, and I was coughing up mucus tinged with blood. Another doctor was called in, and I observed the worried looks of the pair of them as they went over my chest and back with a stethoscope. I was even then in a stupor, but I knew very well what was going on. The doctors didn't tell me the truth, but I knew I had pneumonia.

And when I realized that I had pneumonia, I was sure that would be the end of me. I had been taught to dread pneumonia. Every member of my family that had ever had it, died of it. And in recent years I had developed a diabetic tendency that kept me on a low carbohydrate diet, and specialists had repeatedly warned me to guard against pneumonia. I just knew I was going to die.

But even then I was too weak and ill to give it much thought. I had never thought about death before; but with it confronting me I felt I ought to think about it. My first thoughts were of things I had left undone that I should like to do. For years I had intended making a will, but had put it off, as most young men do. I worried about that.

THERE were many debts I had not paid, and my business property was still encumbered by a mortgage. My brain was muddled and not functioning very well, but I did a lot of calculating in my head: There was my insurance. A more comforting thought could not have come to a dying man. With the proceeds from my insurance, my wife could pay off all my debts, have my home and a going business intact, and a few thousand in cash besides.

A few thousand dollars isn't much; but with my other property my wife could carry on, because she had been associated with me in my work for years, and in that time had developed into an astute business woman. I was glad then that I had taken her into my business and business confidence.

I was happy in these thoughts. What lay before me in some after world didn't bother me. I had never in all my life felt any concern about the hereafter. But on what might be my deathbed, perhaps I should think more upon these things. I dozed off into a feverish, fitful sleep. I felt myself sinking, sinking, sinking. Down, down, down into pitchy blackness I went. There seemed to be no end to the descent. After a long time I landed upon a cold, flat surface that seemed like a rock jutting out over a yawning chasm. I couldn't see so much, but I had the feel of it.

All about me were fluttering creatures excitedly whispering. Their whispers were shrill and tremulous with fright. I won-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

dered why they whispered so and why they were so frightened. I wished they would quit their fearful whispering. It was cold and cheerless enough down there without these fluttering, excited creatures forever whispering.

And then came a still, warm presence that made itself felt by my side. I did not see it in the inky blackness, nor did I have any contact with it. But I sensed its presence, and felt assured thereby. It did not speak in audible words, but it seemed to say to me: "Behold, there is the Valley of the Shadow of Death; there is nothing in that Valley to fear."

Immediately, all the worrisome little whispering voices ceased; there was a great silence, my heart felt at ease, a tired and feverish mind was comforted. I slept. No more did I think or care about what might lie beyond. I have since recalled that I have seen many die, and of all that I have seen die, not one found anything to fear in that approaching shadow of the sable wing of Death.

DAYS later I regained consciousness sufficiently to note in detail the objects about me. The room was filled with flowers, and the air was sweet with the odors of hyacinths, roses, and white narcissus. It was still days before I could understand what all the flowers were about. And still the flowers came. My wife would open them now as they were delivered by the florists, and tell me that these were from this friend, and those from another. There were flowers from many whom I would never have regarded as friends.

Flowers and telegrams and letters. They began to let me see the letters and telegrams. I was overwhelmed by the love and tenderness of these messages. And then at last they let me see the newspaper clippings telling of my fight with death, and of my victory. Then and not until then did I realize why all the flowers and telegrams. For days my pillow was wet with tears of gratitude and appreciation for the goodness and compassion of my neighbors. Men whom I had grossly offended by rudeness or indifference sent me flowers.

And the churches! the churches that I had scorned and held aloof from and whose adherents had oft been offended by my outspoken disbelief in their sincerity, had prayed for me in my illness. While the Protestant churches prayed, the Catholics held mass for me, and down in the negro quarter of the town, the colored people held special prayer services for me in their church, in their own fervent way.

PHOTOGRAPH BY HAMBLIN, SUFFOLK, VA.

W. O. Saunders, of Elizabeth City, North Carolina, Editor of the Elizabeth City "Independent"

In a few days my wife placed in my hands a little book containing the names of scores and scores of neighbors who had come in person or telephoned to my home offering every assistance to my family in my illness, and conveying every good and sincere wish for my recovery. With tears trickling down her cheeks, my wife told me that she could not have endured the strain of my terrible illness but for the prayers of the town and the goodness of neighbors from far and near.

And then I began to see life in a new and lovelier perspective. I, who had thought the world cold, stupid, indifferent, and friendless, came out of a long illness to find that I actually had thousands of friends whom I had never appreciated, and whose inherent goodness I had never discovered.

MEN and women who had never received a favor at my hands in all their lives put themselves out of their way to comfort my wife and children, and seek an opportunity to help me. A humble working man who remembered that I had always spoken to him in passing spent his hard-earned money to buy fruit for me which I could not eat.

Another rugged soul, who was himself sick with a cold, shouldered his gun and tramped through fields of snow and slush to kill some birds that he thought I would enjoy in my convalescence. One of the few foreigners in our town sent me flowers. Some very little girls in the primary department of one of the Sunday-schools were moved, by the prayers they heard made for me, to make up a purse of pennies and buy a potted plant for my sick-room.

A good fellow who had seen his blood relations mercilessly flayed in my iconoclastic editorials, and who must have had many bitter thoughts of me, had two bottles of precious pre-war whisky hidden away in his home. He liked his whisky, and had high anticipations of enjoying his last two bottles of the old-time stuff some day. You can't buy drug-store whisky in North Carolina. But he heard one of my physicians say that a little pure stuff would be good for me. He sent me his whisky. I could cite dozens of similar instances, of men and women, who had no cause to be friendly to me, putting themselves out to help me when they thought I needed their help.

And I thought that all the suffering and inconvenience I had experienced in those dreary weeks in bed were worth all they had cost in physical (*Continued on page 94*)

"Nevada"

A romance of the West

By Zane Grey

ILLUSTRATED BY STOCKTON MULFORD

Synopsis of the Two Preceding Instalments

JIM LACY was notorious as a "gunman," from Lineville, his old hangout, across the desert wastes of Nevada, clear to Tombstone. But two years of friendship with Ben Ide in California had opened a new life before him. He had been known to Ben and his sister Hettie only as "Nevada;" they had loved and trusted him; they had taught him the beauty of love and friendship and faith; and in return Jim had given all his devotion. He had helped Ben in his wild-horse hunting; he had won Hettie's love, and then had come his chance to serve. He had saved their ranch for the Ides, by killing Less Setter and the two accomplices, who had plotted their ruin. He had made Ben and Hettie rich—but Nevada was once more Jim Lacy, who had killed his man, and a fugitive from justice.

After a time of hiding in the mountains he rode back into Lineville, where he had known Less Setter of old. He was resolved to be true to Hettie Ide's ideal of Nevada, even though he could never hope to see her or Ben again. They must never know that the Nevada they had loved was Jim Lacy. He resisted all attempts to draw him into brawls in the "Gold Mine" (the gambling hell of Lineville); he refused all invitations to drink; he tried to help Lize Teller, but ignored her overtures leading to any relationship which might give Link Cawthorne, her lover, ground for jealousy. About this time a man named Cash Burridge came back to Lineville, and begged Nevada to go with him to Arizona, where he purposed to turn from cattle "rustling" to honest cattle raising, and had already bought a ranch. Nevada had decided to go—and then he came into the Gold Mine to find Lize Teller dying at the hands of Link Cawthorne. In Jim Lacy's code there was only one thing to do—he shot Cawthorne dead. And once more he was a fugitive from justice.

As Nevada did not forget Ben and Hettie Ide, so they did not forget him. By his sacrifice a reunion was effected between Ben and his father, and Ben was enabled to marry Ina Blaine. For four years Ben and Hettie hoped for Nevada's return, and then decided to sell the California ranch and move to the wilder country of Arizona. In both hearts was the unspoken hope that in this newer country they might find Nevada. They took "California Red," the wild stallion Ben and Nevada had captured, all the other horses, a few of their men, and Ina's brother, Marvie Blaine, and journeyed overland to Arizona.

Near the town of Winthrop Ben bought a ranch and ten thousand head of cattle from Cash Burridge. They were getting settled here when a neighbor, Tom Day, rode over to see them. To Ben's consternation, he learned that Burridge had cheated him in the count of his cattle, and had passed on to him liens upon the stock he had. Also that the whole country was infested with rustlers, that not even Franklidge, the boss rancher of the country, knew which were the honest ranchers and which the thieves—and that Tom Day had never heard of a cowboy named "Nevada."

SOME eighteen or twenty miles from Tom Day's ranch, Judge Franklidge maintained the last outpost of his extensive cattle ranch.

This property, called the Chevelon Ranch, had come into his possession, as had many another, by the failure of a homesteader. At some time or other Franklidge had lent money or staked cattle to every poor settler in that part of Arizona. His kindness and generosity had for many years made him a mark. But though he had never been known to drive a hard bargain or force a payment, he had prospered through most of his transactions. Chevelon Ranch, however, was a losing proposition so far as actual cattle raising was concerned.

The hundred and sixty acres which comprised the ranch lay in a strip along the rim of Chevelon Canyon, one of the deep wild gorges that constituted part of the brakes of the Mongollons. Cabins and corrals, built of logs, showed the weathering of years of storm and heat. The main cabin stood on the rim, and the wide porch ran to the edge of the gray rock wall. On this mid-August afternoon the porch was a shady and cool place to lounge and rest. The deep canyon was densely green with oak and cedar; a low roar of running water floated dreamily from the depths; the drowsy summer air was redolent with a sweet, dry fragrance.

JUDGE FRANKLIDGE had just arrived on one of his rare visits to this margin of his vast cattle interests.

"Jack," he said to the cowboy who had driven him out, "I'm to meet Day here. Put the horses up. I'll stay all night. Then find Day, if he's here, and come back yourself."

"Yes, sir. An' how aboot Stewart?" replied the cowboy.

"Stewart? Tell him I'll send word when I want him."

"All right, sir," said Jack, and slapping the reins he drove away toward the barn.

"Humph. I'd forgotten about that foreman," muttered Judge Franklidge. "Darn the cattle business, anyway. . . . I'd like to forget it and enjoy the peace of this wild place."

The judge fell into a day dream that amused as well as made him sigh. Presently a jangle of spurs and thud of footsteps interrupted his reverie, and he looked up to see Tom Day and the cowboy approaching. Day had his hand on the younger man's shoulder, and was talking earnestly. That reminded the judge of the strong friendship Day had always evinced for this young man the range called Texas Jack. How good to see two men he could swear by!

"Howdy, Judge; I'm shore glad to see you," said Day, as he heavily mounted the porch, with beaming smile and extended hand.

"How are you, Tom? Pull up that bench. We're in for a good long talk."

"Wal, it's aboot time," returned Day, as he deposited his huge bulk on a seat, with back to the porch rail.

The judge laughed, and then glanced sharply at the cowboy waiting at the step.

"Jack, you've got something on your mind," he said.

"Yes, sir, but it can wait. No hurry, sir."

"Wal, Judge, if you'll take a hunch from me you'll not let it wait too long," interposed Day.

"Come up and sit in with us, Jack," was Franklidge's reply.

THE cowboy did as he was bidden, but he made no reply. He sat near the porch rail and leaned over to gaze down into the green canyon. The judge's appraising eyes took stock of the lithe figure, the service-worn garb, the lean bearded face that was half hidden under the wide sombrero.

"Stewart was in town last night, drunk," said Franklidge casually. "Is he here today?"

"Yes, sir—an' he's all right now," rejoined the cowboy.

"Judge, your foreman *may* be all right, as Texas Jack says; but I've my doubts," put in Day. "I cain't find anythin' agin him, 'cept the drinkin', but I've just come to distrust the man. Mebbe I'm wrong. It shore is a distrustful time."

"Mr. Franklidge, I hunted up Stewart, an' found him an' Dillon off under a cedar, talkin' deep an' quiet," said Texas Jack.

"Dillon? Who's he? That name's familiar."

"Dillon is young Ben Ide's foreman," replied Day, with interest. "He's held jobs all over the range the last two years. Fine cowman. Engagin' sort of chap. Everybody likes him. I shore do."

"Which ought to be recommendation enough for Ide, or even me, sore old cattle man that I am. . . . Well, Tom, have you considered the offer I made you some time ago?"

"Reckon I have, Judge, an' I'm acceptin' with thanks."

"We're partners, then," replied Franklidge. "We'll throw these ranches and all the stock together. I'll have papers made

Digitized by Google

UNIVERSITY OF CALIFORNIA

out when I get back to town. . . . Now, get what's troubling you off your chest."

"Wal, boss, the situation heah has grown from bad to wuss," returned Day seriously.

"Where do you mean by here?" demanded Franklidge.

"All this range thet haids along the wild brakes of the Mongollons. Say, fifty miles in a straight line. Reckon it takes in a good many ranches, countin' everybody, an' mebbe two hundred thousand haid of cattle. But Ben Ide's range an' this one of yours an' mine have come in fer the wust of the rustlin' this last month."

"We've always had rustlers to deal with. We always will have. What's the difference between, say, a year or five years ago and now?"

"Wal, Judge, fer a big cattle man, you're shore poor informed. The difference I'd calkilate offhand to stand you an' me an' Ben Ide around ten thousand haid!"

The judge's boots came down off the porch rail with a crash.

"What?" he demanded, incredulously.

"Boss, I said ten thousand, an' mebbe thet's conservative. Shore, most of this rustled stock belongs to Ide. But we've lost a good deal, an' stand to lose more, or all, unless somethin' is done. You see, Ide proved an easy mark. He bought out Burridge, who had some stock, nobody knows how much. Wal, young Ide's cow outfit was green an' raw fer Arizona. I gave him two of my best riders. One of them, Sam Tull, was found daid in the woods. Shot! We've never found out aboot it. The other cowboy, Rang Jones, had a quarrel with Dillon an' quit. I cain't see thet Dillon has changed matters fer the better. But I reckon no one man could at this stage of the game."

"So they've hit young Ide hard," muttered Franklidge darkly. "Funny he didn't complain to me. I've seen something of him lately."

"Ide's not thet kind, Judge," replied Day warmly. "He's as game as they come. An' his sister—say, she's a thoroughbred. She stands to lose most as much as Ide."

THE two men, warming to the subject, might have been alone for all the notice they took of Texas Jack. He leaned far over the porch rail, his face hidden, his long, lithe form strung like a whipcord. It was the strained position of a listening deer.

"Tom, I admire Miss Ide very much indeed, and her brother too," responded the judge. "I regret exceedingly the reception Arizona has given these two fine young people. I am ashamed. We all ought to be ashamed. We must end this wholesale cattle stealing."

"Ahuh! . . . Boss, I reckon I feel it more than you, as I've come to be friends with the Ides. Why, he paid Burridge's debt to me. Four thousand! An' then I'm a son-of-a-gun if he didn't send for Elam Hatt, an' pay the lien he had on Burridge. Don't know how much. But the Hatts were drunk fer a week or more. An' ever since then the rustlers have been bolder than I ever have seen them yet in Arizonie."

"Who are these rustlers, Tom?"

"Huh! If I said what I think it'd be old to you. But I reckon there is a new leader workin' now. Shore, they're all workin'. But there's some big thief who's keen as a wolf."

"Where are these stolen cattle driven?" asked the judge, wonderingly. "I've been twenty years in this business. Yet this beats me."

"Reckon the stock gets drove everywhere," replied Day.

"Not to the railroad?" queried Franklidge, aghast.

"Shore to the railroad. Not to Winthrop. But, man, there's other stations along the line. Then I had a Mexican sheep herder tell me he'd seen herds of cattle drove over the Rim, down into the Tonto. Thet's a wild country. Shore no cow outfits are followin' rustlers down into the Tonto."

"Tom, the Hatts are a bad outfit," rejoined the judge thoughtfully. "Some years ago I had trouble with Elam Hatt. The Stillwells are another. Surely these backwoodsmen run with these rustler outfits."

"Shore they do," snorted Day. "But I reckon the Hatts ain't the ringleaders. Cedar Hatt is the wust of thet bad lot."

"Cedar Hatt?" mused the judge. "Yes, I know of him. Bad name. Gun fighter. . . . How many Hatts in the family?"

"I KNOW the whole outfit," replied Day. "Elam an' me always got along pretty good. But I've no use fer Cedar. He's the oldest son. Then there's Henny and Tobe—pack-rats, if I ever seen any in the woods. An' last there's a girl, Rose. Reckon she'll be aboot sixteen. Pretty slip of a lass, whose mother died when she was a baby."

"What a pity! No mother. No decent home. No schooling. Why don't some cowboy take this Rose away and marry her? She might turn out a good woman."

"Shore she might. An' so I've said often. But I ain't hit on any cowboy yet who cared to risk his skin down there in the brakes."

"What has Ide done in regard to the raids on his stock?" asked the judge, curiously.

"Aboot all any man could," replied Day admiringly. "He's spent a lot of money hiring extra hands to trail stock. He took over this Dillon at a high salary. An' I reckon he puts a good deal of confidence in Dillon. Funny about Ben Ide, though. He gets sore when the rustlers make a raid. But he really don't care aboot the cattle. He's shore afraid fer hosses, though, 'specially thet California Red. There's a grand hoss, Judge. I'll bet if the rustlers got thet stallion, Ben Ide would hit the trail himself. Strikes me he's seen some wild life. He shore is a rider. Strange sort of chap Ben Ide is. I'm just gettin' acquainted with him. He always struck me as a rancher whose heart wasn't in his ranch. There's somethin' he wants. But he worships his wife an' kid, an' thet handsome sister. It ain't thet. I cain't explain what I don't savvy. But I've a hunch young Ide has been hurt. Mebbe he killed someone over in California, an' had to get out. I've often wondered if thet could be it. Then it might be he's *lookin'* fer some man.

"Say, mister, I reckon you ain't acquainted with Cedar Hatt," declared the girl, almost with scorn. "You're sure a stranger in these parts"

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Man, you're forcing me against my will," said the judge, rising to his feet; "I don't want you to attempt this thing alone. It's a wild cowboy idea"

Like a Texan, you know, who never *forgot.*"

Before the judge could reply to Day's earnest statement, the cowboy, Texas Jack, whirled around with a silent wrestling violence that indicated a suppressed and poignant passion. Under the shadow of his broad sombrero his eyes gleamed like clear coals of fire.

"I'm—heahin'—all—you say!" he burst out, pantingly.

"Suppose you are, Jack?" queried the judge, in kindly surprise. "If I'd minded about being overheard I'd have sent you away."

Tom Day stared, and it was evident he was not so surprised as expectant. He had lived with cowboys all his life.

"Wal, what ails you, son?" he growled.

Jack whirled away in the same sudden violent action with which he had faced them, only now it seemed there was added a fierce struggle of mind over body. But in a moment he turned toward the men again, to present a remarkably transformed front.

"I'm shore (*Continued on page 66*)

When I Need Quick Action I Go To The Men At The Top!

By E. Alexander Powell

FOR lack of a better term, I might describe myself, I suppose, as a professional onlooker and reporter, with the wide world as my assignment. In the pursuit of my profession I have observed the Passing Show from a front-row seat for something over a quarter of a century. The scenes have been laid in European chancelleries and Oriental palaces, in steaming jungles and on sun-drenched deserts.

To some who read the following pages it may appear that I have placed too much stress on my acquaintance with those who sit in the High Places. Yet I have scant patience with those who boast that they have "grasped the hand that shook the hand of John L. Sullivan." If I allude with what appears undue frequency to my relations with personages whose names and faces have been made familiar to everyone through the daily papers, you will remember, please, that it has been my business to cultivate their acquaintance, that I have sought their confidence as a means of earning my livelihood.

Disabuse yourself once and for all of the idea that the really great are unapproachable or haughty. On the contrary, they are usually the simplest people in the world, who, were they occupying humbler spheres, would be described as "just plain folks."

One of the kindliest and most thoughtful men I have ever known happens to be a king. He is the sort of man with whom you would enjoy smoking a pipe beside an open fire. The cleverest and wittiest woman of my acquaintance is a queen. It isn't her fault, but her job. She was born to it. Her greatest ambition, she once told me, was to be a *good* queen, to win the love and respect of her people. Marshal Joffre, the victor of the Marne, has an immortal place in history. Most people, seeing him pictured in a uniform ablaze with decorations, think of him as a remote and lofty figure. Yet those who know "Papa Joffre" are well aware that he is happiest when wearing a disreputable suit and fishing in a French river.

I became acquainted with Eleutherios Venizelos, the greatest statesman modern Greece has produced, when he was mayor of an obscure village in Crete. Though he has played a great part in shaping the destinies of the Near East, he remains as unaffected as when he dwelt in a four-room cottage in the outskirts of Candia. Thanks to a letter of introduction given me by his nephew, a bootblack in an American city, I met M. Danev, the Bulgarian premier who guided his country through the first Balkan war. Was he ashamed of his nephew's humble occupation? Not at all. "Any occupation that is honest," he remarked, "is honorable."

We have at present in the White House a model of simplicity and directness. Calvin Coolidge doesn't know how to put on airs. It takes time to get to him, naturally, for he is the busiest man in the world and must be protected from the merely curious, but once reach him and you will find him as easy as an old shoe. And it is the same, as I have said, with other men in high places.

THAT is why I maintain that you will nearly always get a friendlier hearing and quicker action by going to the man at the top. It is a rule that I have followed, and in this article I shall tell you how the rule has worked for myself and for others.

When a party of American war correspondents, one of whom was John McCutcheon, was arrested by the Germans in Belgium in 1914, they went over the head of the Chief of the Great General Staff and sent a telegram of protest directly to the Kaiser. And it got quick action. They were released with apologies and thereafter treated with every consideration.

I recall a personal experience which illustrates the efficacy of going to the man at the top.

In 1914 I represented a syndicate of American newspapers in Belgium. Brussels had been occupied by the Germans, and Antwerp, though it still held out, was virtually a Belgian island in a sea of German bayonets.

In October of that year dispatches of the most urgent nature were received at the American consulate-general in Antwerp from President Wilson, addressed to Brand Whitlock, the American minister at Brussels. It was imperative that they reach Mr. Whitlock at the earliest possible moment. A friend, Mr. Manly Whedbee, who was then engaged in business in Antwerp, and I volunteered to take them through the German lines to Brussels.

We had no passes from the Germans and no means of procuring any. But I attached a large American flag to the front of my car, painted in staring white letters on either side of the hood the words "Amerikanische Konsulardienst" (American Consular Service), and off we started. Whedbee was the representative in Belgium of the British-American Tobacco Company, and from his stock we filled the tonneau of the car with packages of cigarettes, thousands of them. It was an exciting journey; but, thanks to the cigarettes, we got through, for whenever a sentry or an officer halted us to inspect our papers we tossed him a few packets of cigarettes—and went on. The dispatches were duly delivered.

When we were ready to return I went to General Bissing, the German Governor-General of Belgium, and asked for a pass through the German lines to Antwerp. He bluntly refused it. The more I remonstrated, the angrier he became.

"How did you get into Brussels?" he demanded.

Thinking that the story of the cigarettes might touch a latent chord of humor, I told him.

"You came here without our permission," he said angrily, "and now you are going to stay. I'm not going to have any interfering Americans trotting back and forth telling their Belgian friends of our military dispositions."

"Does that mean, Herr General," I asked, "that you won't give us a pass to leave Brussels?"

"Exactly!" he snapped. "I forbid you to leave the city."

He turned on his heel as an intimation that the interview was ended.

Feeling very downcast, I went out to the car, in which Whedbee was waiting.

"We're virtually under arrest," I told him. "Von Bissing has refused point-blank to give us a pass."

"Well," suggested Whedbee, who was an incorrigible optimist, "let's go anyway. We may be able to bluff our way through, and even if they arrest us we won't be much worse off than at present."

WE EXPERIENCED no particular difficulty, for most of the units we encountered were those among whom we had distributed cigarettes two days before. But when we drove into Louvain we found, to our dismay, that the garrison had been changed.

"Let me see your papers," demanded a brusque young captain of a Prussian guard regiment, holding up an imperative hand, while two of his soldiers covered us with rifles.

To admit that we had no papers was to invite arrest. Our only hope lay in carrying things off with a high hand.

"I wish to see the commanding general," I said, with as much arrogance as I could summon. "This is not a matter for subordinates."

Before my colossal assurance the officer wilted.

"But certainly, *mein herr*," he agreed. "I will myself escort you."

He entered the tonneau of the car and motioned to his soldiers to stand on the running-board. I don't think he was suspicious, but he was taking no chances.

We drew up before the Hotel de Ville, which was German headquarters and, after a brief delay, were ushered ceremoniously into the general's office. He was a jovial old fellow with apple cheeks and rapidly whitening hair. I gave him

Digitized by Google

UNIVERSITY OF CALIFORNIA

no opportunity to ask me for our papers.

"General," I said, "we are traveling on urgent business of state. We have just delivered important dispatches from the President of the United States to the American Minister in Brussels, and are now returning to Antwerp. It is imperative that we should not be delayed. But, unfortunately, I am not certain of the road. As our business is pressing, may I ask you to lend us a staff officer to pass us through your outposts and put us on the road to Antwerp?"

"But—" he began doubtfully.

"I left General von Bissing only two hours ago," I said nonchalantly. "If you need any authority, I would suggest that you ring him up on the telephone."

It was a magnificent bluff, but it worked.

"I AM only too glad," the general assured me, "to assist any friends of the governor-general. My only regret is that I have no staff officer that I can spare you. They are all out at the moment, save my personal aid. But I should be glad to place a sergeant-major at your disposal, if that is agreeable to you."

He rang a bell, and a Prussian N. C. O. entered and stood stolidly at attention.

"You will pass these gentlemen through our lines," barked the general, "and set them on the road to Antwerp. They are on a very important mission. You will afford them every assistance.

"Now," he said, "I will go down and see you off. It is a great pleasure to help you. I was once in America myself. Chicago, Niagara Falls, Coney Island—how well I remember them all."

I seated myself at the wheel and the sergeant-major took his place behind. I stepped on the throttle and the great car leaped forward like a frightened horse.

"*Auf wiedersehen,*" called the general. "And good luck."

"Good luck to *you,*" said I.

I never learned what happened to the general when von Bissing heard of our escape. Von Bissing did not forgive mistakes. The story is not an important one, but it illustrates my text. If you want quick action, go to the man who has the power to act!

Shortly after the German invasion of Belgium, the Belgium Government decided to send a mission composed of distinguished men to the United States, to lodge a protest with President Wilson against the treatment accorded by the invaders to the civil population. None of the members of the mission spoke English; but the wife of the chairman, Emile Vandervelde, was an Englishwoman. She was, moreover, very beautiful and appealing.

"Why don't you take your wife along?" I asked M. Vandervelde. "Dress her in a black gown and let her tell to American audiences the story of Belgium's sufferings. She could win more sympathy and support than all your frock-coated statesmen put together."

"My wife is very eager to go," he told me, "and I should like to take her, but the prime minister has refused his permission. He says that this is a matter of life and death for our country, and that a woman would be a hindrance—that she should be working in the hospitals."

"Then why not write to the King?" I suggested. "If His Majesty were acquainted with the facts I'm certain that he would let Madame Vandervelde go."

The cabinet minister raised his hands in horror. To go over the head of the premier, to appeal directly to the sovereign, was impossible, unthinkable, it simply wasn't done.

"Then I'll write to King Albert myself," I assured him. "Lots of things are done now that weren't being done a few weeks ago. And if His Majesty gives permission, I'll cable to the owner of my newspaper, and ask him to arrange for Madame Vandervelde to address a mass meeting when she reaches New York."

Having been brought up in the school of European statesmanship, which teaches that deviousness is more effective than directness, he shook his head, as though deploring my ignorance of the etiquette which hedges rulers, and passed on.

King Ferdinand of Rumania, with his daughter Marie, Queen of Yugoslavia, and his younger son, Prince Nicholas. Colonel Powell (at the right) relates in the accompanying article an interesting experience he had with this royal family

BUT I wrote to the King, just as, in a similar emergency, I would have written to the President. I explained that I was unable to address him through the usual diplomatic channels because the American minister, Mr. Brand Whitlock, was shut up in Brussels, which was occupied by the Germans. I stressed the important part played by women in shaping American public opinion, reminded him that Madame Vandervelde spoke English as her mother tongue, and urged that she be permitted to accompany the mission.

Madame Vandervelde sent for me while I was at breakfast the next morning. I entered the room to find her in the midst of packing.

"Everything is all right!" she cried exultantly. "I am sailing to-night for America. As soon as he had read your letter the King sent me word that I had his permission to go. He is paying my expenses from his privy purse, and the Queen has given me a message which I am to read to the women of America."

Some of my readers doubtless recall the sensation created by Madame Vandervelde wherever she appeared in the United States—a tragic and appealing figure in her black garments, a personification of desolated Belgium. I learned afterward that certain diplomats were scandalized at my breach of etiquette in writing direct to the King. (*Continued on page 121*)

The Road You Follow To-day Is Part Of Your Goal

Axel Gulbransen worked for other men until he was forty-five; but these years were far from wasted, for he was always accumulating the experience that eventually led to the founding of an enormous enterprise

By Neil M. Clark

EVERY pack of boys likes someone to pick on, and in the Illinois village of Mendota, Axel Gulbransen's arrival was, for bullies, a gift of the gods. His yellow hair, slight figure, and laughable attempts to speak the English language, all conspired to make him a fit object of ridicule.

Axel's father had a job at the organ factory, and Axel helped him every day after school and all day Saturdays. One Saturday morning, he was going to work as usual along a narrow plank sidewalk, looking sharp lest he miss his step and plunge into the ditch, when, a good ways off, he espied Billy Jenks coming. At the same moment, Billy saw him.

"Ya, you, Swedey!" cried Billy gleefully from afar.

Billy, three or four years older than Axel and much bigger, was one of the chief tormentors. Billy now approached with mimicking gestures, sticking out his tongue, and calling names. Usually, he tried to add spice to the entertainment by a bullying shove, which, if it sent the smaller boy sprawling into the mud, filled full his cup of satisfaction.

Axel marched steadily forward. For some time he had been considering, in his small, eleven-year-old head, what he had better do about this Billy Jenks. The fact that Billy was so much bigger made a resort to fists—one kind of language that every boy understands—precarious. But this tormenting could not go on much longer, and in spite of his small stature Axel possessed the courage born of injustice.

Billy was quite close now. Axel estimated the distance carefully with his eye. Suddenly his fist shot out. Billy, having anticipated no turning of the worm, was licked before he got into action. He lost his balance and toppled into the ditch, where he lay in ludicrous surprise and terror.

"Yah, *you*, Beely Yenks!" said Axel.

With this ample remark, the victor went on. Never again did he encounter Billy returning from the cow pasture, nor did he ever again have to submit to his bullying.

Boyhood experiences bite deep. Axel Gulbransen, now in his sixties, looks back on a career crowded with achievement, yet he reckons his encounter with Billy Jenks one of the significant episodes of a lifetime. Only eleven, he met a cruelly hard situation and mastered it. To-day, the lesson of that incident is almost a motto with him:

"*Finish the job fast; do it thoroughly; go on to something else.*"

Before and after this time, Gulbransen encountered far more than his share of vicissitudes. Up to the age of forty-five, he had accumulated a wealth of experience, but little money. He was still working for others at a salary which in these days would be considered small, although he was in charge of important operations. But the fire of ambition burned steadily, and the steel of character gradually took a finely-tempered edge.

Twenty more years passed, and in the interval, this happened: Venturing with little capital into an established industry against a host of competitors, Axel Gulbransen built a business that is to-day the biggest in its field, registered fifty important patents in his own name, and by his example helped to revolutionize an industry.

Gulbransen manufactures pianos, chiefly player-pianos, and he has taken out many patents on devices which enable people who never studied music but have an ear for it, as well as those who are fair musicians, to manipulate pedals and levers and give individual expression to roll-played music on what he calls the registering piano. Last year his company, young as it is, is said to have made as many pianos as any other one company in the world.

THERE were good reasons, of course, for this astonishing growth. At no given moment did Gulbransen "succeed." "The road which leads us to our destination," says an Eastern philosopher, "is part of our goal." Because of the spirit in which he approached his work, Axel Gulbransen was a "success" at twenty, at thirty, at forty, though as a boy he did not dream of creating such a business, nor did he dream of it as a young man, nor even in middle age. His energy was spent on working in a certain way on tasks *in which his interest was passionately absorbed;* the business was an inevitable result.

Physically, Gulbransen is five feet seven inches tall, weighs one hundred and thirty-four pounds, is white-haired, always dresses immaculately, and is given to sudden silences. His slim, sensitive hands belong to a man at home with small tools on fine work. The gray eyes seen through his glasses resemble (*Continued on page 103*)

Being the Boss Doesn't Mean Being Excused

"MY FATHER'S failure in Oslo," says Mr. Gulbransen, "made a deep impression on me. I wondered about it, and used to ask him frankly why he hadn't done better. His replies were evasive. He said conditions had been unfavorable.

"The time came when I understood the real explanation without being told, and by that time I had seen foremen and friends drop by the wayside for the same reason. I think it's one of the great secrets; but so simple that few pay any attention. My father got a number of others working for him, then imagined he did not have to work himself: he felt that being boss meant being excused. I determined that, whatever happened, I'd keep on working."

Axel Gustaf Gulbransen

MR. GULBRANSEN, one of the pioneers in the manufacture of player pianos, is head of the tremendous piano manufacturing establishment which bears his name. He was born in Norway in 1862, and lived there until his family emigrated, nine years later, to the United States. The elder Gulbransen found work in an organ factory at Mendota, Illinois, and here, at the age of ten, the boy began to learn the wood-working trade. During the next thirty-five years he held positions in various musical-instrument factories, and then he ventured into the piano-making business for himself. Mr. Gulbransen's home is in Chicago.

Colleen Moore

COLLEEN MOORE, popular motion - picture star, is very fond of dogs, and particularly of the big Saint Bernard that appears with her above. Miss Moore began her screen career at the age of fifteen. The first picture in which she made an outstanding hit was "Flaming Youth." There followed in rapid succession stellar rôles in such important productions as "So Big," "Sally," "Irene," and "Twinkletoes." She was born in Michigan, but grew up in Tampa, Florida. In private life she is Mrs. John E. McCormick.

Miss Moore is seen here in the charming flagged garden of her home in the Wilshire section of Los Angeles.

Despite her busy career as a First National Star, Colleen Moore often finds time for her favorite game of tennis.

Be Prepared For The Best— It May Come Your Way!

The story of a remarkable girl who gained fame before she was twenty

By Allan Harding

STORIES about movie stars! Thanks to an army of busy press agents, that is one crop which never fails. Hired to get publicity, and fired if he does not get it, the average press agent diligently cultivates his own fertile imagination. But here is one movie story which was garnered from the field of fact.

The story goes back to the time, about a dozen years ago, when the actress about whom I am going to tell you was a young girl in Tampa, Florida. She was a dark-haired, dark-eyed, vivid little creature, just entering her teens.

Then, as now, youthful feminine hearts yearned for a career in motion pictures. But this particular girl was different in one vital respect. Instead of merely yearning to be a movie star, she was blandly certain of becoming one.

Her most cherished possession was a scrapbook in which she pasted pictures of her favorites in the screen world, pictures and clippings cut from newspapers and magazines.

But right in the middle of this portrait gallery of stars was one blank page! Its very blankness made it the most conspicuous one in the whole book.

As a mark of special favor, the little girl would show this volume to any visitors who seemed worthy of the attention. And when, in turning the leaves, she came to the single blank page, there would be a solemn and dramatic pause.

"That," she would say impressively, "is for *me!* When I grow up, I am going to be a famous motion picture actress. Then I'll cut out my picture and my notices and paste them on that page."

This story happens to be true. It happens also to be true that the little girl's dream has been realized. Yet the blank page in her old scrapbook is still blank! She could fill a score of such volumes with her pictures and her printed notices. But she likes to keep that blank page as a reminder of *the power of thought.* For she believes that her faith in herself and in her dream has helped her to *realize* that dream.

This little girl was called Kathleen Morrison. I can imagine you vainly searching your memory for a Kathleen Morrison—but how about Colleen Moore? You have seen that name many a time in huge capitals and in electric lights.

Indeed, the name was chosen, by no less a person than David W. Griffith, because it *could* be shown in electric lights. When he decided to give the fifteen-year-old girl a chance to act in pictures, he also gave her this shrewd advice:

"You may or may not become a star," he said; "but you'd better be prepared for the best, not for the worst. If you do reach the top, your own name is too long to go in electric lights. . . . Let's see! We might change Morrison to Moore."

Having performed a surgical operation on Morrison, he turned his attention to Kathleen. It was a nice name, but it had been preëmpted by two other promising candidates for stardom.

In searching for a substitute, Griffith discovered that the young girl's grandmother, true to her Irish origin, had fallen back on "Colleen" as a pet name for her adored grandchild.

Instantly the great producer seized upon it. Here was something which fitted the electric-light yardstick. It was easy to say, easy to remember, and nobody else had filed any claim on it. So the Kathleen Morrison of Tampa, Florida, became the Colleen Moore of the screen.

I MET her on her latest annual visit to New York. With her straight dark "bob," her half-gay, half-serious little-girl look, and her slender figure—she weighs only one hundred and eight pounds—I could easily have believed that she was still only fifteen years old.

There was, however, one convincing argument to the contrary. This argument was about six feet tall and was introduced to me by Colleen as "my John." Three years ago, he provided the much-named young lady with still another title, by making her Mrs. John E. McCormick; and to her, this third name is the best one of all.

When we had sent her John off to attend to his own business, we settled down for a good long talk. Colleen—you just naturally can't help calling her that—curled up in a big chair, which became her temporary stage; for, as she talked, she seemed to be, in turn, every character in the story she told.

She was her mother, her grandmother, her aunt, her father. She was producers and wardrobe women and famous stars. She was a head waiter at the restaurant where she and her John did *not* eat a memorable dinner. Every incident, in her telling of it, became as vivid as reality.

Yet she is as natural and as unaffected as any girl I ever have met. As I watched and listened to her, I remembered something which one of her friends had told me.

"When I am with Colleen," he said, "I have to keep reminding myself who she is! Most girls who are movie stars never allow you to forget that fact. You are always expected to kowtow to them. But Colleen doesn't carry any pedestal in her personal baggage! She is simple and sincere and genuine.

"At the First National studios, where she works in California, everybody is her friend. If we are shooting scenes late at night, for instance, we often have the studio cars wait to take some of the people home; and by perhaps two o'clock in the morning the chauffeurs are not in a particularly sunny humor.

"If a driver is told to wait for certain actors or actresses—I won't name them—he will grumble to beat the band. But ask any one of these drivers to wait for Colleen Moore, and he will say, 'Sure! Tell her to take her time. I'll be right here.'

"Plenty of movie actors want to be the whole thing in a picture. Haven't you seen films which looked as if half the footage was devoted to close-ups of the star? Some of these stars have almost killed their popularity by that form of vanity.

"Colleen doesn't make this mistake. For one thing, she has too much common sense. She wants to make good *pictures,* not just good pictures of herself! An actor who plays as her leading man can always count on getting a good break. So can the rest of the cast. And because of this, there are fewer changes in her unit, or company, than in any other I know of."

ALL this came back to my mind as I sat opposite Colleen herself and felt the charm of her personality. In telling her experiences, she referred repeatedly to her "luck" in having friends who helped her. But friendship is not given without cause. It has to be earned! And one reason why she is now a half-million-dollar-a-year star is that she has wanted and has won a host of friends.

Colleen Moore was born in Port Huron, Michigan, but her parents moved to Florida when she was a baby. That was her home until she was fifteen years old.

It was there that she attended school. It was there, too, that she made her scrapbook with its one blank page; there that she determined to become what she is today, a famous movie star.

"Did you let your father and mother into the secret of your plans?" I asked.

"Of course!" (*Continued on page 151*)

David's Star Of Bethlehem

A Story

By Christine Whiting Parmenter

ILLUSTRATED BY VICTOR C. ANDERSON

SCOTT CARSON reached home in a bad humor. Nancy, slipping a telltale bit of red ribbon into her workbasket, realized this as soon as he came in.

It was the twenty-first of December, and a white Christmas was promised. Snow had been falling for hours, and in most of the houses wreaths were already in the windows. It was what one calls "a Christmasy-feeling day," yet, save for that red ribbon in Nancy's basket, there was no sign in the Carson home of the approaching festival.

Scott said, kissing her absent-mindedly and slumping into a big chair, "This snow is the very limit. If the wind starts blowing there'll be a fierce time with the traffic. My train was twenty minutes late as it is, and— There's the bell. Who can it be at this hour? I want my dinner."

"I'll go to the door," said Nancy hurriedly, as he started up. "Selma's putting dinner on the table now."

Relaxing into his chair Scott heard her open the front door, say something about the storm and, after a moment, wish someone a Merry Christmas.

A Merry Christmas! He wondered that she could say it so calmly. Three years ago on Christmas morning, they had lost their boy—swiftly—terribly—without warning. Meningitis, the doctor said. Only a few hours before the child had seemed a healthy, happy youngster, helping them trim the tree; hoping, with a twinkle in the brown eyes so like his mother's, that Santa Claus would remember the fact that he wanted skis! He had gone happily to bed after Nancy had read them "The Night Before Christmas," a custom of early childhood's days that the eleven-year-old lad still clung to. Later his mother remembered, with a pang, that when she kissed him good night he had said his head felt "kind of funny." But she had left him light-heartedly enough and gone down to help Scott fill the stockings. Santa had not forgotten the skis; but Jimmy never saw them.

Three years—and the memory still hurt so much that the very thought of Christmas was agony to Scott Carson. Jimmy had slipped away just as the carolers stopped innocently beneath his window, their voices rising clear and penetrating on the dawn-sweet air:

"Silent night—holy night. . . ."

Scott arose suddenly. He *must* not live over that time again. "Who was it?" he asked gruffly as Nancy joined him, and understanding the gruffness she answered tactfully, "Only the expressman."

"What'd he bring?"

"Just a—a package."

"One naturally supposes that," replied her husband, with a touch of sarcasm. Then, suspicion gripping him, he burst out, "Look here! If you've been getting a Christmas gift for me, I—I won't have it. I told you I wanted to forget Christmas. I—"

"I know, dear," she broke in hastily. "The package was only from Aunt Mary."

"Didn't you tell her we weren't keeping Christmas?" he demanded irritably.

"Yes, Scott; but—but you know Aunt Mary! Come now, dinner's on and I think it's a good one. You'll feel better after you eat."

But Scott found it unaccountably hard to eat; and later, when Nancy was reading aloud in an effort to soothe him, he could not follow. She had chosen something humorous and diverting; but in the midst of a paragraph he spoke, and she knew that he had not been listening.

"Nancy," he said, "is there any place—any place on God's earth where we can get away from Christmas?"

She looked up, answering with sweet gentleness, "It would be a hard place to find, Scott."

HE FACED her suddenly: "I feel as if I couldn't stand it—the trees—the carols—the merrymaking, you know. Oh, if I could only sleep this week away! But . . . I've been thinking. . . . Would—would you consider for one moment going up to camp with me for a day or two? I'd go alone, but—"

"Alone!" she echoed. "Up there in the wilderness at Christmas time? Do you think I'd let you?"

"But it would be hard for you, dear, cold and uncomfortable. I'm a brute to ask it, and yet—"

Nancy was thinking rapidly. They could not escape Christmas, of course. No change of locality could make them forget the anniversary of the day that Jimmy went away. But she was worried about Scott, and the change of scene might help him over the difficult hours ahead. The camp, situated on the mountain a mile from any neighbors, would at least be isolated. There was plenty of bedding, and a big fireplace. It was worth trying.

She said, cheerfully, "I'll go with you, dear. Perhaps the change will make things easier for both of us."

This was Tuesday, and on Thursday afternoon they stepped off the northbound train and stood on the platform watching it vanish into the mountains. The day was crisp and cold. "Two above," the station master told them as they went into the box of a station and moved instinctively toward the red-hot "air-tight" which gave forth grateful warmth.

"I sent a telegram yesterday to Clem Hawkins, over on the mountain road," said Scott. "I know you don't deliver a message so far off; but I took a chance. Do you know if he got it?"

"Yep. Clem don't have a 'phone, but the boy come down for some groceries and I sent it up. If I was you, though, I'd stay to the Central House. Seems as if it would be more cheerful—Christmas time."

"I guess we'll be comfortable enough if Hawkins airs out, and lights a fire," replied Scott, his face hardening at this innocent mention of the holiday. "Is there anyone around here who'll take us up? I'll pay well for it, of course."

"Iry Morse'll go; but you'll have to walk from Hawkinses. The road ain't dug out beyond. . . . There's Iry now. You wait, an' I'll holler to him. Hey, Iry!" he called, going to the door, "Will you carry these folks up to Hawkinses? They'll pay for it."

"Iry," a ruddy-faced young farmer, obligingly appeared, his gray work horse hitched to a one-seated sleigh of ancient and uncomfortable design.

"Have to sit three on a seat," he explained cheerfully; "but we'll be all the warmer for it. Tuck the buffalo robe 'round the lady's feet, mister, and you and me'll use the horse blanket. Want to stop to the store for provisions?"

"Yes. I brought some canned stuff, but we'll need other things," said Nancy. "I've made a list."

"Well, you got good courage," grinned the station master. "I hope you don't get froze to death up in the woods. Merry Christmas to yer, anyhow!"

"The same to you!" responded Nancy, smiling; and noted with a stab of pain that her husband's sensitive lips were trembling.

UNDER Ira's cheerful conversation, however, Scott relaxed. They talked of crops, the neighbors, and local politics—safe subjects all; but as they passed the district school, where a half-dozen sleighs or flivvers were parked, the man explained: "Folks decoratin' the school for the doin's to-morrow afternoon. Christmas tree for the kids, and pieces spoke, and singin'. We got a real live schoolma'am this year, believe *me!*"

They had reached the road that wound up the mountain toward the Hawkins farm, and as they plodded on, a sudden wind arose that cut their faces. Snow creaked under the runners, and as the sun sank behind the mountain Nancy shivered, not so much with cold as with a sense of loneliness and isolation. It was Scott's voice that roused her:

"Should we have brought snowshoes?

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

I didn't realize that we couldn't be carried all the way."

"Guess you'll get there all right," said Ira. "Snow's packed hard as a drumhead, and it ain't likely to thaw yet a while. Here you are," as he drew up before the weatherbeaten, unpainted farmhouse. "You better step inside a minute and warm up."

A shrewish-looking woman was already at the door, opening it but a crack, in order to keep out fresh air and cold.

"I think," said Nancy, with a glance at the deepening shadows, "that we'd better keep right on. I wonder if there's anybody here who'd help carry our bags and provisions."

"There ain't," answered the woman, stepping outside and pulling a faded gray sweater around her shoulders. "Clem's gone to East Conroy with the eggs, and Dave's up to the camp keepin' yer fire goin'. You can take the sled and carry yer stuff on that. There 'tis, by the gate. Dave'll bring it back when he comes. An' tell him to hurry. Like as not, Clem won't get back in time fer milkin'."

"I thought Dave was goin' to help Teacher decorate the school this afternoon," ventured Ira. He was unloading their things as he spoke and roping them to the sled.

"So'd he," responded the woman; "but there wa'n't no one else to light that fire, was they? Guess it won't hurt him none to work for his livin' like other folks. That new schoolma'am, she thinks o' nothin' but—"

"Oh, look here!" said the young man, straightening up, a belligerent light in his blue eyes, "it's Christmas! Can Dave go back with me if I stop and milk for him? They'll be workin' all evenin'—lots o' fun for a kid like him, and—"

"No, he can't!" snapped the woman. "His head's enough turned now with speakin' pieces and singin' silly songs. You better be gettin' on, folks. I can't stand here talkin' till mornin'."

SHE slammed the door, while Ira glared after her retreating figure, kicked the gate post to relieve his feelings, and then grinned sheepishly.

"Some grouch! Why, she didn't even ask you in to get warm! Well, I wouldn't loiter if I was you. And send that kid right back, or he'll get worse'n a tongue-lashin'. Well, good-by to you, folks. Hope you have a merry Christmas."

The tramp up the mountain passed almost entirely in silence, for it took their united energy to drag the sled up that steep grade against the wind. Scott drew a breath of relief when they beheld the camp, a spiral of smoke rising from its big stone chimney like a welcome promise of warmth.

"Looks good, doesn't it? But it'll be dark before that boy gets home. I wonder how old—"

They stopped simultaneously as a clear, sweet voice sounded from within the cabin:

"Silent night . . . holy night . . ."

"My God!"

Scott's face went suddenly dead white. He threw out a hand as if to brush something away, but Nancy caught it in hers, pulling it close against her wildly beating heart.

"All is calm . . . all is bright."

The childish treble came weirdly from within, while Nancy cried, "Scott—dearest, don't let go! It's only the little boy singing the carols he's learned in school. Don't you see? Come! Pull yourself together. We must go in."

EVEN as she spoke the door swung open, and through blurred vision they beheld the figure of a boy standing on the threshold. He was a slim little boy with an old, oddly wistful face, and big brown eyes under a thatch of yellow hair.

"You the city folks that was comin' up? Here, I'll help carry in yer things."

Before either could protest he was down on his knees in the snow, untying Ira's knots with skillful fingers. He would have lifted the heavy suit case himself, had not Scott, jerked back to the present by the boy's action, interfered.

"I'll carry that in." His voice sounded queer and shaky. "You take the basket. We're late, I'm afraid. You'd better hurry home before it gets too dark. Your mother said—"

"I don't mind the dark," said the boy quietly, as they went within. "I'll coast most o' the way down, anyhow. Guess you heard me singin' when you come along." He smiled, a shy, embarrassed smile as he explained: "It was a good chance to practice the Christmas carols. They won't let me, 'round home. We're goin' to have a show at the school to-morrow. I'm one o' the three kings—you know—'We three kings of Orient are.' I sing the first verse all by myself," he added with childish pride.

There followed a moment's silence. Nancy was fighting a desire to put her arms about the slim boyish figure, while Scott had turned away, unbuckling the straps of his suit case with fumbling hands. Then Nancy said, "I'm afraid we've kept you from helping at the school this afternoon. I'm so sorry."

The boy drew a resigned breath that struck her as strangely unchildlike.

"You needn't to mind, ma'am. Maybe they wouldn't have let me go anyway; and I've got to-morrow to think about. I—I been reading one o' your books. I like to read."

"What book was it? Would you like to take it home with you for a—" She glanced at Scott, still on his knees by the suit case, and finished hurriedly—"a Christmas gift?"

"Gee! Wouldn't I!" His wistful eyes brightened, then clouded. "Is there a place maybe where I could hide it 'round here? They don't like me to read much to home. They" (a hard look crept into his young eyes), "they burned up the book Teacher gave me a while back. It was 'David Copperfield,' and I hadn't got it finished."

THERE came a crash as Scott, rising suddenly, upset a chair. The child jumped, and then laughed at himself for being startled.

"Look here, sonny," said Scott huskily, "you must be getting home. Can you bring us some milk to-morrow? I'll find a place to hide your book and tell you about it then. Haven't you got a warmer coat than this?"

He lifted a shabby jacket from the settle and held it out while the boy slipped into it.

"Thanks, mister," he said. "It's hard gettin' it on because it's tore inside. They's only one button," he added, as Scott groped for them. "She don't get much time to sew 'em on. I'll bring up the milk to-morrow mornin'. I got to hurry now or I'll get fits! Thanks for the book, ma'am. I'd like it better'n anything. Good night."

Standing at the window Nancy watched

Scott's face went suddenly dead white. He threw out a hand as if to brush something away, but Nancy caught it in hers

"No, he can't!" snapped the woman. "His head's enough turned now with speakin' pieces and singin' silly songs"

him start out in the fast descending dusk. It hurt her to think of that lonely walk; but she thrust the thought aside and turned to Scott, who had lighted a fire on the hearth and seemed absorbed in the dancing flames.

"That's good!" she said cheerfully. "I'll get things started for supper, and then make the bed. I'm weary enough to turn in early. You might bring me the canned stuff in your suit case, Scott. A hot soup ought to taste good to-night."

She took an apron from her bag and moved toward the tiny kitchen. Dave evidently knew how to build a fire. The stove lids were almost red, and the kettle was singing. Nancy went about her preparations deftly, tired though she was from the unaccustomed tramp, while Scott opened a can of soup, toasted some bread, and carried their meal on a tray to the settles before the hearthfire. It was all very cozy and "Christmasy," thought Nancy, with the wind blustering outside and the flames leaping up the chimney. But she was strangely quiet. The thought of that lonely (*Continued on page 98*)

Ten Things The Boss Doesn't Know About Us

THE following information is copied from my last year's income tax return:

Business position: Chief clerk in a manufactory. Total income from all sources: $6,250.

Married: Yes.

Dependents under 21 years of age: Two.

While the Government does not require the taxpayer to state his age, I shall complete the picture by stating that I am forty-five.

It seems only fair to begin my story with this frank portrayal, for there will be some readers who will say: "What's the use of listening to a middle-aged chief clerk?"

Such readers have a right to be warned at the outset so that they can pass on to something more to their taste. But there are others who may find my thoughts interesting. Most of them will be employees, like myself; but I hope a few will be bosses. For in the articles I have read it is always the Boss who tells how he picks men and why, or the reasons for firing them, or the different traits which distinguish profitable from unprofitable subordinates. But what a lot of things there are which we, who may never be bosses, know, that the bosses ought to know, and don't!

Partly because I was the youngest of the family, partly because my health was never robust, I was surrounded from babyhood with a solicitude which was as poisonous as it was kind. The other boys rode the farm horses, tumbled down from the hay mow, jumped fences, camped in the woods at night, and disported themselves as healthy boys should. But I must not ride, for fear that I might fall. I must not camp out, because the night air was dangerous.

Everything possible was done to kill my initiative, to prevent me from ever taking a chance. As I grew older I realized that my mother was afraid of life, and she passed that fear on to me as a heritage.

I mention these things casually and by way of explanation. But I want no sympathy, and I am entitled to none. I know that I shall never be anything bigger in business than I now am. But, whatever the world may think about my career, if such it can be called, I know in my own heart that I am a success, in spite of my limitations. I am a success because I have learned that success is not a matter of position or money; it is a point of view, a philosophy of living, an inner peace. One has to live quite a number of years to find this out; at least, I had to.

With good health, I shall hold my position for another ten or fifteen years. By that time my children will be started in the world, and my wife and I can retire to the little place in the country for which we have been paying month by month. But I shall retire as an ex-chief clerk.

However, this is to be an article about Bosses, and I have already talked too much about myself.

My first employer was a graduate of the little fresh-water college to which I went because my parents wanted me to be a "white collar" man. I met him when he returned for his twenty-fifth reunion. We green youngsters of the graduating class were greatly impressed by his outward evidences of prosperity and by his big talk about his "interests."

He dropped into my room on the evening after Commencement, when I was packing my trunk and wondering where I should go from there. Settling himself on the edge of the bed, he lit a large cigar and viewed the proceedings with benevolent interest. It required little encouragement on my part to start him talking, and before the evening was over he had offered me a job. Just what my duties were to be was not altogether clear to me, but he conveyed the comforting idea that somehow he was going to "make me." My life problems, therefore, seemed settled at the very outset. I had found a wonderful boss and my future was in his hands.

However, the "interest" to which my employer had referred so grandiosely proved to be a very little factory in one corner of a very large factory building. But his letter-heads bore a picture of the *whole* building. This white lie was typical of all his operations. Always his imagination ran a bit ahead of his veracity. The things he told you as facts to-day were not facts, but only hopes. Yet they were very real to him, so real that he would have been astounded had anyone accused him of prevarication.

ONE night, after I had been employed by him for a couple of months, he found me working in the office all alone, and took the occasion to open his heart. He was getting along in years, he said, and his hope was that he might retire before very long and turn the business over to his "boys." The thing that had prevented him from this benevolent course was the lack of any associate who could head up the enterprise. That lack was now filled by me, for I was young, a college man, and he would train me to be his successor.

I left the office that night in a spirit of high exaltation, which continued for four days, until I inadvertently confided my secret to one of the other men in the office. Then my balloon collapsed, for I discovered that there were at least five others who had been taken up onto the mountain top and given the business as their inheritance.

The instance is symbolic of his whole career. Old customers left him by the back door as fast as he could bring in new ones at the front, for his present service was always skimmed by the large measure of his future promises. His employees left him without compunction whenever a better chance came their way. Those who remained were a pathetic group who had stayed too long and had lost the courage to make a change. When the collapse came their lot was pitiful indeed, especially as some of them had put their life's savings into the stock.

The boss passed out ten years ago, just a few steps ahead of the sheriff. His money was gone; his friends had drifted away; the people who had believed in his dreams had lost their investments. But he died still believing.

A fascinating, tragic figure, this first boss of mine. He taught me the hard truth that the imagination, which is such a wonderful servant when under control, can be a man's undoing if it gets the upper hand. With a little less belief in the future, and a lot more hard work in the present, he could have been a great citizen.

MY SECOND boss was the son of a rich man who had bought the boy a daily newspaper. I stayed in that job two years, until the opposition paper, which was run by a hard-headed, experienced ex-reporter bought us out for a song and "consolidated" us.

We had all the advantage of plenty of money, better equipment, social connections; but the opposition had the one great asset which overshadowed all others —it understood human nature. Our young boss didn't have the sense to put a practical man in charge of his paper—a man who had a grip on the daily lives of its readers—but tried to run it himself. And what that young fellow didn't know about the ins and outs of the newspaper game and human nature would fill several volumes. The cards were stacked against him from the start.

No one can read biography without being impressed by the fact that Nature is a very queer old lady with a peculiar sense of humor. She seldom favors one family for very long, and she appears to take a keen delight in frustrating the well-laid plans of her elect.

This is nowhere more apparent than in the records of the sons of geniuses, of famous men and of the rich. The great man, having won his own laurels, tries to pass them on to his son. He hires the best tutors; he shields the boy from all the hardship and disappointment which embittered his own youth; he lays large plans. With what results? Not one famous man in a thousand has had a famous son. The softness and adulation which surround the children of the rich and famous rob them of the stuff of which strong character is made.

It used to strike me as a bitter bit of irony, this unwillingness of Nature to let her favors pass from father to son; but it is a wise and just provision. The rich man's son may be able to keep what his father has gathered, but he seldom adds to it. His sons and daughters divide the in-

UNIVERSITY OF CALIFORNIA

heritance, and promptly begin the process of losing it. In three generations, or four, the money is all spread around again, and another family has its chance. Thus the game is kept forever interesting, and those of us who have achieved little in our own lives have the consolation of knowing that our sons will probably have a better chance on that account.

All of which is more or less apropos of the almost inevitable fate of this second boss of mine. He knew as little about his employees as he knew about his newspaper. And that was next to nothing.

ABOUT a month before our paper was taken over by its competitor, I called on the president of one of the principal industries in our city. In order to shield myself from possible discovery, I ask the privilege of a little poetic license in saying that the company manufactured shoes. As a matter of fact, it makes something quite different, but I am still its chief clerk and I must take care. The president was a big advertiser in our columns, and a frequent contributor of anonymous articles regarding his own civic activities. The purpose of my call was to straighten out a little dispute over our bills for advertising.

It was a matter which ordinarily would never have come to his attention, but he had issued orders that all emissaries from the newspapers, no matter what their errand, should be shown into his office. He received me courteously, but with considerable reserve, since he was under the impression that we had tried to put something over on him. Fortunately, I had all the facts and, when the debate became a little warm, and he took to commenting on our way of running our business, I spoke up briskly:

"You may be right in your political theories, Mr. Evans," I said, "and you know an awful lot about many things of which I'm absolutely ignorant. But when you talk about accounting you hit me where I live. I'll tell you one thing you don't know, and it is this: your accounting department is absolutely punk."

He gasped and blustered, for it was no part of his philosophy that the boss should be addressed in language so frank.

But I had at my command facts to prove it, and the argument ended in his offering me a place in his accounting department.

"Prove that you can straighten it out and I'll make you head of it," he said. Which he did after a year or two, and subsequently I became chief clerk. And that brings me right back to the place where this story started, so I am ready at last to discuss some of the things which this very representative employer does *not* know about fifteen hundred people to whom he refers so grandly in his public speeches as "my family," a phrase, by the way, which most of us do not like at all.

HE IS a good average representative American boss. That means, first of all, that he is self-made. If we have heard the story of his early struggles once we have heard it five hundred times. He was born on a farm and used to get up before breakfast to milk the cows. (When I heard the story for the first time there were three cows, but the herd has grown considerably in the intervening years.) At night he used to fall asleep with a book in his hand. When he was twelve years old he ran away from home and became an errand boy in a department store. He got the idea that the selling (*Continued on page 110*)

If You Ask Me:

Men must speed up to hold their time-honored rank

FIFTY years ago a divorce was almost a scandal. Now divorce is a commonplace of our national life. There must be a reason—a logical reason—for such an alarming increase in the number of unhappy marriages.

People who delight in theories attribute the increase to prosperity, to poverty, to the restless life, to jazz music, to a newly-developed scorn of law, perhaps to sun spots.

Yet the cause that is most obvious and most prolific of unhappiness seldom is mentioned.

To understand this cause it is only necessary to examine the motives of men and women who marry, and to understand the hopes they entertain when they begin the great adventure.

It is obvious that all those who marry expect by so doing to increase their happiness. It is obvious, also, that the genesis of all divorce is unhappiness.

Now, what is required to make the average normal man happy in the state of matrimony, and what is required to make the average normal woman happy?

The typical American does not marry in the hope of "bettering himself;" that is, he is not influenced by a desire to obtain property, or win a higher place in society, or make himself more secure against misfortune.

He marries because he has found a woman he loves. She may be poor, unknown, even homely; no matter. His love asks only the right to cherish and protect and share life with her.

His masculine pride, however, demands more. It demands the right to feel superior to her. Is he not a glorious male, the lord of creation, and by immemorial right boss of the premises? Very well; he must be respected, leaned upon, and consulted.

Find a man whose wife can beat him at tennis, swimming and bridge—who is better informed than he, and able to make more money, and you have found a man who has little acquaintance with happiness—unless, indeed, he lacks a man's native pride.

Here, then, is half the story: The happy husband, whatever his pride in the glorious and gentle creature who is his mate, must feel superior to her.

The other half of the story is equally simple.

The sex game is a woman's game. While the young man is dreaming of fame and fortune to be won, the young woman is dreaming of a man with fame and fortune who will come a-wooing—an ideal man, brave, handsome and chivalrous. She does not dream of marrying an inferior, or even an equal, but always of marrying a man she can respect, admire, revere. The miller's daughter dreams of a prince.

In other words, the average woman looks upward for a mate—never down. Her normal desire, whatever her skill, learning, and practice in the art of caring for herself, is to find a man worthy of her adoration.

Well, there was a time, not very long ago, when she could find a "superior" without great effort. Custom had made her timid, had kept her ignorant, had denied her the opportunity to develop self-reliance. She needed a man to lean upon. She watered the flowers, did fancywork, developed "accomplishments," and waited. When she was wooed and won, she was happy.

Her nature craves the same thing still; but superior beings are not so easily found. They are, in fact, rare.

This does not mean that men have gone backward, but only that women have gone forward—a great way forward, while the progress of men has been relatively small.

The young woman of to-day who is educated, self-reliant, able to make a living, at ease, and unafraid wherever chance may find her, does not meet many men who inspire in her any feeling akin to awe.

She may yearn for a superior, but she is a lucky girl if she finds one.

If the men would establish and maintain the relation on which old-time connubial felicity often depended, they must, in the vernacular of this bewildering age, "step on it"!

Only A Cop

Charlie Sands isn't a captain, a lieutenant, or even a sergeant—"I've had chances to move up," he says; "but promotion for me would have meant giving up things I like better for some gold braid on my uniform and a bit more money in my pocket"

By Mary B. Mullett

CHARLIE SANDS is a policeman; *only* a policeman, if you want to put it that way. Just a "cop." He isn't an inspector, or a captain. Oh no; nothing so grand as that. A lieutenant? Certainly not. A sergeant? No, not even a sergeant.

He is just one of the thousands and thousands of patrolmen who make up the rank and file of the New York Police Department; just one of the millions of "plain folks" who make up the background of our lives.

He has been a policeman for fifty years, and he never will be anything more than that. He is past seventy now; and at that age a man doesn't look for a new job. He doesn't even expect promotion in his old one.

Does this make you feel that you ought to work up a little pity for Charlie Sands? If so, you may save yourself the trouble. He needs no one's pity. Indeed, if we were to sum up the net results of our own lives and to compare them with his, many of us would have to admit that he makes a better showing than we do.

At more than three score years and ten, Charlie Sands has the most precious possessions which any human being can gain: health, happiness, contentment, and friendship. If you are able to say as much for yourself when you have reached seventy, you will be a fortunate man or woman.

To be well and happy; to have youth in one's heart and youth always within sight and within hearing; to have sunshine and beauty and laughter; to have friends, literally by the score! If one has achieved these things, one is to be envied, not pitied. And Charlie Sands has achieved them all.

For fifteen years he has been on duty in Central Park. His "beat" has been the Mall; a walk, fifty feet wide, between double rows of trees. At one end is a great paved circular space; and a bandstand with a stone canopy that looks like a huge shell.

In summer, on Sunday afternoons and on band nights, this space is filled with benches, where thousands sit and listen to the music. But at other times, all the year around, it is an immense outdoor playroom for children. Then it is the prettiest picture to be found in the whole vast city; and no band or orchestra that plays under the stone canopy makes any sweeter music than the gay voices and laughter of those hundreds of children at play. That was what I said to myself the other day, as I came within sight and sound of Charlie Sands's kingdom. Don't think I invented that phrase! People call him "the King of the Mall."

Almost every day, from ten in the morning until six at night, the Mall is his domain. He rules it with absolute authority; and no real sovereign ever received more complete and cheerful obedience from his subjects.

It was a day of brilliant blue skies and sparkling sunshine. The big asphalt circle was a shifting kaleidoscope of color; hundreds of little figures darting about on roller skates, or scooters, or their own restless feet.

Around the edge of the circle was a fringe of benches, where sat an imposing array of nursemaids and a sprinkling of mothers; the nurses gossiping in English, French, German; the mothers reading, sewing, or embroidering.

Babies slept in their perambulators, or sat among their pillows, cooing, laughing, bouncing up and down for the sheer delight of using their strength.

But this encircling fringe of grown-ups was not exclusively feminine. It had a surprising percentage of men—young, middle-aged, and old. They were not reading books or newspapers. They were just sitting there, watching little children at play! And as they watched, the mask which most men wear seemed to slip from their faces, and one saw the hidden gentleness and kindness; saw, too, the boy's love of play, which so often, and for so long, lives on in the heart of a man.

This is the picture of Charlie Sands's kingdom. You must see it and feel it, in your imagination, if you are to add up correctly the debit and credit balance of his life.

CHARLIE SANDS was born in New York City; born on the East Side, where the tenements swarm with human beings as hives swarm with bees. There wasn't a blade of grass, nor the cool green of a single tree. Nothing but the pavement, bare save for the dirt of scattered garbage. Only the walls of brick and stone; the roaring Elevated that shut out the sky and deafened the ears; a confusion of sounds, sights, and smells—all of them ugly.

The only playground, for him and for thousands of other children, was the street. Balls were prohibited. There were too many windows which might possibly be broken.

Other traditional games were out of the question. There were too many pedestrians in the way; too many trucks to be

Just Folks

A MAN asked me, not long ago, "Who is the best bookkeeper in the world?" Then, without waiting for a reply, he answered his own question. "I figure," he said, "that the smartest bookkeeper in the whole Universe is the Recording Angel. And you can bet I'd like to see what he has put down on the page that has my name at the top!"

The Editor of this magazine does not pretend to be in the Recording Angel's confidence. Neither he nor a single one of his readers has any "inside dope" about this biggest of all bookkeeping jobs. Yet each of us, every day, is keeping books on that cross-section of the human race with which we come into contact.

Your mind is a ledger. There is a page for every person you know and for many you do not know, but whom you admire or dislike from afar. Some of these pages are devoted to the rich or the mighty. Other pages are practically blank, because you have so scant an impression of the persons whose names head them.

Many of the pages that mean most to you deal neither with the great nor the near-great; they concern those who have expressed themselves not in dollars but in deeds, not in laurels but in "the human touch." Just folks! Neither rich nor great nor famous; but men and women who have taken the common everyday facts of life—often the poorest and hardest conditions—and have made out of this commonplace material something to help and inspire their fellow men.

Perhaps among its many and varied articles THE AMERICAN MAGAZINE rejoices most in noteworthy recitals of this kind. Such stories constantly are being told in our pages. But in this year of 1927 you are going to have a special series of them, written by Mary B. Mullett, one of your favorites. Every month we will give you a chance to do some human bookkeeping. Read these true stories of "Just Folks," and decide for yourself how they add up.

The first of the series begins on this page. THE EDITOR.

dodged. So they made up their own games; and their "playthings" were old tin cans; rusty pieces of iron; even, on occasion, deceased alley cats.

There were no nursemaids to look after the babies and the toddlers. I should say not! There were only those pathetic figures in tenement life, the "little mothers;" girls from six to twelve years old; thin, pale, and prematurely worn; cheated of their own childhood, because the burden of caring for their baby brothers and sisters was put, literally, on their own frail shoulders.

In this drama of childhood there was an omnipresent character—the Ogre. At least, if he wasn't always present, he was always threatening to appear.

This menacing Ogre was the policeman—the cop! Almost the first English words which the immigrant child learned to understand were, "Cheese it! The cop!" Mothers terrified their rebellious offspring into obedience by threatening that the cop would get them if they didn't behave.

THIS is the picture of Charlie Sands's childhood environment; and you must keep this picture, too, in your imagination, if you are to understand how little he needs your pity, even though he is only a seventy-year-old policeman.

Unlike the common run of royalty, "the King of the Mall" never sits on a throne. In fact, while he is conducting the affairs of his kingdom he doesn't sit at all. A policeman's job, as I soon discovered, is a test of one's ability to stand, literally, on one's own feet. I have had many interviews and under many conditions. But my interview with Charlie Sands is the only *stand-up* one I ever had.

When I reached the fringe of benches which framed that moving picture of children, I stopped to look around for the object of my visit. There he was! A tall, ample, blue-coated figure, standing at one side like some benignant deity, serenely watching the hectic doings of mere mortals.

For the most part, the children played about him as they might have played about the knees of a statue. But every little while, one of them would run up to him—and then I would see the statue come to life. The blue-capped head would bend to the child, but not too much! The king was kindly; but he *was* the king.

After I had joined him, we stood there talking for an hour. It seemed *ten* hours to my unaccustomed feet! And occasionally, for my benefit, he would call one of the children to him: always by name—Gladys, Dorothy, Frank, Bobby, or whatever it might be. He never said anything like, "Here, kid!" or "Say, little girl!" or "Hey, bub!" He knew them as you and I know our child friends—if we are among the lucky grown-up folks who do have child friends.

PHOTOGRAPH BY D. JAY CULVER, N. Y.

Charlie Sands and a few of his little friends. Every clear day, hundreds of children play on the Mall in Central Park, New York City, and Patrolman Sands sees to their safety. For fifty years he has been a policeman, and for the past fifteen years his beat has been in Central Park, where he is affectionately known as "the King of the Mall." Mr. Sands has thousands of little friends, and big ones too, in New York

I said that we stood there talking for an hour; but that isn't strictly accurate. We certainly *stood* there for an hour! As for the talking, however, that was an intermittent affair; and as the minutes drifted by, the pauses came oftener and lasted longer.

At first, I was full of questions. Then, gradually, I came under a sort of spell, as if some quiet hand had smoothed out all my restlessness. From beyond the borders of the Park came faintly the sounds of traffic, but softened by distance. And these far-off sounds, by the very contrast which they implied, made our green haven of refuge seem just that much more desirable.

But the real source of that spell was a certain quality in the man beside me. And it is this quality that I want to show you, if I can; for in it lies the secret of Charlie Sands and the reason why I am telling you about him.

The one word in which I can best describe this quality is "*serenity*." I wonder if you realize how rare that quality is. How many of your friends have it? Do you, yourself, possess it?

It is something very different from dullness. It isn't mere placidity, nor quietness of voice and of manner. Have you ever watched a healthy, well-fed animal? That is a perfect example of physical serenity. But the quality I am describing comes from a healthy, well-fed *spirit;* and a good many of us think more about the three meals a day for our stomachs than about giving our souls a good, satisfying diet.

I CAN imagine the puzzled amusement with which Charlie Sands would listen to remarks about a well-fed spirit. Nevertheless, he has one! It "eats and drinks" the things that produce a good "state of health" in his mind and heart.

We are always experimenting with diets for the good of our bodies; giving up certain foods and adding certain others, because we want to be well and strong and comfortable. Why not experiment with a diet that will make us well and strong and comfortable in spirit?

One of the questions I asked Mr. Sands was the obvious one: "How did you happen to become a policeman?"

"Well," he said, "I don't know exactly. When I got through school and had gone to work, my folks thought I'd better be learning a trade of some sort. The one they picked out for me was dentistry—which isn't a trade at all, though I'm afraid that's what it would have been if I had practiced it.

"But I had no (*Continued on page 86*)

Dot And Will Find Out What It Means To Be Rich

By Fannie Kilbourne

ILLUSTRATED BY T. K. HANNA

OUR crowd got to talking one night about how you'd know when you were rich. Roger Lane said he'd know he was when he could put in a long distance to Chicago, and then wait to ask the fellow at the other end how he was and speak about the weather, without getting nervous, just as though it were a local call. Rosemary Merton said she would when she could let the baby play with the soap in the bath water, and Frank Kirstead said he'd know he was when, if there happened to be half a potato or a spoonful of scrambled eggs left, his wife wouldn't insist on his eating it to save it.

Then we stopped joking and said seriously, we wondered if it wouldn't creep up on you so gradually that you'd get used to having things a little nicer and a little nicer—and there'd always be somebody who had things a little nicer yet—till you might get to where any of us now would call rich, and not even know you were there.

"I don't believe Mrs. Curtis really knows she's rich," I said. "Look at the way she markets for that big house of theirs. I meet her in the cash-and-carry nearly every day, a limousine and driver waiting outside for her while she wrangles over whether carrots are cheaper by the bunch or the pound."

"And the cooking eggs!" said Dulcie, at which we all went into spasms. Mrs. Curtis buys two kinds of eggs, table eggs and cooking eggs; and she always made the servants use the cooking eggs for their breakfasts. But when she got Jennie Durhart, whose father owns the big Durhart farm, to come in and work for her, Jennie wouldn't eat the cooking eggs. She said she'd been brought up on fresh eggs and knew one when she tasted it, which, she'd bet, was more than Mrs. Curtis did, growing up in the city. So, to prove it, Jennie would boil the cooking eggs for the table and the help would eat the table eggs out in the kitchen, and Mrs. Curtis never knew the difference.

It was a letter I had had from Elaine Pepper that started the discussion. Elaine had been in my class, my one year at college, and of all the conceited, snobbish, patronizing cats I've ever known, Elaine gets the brown derby. She'd married a very rich man out in California, and wrote me that she might see me around Christmas time; they were coming East to spend Christmas with her husband's people, and had to go right through Montrose.

"Lita MacEnery writes me that you married your small-town sweetheart, after all," Elaine wrote. "How I'd love to see you again! And Dulcie Dunwoody—did she ever get married? And does she still live near you? We sha'n't be taking a very long vacation, of course—you simply can't imagine how hard it is to pry a city man away from his office, and my husband is one of the very worst. But I tell Gregg that, even if he is one of the directors of about everything in Los Angeles, he has just got to take a little time to play with his wife once in a while. I'm sure he'll be able to arrange for a few hours between trains in Montrose. How I'd love to look in on you in your little home, Christmas Eve!"

I read the letter out loud to the crowd and when I came to this paragraph, Dulcie and I just looked at each other. The letter was so exactly like Elaine.

"What does she mean, 'Married your small-town sweetheart, *after all*'?" Will demanded. "After all what?"

"I'm sure I don't know. That's just Elaine's way of talking," I said, seeing that he was irritated, as who wouldn't be, at being called a "small-town sweetheart."

"Director of everything in Los Angeles!" Dulcie mimicked. "If Elaine married a traffic cop, she'd say he was city director of traffic. 'Did Dulcie Dunwoody *ever get* married?' As though I'd been trying to for years! She knows very well I'm married, sends me a Christmas card every year addressed to 'Mrs. Roger Lane'!"

That was Elaine Pepper all over. There never was a girl who could make so many people mad in one paragraph, all the time being as sweet as honey.

"'How I'd love to look in on you in your little home!'" I reread disgustedly. "How does Elaine know I haven't got a house as big as the new Union Depot?"

"She doesn't," said Dulcie. "She just takes it for granted that everybody's life but her own is the short and simple annals of the poor. She gives me a pain."

"It's people like Elaine that make you feel you'd give anything to be rich, just to show them," I said, which was what started our discussion about being rich.

AS WILL and I were walking home that night—we'd all been at the Kirsteads'—I said:

"If Elaine really does stop off here I'll have to invite her for lunch or dinner or something. I suppose I really ought to give a party. That's what most of the girls do when anybody they've known in college comes through or visits them."

"Well, why don't you?" said Will.

"I suppose I ought to," I agreed.

There was a little pause. And then:

"While you're doing it, make it a good one," said Will.

I had to smile at that, the kind of smile that every married woman knows, sort of behind your hand, so to speak. For it was so funny to hear Will say a thing like that. He usually has no use for putting on dog in any way, prides himself on the "just-put-on-another-plate" stuff. And here he was, actually egging me on to have the kind of party that would impress Elaine Pepper. I suppose every man's got his sore spots, though, and Elaine's "your small-town sweetheart" certainly hit one of Will's.

"Of course I can have a party of some sort and have all the crowd," I said. "But I don't see how I can spring anything so very fancy, now that I can't get Ella Crowninshield any more to come and serve. You couldn't have a dinner party elaborate enough to impress a girl like Elaine, if she knew you got it yourself. It's just like making your own clothes—you may make a dress that is as smart as anything you could buy in Paris, and if she thought it had come from Paris she'd rave over its being so smart and exclusive and everything; but if she knew you'd made it, yourself, she'd just smile patronizingly and say, "My, aren't you handy with your needle!"

WE WALKED on a little way in silence, and I thought Will had let the subject drop right out of his mind. But no; suddenly he suggested:

"Well, why don't you have a dinner party, and have Mrs. Whiting?"

"Oh, Will!" I gasped, the mere suggestion hitting me amidships, as it were.

Mrs. Whiting is a caterer, the only one in Montrose. The rich Harvester crowd have her sometimes for their parties, and when people like the Scoggins or the Curtises give a dinner party, they have her. She does the cooking herself, but she brings a colored man with her who wears a crisp white coat and opens the door and waits on the table like a million dollars. I'd always thought of Mrs. Whiting as being as far out of my class as a private airplane.

"Suppose it costs fifteen dollars besides the food," said Will largely, "it wouldn't break us. It's not like taking on a running expense; it would only be for the once."

Well, when it comes to anything like that, I'm not the kind of pump that has to be primed. The mere suggestion was enough for me. The very next afternoon, I went down to Mrs. Whiting's and engaged her for Christmas Eve. As it was only July, Will asked me if that wasn't being almost too forehanded. Suppose Elaine changed her plans in the meantime, or came some other time than Christmas Eve.

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

The one thing that saved the evening for Elaine was showing us the little-finger ring her husband had given her for Christmas, a diamond that looked as big as a soup-plate

"You can't be too forehanded about engaging Mrs. Whiting for around Christmas time," I explained. "With the college people home and everybody entertaining, and family reunions and what not, she's engaged weeks ahead. She was saying just to-day that she did wish she could have some of the jobs she had to turn down last holiday time right now, in the dull season. Along in November, I'll write and invite Elaine very formally, and if she's changed her plans by then, I can just tell Mrs. Whiting, and she'll have calls enough for the extra time." And the way things worked out proved that I had planned right. I invited Elaine the first of November, and she accepted. I told her that I wanted to entertain for her and her husband, and she said they'd make it a point to spend Christmas Eve in Montrose. They could come in on Number Eighteen, which gets in at six-thirty-nine, and go out on the midnight sleeper, and be at her husband's home Christmas morning.

So, six weeks ahead, everything was arranged. I even invited the guests, so as to be able to have just the people I wanted. Dulcie and Roger, of course, and the Frank Kirsteads and the Mertons and Scott and Corinne, just our own crowd. I set dinner for half-past seven, an unheard-of hour; but besides being fashionable beyond words, it gave everybody a chance to get the babies to bed before they came. They all entered into the spirit of the thing, the boys agreeing to wear their dress suits and most of the girls having new dresses for the occasion.

Will admitted that I'd used my bean when I was so forehanded, because we met Mrs. Whiting on the street one day the first of December, and she said she was dated solid; she didn't have an afternoon or evening left from the fifteenth till after New Year's.

MY, THE heavenly freedom of giving a dinner party when you didn't have everything from the fruit cup to the demitasse on your mind! Ten days ahead, I went down to see Mrs. Whiting, and we planned out the menu, and she told me just how much of everything to order and what

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

little things, like sage and paprika, I must be sure to have on hand. She would come early the morning of Christmas Eve, and attend to everything, and I wouldn't have so much as to set foot in the kitchen, except to get the babies' dinner.

Not but that I'd be busy enough the day before Christmas. I would have plenty to do with last-minute things and getting the twins' Christmas ready. Of course, being only two and two-thirds years old, they wouldn't really understand what it was all about; but I was going to hang up their little stockings and have a tree for them, just the same.

Then there'd be the house to trim up. Christmas was Tuesday, and Sunday afternoon Will and I would go out to the woods and bring the flivver home full of evergreen branches, and I'd make it into ropes and drape the rooms with it. Oh, I wouldn't sit around Monday and twiddle my thumbs in idleness! But the freedom of not having it on my mind! And knowing that everything would go off perfectly.

Will, appearing from the cellar, said, "Sure, that's the best idea

"IF WE ever get rich, so that I have this sort of thing all the time," I told Corinne a few days before Christmas, "I shall remember how it seemed the first time, so that I'll keep on realizing how lucky I am. I'll never allow myself to get so used to it that I don't notice it."

"Aren't you worried, though, for fear Mrs. Whiting will disappoint you at the last minute? Be sick or something?" Corinne is a born worrier if there ever was one.

"No," I said comfortably. "Mrs. Whiting has built up her reputation by never disappointing a customer—people always say: 'You can count on Mrs. Whiting.'

"She's never sick. And I'm not going to lie awake nights worrying for fear she'll die for the first time on the day of my party!"

So I went blithely ahead, got Will's dress suit out of the moth balls and pressed it and aired it, polished the brass andirons and finished up the gold velour cushions for the end of the divan—did all of the little finishing touches that make a house look just right.

It did occur to me once or twice, what if something should happen to change Elaine's plans, or there should be a train wreck or something that would spoil everything? But a few days before Christmas I got a most reassuring note from her, saying they'd arrive on the six-thirty-nine as per schedule. And then, in the very midst of feeling so safe and comfortable, I had a terrible scare.

Mrs. Whiting came to see me, only a week before Christmas Eve, and asked me if I'd let her off. Her son Jack, who is in the navy, was being transferred across the country and would have three days in Montrose at Christmas.

It was an awfully upsetting thing to be asked, because I knew Jack was her only son, the only person she had in the world who belonged to her, and they were crazy about each other, and he'd been away for nearly three years. And there she was, tied up for every waking second of time; days when she didn't have a dinner that took her all day, she had a luncheon, and then supper for a dance or something in the evening. Not one single minute to be with her boy. And only three days out of three years!

AT FIRST thought I was terror-stricken—it seemed to me that I should have to let her off. And then my common sense came to my rescue. She didn't expect to get all the three days off. As she said, if she could get one day and evening it wouldn't be so bad. And there certainly wasn't any reason why, out of three days, mine should have to be the one.

"And when I engaged you so far ahead, Mrs. Whiting," I reminded her. "I'm sure none of the other people engaged you *in July!*"

She admitted that nobody else had. And the other people who had engaged her were all rich people who had parties all the time; they could afford to give up one much better than I could. So I explained that I was terribly sorry, but that this was a very important engagement to me, and I didn't see how I could possibly give it up. That surely some of her other customers would give up their day. So she said that of course she'd promised me, and she would come.

I knew she would too, and it was fair enough—there was no reason why the person who could least afford to give up should be the one to do it. Of course I realized she asked me first instead of some other customer, just because the others did give more parties, which meant more

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

yet. Mert's got just the face for a butler, kind of sad and dumb!"

work for her. But the rights of the thing were on my side, just the same. Nobody else had engaged her in July! Let somebody else let her off.

And it honestly never occurred to me but that somebody else would. I just put the whole thing out of my head, and went on planning for the dinner party.

THEN Sunday morning, the Sunday before the day of my party, we saw Jack Whiting in the church with his old chums, the Harley boys. That recalled the matter to my mind, of course. After church, people gathered in the vestibule talking in little groups, as they always do, and it was evident that seeing Jack there had reminded other people besides me.

I heard Mrs. Curtis explaining to Mrs. Gorson why she couldn't possibly give up Mrs. Whiting Christmas Day, much as she would like to; but her own cook had stayed in on Thanksgiving, with the promise of having Christmas off, and Mrs. Curtis wouldn't dare ask her to stay now. They were having a big family dinner and Mr. Curtis set great store by family dinners. And now that he was so poorly —Mrs. Curtis's eyes suddenly filled with tears. "I don't know how many more Christmases he'll have to enjoy," she said pathetically.

Mrs. Gorson said something sympathetic, and then added that she'd like to have let Mrs. Whiting off, herself, that day, but the children were home from boarding-school and had invited twelve for Sunday night supper, and Clara was too good a maid to take any chances with, such as asking her to stay in Sunday night and get supper for twelve.

"And you know how the young people are nowadays," Mrs. Gorson went on plaintively. "All they want is a good time and excitement. They never want to stay at home a minute. You just have to keep entertaining them all the time, in hopes it will keep them from something worse."

"Where is Mrs. Whiting working this afternoon?" Mrs. Curtis asked.

"At the young Jasons," Mrs. Gorson answered. "They're having a big luncheon. I told Rita frankly that she'd better let Mrs. Whiting off, and just give the luncheon up—they can't really afford half the entertaining they do, anyway. But you know how Rita is. And with Jimmie running after every pretty face he sees, she's more determined than ever to do just exactly what she wants to."

Then they talked a little about how wild young Jimmie Jason was getting, and walked on, leaving me simply sick all over. It was evident that nobody had let Mrs. Whiting off.

WELL, I wasn't going to, that was flat. I told myself, and I told Will all the way home from church, that I wasn't going to. It wasn't my place to; I'd engaged her earlier than any of those other people; they had nifty parties all the time; this was the only one I'd ever had. Anybody would say that it wasn't fair. Just because they, who could afford so well to let her off, wouldn't, was surely no reason why it should be up to me. I just wasn't going to do it.

I wasn't going to do it. I wasn't going to do it. I kept telling that to myself and to Will all through dinner, and all through the afternoon. And all the time I kept saying it, I kept feeling more and more gloomy. I'd think of how she'd feel, Jack home for those precious three days, and then gone again for nobody knew how long. If only I hadn't happened to know that she and Jack were crazy about each other—plenty of mothers and sons aren't; plenty of boys would be only too glad of the excuse not to have to hang around home.

Once in the afternoon, while I was wrapping up presents and my own baby Jack got hold of a piece of tissue paper and held it up in front of him and then looked around it with that funny, roguish look he gets on his face, and said "Peek—boo!" and I caught him up and hugged him, all soft and warm and sweet, I thought of sometime, maybe, when I'd have him only three days out of three years. It was almost too much; I had actually started to telephone to tell Mrs. Whiting she needn't come; but I controlled myself in time.

In order to strengthen my determination, I got out Elaine's letter and read it through—smug, patronizing. There was that "your small-town sweetheart"—Will felt just as strongly as I did about it. I saw Mrs. Whiting's colored man in his crisp white coat, all of us in our evening clothes . . . it wasn't fair. All these rich people had that (*Continued on page 156*)

I've Sworn Off Saying "Yes"

By O. O. McIntyre

PHOTOGRAPH BY BLANK AND STOLLER

"Never again will I say 'Yes' when I mean 'No'," says O. O. McIntyre, one of the best known newspaper syndicate writers in America. "All my life I have been an amiable, foolish 'yesser'," he declares, "and the weakness has caused me no end of trouble, and lost for me a great many friends." Mr. McIntyre was born in Plattsburg, Missouri; but now lives in New York City

I HAVE made one New Year resolution which I am praying will click. I have sworn off saying "Yes." Most of my life I have belonged to the spineless breed of "Yessers"—there are many of us—and I have reaped the inevitable whirlwind. It has not been pleasant.

The "Yesser" is almost always in difficulty. He offends when his sole aim is to be kindly. He finds himself involved in a helpless snarl over some triviality, when a firm "No" at the beginning would have cleared the atmosphere like a clap of thunder.

The ability to say "No" at the proper time saves friends, money, and worry. We "Yessers" try to soften the blow, but make it harder. Some people have acquired naturally a calm negative state, but the rest of us flounder around making ourselves and others miserable.

It is in inconsequential matters that most of us "Yessers" adopt the easiest way. We drift along until we are suddenly snagged by the realization we have offended a friend, bought a worthless bond, or even injured our reputation, and for no possible gain for ourselves save the specious desire to be agreeable. The easy-going fellow is always likable and has many fair-weather friends, but he is rarely taken into the firm or given an important executive post.

I know a man who holds down a sixty-thousand-dollar-a-year position in China. The day he arrived he was asked to join a convivial party that evening.

"I didn't come over here to play," he said; "I came to work."

The head of a big shipping concern overheard him and was impressed. Three weeks later he sent for the man and gave him a position. The newcomer went like a shot from one job to another until he became general manager. In a few years he will be able to play as he pleases.

My resolve to stop "yessing" was the result of a jolt, not undeserved but nevertheless upsetting. I had joined a group of friends to discuss a proposed jaunt together. All the arrangements were perfected and I had agreed to go.

I departed, and at the elevator discovered I had left my cane. I went back for it. Out in the hall I heard someone mention my name, and then one of the talkers said, "You cannot count on him. He always says yes."

THAT cold analytical view was far more chilling than it sounds on paper—for it was the truth. I had not seriously intended to go and the truth often hurts.

It was the old story. My judgment told me to say "No," and my lips had murmured "Yes." The world makes too many excuses for little white lies. They get you into just as much trouble as big ones.

I was in a business man's office recently when his 'phone rang. In response to a query he replied firmly, "No; I am not interested in that charity. I do not think it gets anywhere. I would not contribute a cent."

Then he talked of other matters pleasantly and hung up. It was easy to realize he was talking to a friend and had not offended. I cannot tell you how tremendously I was impressed by his casual manner. I would have quibbled—backed and filled and wasted time.

FOR many years I accepted invitations to functions I knew at the time I did not care to attend. At the last moment I would wiggle out, and leave someone, who would have accepted "No" at the outset, without a thought, a trifle miffed.

I have often sent last-minute telegrams to dinner parties to which I had been invited from ten days to two weeks in advance, announcing my inability to attend. A polite regret at the start would have been agreeably accepted; but these last-minute excuses often offended.

In one instance I grievously offended a dinner host. A telegram arrived several hours late announcing I would not be there. He replied tartly, "You kept our dinner waiting until ten o'clock. It was a mean thing to do." He was right. When he sees me now he bows coldly, and no regrets of mine, I fear, will ever change that attitude.

I am not parading this weakness for any purpose other than to show, if I am able, its sheer futility. The Editor of this magazine knows I waited a long while before consenting to write about it. It seems the supine in spinelessness constantly to be in hot water over trivialities easily avoided.

If I can save others the mental annoyance I have experienced because of a sheer lack of directness, this article will have more than accomplished its purpose.

Analyzed, the sole object of my vacillating attitude has been to be kind. But it has been far from that in results; and has cost me many hours of sleep and a number of friends.

It is only fair to say I am not a he-Pollyanna, gadding about to shed sweetness and light in a troubled world. I have a streak of selfishness as large as that of the average man. My temper is not always amiable. Yet I do not know of any other person who suffers so much from offending another as I, though this appears to be what I am constantly doing.

There are many homes to which I am no longer invited, and deservedly so. There are also many who consider me totally unreliable in fulfilling engagements. The wife of one of my closest friends recently told me: "You are welcome at our home any time you care to visit, for lunch, dinner, or to remain all night; but I shall never tender you a special invitation."

I do not believe I am a willful prevaricator nor do I believe my friends regard me as such. In matters of importance and in my work I try to cleave to the truth.

Original from UNIVERSITY OF CALIFORNIA

I do not think my derelictions classify me as dishonest. I pay my debts and have never knowingly taken advantage of my fellows.

Yet I continue to quibble in unimportant matters to the annoyance of myself and others. I am not a "Yes-yes man" as we know the term. Editors with whom I deal consider me a little hard-boiled. I have been able to take care of myself.

It is in a misguided consideration for the other fellow that I err, and I have found the land filled with thousands with the same jellyfish tendencies who are constantly rolling up trouble.

TAKE it from one who knows, you never help a person by saying "Yes" when you mean "No."

Indeed, I have never known a person to be offended by a direct and straight-from-the-shoulder reply. In their sudden disappointment they may appear provoked, but in the end you have their respect. As one who has floundered about willy-nilly I have come to believe directness of speech is one of the supremest of human virtues.

Every once in a while I find myself avoiding someone to whom I have given an indirect reply about something essentially unimportant. They had asked me to play golf, and I don't play golf; but I had given the idea that I would take it up just to please them.

A "No" would have meant nothing in their lives but much in mine, for it would have saved me peace of mind. Durable friendships are built on mutual consideration, and such trifling lack of consideration will often mar them.

It is largely true that the friend who is offended by an honest answer is not worthy of friendship.

As a reporter I am politely asked to many affairs. It is all a simple gesture toward the press, and means nothing; but I usually intimate it will be the biggest moment of my life to attend, when, as a matter of fact, I would not attend most of these affairs on a bet, and the hosts, in turn, do not give a hoot in Hohokus whether I am present or absent.

Frankness is such a simple thing, and always effective. I have a convivial friend who suddenly turned from the cup. He sent a little note to his friends announcing his decision to stop drinking, and he says not one of them has ever asked him to take a drink since.

He explained he had never been able to resist the plea to have just "a little nip," and one invariably meant several. Being frank saved him from these invitations.

This ability to be direct in little things is bigger than it often looks. About ten years ago a reporter wired me from a distant city that he had been dismissed, and was desperately in need of a job. It was the period of summer lay-off in New York and I felt certain there was not a job on any of the local newspapers, especially for the stranger. But I was not direct enough to tell him that. I knew the despair of being jobless—nothing quite equals it—so I wired him consolingly: "Will do my best. Don't worry!"

I buoyed him up without good reason. It would have been far better for him to face the facts as they were at the beginning, even though it added temporarily to his unhappy state.

I did scurry around among the few executives I knew, trying to place him. It was hopeless. He waited about a week, pawning everything he owned. In the end, I sent him word of conditions as they were at the start. It would have been fairer to have wired him, when I received his first message, "There is no chance of a job here. Look elsewhere."

It would have saved what happened. Toward the end of his wait, the reporter went off on a spree and was in an alcoholic cure for a month. I feel I was partly responsible. He has forgiven me, but I have not quite forgiven myself.

I can cite an illuminating case in my own experience of directness bringing financial profit to another. I visited a tailor several years ago with an idea I had for a suit of clothes. He was not enthusiastic and tried to talk me out of it.

It was irritating, and I insisted upon my idea being carried out. Finally, he told me quite frankly he did not want the order. "I would lose you as a customer and you would probably cause me to lose other trade," he said.

I left him hopping mad, and another tailor made the suit as directed. I tried it on, looked in the mirror, and promptly gave it to a floor waiter at my hotel, who probably dropped it in an ash can on his way home. It was terrible. The first tailor lost the sale of that suit; but I have bought possibly fifty suits and overcoats from him since.

One of the most popular men I know is a bachelor noted for his blunt speech. He is a kindly gentleman and extremely loyal to his friends; but he can say "No" the easiest of any person I know, and he rarely offends. He salvaged this virtue out of several failures in life.

I once called him up to say I was dropping in to see him after dinner. "I am giving a dinner party to-night," he said, "and it will not be convenient to see you." He was pleasant enough, but firm.

It was like a bucket of cold water, and I left the 'phone in confusion. I decided it would be a long time before he saw me again. He never referred to the matter, but I learned several weeks later that one of his dinner guests was a man with whom I had had a rather serious disagreement. He was saving me and his guest embarrassment, and did not think it necessary to launch upon an elaborate explanation.

I think now he was right. There should be no misunderstanding among friends over directness of speech.

OLDER men, I have found, seasoned by the ripe experience of years are more direct. It may have taken them a long while, but they have found it pays.

E. W. Howe, the popular Kansas philosopher, is as direct as any man I know in action and speech, yet remains beloved by all. I once asked him to an evening dinner.

"I eat my big meal in the middle of the day," he said, "and do not like to sit around a table while others eat. I'll come after dinner." Most men, I believe, would have sat at the table, and perhaps given the host the idea the meal was not appetizing.

I believe it was Chauncey Depew who said he had not learned to say "No" until after he was forty, and it was with the achievement of this virtue he really began to enjoy life.

As I grow older, I am conscious of seeking the companionship of men who are direct. I want them to handle my business affairs and I seek them for advice. That is largely true of most of us, and is indicative of the intangible power directness of speech creates.

In almost every instance where I have loaned money to friends I have had the usual result—the loss of money and the friends. In no case did I want to loan the money, realizing the probable hazards; but I could not steel myself to say "No."

The blunt bachelor friend I have mentioned has an invariable rule for borrowers—no matter how close friends they may be. He demands security and interest for every loan.

When the debt is paid, he refuses to accept the interest. He has never lost a penny or a friend in such transactions, and they have been numerous.

MOST of us can trace a large share of our troubles to a lack of directness in ourselves and others. I spent a lean and depressing year in New York trying to be a business man. I am no more fitted for business than a cat is to play a cornet. My salary was so trifling it was never missed, and I suppose my employer was simply gambling on a prospect, for I came rather highly recommended. He was really gambling on my future, which was, whether he realized it or not, a mean thing to do.

In two weeks he could have told me the truth—blazing away with both barrels. I know at least a dozen men who were turned from the paths of failure merely by having direct employers who told them they were not fitted for the task assigned.

It is far better to be discharged abruptly, and later find suitable activities, than to wear the tag of failure. Most men who lose their jobs find better ones. Their eyes are suddenly opened, and they find themselves. Thousands of employees who have the virtue of industry suffer from a lack of directness on the part of employers. They are permitted to hang on, when they should be cut adrift to seek jobs for which their talents are suited.

Aspiring singers and painters perhaps suffer more from evasiveness than any other class. I once had a distinguished painter tell me in the Latin Quarter of Paris that, of all the hordes of students there at the time, he knew of only twelve who showed any actual talent, and he had been studying their work for many weeks. "The pity of it is," he said, "that no one tells them the truth."

Europe is filled with unscrupulous singing teachers who are always willing to flatter a pupil for the small tuition fees.

Debt is one of the most difficult problems in human experience to face with directness. When we are unable to meet our obligations promptly, most of us suffer sharp twinges of conscience. Somehow we feel dishonest.

Invariably I have found that when a man, through circumstances over which he has no control, is unable to settle a debt at the designated time, he has merely to put his cards on the table to receive consideration.

The head of a credit bureau, extensive in its scope, writes me as follows regarding the matter:

"We do not (*Continued on page 141*)

"Snap!" Went the Furnace Door And Spencer Got His Big Idea

As night watchman in a sawmill he noticed that the iron door of the furnace heated more quickly in the middle than at the rim—This observation, plus years of patient labor, resulted in a two-million-dollar invention

By Keene Sumner

DID you happen to read, some months ago, that a man named John A. Spencer had been paid one million dollars for a little electrical device which he had invented? You probably did, for the story was printed in hundreds of newspapers.

That story was almost, but not quite, a true one. Spencer did invent a device, which he called the Spencer thermostat. He designed and built the machines to manufacture it. Altogether, he spent more than ten years in perfecting it.

The Westinghouse Company leased the manufacturing rights on a royalty basis. During the life of the patent, which is seventeen years, the royalties will amount to probably more than *two* million dollars instead of the one million mentioned in the newspapers.

But there was one big error in the story. Spencer does not receive all that money! The royalties go to a company which financed and owns his invention.

He will receive a percentage of the royalties, and this will give him a nice income. But his slice of the "melon" is a comparatively small one—five per cent of the net profits of the company he formed, and a substantial salary.

Now suppose *you* had raised a two-million-dollar melon. And suppose that you got only a bite instead of a feast. How would you feel about it?

After you have answered that question, read this story of a man who had to settle it, not in his imagination, but in reality.

"Al" Spencer—for his middle name, Alby, is the one by which his friends know him—is thirty-five years old. He can do almost anything with his hands. He can do extraordinary things with his brain. But his *tongue* is a shirker.

He is a steam engine for work. But in order to get the facts in this interview I had to put him through four hours of the hardest labor he ever submitted to. He is about as talkative as one of the lonely pines in his native state of Maine.

When I asked him where he was born, Spencer gave a puzzled shake of his head.

"It was in a little village north of Bangor," he said; "but I'm never sure what to call it. Some towns, you know, are always squabbling about their dividing lines; and this village was in the middle of a nest of such towns. Sometimes it was claimed by one, sometimes by another.

By turns it was Enfield, West Enfield, South Lincoln—I don't know what else.

"It doesn't make much difference anyway, for my father died when I was three years old, and I went then to live with my grandparents. After that, I moved around so much that I hadn't any settled home.

"My grandfather built sawmills. When his contract took him to a village, I had a chance to go to school; but when he went into the big woods, as he often did, my schooling stopped.

"It stopped for good when I was eleven or twelve years old, for I started to work as soon as I was big enough to lug a water pail. That was my first job—as water boy at a sawmill.

"From that I was promoted—if you want to call it promotion—to washing dishes for the mill hands. The cook had two assistants: the 'inside cookee' and the 'outside cookee.' I was the outside one.

"I washed the dishes—tin ones, of course—chopped and carried wood, and made myself generally useful. But I hung around the mill whenever I had a minute to spare, for I was crazy about machinery.

"I NEVER have taken a technical course in any school. I have learned simply by watching and handling and studying the machines themselves. When I was only fifteen, I was a sawyer in a mill; and that is a job which is seldom given to a man under forty.

"One day the wife of the owner happened to see me, a mere kid, doing this work, and she couldn't get over it. When somebody told her, last winter, that I had got out an invention and sold it for a million dollars, she said:

"'It's no more than I expected! I got *my* big surprise years ago, when I saw him, as a boy, handling the hardest job in the mill. I knew then that he was going to amount to something.'"

This little burst of confidence was so foreign to Spencer's nature that he lapsed into embarrassed silence. I had to prod him into speech once more.

"How did you learn to be a sawyer?" I asked.

"Oh, just by watching and helping," he said. "I was always hanging around, doing everything I got a chance to do. I had a natural mechanical instinct; and I guess I have plain horse sense. By putting the two together, using my eyes and my wits, and always being eager to lend a hand, I learned how to do every job in the mill. The result was that I became a sort of pinch-hitter.

"I might never have invented my thermostat, if it hadn't been for this habit of watching how things worked. I got the germ of the idea back there in one of those Maine sawmills.

"It was when I was a sort of night watchman and had to keep the fire going in the engine-room. During the daytime we used sawdust for fuel; and the furnace was the kind that opened at the top, so that the sawdust could be fed in through this opening. At night we used pine slabs and edgings, which made a hot fire but burned down fast.

"The opening in the furnace had a round iron cover; and this cover would heat more quickly at the center than at the rim.

"The metal would expand with the heat. And since this expansion was greater at the center than at the cooler rim, the difference caused a tension which made the cover bulge in the middle.

"It didn't do this gradually, but all of a sudden and with a loud snap. Then, if the fire died down and the iron cooled off, the cover would snap back again. I could hear this noise even outside the engine-room. It was my signal that the fire needed attention.

"I used to think about this little trick of the metal cover. It seemed to me that the principle which was responsible for it could be used in some practical way.

"I saw the same principle at work in the saws. The big circular ones would heat at the center more than at the rim; and this uneven heating would have made them bulge in the middle, if they hadn't been hammered around the edges before being put in place.

"As I said before, I noticed this and thought about it. But it was years before I saw a way of putting it to some use."

AFTER these glimpses of "Al" Spencer's boyhood, I felt as the wife of his old employer did—not at all surprised that he had made a two-million-dollar invention. His habit of observing and thinking and doing was bound to result in something worth-while.

One of Spencer's friends told me of another field in which young Al trained his powers of observation. At times he acted as guide to hunters in the Maine woods. He was a keen hunter. And here, too, he made good, because he used his eyes and his wits. (*Continued on page 126*)

John A. Spencer

MR. SPENCER quit school when he was eleven years old, and worked at many varied jobs before he invented the Spencer thermostat, a device for automatically controlling the current in certain electrical equipment. He was born in Maine thirty-five years ago, and has earned his living as a dish-washer, fireman, night watchman, and sawyer in a lumber mill. He has also been a hunters' guide, and has worked in an irrigation plant, a radio company and in various electrical industries. His home is in Revere, Massachusetts.

Thomas Arkle Clark

"TOMMY ARKLE," as he is affectionately known to the students and alumni of the University of Illinois, has had an opportunity to see very far into the hearts of the young men and women of this generation. For thirty-five years a teacher, and for fifteen years Dean of Men at the University of Illinois, he has had the friendship of thousands of young people. In addition to his administrative work, Dean Clark is the author of a number of books, including "Great American Authors," "Great English Authors," "The Fraternity and the College," "The High-School Boy and His Problems," and "When You Write a Letter." His home is in Urbana, Illinois.

Boneheads I Have Known

By Thomas Arkle Clark

WE ARE all boneheads, more or less. Nancy can't sew, for instance, and I've never been able to play the piano. I made one or two serious attempts to learn music, but my progress was pretty discouraging. It wasn't the teacher's fault, either.

"What do you think of my playing?" I had the courage, after some months of daily practice, to ask my teacher.

"Well, you haven't much talent," was his prompt reply; "but you're darned persistent."

I was, in short, a bonehead—at least, as far as music was concerned.

We are wont to argue, and to prove our contention by figures, that the bonehead has little chance of success in the world. And it can be shown beyond question, I think, that a man's scholastic average in college, for instance, is as a rule a pretty safe index to his financial and professional status twenty years after graduation. I myself have often helped to prove it by going over our college records, and I have flaunted the statistics in the face of the intellectual dullard over and over again, in an effort to stimulate his latent energies, when he was sitting across the desk from me trying to justify his lack of accomplishment.

I like to believe that the dullard fails and that the bright boy gets on. I suppose this is partly because I managed in some way to make a creditable scholastic record and wear the symbol of high scholarship dangling at my watch chain. When I grow downhearted and discouraged over the small accomplishments of my life, it is comforting to glance at my Phi Beta Kappa key and to feel a growing confidence that I am bound to succeed.

However, in spite of the theory that the clever and the quick-witted are sure to get there, no matter what business or profession they may take up, and that the slow, plodding dullard must be content with the booby prize, I have known some pretty capable boneheads.

Now, take Meeks, for example. There was no doubt in the mind of anyone who knew him that Meeks was a bonehead. And yet he had an alert, intelligent face that would have deceived the most astute mind reader. He always sat in the front row in my class, and he paid the strictest, most respectful attention to everything I had to say. At intervals he nodded assent to particular statements of mine which seemed especially to appeal to his judgment, and he raised his hand frequently, signifying his readiness and eagerness to recite. He seemed, in fact, intellectually quite on the job.

"Do you understand the principle, Meeks?" I would ask, when I had completed the explanation of some simple problem.

"Yes," he would reply.

"Then explain it to me," I would suggest. But he never could. He could not find the words; his brain refused to function in any logical way. I do not now recall that either in recitation or examination he ever answered a question correctly. He seemed completely a bonehead. The scholastic regulations were not very rigid in those days or Meeks would have been sent to the bench at the end of the first inning. As it was, he hung on for a season or two, and then disappeared.

It was only last year that a middle-aged gentleman called at my office one morning. He was well-groomed, carefully dressed, exact of speech, and on the whole rather distinguished-looking. He gave every evidence of the self-possessed, respected, and able business man.

It was Meeks.

"Do you remember me?" he asked pleasantly.

It was impossible, even with only a trace of human intelligence, to forget Meeks, though when I assured him that I knew him, I hesitated to put it quite that baldly.

He told his story modestly, but it was quite clear that he was getting on very well; in fact, amazingly well. He was at the head of a considerable manufacturing establishment; he had married a woman of education and social experience; he belonged to clubs; he was interested in the work of the schools and of the church in the town in which he lived. He held all sorts of important offices. It was easy to see that he was prominent in his community. He had worked hard; he had character; he was seriously and unselfishly interested in the welfare of his neighbors. Bonehead as he was, he had made good.

"You no doubt thought I got little out of college," he said. "I didn't learn many facts; but I got a vision of things, I had ideals presented to me, I saw that hard work and persistence were necessary if I should accomplish anything."

Meeks made me think that, after all, I might have learned to play the piano if I had kept at it!

I HAD a letter from Johnson a few days ago—a very good letter, too, which of course may have been touched up in spots by Johnson's stenographer. But, even so, it had some thought in it. He is running for office, a pretty important office too, and he wants me to vote for him. From the engraved letterhead, I gather that Johnson is the senior member of a law firm of some prominence and influence.

Now I recall that far back, some years previous to the Spanish War, I attempted to teach Johnson the elements of simple fractions and a few fundamental principles of use in speaking or writing the English language correctly. The boy was old enough to be in high school, and here he was struggling—or at least I was struggling—to get him through the seventh grade. In those days, it was a hopeless task to try to teach him the difference between a noun and a transitive verb, or how many times two thirds were contained in ten; and here he was practicing law, and even his political enemies admitted that he was doing it shrewdly, intelligently, and successfully! He might not be able to do simple arithmetic, or to parse a sentence, but he had an uncanny judgment, and an insight into human nature that was making him comfortably well off.

WHEN I came to college, straight from the farm, Nicholi was running a cobbler's shop on South Neil Street. He was as down in his financial luck as Lazarus, and as stupid, apparently, as a half-wit. No one thought he would ever amount to anything. It would not have surprised me at any time to have learned that he and his family had become pensioners of the associated charities.

It was not through mending shoes that he forged to the front, for he mended shoes badly. But he had an amazing judgment when it came to estimating the value of real estate, and in realizing the possibilities of its future development. He was a remarkably good trader. He could start out in the morning, it was said, with a pair of second-hand shoe strings, and bring up in the evening with a good pair of shoes.

He saw in what direction building was tending. By some financial jugglery, he got hold of a couple of lots on a certain avenue, when no one had any idea that that part of town would ever be a high-class residence district; and he held on to them, and by trading around a little finally paid for them. He sold the lots for ten thousand dollars three or four years ago, and went to Florida for his health—or at least that is what he said he went for.

Last April, a man from our town who had been spending the winter in Miam, came back home.

"Do you remember old Nicholi who used to half-sole our shoes when we were sophomores?" he asked.

"Sure," I answered; "what about him?"

"Well, he's had a town site named for him down in Florida; he's made a million dollars in real money, they say, and a lot more on paper. He and his wife ride around in a big imported car with a uniformed chauffeur at the wheel, and they carry themselves like blooded aristocrats."

"Maybe it doesn't take brains to make money," I said. "A millionaire once told me that it didn't; but Nicholi must have a little gray matter concealed somewhere about his anatomy, even though his head seemed solid ivory when we knew him."

Nicholi was evidently a sort of real estate Blind Tom, who, it will be recalled, was pretty much a flat tire intellectually except when it came to playing the piano.

PHOTOGRAPH BY BACHRACH

Dr. Wallace Nutting

"I Never Learned To Live Until I Was Fifty"

The story of Dr. Wallace Nutting, famous photographer of beautiful scenes, and authority on early American homes and furniture—Forced by ill-health to leave the ministry, he turned to the out-of-doors, where he found both health and a new vocation

By Marion T. Colley

IN THE little old-world village of Framingham Center, Massachusetts, there lives a man whom adversity has proved powerless to conquer. He is Dr. Wallace Nutting.

For more than twenty years Doctor Nutting was a minister. Then ill health forced him to give up what to him was a sacred calling. He was forty-six at the time, and for eight years thereafter he never knew what it was to be free from pain.

Yet, within those years, he made a name for himself in three different lines of work, and then, best of all, recovered his health.

Millions know Doctor Nutting through his charming nature pictures. Whoever appreciates the grace and beauty of early American furniture is familiar with his achievements in reproducing certain types of it. His artistic books have become guides to the sequestered, enchanted spots of many states. Few, however, know his life, for he has kept that to himself.

During the years of his ministry, Doctor Nutting preached in a number of cities in the West and East, among them Newark, St. Paul, Seattle, and Providence. His first chapel in Seattle was a barn, erected after a great fire as a temporary place of worship. But so totally inadequate was its space before he had been there two weeks, that the rows of seats were moved closer together to make more room. People stood in the aisles and at the back, for this extraordinarily earnest man had a message to give, and they came to hear it. A larger church was immediately erected, and this, too, was filled to overflowing.

In one week he was called both to Pasadena and to Los Angeles and, in the

This charming and dignified old house near Westchester, Pennsylvania, was once LaFayette's headquarters

very same month, New York and Providence invited him to come to them.

It was in Providence that his health went to pieces. The verdict of the doctors was that unless he gave up the ministry he would die.

"THE thought of resigning almost broke his heart," Mrs. Nutting confided to me. "In those first weeks of his illness, I have seen him go out into the yard on Sundays at the hour of service and, trembling from weakness, stand there and look over at his church with the tears streaming down his face."

Doctor Nutting, however, refers to that experience briefly as the time "when I was turned out to graze—not by the deacons but by the doctors."

At that time, he was supposed to have some serious physical trouble. Scarcely had this begun to clear up, when he had typhoid fever. Pneumonia followed close upon his recuperation from this exhausting disease. The final affliction came to him in the form of an affection of the inner ear which destroys the sufferer's sense of equilibrium, and is accompanied by the most distressing feeling of dizziness and vertigo when the victim attempts to stand. In those years, in going from one part of a room to another in his home, he would sometimes have to crawl upon his hands and knees.

He refuses to talk about these things; instead, he will tell you a joke. No sooner would he recover from one of these illnesses sufficiently to lift his head from the pillow than he would begin to work at something, or to study. The one thing that he positively could not stand was inaction.

But life had never been a time of play to Doctor Nutting. As a very little boy, he had learned what it was to ache in every limb from the weariness of honest physical toil. As a small child he trudged along barefoot in the dawn beside slow oxen, as they plowed the potato fields—prodding them sharply in the sides, from time to time, with the goad he carried, to remind them that they couldn't take forever about the thing. When he was six, he earned material wages in the form of a sheep, for picking up all the potatoes in a six-acre field. Forty bushels was a day's stint.

He knew that when he was grown he was going to be a minister. That was in a way foreordained, for, long before he was born, his mother and father used to talk and dream about him. And always in their dreams he was to be a minister. His father died when he was too young to remember, but the dream lived on, and through every obstacle young Wallace Nutting forced his way to its consummation.

Doctor Nutting is tall and slender and kind. His hair is white, and his eyes very blue and trusting. When he is not talking to you, or showing you the rarest treasures of his wonderful collection of the old Pilgrim furniture of America, there is about him a faint air of remoteness, such as we associate with absent-minded people and dreamers.

"I was born in Rockbottom, Massachusetts," he told me. And he added, with a whimsical smile, "a hard place, perhaps, in which to begin life—but still a good foundation.

"MY FATHER was a most unusual man and an inventor. Almost coincidentally with Elias Howe, he constructed a sewing machine, which Mother used for thirty-five years. At the outbreak of the Civil War, he volunteered, and later became ill, and died before he could be brought back home. After this, Mother took my little sister and me and went to Maine to live with an uncle.

"I was not happy in my new home, for my uncle was a stern, severe man. Being a sensitive child, I was continually wounded by his harshness. I recall his sending me, when I was about five, to get some oats from a storeroom in the barn. I explained that I didn't know oats from the other small grains. He commanded me to shut up, and do as I was told. Unfortunately, I chose rye instead of the right seed. He became furiously angry and, seizing me, dragged me to the house. 'I'll treat you so that you'll never forget again,' he said. His words were prophetic, for not all these years have sufficed to blot out the memory of the punishment he inflicted that day.

"On another occasion, I was thrown

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from a wagon and my head struck on a rock. The blow dazed me for some moments; this incident appealed to my strange uncle as being excruciatingly funny. He laughed uproariously over it and made endless jokes at my expense. Even his humor, it seemed to me, was cruel, though he may not have intended it to be so. He was a gigantic creature, built on the lines of a cave man, and he had double teeth. To the eyes of an imaginative child, he was like the ogre in a story book.

"Mother was very eager for me to have a good education, and when I was twelve she sent me to the high school in Augusta. A very comical arrangement was entered into for my board.

"Uncle sold country produce to the housewives of the town, but he found some of his customers more than reluctant to pay their bills. He now hit upon the novel plan of sending me to the homes of these hopeless debtors to board out the amount due.

"As you may imagine, having a creditor billeted upon them in this high-handed manner was not at all to the liking of these thrifty people. Indeed, the element of cordiality was often conspicuously lacking in my welcome.

"The last debt that I liquidated in this very personal manner was with a boarding-house keeper. Among her lodgers were a number of exceedingly cynical folks whose statements were frightfully shocking to a serious country boy. I felt it incumbent upon me to refute them—an obligation that kept me very busy indeed. This tendency on my part to subject every assertion of others to the acid test of argument was most exasperating to my landlady, who liked her sophisticated boarders. I wore on her nerves and she earnestly desired to be rid of me. There was no way, however, for either of us to effect a transfer until I had consumed the last crumb to which her bill entitled my uncle.

"WHEN I was sixteen, I was the unfortunate object of another of my uncle's rages. This occurrence hurt me so deeply that I could no longer remain at his home. So I left and never went back there again to live. Shortly afterward my mother followed me.

"I had stopped school a year before to clerk in a store; but as soon as I had saved up enough money my longing for an education resulted in my going to Phillips Exeter Academy. Later, I worked my way through Harvard also, and formed many pleasant friendships. I received my training for the ministry at the Hartford Theological Seminary. Early in my ministerial career, I married Miss Mariet Griswold.

"I have known very brilliant ministers who devoted a great deal of their attention to church suppers and entertainments, but with me the pulpit was everything. Often I have sat up night after night trying to put into a sermon the thing that I felt in my soul, and throwing each attempt away as too mediocre. In order to do my best work, I had to become deeply stirred. For this reason, I probably put too much intensity into the effort. After every sermon, I was entirely exhausted. Whatever it amounted to, I had given to it all that I had and was.

"Even now when I preach—as I still do every now and then—I am not very much good for the next day or two. But once a preacher—always a preacher. It goes into you, and you cannot get away from it. I would rather do it than anything else on earth."

After his breakdown, as soon as he was strong enough to get about a little, Doctor Nutting

would mount his bicycle and go for a ride along the country roads. With him he took his camera, its purpose being not only to record pictures but also to prevent him from riding at quite so nervous a pace. Absorbed for many years in the spiritual welfare of people, he had forgotten, in some measure, the breath-taking beauty of the world's rebirth each spring. But now he began taking pictures of all the enchantment about him. After a little, he decided that he would try to sell some of these.

"I was compelled to earn my salt," he explained. "You can't live on beauty alone in this material world."

A woman friend suggested coloring one of these photographs, and the effect pleased him very much. He got her to do others, and placed a number of them in art shops. People liked the pictures and they sold. They were studies of familiar scenes: deep shadow-haunted pools, and misty hills; an old stone mill crumbling into ruin on the bank of the river; and apple trees, flaunting their ethereal loveliness against a mountainside, or bending to see their reflection in a brook, or lighting up a quiet country road like a tree with a thousand candles.

BECAUSE they were pictures of the kinds of places that everyone knows and loves, they had the faculty of waking old memories of spots dear to childhood and youth. Passing the windows where they were displayed, people would pause, overcome by their recollections. And then they would go in and buy them.

"In a year I sold so many," Doctor Nutting informed me, "that a few people actually accused me of leaving the ministry in order to make money. In the ensuing years, the demand for my pictures became so widespread that I employed as many as a hundred women at a time to color them. But I never had any technical training as a photographer. I was an amateur who became a professional through necessity.

"I had some amusing experiences marketing my first pictures," he related. "Once, during those early months, I took a few prints I had made to an art dealer to see if he would buy any. An art publisher chanced to be present, and after looking over the photographs he asked if I would sell him a hundred negatives every year at five dollars apiece. I readily agreed, and at once went to work.

"When I carried the first hundred to him, however, he fussed over them, picked out fifty and said, 'I'll take these. The others don't interest me.'

"'You agreed to take a hundred,' I reminded him.

"'Well, I've changed my mind; I don't want them,' he answered.

"'Then I shall consider our contract at an end,' I told him. And I packed up my plates and took them away with me.

© BY WALLACE NUTTING

One of the New England scenes in which Doctor Nutting has preserved for us the very spirit of the past

"Several days later a merchant who dealt in art objects offered me three hundred dollars for these negatives. As I was badly in need of funds, I let him have them for that sum. Some months afterward, hearing that he was about to fail, I went to see him to find out if the report was true.

"'Yes, it is,' he informed me, brusquely, 'and your negatives are partly responsible. You thought they were very fine, but they've been of no value to us. We still have them on our hands.'

"'Do you want to sell them?' I inquired.

"'Certainly I do,' he retorted impatiently; 'but who on earth will buy them?'

"'I will,' I announced; 'I'll give you exactly what you paid me for them.'

"He thought I was crazy, but he handed them over at once before I changed my mind. The following week I sold them to an art firm for six hundred dollars. Learning later that *this* company was hard up, I dropped in to inquire the cause of *their* difficulties.

"'Your negatives are the cause—that's what,' they said. 'We've done our best with them, but they won't sell.'

"I OFFERED them their original price, took the plates, and the following week sold them for fifteen hundred dollars. With this money, my wife and I went abroad to Jerusalem, hoping that the trip would improve my health. On our return, I called at once upon the publisher who had my negatives to find out how he had succeeded, for I was eager to see my pictures on the market. But it almost seemed as if that little batch of plates had a curse upon it.

"'We haven't done anything with them, and we don't intend to,' I was informed. 'We've decided that it would ruin our business with other photographers if we showed you this favoritism.'

"Once again I bought my negatives back at the price which I had received for them. Taking them home, I went over them carefully, and destroyed almost half, keeping only the best. For these selected ones, I was offered four thousand dollars the following week, but refused to accept it. I had made up my mind to put them out myself. I did this, and in the following years those rejected pictures became known to millions of households, and paid me much more than a hundred times the price for which I had first contracted to sell them.

"The bad luck experienced by the other publishers was due to the fact that they tried to put out the pictures in black and white. People like color. The work of painting these photographs must be carefully done. I have got my best results from women who never before held a brush in their hands; but they were willing to learn, were very painstaking in their efforts, and kept the background soft.

"One blossomy (*Continued on page 116*)

Nobody Graduates From Bill Hanley's University

"My school is the Universe," says this old-time cattle man, whose great store of wisdom was gained while "ridin' the range, an' readin' the Book o' the Open Sky an' Plain"

By Magner White

ONE day, in the year that Bill Hanley was nine—and that was more than fifty years ago—his father met the boy on his pony. Young Bill was riding down the road which led from the schoolhouse that served the sparsely settled Oregon valley in which the Hanleys and a few other pioneer families lived. Although it was still early in the forenoon, the boy had his books under his arm.

The elder Hanley reined in his team. "Here, young fellow," he called. "What does all this mean? Why aren't you at your place in school?"

The boy halted his pony, stood up in the stirrups, and nodded his head back in the general direction of the schoolhouse from which he had just come.

"Paw," he said, "*that's* too slow a way to git it!"

The elder Hanley's stern face softened into a smile. Fortunately, he understood the unusual temperament of this third child of his.

"All right, Bill," he said quietly. "Go on in to the ranch, and get to work."

Bill has never gone back to school. Since 1879 he has lived on ranches in eastern Oregon. The railroad reached his home town—Burns, the county seat of Harney County, Oregon—only last year.

And yet, Bill Hanley is an educated man. He is a happy man too. Yesterday, while we were having a glass of cider and a cheese sandwich on the front porch of his big ranch, which he calls the "Double O," I said to him:

"You seem to have caught up with something that most of us spend our lives in chasing. Where did you find this extraordinary spiritual calm of yours?"

He stepped off the porch, and I followed. As far as we could see in any direction, we were looking at the Hanley acres. The floor of Harney Valley was stretched out before us, losing itself against the vague outlines of distant rim rocks. The intoxicating fragrance of wild sage honey came to us on a gentle breeze.

Hanley waved his hand at the beautiful setting—at the valley, the distant hills, and the sky—and then he answered my question.

"Why, I *live* in beauty," he replied. "What I put into my heart and mind, I get right here—out of this vast universe all around us."

BILL HANLEY is called "the sage of Harney County." He looks the part of a sage. A short, sturdy figure of a man; features that have braved wind and rain and, at times, adversity, for half a century, and yet have remained kindly; over all, a crown of gray hair, thin on top, but thick and bushy around the edges and at the back. Hanley talks the language of the cow countries—a language that sometimes requires the use of blanks, dashes, and asterisks in its transcription to the printed page. Perhaps you will be surprised that I asked him this question:

"Do you ever pray?"

"Sure, I do," he replied. "This here, all around us, is my church, an' my university too. Sure, I pray." He chuckled, a characteristic habit, and added naïvely: "But I don't do it up in *prescriptions*, like some fellers does."

Bill has lived off the railroad on great cattle ranches all his life, but he has had contacts with the outside world. Indeed, his kindly hospitality, and especially his philosophy, has attracted to his fireside some of the most distinguished figures in America.

James J. Hill, the great railroad builder, was an intimate friend of Bill Hanley's, as is his son, Louis W. Hill, to-day. Carl R. Gray, president of the Union Pacific, has been a guest at Hanley's ranches. So has Irvin S. Cobb, the writer; C. E. S. Wood, the Pacific Coast artist; Ralph Budd, of the Northern Pacific—and so on.

I said just now that Bill has never gone back to school—but that isn't true. He goes back every now and then, to the University of Oregon, to high schools, to colleges. But he doesn't go as a student; he goes to make talks at graduation exercises!

"My university is the Universe," he tells the students. "So far we've never held any graduatin' exercises; an' I don't suppose we ever will. But I've learned a few things as I've gone along, ridin' the range and raisin' cattle. Here's what I've learned about books:

"Remember, young folks, th't the guy who writes a book holds out a lot on you. He don't tell you all he knows. In order to git up even with him in knowledge, you got to *go outside* o' his book and supplemint what he tells you. Th't's one thing about the Book I read—the Book o' the Open Sky an' Plain: The Guy who written it didn't hold out nothin' on me. It's all there, waitin' for me t' read it, an' understan' it an' apply it. . . ."

HANLEY is one of eastern Oregon's largest land owners. He has three ranches, the Double O—his favorite because it is still untouched by the inroads of "civilization;" the Bell A, where Mrs. Hanley has her residence in a beautiful home; and the Juntura ranch. There are between 25,000 and 35,000 acres in these three properties. Up until a few years ago,

"The World is Safe From Aristocracy"

"THE first time I was ever in New York," says Bill Hanley, veteran cowman, "the thing 'at struck me was that people run in herds in the city, jess like cattle. An' if you want to study folks in a big town, all you got to do is to find the spots where they water and nibble. Why, I hadn't et two meals in New York before I knowed everybody there—an' nobody knowed me!

"Another thought I got in New York was th't the world is safe from aristocracy. I trekked up to Brooklyn Bridge, where there's lots of youngsters, an' then way back up to the highfalutin' streets where there's one-chick families, or else they're plumb dry. An' I thought th't they ain't anything so sure an' certain as it's sure an' certain th't the future o' this country is in the hands o' the common herd."

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

Hanley was manager of 175,000 acres of ranch lands, from which cattle were taken to market by the thousands.

The Hanleys have no children; but scores of children, mostly boys, have been raised on the ranch. Many a boy has lived at the Bell A, board-free, while he went to school in Burns, four miles away.

MR. HANLEY'S father came into the Western country from Missouri with the early mining migration. His mother was a Tennessean. After the pioneer period of the mining rush, the elder Hanley invested his modest savings in a few head of stock. He and his boys herded the cattle on the Rogue River Valley, Oregon, which was then open domain. Bill was born near Jacksonville, in the Rogue River Valley, and he had three brothers and two sisters. He declined to give me the exact date of his birth.

"You know birth is continuous, an' time is only an invention o' man's," he said. "I ain't fully born yet.

"An' as to how old I am, sometimes, when I am in Portland or New York City at some club or something with a baldface shirt on, I'm registerin' up around sixty an' seventy; but when I'm off on a bench lookin' down on a herd o' purty little steers in a valley, I ain't got any age at all—I'm just contemporary.

"I never carry a watch. If I was to, I'd spend too much time lookin' at it, I suppose. Time was made to *live* in, not to *look at*."

Bill took his place as a cowboy on his father's ranches the day he left school. When he was twelve, he was made a foreman. Often, with one or two men to help him, he went on long trips with cattle to the railroad at Reno and Winnemucca, in Nevada. In this work he got a comprehensive knowledge of the stock business, and its relation to the country's economics.

Bill Hanley is one of eastern Oregon's largest landowners. He was born in the Rogue River Valley section, and has lived always on cattle ranches. As a young man, he tamed a herd of wild mountain cattle, and thus got his start as a cattle man. (Above) A glimpse of Hanley's favorite ranch, the "Double O"

When he was seventeen, his father lent him two hundred head of cattle and started him off with an elder brother, who also had two hundred head, to find a range of his own.

"FATHER rode with us for a while when we left the home range," Hanley said to me in one of our chats at the Double O ranch-house. "When he started to leave us, he said, 'Boys, keep on goin' until you find a big country. Remember, you can't get any bigger than the country you adopt. Never min' worryin' about transportation; the timber in Oregon is goin' to bring the transportation. Some day this country will be holdin' the last stands o' timber.'

"Now, it's been a long time ago since Father said th't, but he had vision. Dreamers, they sometimes called those old pioneers who saw ahead. Dreamers? Mebbe so, but not the kind th't jess set still an' let the other fellow sweat to make their visions come true!

"DID you ever stop to think," he went on earnestly, "th't ever' other livin' thing in the world excep' man himself has got its purpose already mapped out for it? But when God made man, he left the matter o' decidin' what his purpose in life would be *entirely up to the individual man.* Man is the only animal th't has that privilege.

"When those old Middle-Western plainsmen decided th't their purpose was to pioneer a new country, they ruled out ever' other consideration. And when they done *that*, they could no more resist pushin' on west ag'inst ever' kind of discomfort you can think of, than I c'n resist goin' to the window of the Bell A ranch office when the boys here drive a bunch o' purty cows by.

"An' havin' ruled out all other considerations, the old plainsmen had clear minds to look ahead with. They didn't stop on the way an' try to raise cotton, they stuck to what they was doin'.

"An' th't's when the visions comes to you—when you're stickin' to your job, an' lookin' ahead with a mind th't ain't focused on anything else. The visions is *always there*, but you can't see them 'less you're lookin' where they are at.

"You take most people th't is unhappy, an' it's usually because they didn't pick out a purpose and stick to it. Or somebody else whose life had a bearin' on theirn failed to pick out a purpose.

"A man who fails to pick out some purpose an' follow it through c'n make his whole family (*Continued on page 147*)

"Treasures!"

Jen Culliton helps Ollie to find them

By Nelia Gardner White

ILLUSTRATED BY HERMAN PFEIFER

OLLIE CREWE lay on the grass beneath the Pound Sweet tree. He felt lazy, but through his laziness he seemed to see everything with a sharp new vision. Overnight, the red new leaves of the maples had become soft green and the sweeping branches of the great elm outside his bedroom window made delicate green patterns against the May sky. The azalea bush out by the well—Aunt Jen said she and Uncle Steve had planted it the first spring after they were married—was a big pink flare. Ollie didn't remember ever thinking much about spring before. He wondered why he was thinking about it now.

Yesterday he had gone over to the field, where Zeb, the hired man, had been plowing, and the smell of the plowed earth had seemed new to him. It had made him remember one spring when he was a very little boy, and his mother had let him dig a place with a trowel out by the back fence in the city. He had put the seeds in himself. And one other spring, the first one here with Aunt Jen after his mother died—Zeb had let him drive the horses in from the field. It was a warm day and the horses' flanks glistened with moisture. The horses had seemed very big, and Ollie very powerful and important.

Down here in the orchard it was the same. The smell of the apple blossoms made him think of things he had thought quite forgotten. He puzzled about it with boy thoughts. Maybe, when you turned sod over, it let out old springs. Maybe the sap in the trees kept things in it, and every year let them out in blossoms. Ollie flushed, all alone there—that was a silly idea.

He'd always thought poetry foolish. What was the sense of poetry, when you could play football, or Indian massacre, or knights conquering dragons? But only this week in school, Leo Gates, the schoolteacher, had read them a piece called "When Lilacs Last in the Dooryard Bloomed." It was about Lincoln, by somebody called Walt Whitman. Leo Gates had looked different as he'd read it. It had hurt Ollie so that once, in a terrible agony of shame, he had looked out of the window so that no one could see his eyes. He had taken the book off Mr. Gates's desk at recess time and found the place. He couldn't get that thing about the thrush out of his head. "Sing on there in the swamp, O singer, bashful and tender—" He wished he hadn't read it again. It had seemed to hurt Leo Gates to read it, too. Queer! Peter, his little blind brother, had always been after Ollie to read verses to him, and he'd laughed at Peter, and had always read things in a silly singsong. He wished now that he hadn't.

He wondered why you always felt restless in the spring. . . . He couldn't stand it here much longer. He and Joe, maybe, would beat it off as soon as school was out.

He pulled the head off a violet, and then jerked up on an elbow a little resentfully. Joe, his twin, and Molly Parsons were coming across the field. Ollie hated girls. But there was one thing about Molly—she never paid any attention whether you liked her or didn't. They were laughing about something. They dropped down on the grass beside Ollie.

"Where's Peter?" Ollie asked.

"Oh—up in the hammock!"

A train rumbled along far down the slope. The sound intensified that restlessness in Ollie. He felt it like a physical ache.

"Look—it's Santa Fé!" Joe said lazily.

"'Tis not!" contradicted Molly. "It's San Francisco! *San Francisco-Northern Pacific-Canadian Grand Central-Shamut-Rio Grande—*"

OLLIE heard her voice as a kind of chanting. She was lifted up on her knees in the grass, one hand shading her eyes. She was like a boy, with her short hair and khaki bloomers. Even she seemed different to Ollie. He'd always thought her a bother, but now it seemed kind of nice to have her there. He wished she would go on with her singsong from the box cars.

"Golly!" he raised himself up farther, jerked backward across the green grass till his back was against the Pound Sweet tree. "Golly! I'm going to go to all of those places one of these days!"

"How?" asked Molly the practical.

"Walk—bum my way! You'd get all kinds of adventure. Don't tell, but maybe Joe and I'll beat it out as soon as school is over."

A train rumbled

They had talked of it vaguely. Ollie felt a surprise at himself for being suddenly sure of it.

"Why, Ollie Crewe! You will not! You wouldn't dare!"

"I would so! I hate school—Aunt Jen thinks we'll go off to college! Not me! I'm going to hop a freight and get off to Santa Fé—honest—soon as school is out."

"You wouldn't be anything but a tramp!"

"Well, maybe. Maybe I'd be like Captain Kidd or Daniel Boone or somebody. There's still treasures around—lots down in Mexico and South America!"

"Treasures! Silly!" scoffed Molly.

Molly's dark, thin face, with eyes a little shy above the unafraid mouth and eager lifted chin, came between Ollie and the blue above apple-blossom pink. He didn't want to talk to her, but he found himself saying things—queer things, that made him uncomfortable to know were inside him.

"Well, there are! You're a silly! Wait till I go—I'll send you home a—a—"

Molly laughed clearly. When she laughed, she put her head back. Her throat looked very white beneath the tan of her face.

"Yes—a what? I'd rather stay here and go to college and play football, if I were you. Why, what do you want to be?"

"*Be? Be?* I don't want to be anything—just myself! Why in the dickens do you have to be something?"

"Well, why in the dickens shouldn't you? Everybody does."

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

along far down the slope. The sound intensified that restlessness in Ollie

"Yes—I know it—but I won't!" Inside, Ollie felt his heart pounding as it used to nights when he was afraid of the dark; but he kept on: "I don't know why you have to be like everybody else! If you're a doctor, you have to fuss over other folks' pains from morning till night. If you're a lawyer, you have to fight for folks you know are crooks. Or, if you work in a store or a factory, somebody's always bossing you. I just want to be myself, not be under anybody's thumb! If I went to college, I'd do some of those things and I'd hate it!"

Ollie saw Joe's slow grin, Molly's suddenly serious, dark little face. He wished Joe would go up to the house.

"That doesn't sound sensible," Molly said slowly; "but I don't just know why! I know what you mean—that feeling. When it's spring I feel like that too, and I don't even want to help do the dishes, or go down after rhubarb, or anything. But I feel different in the fall. Then I want to be a—a singer—or something like that, and I'd just as soon work terribly hard to get to be it!"

Molly, also, was sitting now with her back to a tree, her brown arms about her knees. She didn't look like a boy any more.

UP THROUGH the orchard Ollie saw his Aunt Jen coming. She had on a blue gingham dress, turned in at the neck as a man turns in a shirt. Aunt Jen looked different to him too. He had always thought her homely—kind and good enough—but too big. Homely, that was the word that had always been in his mind about her. He shut his eyes against her, and then flushed a little and looked sharply at Joe to see if Joe had seen him do it.

Aunt Jen looked beautiful—yes, *beautiful* was the surprising word that came into his mind. Her big figure in its clean blue came along so easily under the apple trees. Ollie had always thought she combed her hair queerly, but it didn't seem so now. It would have looked strange, curled and fluffed out. Ollie thought of a picture in a book of myths at school. It was of a Saxon king. Aunt Jen looked like that king. Then he saw that she had a letter in her hand and her kind eyes were troubled.

"Boys," she said abruptly, "I've just had a letter from your father!"

Ollie scowled a little. His father never wrote much—just sent a little money now and then. Aunt Jen ignored Molly. She always treated her like one of the family anyway.

"He wants one of you to come live with him, soon as school is out. I don't deny it kind of knocks me all in a heap—I've got used to you around, and you're a big help too; but he's lonesome, and I guess it's no more than right for one of you to go to be with him for a spell."

Her voice was brusque and deep, as always, but Ollie thought suddenly of his mother. After one of them had disappointed her, her voice used to be hurt like that. He hadn't thought much before about whether Aunt Jen liked them or not. He knew now that she did, a lot.

"I don't want to be the one to say which'll go," he heard her saying. "It'll have to be one of you, of course—he couldn't manage about Peter. I guess you boys'll have to decide between you."

Ollie felt Aunt Jen's shrewd blue eyes upon him. He didn't want to look at her, but he had to.

"She wants *me* to stay here!" he thought, with surprised, disturbing certainty.

THEN he saw Aunt Jen going back up through the orchard. Her shoulders looked so broad and strong. Once, when he'd fallen out of a tree, she had taken him in her arms as if he were little. He'd been eleven. He remembered the sure strength of her, the strange comfort of putting his cheek against her. He flushed at remembering it. Then he saw Joe's eyes, sullen, defiant.

"I sha'n't go back!" Joe said.

Molly looked startled.

"I should think you'd want to live with your father!" she said.

Both boys were silent. Molly grew red under her tan. Ollie wanted to tell her things, about how his father had always left them alone; but the words seemed pushed back into him. Molly scrambled to her feet.

"I've got to go help with supper," she said. The boys sat still and let her go. Ollie watched her white middy till she was far across the fields. Once an end of red tie blew across her shoulder.

That night Ollie lay awake a long time. The moonlight made a path across the floor to the bed. The elm branches traced

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Listen, Joe; let's go away now. We'll go down by the water tower and hitch a freight when it stops to get water!"

a quivering design across the path. Joe kept his back turned. He was asleep. But Ollie could not sleep. He thought about his father. His father was thin and sober. Ollie remembered once when he'd taken them to the Zoo. They'd gone about so silently. When his mother went, they would get so excited about the baby deer and the pelicans. Ollie couldn't remember his father ever talking to them.

HE THOUGHT about Aunt Jen. She was a queer woman—but beautiful; yes (sleep hovered)—yes, she was very beautiful. He wished Molly would sing off some more names of cars—it sounded like magic—the pass words they'd fixed up for getting into caves. Suddenly he sat up with a wide-awake jerk. He shook Joe.

"Joe!" he said.

"Huh?" said Joe, quite wide awake. That almost frightened Ollie—to know Joe had been lying there wide awake; it was almost as if Joe had been listening to his thoughts.

"Listen—let's go away now. Shall we? We'll go down by the water tank and hitch a freight when it stops to get water! I sha'n't go back to the city—get stuck in an office! I'm going to get out and see the world. I don't want to be bossed by anybody!"

"Now—to-night?" Joe whispered.

"Next week. Will you?"

"Sure!"

Ollie lay down again. There seemed no more to say. He wondered why he hadn't said, "Yes—now—*to-night!*" Well, it was Peter's birthday next Sunday. Peter always counted a lot on birthdays. After a long time, he went to sleep.

Ollie couldn't look directly at Jen in the next days. But every time a train went rumbling past far away, he felt that queer inner rumbling, as if he were being drawn along on the train, and couldn't help himself. Once he dreamed that, and found himself wanting to drop off the train and wait for his father, running along behind. But he didn't dare let go. In the dream, though, his father looked big and powerful—like Aunt Jen.

Out in a hole in an apple tree, Ollie had a rabbit's foot and a stone that was round as a compass circle. The stone had a hole worn in the middle of it. There was a key there—a strange brass key that Zeb had turned up in plowing. There were three porcupine quills in a little box that used to hold pencil leads; a big green glassy, clear as lake water; a willow whistle with his name scratched on it with a pin. One day Ollie went out to the apple tree, and put all the things inside a handkerchief and stuffed them into his pocket.

On Friday he asked Professor Gates if he could borrow that book for over Sunday.

"I'll write and have Molly take it back," he thought.

Professor Gates looked at Ollie curiously over his glasses.

"Well," he hesitated, "that seems a little mature for you, Ollie! Why did you want it?"

"Oh," Ollie felt very embarrassed, "never mind! I just kind of thought I'd look over that poem you read us." He turned away abruptly, as if poems were really of small matter to him. But Leo Gates called him back.

"Here—take it!" he said. "Only, don't try to understand it all."

Ollie put it between his other books, so the boys wouldn't notice.

ANOTHER letter from his father had come.

"He thinks he'll come up here in about two weeks or so, and one of you can go along back with him," Jen said. "You haven't decided which one's going, have you?" She looked from one to the other sharply.

Ollie shook his head, and went at once out on the back porch, where he began to whistle. His Aunt Jen had been crying and the knowledge disturbed him, made him feel guilty, though about what he did not know. They had decided now on Sunday—Sunday night. There was a fast freight went through at eleven. It always stopped at the water tower. Ollie seemed to swell inside, just thinking about it. The whole world to see—no one to hold him back! Maybe they would get on a steamer after a while, a cattle boat, maybe, and go across the ocean.

Peter came out and sat down on the top step, his chin in his palms, in a lonely little posture peculiar to him; he stared down toward the orchard as if he were seeing it. Ollie felt angry at Peter, just for sitting there like that, and he went down the steps and away from Peter toward the barn. But at the barn door he looked back, and there was Peter sitting there in just the same attitude, his wistful mouth drooping, his curly mop of dark hair making him look like a picture out of a book.

"He hasn't any business looking like that!" Ollie thought, and then went back up to the house, sat down on the step below Peter.

"I'll get you a pail of pollywogs," he said. Peter's face grew boyish, eager, happy. But Ollie, if he hadn't been fifteen, would have thrown himself on the grass and cried.

THEN it was Sunday—all gold and blue. Ollie woke to the sound of the orioles. He shut his eyes and tried to sleep again. But he tingled all over. *This was the day!* To-night they were going. Mexico—ranches—mountains—cattle boats—and *no one to boss!* It seemed to Ollie he could not bear it another day unless he could be his own master. Well, he wouldn't have to! When he dressed for Sunday-school, he grinned at himself in the glass. Next Sunday he'd be, maybe, a thousand miles away.

When he went down-stairs Aunt Jen was standing by the table in her black silk. She looked up at him, a puzzled line between her eyes.

"I've been looking at this book you brought along from school," she said. "Couldn't think at first where I'd heard that name before—it's just come to me! Your grandpa used to know this Walt Whitman—did you know that?"

Ollie found a queer lump of excitement going up and down in his throat, and he could not answer.

"He was a nurse in a hospital where your grandpa was sick, in war days. He was always saying poetry—or your grandpa said it was that. We used to laugh at him—it didn't have any rhyme or anything. But I been looking this over, and I guess Grandpa was right. It does have something about it, doesn't it? Toward the last your grandpa was kind of childish, and he told about war days over and over. He liked to talk about this Walt Whitman. There was one line I can remember yet: 'I will plant companionship thick as trees

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

along all the rivers of America, and along the shores of the Great Lakes, and all over the prairies.' We'd laugh at it, but it *did* always sound kind of grand to me, like the Gettysburg speech we had to learn in school!"

Ollie found his hand going out to touch his Aunt Jen; then it dropped back to his side. He thought again of the Saxon king whose picture Aunt Jen sometimes looked like. He had never before seen his Aunt Jen reading, in all the four years he had been there. Seemed queer she'd even know how to say a thing like that. He thought, not of the Gettysburg speech itself, but of Abraham Lincoln, as he looked at her.

"Well, shall we get along to church?" he asked embarrassedly.

"Yes. I guess it's time. Joe ready?"

IN THE afternoon, Ollie took Peter up on the hill after mountain laurel. Joe didn't want to go, and Ollie somehow felt glad.

"Kind of thought I'd go down and see Tub Pierce," Joe said. Ollie heard a note in Joe's voice that frightened him. Was Joe backing out?

He took the book from school along. He had a notion of making up to Peter for all the times he had read poems to him in that silly singsong. They had to go slowly, on account of Peter. Ollie kept Peter's hand tight in his. When they came to the little creek, he said:

"Hang on, old-timer. I'll carry you over."

Peter wasn't very heavy, he thought. He kept thinking about it, all the way up across the hillside. He tried to push the thought away, but it stuck, as flies did in berry time. They came to the woods.

"Let's lie down and rest a while!" Peter's voice was tired.

"Sure!" said Ollie. They stretched out in a spot that was sunny. Peter loved the sun. He lay very still and let it beat down on his face and on his thin little body. He didn't look eleven. Ollie lay beside him. The clouds went billowing past like great ships. It was very quiet there —just the birds. Far below were the roofs of the town. Ollie wished he could sleep there a while. When Peter was little he used to play a game with him—the magic carpet game. He suddenly wanted to play it now. He swallowed hard and slid a little nearer in the grass so that his elbow touched Peter.

"Here we go a-sailing!" he said suddenly. Peter lay very still, but about his mouth trembled a small, warm smile. "All on? Look, there's the Methodist steeple! See the creek? Gosh, aren't the willows pretty, all yellow-green like that? There's a bluebird! Wow—we almost bumped into a cloud! Hang on—we're terrible high! See the hill down there? That's the laurel that's so pink—and there's the white birches! See them bend under the wind! Doesn't it feel great to have the wind in your face? Isn't it warm? Look how the creek twists around down on the flats! There's Aunt Jen's! See the barn? Here comes a flock of birds! Bet they're from the South—let's be the leader! Here we go—hang on, Peter, hang on! Feel that wind!"

Peter was sitting up now, crosslegged, his face uplifted to the blue sky. There was a look in his face as if he really were leading a thousand birds across the blue, against the warm wind. Ollie pulled his elbow away so that it did not touch Peter. He couldn't bear to feel like this—so tight inside. "Steady, now—she's coming down! Gently, old boy! Right there in front of the birches! Steady! There!" He scrambled to his feet. You would suddenly have known them to be brothers. "Come on—let's get some laurel. A bushel of it! It's better on up. Here—now we're 'most up the mountain! Gee, that's a deep gully! You sit here on this log. Whistle, so I can find the place all right. I'll bring the laurel here!"

He began whistling himself, unsteadily, striding off through the trees. He paused presently—faint but clear came Peter's whistle. Ollie threw back his head suddenly, went back.

"'Most forgot!" he said. "Brought something along to read. Don't know—maybe you won't understand it—I'll read it, anyhow. It's about Lincoln when he died—and the funeral train going across the country and all. His friend wrote it—"

He read it, in a voice which grew curiously like Leo Gates's in that self-forgetful moment before his class—"When Lilacs Last in the Dooryard Bloomed." He was not the Ollie Crewe who put toads in the teacher's desk, not the Ollie Crewe who was going to run off to-night. He knew it as he read, and it disturbed him, bewildered him, crept into his voice like a minor, groping chant. He became aware of tears running down Peter's blind face. Something stung down his own face and he closed the book abruptly.

"Now sit right still, old scout! I'll be back with the laurel in a jiffy!"

He was off again. A few rods away he paused. There it was, clear and sweet, that childish whistle. Ollie went on. Something seemed to pull him back, and he tried to jerk away from it, escape it by running. *To-night, at eleven down by the water tank.* There was laurel, great sweet pink masses of it. He scrambled after it, began to break it off. Gee, it *was* nice out in the woods this time of year! Peter's whistle came. Ollie thought of the thrush of the poem—"singer bashful and tender."

He thrust on toward a brighter burst of fragrant pinkness. His arms were full, but he leaned against a tree for a long moment, staring down through the woods to the valley below. Aunt Jen's house, the red barn—they looked so beautiful to-day—and yet, they were just a regular farm like all the rest! He lifted his head—where was the whistle? He turned swiftly, whistled loudly, waited for an answer.

Ollie went as carefully as he could down to the water. . . . Peter lay limp across his shoulder

He strode down through the woods; he began to call in a sudden panic of fear, "Peter—oh, Peter!"

He still clung to the laurel as he ran. Peter did not answer. He came to the log—looked this way and that to be sure it was the same place. Peter was gone. Ollie dropped the laurel.

"Peter! *Peter!*" (*Continued on page 143*)

The Best Story I Ever Found In Real Life

By Leroy Scott

IT CHANCED that all of us were writing people. During the dinner, the talk had touched lightly upon a score of themes, but with the coffee and cigarettes and the leisure that came with them our scattered talk had drifted to, and then focused upon, one subject—heart stories which we had never written. True stories that, perhaps because of too much coincidence, would be utterly incredible if related as fiction. Some dozen of these heart stories were told. At the end it was our opinion that such stories, if ever told, would gain credence only if told as the truth, and if granted the license for strangeness that is permitted truth.

My contribution to the evening's informal symposium was the true story of The Little Old Lady From the Poorhouse.

Some twenty-five years ago I was a cub reporter on the Chicago "Journal." Finley Peter Dunne was the editor, and Gilson Gardner, since noted among Washington correspondents, was the city editor. They had given me the job of covering the Harrison Street Police Station, for the reason that stories not valuable as strict news but with a strong human interest in them were forever turning up there, and Dunne and Gardner had discovered that I had a knack of digging up and putting some kind of throb into the human-interest stories.

Since this little story had the Harrison Street Police Station—it no longer exists—as its atmosphere and stage setting, it and its neighborhood require a few words of description. That grimy brick building, with its rows of cells in the basement, its police court, its women's annex, was the center of the most vicious district that has existed in any American city in the past fifty years. I have known San Francisco's Barbary Coast, New York's Bowery in its heyday of vice, and corresponding regions of Paris, Berlin, and other continental cities; but nowhere have I seen such hideous degradation as that which, years ago, all but naked, crowded cajolingly on every doorway and window in Customhouse Place and the adjoining streets.

As I had been on daily duty at the Harrison Street Station for many months, the officials were all my friends, and I had the free run of the place.

One morning when the cells had vomited their night's taking of human offal up into the court-room—thieves, thugs, drunks, brawlers, knife-fighters and gun-fighters, heavy-eyed wrecks from raided opium dens, those hideous Loreleis from Customhouse Place—I was at the magistrate's elbow while he meted out his justice at the rate of about one minute per head. The magistrate liked to have me beside him; he found a humorous satisfaction in referring some of his cases to me for decision.

The line of dregs filed steadily by us, usually saying little in response to the arresting officer's charges and dully accepting the magistrate's decree. Justice clicked on, as if regulated by a metronome. Then, after half a dozen of sleepy, unwashed, tinseled houris of Customhouse Place, as alluring in the dirty morning light of the court-room as the last leavings of sin, a bent little woman was led before the bar of justice.

I fairly gasped at the contrast. She was perhaps seventy-five. Her hair was snow white; on it was a little black bonnet, about her shoulders was a gray shawl—she was somehow clean, although she had spent the night locked in a big cell with these unwashed sisters of the night—and she greeted the judge with a smile that to me seemed an irradiation from the heart.

"What's the charge, Officer?" asked the magistrate.

"Your Honor," replied the policeman, "I picked her up drunk yesterday afternoon over on State Street. She was staggering drunk."

"Martha Hollingsworth"—the magistrate had glanced at his docket to get the name—"what have you to say to the officer's charge?"

"I wasn't drunk, Your Honor. The officer made a mistake—though I'm sure he thought I was drunk." The voice was as gentle and simple as her smile; here was that marvel of marvels in a police-court, a prisoner interceding in behalf of the man who had arrested her. "I've never had a drink in my life, Your Honor.

"It was like this, Your Honor. I live out at the Cook County Infirmary"—which was the euphuism by which Cook County and Chicago designated the poorhouse. "They let us come into Chicago once in a while to sell the fancywork we make. That's why I was in town yesterday—to sell my fancywork. I'd just sold the last of it and was going to start back to the infirmary when the officer arrested me. If I seemed to stagger, it was because I had forgotten to eat anything all day, and I was pretty weak. And then I'd forgotten to bring my specs, and I don't see very well without my specs, and perhaps I did stumble quite a lot. That's all, Your Honor."

ALREADY I was in love with the little old woman who had spent the night in a vile cell beneath me, and yet who was clean, and could smile.

Behind his hand the magistrate whispered to me, "How about her?"

Behind my hand I whispered back, "Hold the case for investigation, and let me do the investigating."

"All right." Then, aloud, "Case held for investigation."

I saw there could be no story for me among what remained of that morning's grist of drunken and drugged derelicts, so I accompanied my charge to the Women's Annex, which was a separate building adjoining the police station. The matron was another good friend of mine. I telephoned the Cook County poorhouse; my little old lady had been telling the truth—even to the detail that they had discovered she had come to the city without her spectacles.

Then I had a talk with my charge. Soon she was telling me in her simple, winning, smiling way about the thing that was nearest her heart. That was her boy—her wonderful Jimmie—her one child whom she had not seen in more than thirty years.

She and her husband and Jimmie had lived in a small town in western New York. Jimmie had always been a good boy, and he had always loved her. Jimmie had always been crazy about horses. When he was eighteen he had slipped over to the county seat and spent the entire week at the county fair watching the races. Not that he bet. He just wanted to see these fine horses in action on the track, see how they were rubbed down, fed, bedded.

WHEN Jimmie came back from his week at the fair there was a terrible scene with his father, for his father was very religious, and he believed that race horses were a sin. In consequence of that quarrel, Jimmie had run away. There had followed a year of silence. Then a letter had come to her from Jimmie; he was in Chicago, and had a job as hostler in a stable of fine horses. Within a few weeks after her Jimmie's one letter had come, she and her husband moved to another town, leaving no address behind them of their new home. A few weeks later her husband had died.

She had no other relatives, and so she decided to go to Chicago to make a home for Jimmie. She told none of the strangers among whom she lived of her purpose, and she did not write Jimmie of her intention. She wanted to surprise him. Anyway, she never was much of a hand for writing letters.

Just as she was ready to start, the great fire had swept away the city. When she reached Chicago, she found that Jimmie's address no longer existed, that the inhabitants were scattered as the sparks had scattered. Nevertheless, amid that ruin, she started out to try to find her Jimmie. Presently her little money gave out, and she had to go to work. But, working, she kept on searching the new Chicago that was rising from the ashes, for her Jimmie.

For more than twenty-five years she kept up her ceaseless search for her son, never losing hope. Then, her days of self-

Digitized by Google

UNIVERSITY OF CALIFORNIA

respecting hard toil all behind her, she had finally been carried away to the poorhouse. From a poorhouse one cannot very well conduct a search for a missing son; but every time she was allowed to come to Chicago to sell her fancywork, she eagerly scanned the hurrying faces for a face that might be Jimmie's.

That was my little old lady's story. It was all Jimmie; her beloved Jimmie, of whom she had lost all trace in the great Chicago fire.

"I have only one wish, and that is that I could see my Jimmie just once before I die," she ended with a wistful smile. "Then I wouldn't mind dying."

THAT one wish of my little old woman stirred a wild desire in me. I hurried down into the courtroom, still busy with its dull grind of drab justice, and whispered a brief summary of my findings to the magistrate. Against Mrs. Hollingsworth's name on his docket he wrote "Discharged."

"But I don't want her discharged," I protested. "I'd like to have her held until we can try to locate her son."

"Then I'll discharge her in your custody. She goes free when you say so. About your crazy idea of finding that son, better get Captain Denny to help you."

I went into the office of Captain Denny, who was in charge of the Harrison Street Station. He was another good friend. To him I told the story of the little old lady, of Jimmie, and of my desire to trace the boy.

Captain Denny stared at me in amazement: "Son, don't you realize that if that boy was eighteen in the late sixties, he's fifty or more today? Very likely he's dead. But if he's alive, and if he was a hostler at eighteen—say, don't you know what hostlers turn out to be? Drunken bums, some of them! Even if we could find the son—and it's a million-to-one shot we can't—you want to bring before that mother, who's got an idealized picture of her boy, a grimy, bent, blear-eyed, gray-haired, drunken bum, and introduce him to her as her son?"

"Anyhow, I'd like to have a try at finding that son," I persisted.

Captain Denny meditated for a long space. "Ed Splain is our best bet for help. He knows more hostlers and stable men than any other man in Chicago. Been mighty good to his own help, and has been a good friend to a lot of men who have never worked for him. Know Ed Splain?"

Of course I knew of Ed Splain. Almost every person in Chicago did. In that city of live stock, he was the most prominent breeder of blooded horses, and was reputed to be worth his millions. And he was respected in every way by everyone.

"We're pretty good friends," continued Captain Denny in a genial grumble, "and since you're bug-house about finding that boy, I guess I might as well start off with Ed Splain—though he may be a thousand miles from this town."

He reached for his 'phone. Fortune was with him, and in a few moments he was talking to Ed Splain himself. Captain Denny briefly told of the old lady up in the Women's Annex, told of Jimmie Hollingsworth, who had run away from home when eighteen, told of the mother's losing trace of her son in the Chicago fire, and told of the mother's long search. Did Ed Splain know of a broken-down hostler, aged about fifty, working in any of the stables or stock farms around Chicago?

CAPTAIN DENNY listened for a moment, then hung up. "I told you Ed Splain was good to all the old boys who work around horses. He's coming straight over here to look into that case himself."

I hurried back to the Annex and my little old lady. Within an hour the matron called me and introduced me to Mr. Splain. He was a tall, deep-chested man of perhaps fifty. There was nothing "sporty" or typically "horsy" in his appearance. He looked the man of solid substance and real achievement: proud, self-contained, reticent, with his own high code of life.

This floor of the Annex was one large room. The rear was portioned off by bars into a detention pen, and in this moped and sulked and glowered some dozen tousled sirens from Customhouse Place. He shivered at sight of them, then followed me to the front of the room. I introduced Mrs. Hollingsworth to Mr. Splain, and the three of us sat down.

At my suggestion my little old lady started to retell her story. But before her story had gone far Mr. Splain interrupted it with questions about the lost Jimmie's early life. My little lady answered every question fully, giving intimate family details. Particularly did she go into details over Jimmie's week-stay at the county fair, the quarrel with his father, his running away from home.

THEN I began to note a change that had come upon Ed Splain. His self-contained face was now gray granite; its hardness was that of a clamping self-control. The big hands were gripping each other with the straining tensity of wrestlers' grips.

The truth went through me with the stupefying and thrilling awe such as must have benumbed the beholders of the miracles. This was Jimmie! Those two facing each other were mother and son—after thirty years of separation, meeting at last in the country's most infamous police station! And the drunken bum of a hostler whom Captain Denny had been afraid to discover was the great Ed Splain!

And the chance, the coincidences, the miracle that had brought about this meeting! My little old lady coming to town to sell her fancywork—the blunder of a stupid policeman in arresting her for drunkenness—her catching my eye as I sat beside the magistrate—Captain Denny's telephone call, which by one chance in a million was the right telephone call!

Though Ed Splain knew the truth, I saw that the mother, who couldn't see well without her specs, had no idea that this handsome big stranger she was talking to was her lost Jimmie.

She went on with her story; but I heard little more of it. My mind was trying to supply and explain that silent son's half of the story. I knew that intention on his part had had no share in this separation. As to the change in name, the reason seemed simple. Perhaps on arriving in Chicago he had changed his name out of anger at his father, who believed blooded horses were lures of the devil. Or perhaps he had changed it (*Continued on page 142*)

The Most Remarkable Coincidence I Ever Heard Of

Prize Contest Announcement

THE story told in the accompanying article is true, except for the names. But it involves such a remarkable coincidence that the author, Mr. Scott, has never dared use it in fiction, for fear that no reader would believe it! That weather-beaten platitude, "Truth is stranger than fiction," is admirably illustrated in this story of "The Little Old Lady From the Poorhouse." The author says it is the best story he ever ran across in real life—and the most unusual. Can you match it with some coincidence that you have heard of, or have been a party to? Even if you cannot quite equal this wonderful happening, very likely you can relate one that deserves to be classed as extraordinary. In this contest THE AMERICAN MAGAZINE invites you to relate your best story based upon a coincidence. Everyone knows such a story; everyone is fond of telling of strange happenings. Here is *your* chance.

For the best letters of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes January 20th. Winning letters will appear in the April issue.

Address Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

The Courage Of The Wild

By Archibald Rutledge

ILLUSTRATED BY CHARLES LIVINGSTON BULL

WHAT first made me notice this wild mother was the gentle swaying of a green fern that drooped over the old trail that I was following up the slopes of the Tuscaroras. It was late in June. The air was calm. The sky had the deep halcyon blue of early summer. The mountain woods were full of wild fragrance, wild beauty, wild stillness. I had been listening for the singing of birds; but only a warbling vireo and a towhee were heard. Then I saw this fern sway. Next I heard the faintest of elfin pipings, hushed almost as soon as heard.

Stepping forward, I flushed a mother ruffed grouse, a beautiful bird; indeed, I think there is no finer in the whole world. Ordinarily, such a bird will be gone in flight far through the thicket, or will rocket over the tree tops. Only the surest shot can kill it in the brush. But this bird was a mother. Forgotten were her dreadful feats of man; at least, they were overcome by love.

The Bible, I find, knows exactly what it is talking about: "Perfect love casteth out fear." Assuredly. Here was the wildest of birds, the very essence of timidity and wariness and intelligent elusion, about to stand me at bay. She whirred to the top of a tiny hemlock, four feet from the ground. She spread her wings, lowered her head, made curious clucking, menacing sounds. She was threatening me.

I took a step forward, knowing well that her babies were near. From the shelter of the grass, the old leaves, the ferns, they ran, shadowy little things; tiny chicks of the mountain wilderness; balls of down enclosing palpitant hearts. They vanished almost as soon as seen. My chance to see them, close as I was, decidedly was not good. As soon as the first one disclosed itself, the wild mother flew straight at my head. With curious foreshortened speed she circled me, buffeting my coat with pitiful strength—but with superb courage. A dozen times I could have reached out and caught her. Well she knew her danger. But she was willing deliberately to jeopard her life for the safety of her little ones. The true heart of the Mother was there: wild, but the genuine maternal heart, ready, eager, to sacrifice all for her little ones.

WE RATHER expect this conduct from domestic things that have only a half-fear of man; and we expect it from the greater members of the animal kingdom that are often more than sufficiently strong to cope with man. But the appeal of such actions comes most sharply when we find a helpless and most sensitive mother valiantly throwing herself between death and her children.

An incident of this kind makes us ask ourselves the question: Are wild things really timid? Of course they are notoriously afraid of man, and they have grim cause to be. Yet I believe they have great courage, often sublime courage. I think some careful discrimination, however, is necessary just here. Some animals are apparently born with more courage than others. It would be a great mistake to attribute the same degree of dauntlessness to all alike. I know, though, from actual observation, that many animals are coolly courageous when they are facing

I saw the buck foreshorten his neck so that it bulged, and his antlers were lowered artfully, so that the tips of their keen points looked straight into the bull's eyes

UNIVERSITY OF CALIFORNIA

some situation that can be coped with.

That is about all that can be said for man. We human beings are likely to get frantic when some monstrous force, like an earthquake, comes along. As a rule, when men know that courage is futile, they will make no effort to display it. To be definite: What man on earth, unarmed, will attack the African lion on his native veldt? There might be such a man; yet we should call him foolhardy rather than brave, unless, perchance, he might be advancing to try to rescue a human victim of the lion. When a man goes after lions, he takes a rifle that will kill at long range. Even the savage carries his assagai.

When we think of the courage of wild things, we have to remember that they have no artificial weapons. They attack, and they defend themselves, with the weapons that the Creator gave. We bring against them whole arsenals of death and destruction. When we deal with wild things we hit below the belt. It is as if in a football game one side should arm itself with poleaxes and cleavers. Under those conditions, could we blame the other team for showing a rather retiring disposition?

For a good many years, I have been watching wild things in their native haunts, and it has not appeared to me that they lacked in the great quality of courage. I remember, for example, the behavior of a stag on Murphy's Island, South Carolina. Many deer live there, and likewise many wild cattle, the descendants of a small herd liberated in the wild jungles of that solitary place nearly a hundred years ago. I was in the edge of a dense red-cedar grove watching a small herd of deer coming out on the marsh to feed, late in the afternoon. A splendid buck led them. A little way off I saw a black bull, a huge creature with a massive neck, and short, sharp, polished horns. His mien was decidedly menacing. One of the does, for some reason or other, was limping slightly; she lagged behind the others, and the buck appeared to be shielding her.

FOR some reason best known to himself, but probably merely because of sheer truculence, the bull lowered his head, lolling it from side to side, rolled his eyes, bellowed softly but terribly, and advanced toward the crippled deer. It frequently happens, among wild things, especially with surly old males, that one will attack the other without provocation, or merely because an advantage seems to be offered. I saw the bull start toward the doe. What his purpose was, I cannot be sure; but certainly his approach was not Chesterfieldian. In the matter of reassurement it left much to be desired.

The deer saw the monster coming. The stag might have weighed a hundred and fifty pounds, possibly a little more. The bull weighed nearly a ton. Yet the buck turned, lifted his proud antlered head, dipped forward his ears, opened wide his black nostrils. The bull, mumbling ferociously to himself, and not watching carefully where he was going, so busy was he with the matter of creating a dread impression, came within twenty feet of the buck ere he saw that a champion was in his path.

To see two antagonists of this sort face each other seemed almost pitiful; like pitting a baby against a brontosaurus. But the bull halted, ceased his bellowing, lifted his head high, and looked thunder and lightning at the beautiful lithe gentleman in his pathway. The crippled doe, meanwhile, had taken advantage of the diversion created for her, and was a good way off in the marsh. The bull took a step forward. I saw the buck foreshorten

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

I am told by a reliable observer that he has seen the kingbird put the bald eagle to ignominious flight

his neck so that it bulged, and his antlers were lowered artfully so that the tips of their keen points looked straight into the bull's eyes. Thus they stood for several moments, the stag refusing to give an inch, the bull uncertain of the etiquette of the situation.

After a time, the buck standing steadfast, the bull lowered his head and pretended to browse, whereat the deer turned and with quiet dignity followed his comrades. Once or twice he looked back. But the bull made no pretense of pursuit. He evidently found the succulent grasses more to his liking than the promise of an encounter with a buck that appeared quite ready to take care of himself and of those under his protection.

That the deer may become, under certain circumstances, almost absurdly courageous, may be attested by the following story:

One day I stopped to see Peter Lincoln, one of my boyhood friends, who lived on a fine old place on the highway between Georgetown and Charleston, South Carolina. His yard was most ample, two or three acres in extent, with here and there a huge live oak or a scuppernong vine. As I went in the gate, a full-grown doe jumped up from beneath an oak and came stepping toward me, her attitude clearly indicating that she doubted my right to enter the yard. When a deer means trouble, it has a very peculiar walk and an eccentric way of lowering its head and of making its hair stand out, so that its size is very apparently increased. When an animal is menacing, the Pennsylvania Germans say, "It makes ugly at me." The description is a good one.

About this time my friend appeared, and together we went toward the house, closely followed by the doe, which seemed to have lost her enmity but to have retained her curiosity. Seated before the fire inside, Lincoln told me about the deer.

"That's my watch dog," he said. "Nothing comes into this yard without her knowing the reason why. And she's always awake at night. I raised her from a fawn, and she can't be persuaded to leave the yard. I have had her out; but the minute she's on the other side of the fence, her whole nature changes. She's just a deer once again, flighty and timid. But in the yard she's not afraid of anything.

"She always investigates visitors. A dog can't cross the fence without her being on his back. The other morning, about daylight, I heard a dog yelping. Looking out of the window, I saw the doe by the fence, jumping on something. By the time I had on my clothes, the business was over. But I am satisfied that a stray dog had tried to come through a wide panel in the fence, and that the deer caught him and mauled him before he could get away. I found signs of the struggle.

"Her scent is so keen that she knows long before I do that something is coming. She's both a barometer and a watch dog. Often I see her winding something; and after a time it will come into sight. The other day she ran some razorbacks out of the yard, and that's more than some dogs can do."

THIS incident, authentic in every detail, appears to me to prove that, given anything like a fair chance, a wild creature cannot only show courage of a rather high order but can also develop it rapidly. Wild things, as this tale of the doe illustrates, have a deep love of a certain place; possibly a certain sense of possession (that in us is acutely developed). They will not only defend their own lives but also their own rights and property. I know with what amusement I have watched a mockingbird make everything in feathers stay clear of his castle.

As long as I can remember, a mockingbird has had his home in a cedar, covered with smilax, close to our front porch. Of course this has not been the same bird, for generations come and go with the years, but always there has been one there with a strongly developed family trait. It is exclusiveness. This mocker is really an artist, a great solitary. Things that merely twitter and cheep and caw drive his esthetic spirit to distraction. He lurks in the shadow of the cedar most of the time. When he appears, it is either to sing divinely, or else, with the harshest cries, to drive away intruders who would profane his sanctuary.

It does not appear to matter to him what disturbs him; he protests just the same. I have seen him chase blue jays, dogs, brown thrashers, cats, crows, and even a little hawk! One day a mule sidled up to the cedar to rub off the flies; then, feeling relief in its inmost soul, it began to bray with amiable idiocy. Out of the tree flashed the mockingbird, straight at the mule's head, buffeted its ears, screamed harshly at it, and then darted with defiant grace back into the secreting shadows. I suppose we have no right to expect an

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

artist to listen placidly to a mule's braying—and right in the studio too, as it were.

Than the mockingbird there are others even more dauntless; indeed, one of the standard sights every summer afforded to watchers of the sky is the David-and-Goliath encounter of the kingbird and some huge antagonist—crow, hawk, buzzard, or black vulture. I have been told by a reliable observer that he has seen the kingbird put the bald eagle to ignominious flight!

But I remember seeing one day something that impressed me with the eagle's spirit. I was a few miles from the tip of the Santee delta, in a huge wasteland. A storm was rolling up from the southwest—not an ordinary storm, but the "lunatic fringe" of a West Indian cyclone. The inky sky took on a greenish tinge, then an angry saffron. A greenish-yellow sky usually impends disaster of some kind. Things looked so bad that I decided to spend the night where I was rather than risk the wrath of the river. Yet I wanted much to be at home. I looked at my small boat; then at the stormy and menacing sky; then at the distant mainland. I was afraid to take the risk, with the twilight falling and a wild tempest lording it over the world.

But as I looked for a last time at the crazy sky, I saw a bald eagle, that doubtless had been cruising far up the river all the day long, making his way back to his roosting tree on Cedar Island, at the very point of the delta. There was grandeur in the way that he rode the storm. He was heading for home; the hurricane had intercepted him. Yet he would not turn back.

It is a common sight to see birds fleeing before a storm; but here was one beating his way powerfully and heroically through the very heart of a gale. The old bird wanted to get home—just as I did. "But," you say, "he had the advantage; he had wings." Yes; and he had something more, to make him plunge dauntlessly toward that green-bosomed storm: he had a great heart; a certain elemental valor which we should do well oftener to associate with these children of the wild. They are no cowards; we have no right to adjudge them so by considering merely their attitude toward us, entrenched as we are with weapons of destruction. If stags carried high-powered rifles and hunters were weaponless, I imagine that the popularity of deer hunting as a sport would wane somewhat.

AMONG my acquaintances of the wildwoods none was more ferocious-looking or more interesting than a gigantic razorback sow that wore a tinkling bell. Just who decorated this grim chimera with this absurd appendage is beyond me; certainly it was as incongruous as a pearl pendant on a rhinoceros. Nor did the bell have the effect of domesticating the rugged old giantess. Frequently, while deer hunting in the wildest swamps near home, I used to hear this eerie bell; and although my negro driver knew that the hog wore it, he had apprehensions about it. On one occasion, while trying to suckle nine pigs, and when both she and the pigs were famished, she came to the plantation fields. I heard the bell, then a great outcry among the sheep. Running over to where they were bleating foolishly, I saw the sow making off with a lamb in her mouth. I ran her down and made her drop it. But her boldness and her savagery impressed me; indeed, her attitude toward me was anything but conciliatory. Even after I had the lamb in my arms, she followed me truculently, champing her jaws. Tall, lank, starving, she was a really dangerous wild creature; and the tinkle of the dainty bell only heightened the horror of her.

IT WAS this same razorback, however, that my negro hunter saw held at bay by another wild thing, which has the reputation of being timid. He was out in the turpentine woods in mid-May, when one is likely at any time to come upon a baby fawn. But he did not see the fawn first. He heard the old sow's bell. As he was alone, as it was late in the afternoon, and as he had a somewhat respectful attitude toward "hants," he walked up the wreckage of a pine that had been thrown down by a storm. From this point of vantage he saw what he later reported to me. I shall give the story in my own words, for you would not be able to interpret his low-country speech—a language in which many native African words survive; for example, "bofemba" is rabbit, "machinchie" is small, "bungiewala" is dragonfly, and "jubrocroo" is thicket. "I saw the old sow," he said, "coming down the side of a little watercourse, and she did not seem to have anything on her mind. She was just grunting and moving along. When near me she stopped, but not because she saw me.

"Just then I saw something suddenly jump up in front of her. It was a doe. She did not run off, but turned to face the razorback. I did not know then that she had a little fawn lying there by her. The deer lowered her head, looked at the sow, and advanced toward her, stepping high, and now and then pawing. She tried to make herself look like an angry bull.

"In the wild forest deer and hogs usually pay no attention to each other; but here was a doe telling a famished old razorback to keep her distance. By this time the sow saw the fawn. It was so little that she could easily have caught it and carried it away, just as she caught that lamb; and perhaps in a fight between the doe and the razorback, the doe might get the worst of it. But the doe put on the airs of a bully, advanced to meet the sow, and brought that old hog to a halt. The two stood facing each other. The doe curled back (*Continued on page 135*)

"Reared up against a big tupelo was the bear, facing me—just waiting for me, daring me to come"

It's Fun Being A Father

By Clarence Budington Kelland

MOST fathers go wrong at the very start of their careers as parents. As soon as the doctor comes down to announce that it is a boy, the new father rushes to the telephone to spread the news over a breathlessly waiting world. He is so convinced that he has achieved something remarkable and unique, that he straightway begins to swell with pride.

And that's where the male parent gets off on the wrong foot. The new father is so vain over the miracle that he never quite recovers from it. His point of view lops over into his relations with his son. He says to him, "I am the very remarkable fellow who made himself your father, and it's your business to reverence me." And there you are! Dad starts out with the full belief that he is entitled to the profound esteem, if not the reverence of his offspring.

"Honor thy father and thy mother" is a fine commandment, and states what the lawyers call a splendid *prima facie* case; but I, personally, believe it has been misinterpreted for a couple of dozens of centuries. From time immemorial, parents have read into it a meaning which no intelligent lawgiver could have intended should be there; which is, that the mere fact of being a parent entitles you to the honor of the children of whom you are the father or the mother. To me that's a heap like the lazy man saying that the world owes him a living.

Nobody owes you anything until you have delivered some kind of goods to create a debt.

HENRY JAMES once defined life as that predicament which precedes death, and certainly nobody owes you a debt of honor or gratitude for getting him into that predicament. But a child does owe his father a debt, if Dad, having gotten him into this peck of trouble, takes off his coat and buckles down to the job of showing his son how best to crash through it.

We're leaving mothers out of this discussion. It applies only to fathers, for the sake of argument. My parental experience having been exclusively paternal I feel myself unfitted to cope with the feminine portion of the problem. But I'll venture to wager a small red apple that what I say about fathers and sons applies equally well to mothers and daughters.

Along about the year 1918 the divine right of kings came a bit of a cropper, and passed into innocuous desuetude; the divine right of parents ought to take the same journey. Fathers are living on an inherited fortune of worn-out and absurd traditions. In my capacity as a father I'm trying to get rid of them.

Once upon a time, and not so long ago as time is counted, a father had the right of life and death over his children and his slaves. Up until very recent times fathers have tried to maintain as much of this right as they could. A relic of barbarism, of course; but what would you? Even so young and tender a shoot as myself can remember when it was fashionable for sons to be afraid of their fathers. And by this I mean *afraid*.

Father was a potentate in the house, and the dish he wanted served up three times a day was not love but fear. He maintained his position by force of arms, as all tyrants do, and his sons looked forward eagerly to the day when they could throw him over a five-bar fence. Deference and implicit obedience and awe were what fathers demanded and got—or resorted to the gad. They used to run around cutting off their sons with a shilling, and deriving great satisfaction from the pastime. It was divine right gone mad.

PHOTOGRAPH BY BLANK & STOLLER, N. Y.

Clarence Budington Kelland demonstrates for his two sons, Tom and Horace (shown on the opposite page), the proper way to handle a medicine ball

This, in its most virulent form, has passed—save in enough individual instances to give a decided leaven to the loaf. But it hasn't gone far enough or fast enough to lose all the nonsense which clung to it. The good old commandment needs to be revised so that it will read, "Honor thy father and thy mother—if they are worthy of it."

Before I gained any experience as a father I had had a noteworthy career as a son. Being a son is the finest way to prepare for being a father. A son is the raw material of the parent's job, and anybody who tries to manufacture ought to know how his raw material feels about it.

I had one father and one mother, and I remember very distinctly my relations to my parents and my reactions in various sets of circumstances. I've always thought how lucky I was that the stork dropped me down our chimney instead of the chimney next door.

NOW, as this article is about fathers, and not mothers, I'll touch only on some of my dad's methods, and just say in passing that Mother was a humdinger, and I can't see that to-day she has lost an ounce of what she had in stock when I first became acquainted with her, forty-five years ago.

She was father and mother to both Dad and me, and no dynamo ever built can shoot out as much electric power in a day as she. I have known a number of remarkable women in my time; but of them all I think two—my mother and my mother's mother—stand at the top. For personality, sturdiness, ambition, tenacity, tirelessness. . . . If my mother reads this, and it is dollars to doughnuts that she does, I may know again the sensation of being laid across parental knees under a slipper.

But we are on the subject of dads. I have, so far as possible, modeled myself in my capacity as a father, upon *my* father. With this difference—I have theories; Dad didn't bother with any. He was a parent by ear, and a wonderfully correct ear he had, too. Instinctively, he went in for the catch-as-catch-can system of fatherhood, just as I have gone in for it because I believe it is the only workable system.

Dad started out with a fine foundation—a real love of children, male or female, white, yellow, orange, or black. If it was a child, Dad loved it; and his idea wasn't to improve it right away but to make it happy. He was one of those almost extinct men who used to carry pink wintergreen candies in their pockets. I suppose he still does. He was as young as I when I was six, and now that I am in the middle forties he is a great deal younger. Why, only a couple of weeks ago he almost cut his foot off with an ax while playing he was a Boy Scout or something!

He enjoyed being a father. I believe he enjoyed walking the floor with me nights when I was cutting teeth—and that's more than I did when my sons were in the same predicament. He enjoyed everything, and everybody enjoyed him.

As I say, he went in for the catch-as-catch-can system of being a father. I don't remember that he ever recited a

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

moral precept to me, or told me that this or that thing was wrong. But, every once in a while, when he saw an opening, he would dash in and get a hold in approved catch-as-catch-can style. And when he let go I'd have something I didn't have before. He didn't tell me how to live; he lived, and let me watch him do it.

Dad never was a money-maker, and, as nearly as I can make out, he never wanted to be. He worked mighty hard when he worked, but his real job was living. Oh, he and I would have been a slick pair of vagabonds if our wives hadn't needed to eat three times a day. To-day he's an elder in the Presbyterian church, and every time I think of it I have to chuckle. I bet it's Mother's doing; and every week I expect to hear a scandal about his inveigling the minister off Sunday morning to catch black bass instead of staying home to preach good Presbyterian doctrines.

He had—and has—the quickest temper I ever met. But, quick as it is, he never lost it with me, not even when I was at the eighteen-year-old stage and for a while thought myself his social and intellectual superior. I guess he just grinned some.

DAD taught me to enjoy the everyday things of life. He used to take me walking every Sunday afternoon—not to unload facts about natural history, nor to work off any pet theories, nor even to amuse me. He did it because he liked to do it, and had the idea that if he liked it I would like it too. He took me to circuses because he liked circuses, and to baseball games for the same reason. He didn't play down to me, and he never made me feel that he was being noble for my benefit, or that he was sacrificing himself to give me pleasure.

A lot of us fathers do that very thing. We take an afternoon off to do something for our kids, and then spend the rest of the summer bragging to them about what wonderful fathers they have, to do so much for them. The next worse thing to doing a favor for somebody is to keep on telling him about it.

Dad never made me feel uncomfortable when I was with him; he never tried to put over any "heavy father" stuff. He didn't preach, but he managed to impress upon me without ever putting it into words, his ideas of how a boy should behave. They were good ideas too, though not orthodox. I am even less orthodox than he, and I'm glad of it, because it has worked out in practice.

I've told you all this about my Dad so that you may get an idea of the groundwork I had to build on. Now, I'm going to talk about myself, and a lot of you fathers may start out to make trouble for me, or say I'm just one of those literary lunatics. Go ahead; I don't mind.

I scandalized the head master of the school my sons are attending by saying that nothing would horrify me more than to see my boys honor students. I told him I thought you could go too far with education, and make it the end and aim of existence. Nobody ever got anywhere merely by *knowing* a fact; the way you make a dent in the world is by *using* a fact. Schools have much more important and interesting things to teach than how to discover the cubical content of a cylinder.

Every boy of ordinary intelligence is bound to pick up a groundwork of education as he goes along. A great deal of it he forgets, and some of it isn't any good, anyhow. But learning is mental exercise, and therefore it has real value. A while ago my younger son came home with a report card that wouldn't win him any medals; and he rather expected to hear language about it. But he didn't. I didn't even tell him he ought to do better, because he knew that without being told, and he has sense enough to know I knew he ought to do better. So, why talk about it? I wasn't especially interested in that side of his school life.

PHOTOGRAPH BY BLANK & STOLLER, N. Y.

BUT I was keenly interested in other things. I wanted to know how he got along with his masters—if they liked him, and if he liked them. More particularly I wanted to know what were his relations with the other boys in his dormitory. Now that, to my mind, overshadows everything else in importance. Why? Because that is life, and life is made up of contacts with other human beings. If he was learning how to get along with the other fellows, I was satisfied. It is what I sent him to school to learn. Anybody can teach him what a verb is. You can learn it out of a book, sitting alone in a cave. But you can't learn how to meet and to know other human beings without bumping into them in everyday life.

I wanted to know why he liked or disliked certain boys. That is a mighty significant thing—why your son likes or dislikes folks. And it is a vitally important piece of education to get into his head what sort of people he ought to like and whom to dislike.

He passed a pretty good examination on it, too. Of course he didn't know he was being examined; he thought I was just interested—which was sixty per cent true. We discussed things as if we were both thirteen, and immediately got on a common footing.

You know, a thirteen-year-old boy understands facts and events with the perceptions and experience and point of view of thirteen years. That's how he ought to understand them. Where we fathers go wrong is that we look at things from the age of forty-odd with the mind of forty-odd, while our sons look at them from the angle of thirteen, or fifteen, or eighteen. We may be perfectly right in our viewpoint; they may be perfectly right in theirs—and that's where the rub comes.

YOU must dig back in your memory so that you can reproduce your sensations at thirteen, and then talk from that viewpoint. Your boy can't leap forward to forty-odd. If, to thirteen, an act seems fair and square and fine, then it is fair and square and fine, no matter how foolish it may seem to you. If your boy has done something of which his immature sense of ethics approves, then he has done a good thing, no matter how ridiculous it actually may be, and he deserves a pat on the back for it.

Words mean a different thing to thirteen from what they do to fifty. You can't speak Greek to a boy who understands only English, and get riled because he doesn't know what you are talking about. You mustn't expect your son to strap on stilts and stand at your height. It puts him in a false position, and all the time he knows he is on stilts, and that his legs actually are not that length. He is pretending to something he hasn't got, and we fathers never know it, unless we watch out.

A good memory is the best asset any father can have. If you can't remember your own boyhood, you want to walk mighty softly, or you have no more chance of being a proper father than a hen has of scratching over its own grave.

As I was saying, it is a heap more important to know how to live than it is to know how to find the square root. It is a heap more important to be a gentleman than it is to be able to conjugate irregular verbs. It is a whole lot more vital to learn how to think than it is to memorize like a parrot. The school that teaches your sons these things really educates him; the school that only drums into him lessons out of books is as (*Continued on page 144*)

Masquerade

A thrilling mystery romance

By Henry Kitchell Webster

ILLUSTRATED BY FREDERIC ANDERSON

"THAT you, Celia?" Phil's voice called from somewhere.

"Yes," she answered. "I came on ahead of the others to change my dress."

She could hear him now splashing in his bath, and she laughed when he said, "I'm glad you haven't got the whole bunch with you."

The queerest thing about it was that her feelings were exactly what they ought to have been if she had really been his wife. It was nice to know that he was in there getting dressed for the wedding and was sure to be ready on time. Her shivers had disappeared at the first sound of his voice. It was perfectly delicious to be shouted at through the door, to have him inquire whether she wanted him in regulation rig—morning coat, and so on—or not.

"Of course!" she said. "We don't have a wedding every day."

The twinge she got out of the reflection that it was his own wife he was going to see married lasted only an instant. Celia was not his wife, and never had been—legally or otherwise.

Now he wanted to know what she was going to wear.

"I don't know," she answered. "Any choice, Phil?"

He did not answer that question immediately.

"Why, I have one," he said at last; "but I don't know that I dare mention it."

"Why not?"

"Well, you know what it is—the Venice dress."

Her heart gave a jump at that.

"I don't believe I want to wear it to the wedding, Phil," she told him; "but I'll put it on for you afterward, if you like."

"That will be better," he said gravely.

It meant something, then. Something apparently that Celia had always denied him. She was getting scared again.

HE BROKE the tension by calling, "Hollister was surprised, all right, but he said he'd come. I asked him to be a little early. That's what you wanted, wasn't it? So he may be along almost any minute."

The news just about knocked her flat. She had simply forgotten all about Tommy; had not thought of him for twenty-four hours. It took her a minute to remember what she had wanted him for.

But she recovered her poise very quickly. "All right," she told Phil. "I'll be ready for him."

She was dressed and answered the 'phone herself when they announced him from down-stairs. "Send him up," she ordered.

Phil opened his door to speak to her. "I can be dressed in a minute if you want me," he told her. "But you want to run this show yourself, don't you?"

"Yes, I do, if I can." She added, with a smile, "You've always been nice about letting me do that."

The remark apparently puzzled as well as pleased him, but it didn't matter. Nothing mattered now.

She opened the door for Tommy and led him straight down the corridor into the drawing-room.

"It was very nice of you to come," she told him. "I hoped you would."

BETWEEN curiosity and embarrassment, with fright in the background, he was simply squirming. Apparently he considered it a possibility that she meant to make up with him after all.

"I didn't quite see why I was asked," he began.

"To my sister's wedding? Sit down, Tommy. You've been interested in Cynthia for a long time, you see. Ever since you read a letter of hers, years ago, up in Fred's room in the fraternity house."

He jumped as if he'd been stung.

"A letter of *hers!*" he cried.

She nodded. "I thought you'd better understand that. It was she Fred married, not I."

"The answer he wrote was addressed to you, all right," he asserted, getting himself together a little.

"No; it wasn't," she said. "I never saw the answer. The outer envelope happened to be addressed to Celia Howard. That misled you. It's always a mistake to jump to conclusions, Tommy."

"Look here," he demanded, "why didn't you tell me this before?"

"I didn't owe you any confidences. It happened to be important then that the marriage should be kept secret. It's not important any longer. Her guardian knows all about it. He's come on for the wedding."

His expression of bewilderment was so ludicrous that she did laugh a little.

"It's all exactly as I tell you," she assured him. "You wait and see."

"But if it was Cynthia who got married to Fred, why is she getting married again to-day? Who is it she's going to marry, anyway?" He thought of the answer to that question in the moment he asked it, and jumped to his feet! "Fred? Is Fred coming here?"

"Yes," she said. "He doesn't know you've been invited to his wedding, but I'm sure he'll be glad to see you."

The telephone rang just then, and she added, "I guess that's them now, Fred and Cynthia and her guardian." She noted that Phil was answering the telephone, and turned back to Tommy.

Fred must have frightened him terribly that morning at the Club.

"What did you get me up here for?" he asked. His lips were actually trembling. She was half-way sorry for him.

"Not to do any harm—really not. I wanted to make perfectly sure that you had the pair of us, Cynthia and me, straight in your mind so that you never could mix us up again. I thought if you saw Cynthia and Fred married it would save a whole lot of explaining. Excuse me just a minute, won't you? I've got some introducing to do."

"This is Phil, Cynthia," she said, and wondered, during half a breath, whether the ceiling would fall or not.

It didn't. The other introductions got themselves made somehow. She led the bride down the passage to her own bedroom, leaving Phil to take the men into his room to leave their overcoats.

Celia sat down on the edge of the long chair and looked around. "I hate this place," she said. "I've always hated it. It seems as if I'd been away a year. Can you realize, Cyndy, that it's been just a week? That it was only last Wednesday afternoon that I met you at the Blackstone and gave you the key to the flat?"

Cynthia delayed her reply for a moment. She was standing near the door, and she heard steps, light, rapid steps, going down the passage. Then the outer door of the flat opened and shut. Well, thank heaven, that was the last of Tommy Hollister.

"No," she answered, "I can't."

SHE had one more hurdle to take. "There's one thing I want to ask you, Celia, and I may not get another chance. Do you remember that I promised you the other night not to tell Phil—the truth about us, you know—unless you told me I might? Well, I want you to set me free from that promise."

"You'll be perfectly crazy to tell him," Celia warned her.

"I want to be free to, anyhow. If I'm going to be Celia, I want to be able to keep her secrets in my own way."

"Once this is over, you can tell him anything you like—as far as I'm concerned," Celia said.

The telephone rang again. "That must

UNIVERSITY OF CALIFORNIA

be the minister," Cynthia observed. "Let's go out."

Fred and his bride were catching the five-o'clock train, so there was no delay after the arrival of the minister.

Cynthia stood through the reading of the service like one in a trance. Liturgical ceremonies are rather hypnotic, anyhow, and the implications of this one were too queer to bear thinking about. She concentrated her mind upon wondering how she was going to cook Phil's dinner, with presumably none of the materials for it in the house, till this train of thought was routed by the surmise, a devastating one, that Uncle Henry Pyncheon might expect to be asked to dinner, and perhaps to let them put him up for the night.

She came out of this nightmare with a start to realize that everything was over, and the handshaking and kissing had begun. The queerest, most dreamlike thing of all was to see Phil gravely and ceremoniously follow the example of the other men in kissing Celia. He produced some coffee and biscuits, passed the cigarettes. The minister took his leave. Fred looked at his watch and said he guessed they'd better be starting.

The nightmare about Uncle Henry didn't come off, for he promptly said he must be going, too. He'd promised himself for dinner with some old friends on the South Side.

Phil tossed a handful of rice while they waited for the elevator, the elevator went down, and the two who were left went back through their open door and closed it behind them.

"Well," he said, "good luck to them. They're off your hands now, aren't they, Celia? That job's finished?"

THE words were commonplace enough; but his voice was vibrant with a feeling he could not disguise. The unworded question, "Now, what about us?" sounded as clear as if he had spoken it.

It was high time she settled that question, she knew. But for the moment she felt helplessly unready for it. She couldn't think at all. He was looking at her, and she couldn't speak. Panic was mounting in her.

He turned away and looked at his watch. "Would you mind my going back to the office for an hour?" he asked. "There are some things on my desk that ought to be signed tonight. I'll be back in time for dinner."

She was not for a moment taken in by his excuse. He had seen she was frightened, and meant to give her time to get herself together. Perceiving that this was true she was frightened no longer. The panic subsided as suddenly as it had surged up.

But she did not tell him not to go. "I can use a couple of hours myself," she said. "I don't believe there's anything in the house for dinner."

He was putting on his overcoat. "Yes, there is," he told her. "I did the ordering this morning myself. But don't you bother about it. Take it easy till I come back, and then we'll do it together, the way we did the other night."

She grinned at him. "I won't bother about a thing."

She was out of her wedding dress and into a pinafore before he'd had more than time to leave the building, and for the better part of the next two hours she never stopped to think at all. She explored her larder. She studied her cook book. She set her table for dinner. She salted, and stirred, and tasted, and watched. She flew from one thing to another, averting disaster now and then by the mere breadth of a hair.

It was quarter-past six when she turned down all the flames to the simmering point, satisfied that the meal was ready, and went to her bedroom—it was hers now if it was anybody's—to put on the Venice dress and get herself ready for Phil. She hoped he wouldn't be late.

He was not. She was only half dressed when she heard him letting himself in.

"Dinner's ready," she called to him; "and I will be in a minute."

"Is that the way you keep your promises?" he wanted to know as he went into his bathroom to wash his hands.

Cynthia realized with a start that everything was over, and the handshaking and kissing had begun

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Yes," she said. "I promised I wouldn't bother, and I haven't."

"How long is a minute?" he asked outside her half-opened door. "If I put the dinner on now, will you be ready?"

She told him she would, and came into the dining-room in her Venice dress, just as he, with two plates of soup, pushed open the swing door from the pantry.

"Oh, don't drop them!" she cried, and the catastrophe did not quite happen. She rescued one of the plates and he managed to put the other right side up in its place.

"CELIA—" he began, but waited so long she asked, "What is it?"

"If I—if I came around the table now and kissed you, would—would the whole building go up in smoke, like in one of the Arabian Nights tales?"

"I don't know." She smiled at him as she said it; but her voice was grave enough. "I think I'd rather you waited till—till after dinner. I think it might be—safer for both of us."

For a moment it was doubtful whether Phil was going to accept the decision. Then he too, smiled, and the tension of his body relaxed. When he came around the table it was only to hold her chair for her.

"I wasn't frightened at *our* wedding," he remarked, conversationally, after he'd gone back to his own seat, "and I was rather surprised to find myself getting frightened at this. I couldn't think at first what it was I was afraid of. Then I got it. I realized that unless Mr. Pyncheon had another invitation to dinner, we'd have to ask him to stay here!"

"That was my nightmare, too," she acknowledged. "I thought I simply couldn't bear it. It isn't that I don't like him, but I've had a good deal of him today. I had to meet him at the train and tell him all about my sister before he saw her. . . . And now," she went on, "I'm going to tell you everything I told him."

"Don't you want to let that wait till after dinner, too?" he asked.

But she said she didn't. She'd rather get it over with. Really, the little informal digressions of the dinner with its necessary excursions to the kitchen made the telling much easier. She could hardly have plodded through the long lie in cold blood, and even with this help she felt she was telling it mechanically. She did not see how he could fail to perceive that she was lying to him.

He didn't, though. He listened gravely but alertly—without preoccupation.

She thought she had waded through to the farther side of the morass when she came to the end of the story she had told Uncle Henry Pyncheon, but in the thoughtful silence that succeeded it she perceived she hadn't. She had not yet accounted for Tommy Hollister.

Was it telepathy? He said, "I suppose Hollister was the one person who had found out about it?"

Luckily for her, she could always smile over the thought of Tommy, and the feel of the smile made it easier for her to go on.

"It wasn't what Tommy thought he'd found out," she said. "He saw the letter she'd written to Fred, saying it couldn't be a real marriage and asking him to agree that it never had happened. It wasn't signed with anything but her initial, but Fred's answer to it was lying on the desk—sealed up in an envelope—and addressed—under cover—to Celia Howard. I sent it on to her, without knowing what was in it, of course.

"But Tommy thought that it was I who had married Fred. He said nothing to Fred about it, but he remembered the name. Fred thinks he probably wrote it down—filed it for reference. Anyhow, when he met me and found out where I'd been to college, and that my name had been Howard before I married you, he thought he had something that he could use. It was just after he'd told me about it that you came in and kicked him out."

THIS was where the ice was thinnest. She hoped it wouldn't break through till she got to the end. It held. He didn't ask her why, since Tommy was wrong, she hadn't merely laughed at him. Instead of that, he said, with a blue-black gleam in his eyes, "I wish I'd kicked him all the way to the street!"

"I knew he'd mixed us up, of course," she hurried on. "I'd never seen Fred. But I didn't want to give Cynthia away to him—nor to you. He threatened to tell you about it, but of course he didn't. He told it to James Beale, instead.

"I didn't know he'd done that until after Cynthia was hurt. He spoke to me outside the hospital; wanted to ride home with me, and I let him because I saw he was a little drunk, and I thought I might find out something. I did; but I couldn't make out exactly how he'd made his mistake nor how much he'd told Beale; whether it was (*Continued on page 131*)

INTERESTING PEOPLE

"Dead-Shot" Stanley is Still Blazing Trails

FIFTY years ago it was no uncommon sight for loungers in the neighborhood of the old Barnum Museum, in New York City, to see Indian scouts dressed in chaps and sombreros, with wicked-looking six-shooters at their belts, and hair growing long about their shoulders.

One of these scouts was King Stanley. And the small boys who followed in the wake of their heroes recognized him from his picture, which graced the pages of the old McGuffey's Fifth Reader which some of them studied at school. The caption of the picture was "King Stanley—Indian Scout," and the text told of the heroic conduct of this intrepid Indian fighter at the battle of Wounded Knee Creek, where he won the name of "Dead-Shot" Stanley.

He is now known as Colonel Stanley. He is seventy-three years old, but still every inch the fighter, from the crown of his sombrero to his sturdy legs, encased in leather leggins. He has a florid complexion, and a sandy mustache, the fierceness of which is counteracted by the lines of humor around his eyes and mouth. His once long, waving, reddish hair has been shorn. From beneath the brim of the wide hat gaze eyes as blue as the burning sky over his beloved plains, eyes that have the farseeing expression of one used to long distances.

"Were you born in the West?" I asked him, as we sat talking in a New York hotel during his visit to that city.

"I was born traveling, and I've been at it ever since," he replied.

One January night, way back in the 50's, King Stanley was born on a prairie schooner which was traveling back East from California.

"When I was two months old," Colonel Stanley said, "we started back to California, and that completed the first of fifty-nine round trips I have made from coast to coast during my life. The second trip I made on a bicycle. I wanted to go back East, and see the places where my father and mother had lived. When I got to Boston I sold the bike and footed it around the New England states."

He finished his exploration of his ancestral states at Bath, Maine, where he bought a horse, and rode back to California, which he calls his home.

In the years between 1855 and 1880, when Stanley was growing up on the Western frontier, a boy was considered a man among those rough and hardy pioneers from the time he was twelve years old. He dressed like the men—in hickory shirt and corduroy trousers tucked into high top boots. He carried a gun, and was supposed to be able to look after himself and anyone else who was dependent upon him for protection.

When he was fourteen, King Stanley piloted wagon trains across the Rockies to California. He won the title of "Dead-Shot" Stanley in his fights with the Indians. At the age of seventy-three he is opening new roads to develop the West

King Stanley's parents had what was a large amount of money, for those days, through the sale of family property in New England. They traveled from one state to another, looking for the perfect location for a homestead. A few years of this life dissipated their funds; the elder Stanley died, and at fourteen, the boy, thrown on his own resources, was making his living piloting wagon trains across the prairies from Kansas and the Dakotas, over the Rockies to California.

These were exciting days, for hardly a trip was accomplished without an attack from hostile Indians lying in wait for the settlers.

By the time young Stanley was sixteen, he knew every inch of the country through which he traveled, and no grown man could be better depended upon to follow the trail, to use keen judgment in emergencies, and to shoot straight and fast in the face of danger.

On his body, Colonel Stanley bears sixty-two knife and bullet wounds—souvenirs of these days. At the Battle of Wounded Knee Creek, he was cut off from the rest of the command, but shot his way out.

Two days before the Custer massacre, Colonel Stanley was crossing what is now a part of the state of Montana, with a wagon train in which there were about forty men besides the women and children. Suddenly, when they were in the neighborhood of Pompey's Pillar, they were ambushed and attacked by a band of about two hundred Indians. Throwing his little force around the wagons to protect the women and children, Colonel Stanley prepared to fight as long as there was a man to fire a gun, for he knew by experience the fate of anyone who fell alive into the hands of red men on the warpath.

The determined defense of the little band of settlers routed the Indians. Last year, while the colonel was driving through the Arizona Desert, he met an old Indian brave, who told him he was one of twelve who had escaped from the battle of Pompey's Pillar.

But this man has been something more than a fighter. He has used his influence and knowledge to promote friendly relations between the Indians and the Government. He learned the dialects of the different tribes when he was still a child, so he could meet them on their own ground. The army officers were always on the lookout for men of this type—fearless in danger and faithful to their trust. In the attempt to bring about a better understanding between the Indian and his white brother, Stanley was taken

Digitized by Google

UNIVERSITY OF CALIFORNIA

into the Arapahoe tribe of Indians, and was made a medicine man.

Somehow, during those years in the saddle, riding over the plains, the colonel found time to study medicine. Accidents and wounds were a part of the existence of the day, and on the long, slow journeys across the country there were many cases of illness among the women and children. There were times without number when a little medical knowledge on the part of someone on the spot might save lives or alleviate suffering. So "Dead-Shot" Stanley took a regular medical course.

And somehow, in his varied career, the colonel, who never had a day of proper schooling in his life, found time to study botany, biology, and archæology. The ancient cliff dwellings, Indian mounds, fossilized skeletons of prehistoric animals, wild animals, birds, and plants have been his objects of study.

"The Arizona Desert is a rich storehouse of archæology," said he. "I can't see why Americans should go abroad to dig up ruins, when our own are so interesting."

In 1898, pioneering, in the old sense, was practically at an end, and the automobile was emerging from a dream to a reality. Not to be left behind in the march of progress, the colonel got an automobile.

"You would hardly call the first car I drove an automobile," he said, smiling. "It was one of the first cars by R. E. Olds—the 'Olds curved-dash runabout,' and he wanted me to drive it around the country to prove its practicability. On it, I painted the slogan which I have painted on every one of the twenty-six different makes of car I have driven since—'En Route from Here to There'—and I became a trail-blazer for the generation of tourists which was to spring up over the country."

The colonel calls himself a trail-blazer. He never had a home but once in his life, and that was in Hollywood, when he was acting in Western pictures and collaborating on scenarios. Yet he is vitally interested in the civic problems of all the towns he visits. His advice and experience are welcomed at the meetings of many a good roads committee in the Western towns, where he is well known. Sometimes he puts on his own entertainment in the town hall, or in the vacant room back of the post office. Here he lectures on various subjects—better roads, tourist camps, new trails, civic progress—illustrating his talks with pictures he has taken and colored himself. He is a member of 468 automobile clubs.

One of Colonel Stanley's pet projects is to conduct a caravan of cars to the beauty spots which he has discovered in his million miles of travel.

HELEN HULETT SEARL

People Stop at Hotel Hayes—And Often Stay for Life

FOR over thirty years, the Hotel Hayes in Woodlawn, on the south side of Chicago, has been known for its homelike atmosphere. Many of its guests have lived the greater part of their lives within its hospitable walls.

Perhaps nothing will show the attitude of the hotel's guests so clearly as a note of thanks addressed to the Hayes brothers, John and Frank, by a young woman living there:

To the HAYES BROTHERS: I think I know now—or did last night—why people come to Hotel Hayes, and live the rest of their lives without trying to find another home. I knew it when that lovely blooming potted plant was brought into my room, and on the card was written, "Hayes Brothers."

Of the kind remembrances which have come to me, truly, I have not received one with more appreciation.

With that in mind, I think I shall grow strong sooner.

Sincerely,
LUCY ADAMS.

John Hayes, Senior, built the Hotel Hayes thirty-four years ago to accommodate visitors to the World's Fair of 1893, held along the Midway, a few blocks distant. The hotel was hardly established when John Hayes, Senior, died, leaving his widow, Mrs. Minnie Hayes, and her two small boys, John and Frank, with the burden of management and a twenty-four-thousand-dollar mortgage to pay off on the hotel.

"Mother was up at half-past five," says John Hayes, telling of these early days, "and she worked often until nearly midnight. I can picture her now, sewing comforts in the evenings.

"We lived in the hotel then, Mother, Frank, and I. It was our home and it was a home for everyone else who stayed there. Home-making is a woman's gift—Frank and I have had to learn it. Mother looked after the personal comfort of her guests; and if any of them were ill, it was she who took care of them. She had the same pride in her kitchen and in her rooms that any good housekeeper has. Everything had to be just right, not according to hotel but to home standards, for they were the only ones Mother knew.

"When Mother turned over the management of the hotel to Frank and me, in 1905, she did so with the sound advice that we keep the help with which she had surrounded herself as long as they lived, or cared to stay. We could not keep the hotel homelike, she said, by changing the faces about the place. We have abided by that wish of Mother's, and a number of our helpers have spent their lives here, just as have many of our guests. Our former housekeeper was with us thirty-one years. Our head waiter is rounding out his twenty-eighth year of service. Our bell captain has been with us now for twenty-one years.

PHOTOGRAPH BY ATWELL, CHICAGO

John and Frank Hayes, who have made their hotel into a real home. Many of the helpers and guests have spent their lives within its walls

"Luckily, Frank and I were wise enough to take Mother's advice and to continue her work of building up a homelike hotel. Even though this part of Chicago was growing rapidly, and we have since built two additions to the original hotel, we have tried to strengthen that reputation.

"Our present housekeeper is a woman who knows this hotel as her only home. She and her husband have lived here for twenty-five years. She had never been in hotel management work before she took up her present duties. She was one of our guests, and thought of Hotel Hayes as her home.

"Consequently, when she undertook to buy pictures for our newest addition, she chose them with all the care she would have used in selecting them for her own home. In decorating, she thinks of each room as a part of her house. It is an individual room to her—not merely a number.

"But the most comfortable hotel room in the world is, after all, a rather lonesome place to stay in. It is in our lobby that we give our guests the opportunity to find the friendship and sympathy which everyone instinctively wants.

"You have seen the high-backed chairs in hotel reception-rooms that seem fitting only for a dowager queen? Most people shy away from such chairs, and you will find none of them here. We told the hotel-furnishing people that we wanted comfortable, inviting furniture in our lobby. They came back with the usual layout—beautiful, perhaps, but by far too stiff and formal. It was not until three sets of plans for furniture had been submitted that we found what we wanted.

"Our guests are no different from the guests of other hotels. It is simply that they find here an opportunity to develop their social side. There is Paul Cadieux, a young French-Canadian, who works in a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

railway ticket office down-town. He has a splendid baritone voice. In our lobby, Paul finds his chance to sing. All of us, guests and management alike, want to hear him sing.

"There is Miss Lincicome, who does secretarial work. She is a talented whistler. Ethel Tomlin is a school-teacher; but our guests know her as a 'cello player. Leo Dillon works in an office. In our lobby he sings tenor. Nearly every one of our guests has some accomplishment he likes to air, and we encourage him to air it.

"Over in the corner of our lobby is the best grand piano that we could buy. There is always a group about it. You see, people will make themselves feel at home if you just give them half a chance.

"It is not unusual for hotels to broadcast over the radio these days, as we do. What is unusual in our broadcasting is the fact that we do not hire our talent. It all comes from among our guests. On every other Saturday afternoon we bring additional chairs from our ballroom into our lobby, where the greater number of our guests will congregate to listen to their friends over the radio. In the winter we have a dance one night a week, and on another night a card party. Last winter we flooded the roof and turned it into a skating rink for our guests. In the summer we convert this same roof into a roof garden and social center.

"In the last analysis, I think these methods would all fail, if it were not for the spirit which prompts them. When any one of us here inquires after a guest's welfare, we do it because we are really interested. The thought prompts the words.

"The flowers we send to the funerals of our guests' relatives, all over the country, or to the sick-rooms of our guests, would be a mere formality unless we backed them up every day with our sincere interest.

"We have learned that people *do* want friendliness. They *do* want sympathy. And because they get these things in this hotel, it becomes a home for them."

C. B. SPAULDING

She Trains Baby Orchids in the Way They Should Grow

ELINOR ALBERTS, of Louisville, Kentucky, is a young woman who, instead of wearing expensive orchids, grows them. She loves the beautiful blossoms so much that she now has 48,000 young plants, besides other thousands of older plants, under glass in a city back yard. She has even learned to cross-breed orchids to obtain unique and beautiful colorings in these mysterious plants from the tropical forests. Flowers from the Alberts's greenhouse are bought as far east as New York City, as far south as New Orleans, and as far north as Chicago.

Miss Alberts is one of the few women in the United States who breed and grow orchids for the market. To do this successfully she has had to study orchids intimately from the time the tiny seeds are sown until the full-grown plants open their gorgeous blossoms. Orchids are slow in coming into bloom. From seven to nine years are required by the plants to grow and display their delicate flowers, so, naturally, few florists are willing to work and wait for a crop of these expensive blooms.

"My father has been a lover of beautiful flowers all his life," says Miss Alberts. "When I was still a small child, he built a little conservatory at the side of our home. He filled it with the usual greenhouse plants. Then one day he bought an orchid or two.

"The peculiar beauty and delicacy of the orchids fascinated me. In a short time I became eager to understand these elusive beauties more intimately and thoroughly. They were so completely different from any other plant I had known that I felt they were worth an enormous amount of close and critical study. I read everything I could about orchids in greenhouses and in their own home in the tropics. I questioned florists, to find out anything they might happen to know. At that time nobody in this country had been successful in growing orchids from the seed, so I decided to solve this knotty problem if it were possible. With 48,000 baby orchids under three years old right here in our own back yard, I can safely say I have succeeded in solving the matter."

To-day Miss Alberts is the thoroughly well-trained and self-appointed nursery governess to the many thousands of baby orchids growing in the back-yard greenhouse. Practically all of her waking hours are spent tending the tender young plants, which must get their start in life on a special cotton. When the tiny seeds open they appear as little green specks on the smooth surface of the translucent culture.

Miss Elinor Alberts raises rare and beautiful orchids in her own back yard in Louisville, Kentucky. She started growing them as a hobby in her father's conservatory. Now she does cross-breeding to secure new varieties, and ships her blooms to florists in many cities

For months the painstaking and methodical nurse watches over and handles the glass flask incubators until the minute, slow-growing orchids are old enough to be transplanted into other flasks, in which a mixture of peat and moss takes the place of the culture. When the babies are about eighteen months old they are transferred to small pots, in which they can take care of themselves. This specially prepared culture in which the young plants begin life is a carefully guarded trade secret.

The most fascinating part of developing orchids from seed of one's own growing lies in cross-breeding to secure wonderful combinations of color and shape. Miss Alberts feels that she is painting in living colors when she is doing this most delicate work. In order to secure exactly what she needs in the way of parent plants for cross-breeding, Miss Alberts grows, buys, and even imports exceptionally fine and beautiful orchids. She recently imported a gorgeous specimen from England, the seed of which cost one hundred dollars. It will be reared in her back-yard nursery, so that in seven or nine years Miss Alberts may be able to see what the cross-breeding gave her in color and in size of bloom.

Originally, Miss Alberts was merely an amateur, greatly interested in orchids because of the pleasure she got in developing them. Now that she has a regular market for her plants and blossoms in widely scattered cities, she must produce vigorous plants and beautiful flowers for bouquets. The fragile blooms must, of course, be packed with the utmost care to reach the retail florists in perfect condition.

The fully grown and ready-to-bloom plants, which are bought for conservatories, can be shipped long distances with safety. Finely colored and extra large blossoms sometimes sell for $3 each; but when a glut on the market occurs they will drop to about $1.50.

"It is easy to find an absorbing life work in your own home," Miss Alberts says. "Orchids under glass in my back yard have given me a business which keeps me constantly alert, and in the sunshine."

Andy Epple's Dugout Market Attracts Customers From Three States

A BUSINESS that attracts trade from three states is conducted in a dugout just outside the limits of Greeley, Colorado.

This unusual market has a capacity of about forty carloads. It runs back into the cool depths of the earth; but it opens on the sunny highway, where it furnishes a steady stream of customers with fresh vegetables at retail prices.

The owner of the dugout store, and the originator of the selling plan, is Andy Epple, who, sixteen years ago, was a hired hand to a Kentucky gardener. He started in business with no capital but his two hands and the idea that vegetables sold from his dugout direct to the customer would be fresher and better than any other vegetables on the market. He opened his doors to the public, and in a few years Mr. Epple has become a prosperous truck gardener, and owner of fifty acres, with a business so efficient that it attracts not only the retail patronage of a large countryside, but hucksters' wagons from little towns in Wyoming and Nebraska one hundred and fifty to two hundred miles away.

On the outside, this place of large business appears to be an unpretentious cellar; but take a peep inside the doorway (which, incidentally, is never closed until cold weather), and its magnitude will surprise you.

The inside of the dugout is built entirely of spruce logs and poles brought down from the mountains. From front to back a driveway runs through for convenience, and on each post all along its length is an electric light. After supper is the favorite time for customers to drive out and do their marketing.

Each morning the dugout and the roadway in front of it is freshly sprinkled. Then the newly gathered vegetables and melons begin to arrive in trucks from the fields, and, no matter how high the thermometer rises outside, the produce is kept tempting and fresh in the underground market.

In the fall, when all the crops are stored, people buy in large quantities for their winter supply. Mr. Epple does not have to pack his surplus for shipping, as he did at one time. Although he has increased his acreage and varieties of produce, he is so well known that he cannot meet the demand at his door.

He and his wife live in their attractive modern dwelling on the opposite side of the road from his place of business.

Mr. Epple was born at Huff, Indiana. At the age of thirteen he was left with his mother, two sisters, and three brothers to be supported. He quit school and went to work for a farmer at four dollars a month and board. His mother died when he was fifteen and the family was scattered.

He went to work for a gardener in Owensboro, Kentucky, where he learned to love gardening. But he was making only a small wage, and he left gardening and worked on farms in various capacities for two years. At the end of that time he made a visit to Colorado.

"I had heard a good deal about land and opportunity around Greeley," he said, "and I decided to take a look for myself. It was August when I got here, and a real estate agent could not have picked a better time to interest a truck gardener in Colorado, for that is the height of the growing season. As soon as I saw those great green fields of beets, potatoes, and cabbage, and the orderliness of it all, I said, 'This is where I stay.' And I have never changed my mind.

"There was a big crop in that fall of 1909, but the prices were so low that a one-hundred-and-twenty-pound sack of the finest potatoes brought less than half a dollar. Jobs were scarce, and after my temporary work of topping beets, I took a drove of horses to North Park for a man, to pasture them for the winter. The following spring I took a job as helper on the garden tract I now own.

"The irrigating was all new to a gardener from Indiana, and there were a whole lot of other things that were new; but the work interested me mightily, and the climate was so invigorating that, no matter how tired I was after a day's work, I slept like a log through the cool night and woke up full of pep and ready for another full day.

"By the next spring, the man I was working for offered me the place to run on shares, he to furnish everything but the labor. That was the beginning of ten years of truck gardening on shares. I made money, and my employer made more than he had ever made on the place before.

"At the end of ten years, I bought the tract and some additional acreage, and went into the business on a larger scale. I had added not only to the acres, but to the varieties of vegetables."

Mr. Epple has now forty-odd different crops. Hail may destroy a crop when it is too late to replant, or pheasants may damage a sprouting crop of cantaloupe, so that they must be replanted, and mature too late for a big harvest. But if he loses on one kind of produce, he makes it up on another.

One of the largest of Mr. Epple's crops is the Chili or Mexican pepper. He grows about a hundred thousand pepper plants, Chili and mango varieties. After the first frost they keep in the cellar for from eighty to ninety days.

Besides starting his own plants, Mr. Epple sells hundreds of thousands of plants begun in his large greenhouses, and not only vegetable plants but flowers as well.

LILIAN MOSES

Andy Epple, of Greeley, Colorado, knew that vegetables keep well when they are stored underground. So when he went into the truck-gardening business, instead of building a store to sell his produce, he dug a cellar. Now, farmers for miles around sell their vegetables in his dugout

The Pickups Are Air Pilots Whose Passengers Come Back for More

WHY, there's nothing to it," exclaimed the lady customer, when the roar of the airplane in which she had made her maiden flight had ceased.

When she had left an aviation field at Arlington, Virginia—where tourists may see Washington from the air for five minutes at the price of two dollars and fifty cents—I stepped up to the operators of the machines. Here was a couple, each only twenty-six years old, who in two years had converted a barren waste into a busy site. They had constructed and sold a dozen planes, had flown more than fifteen thousand tourists over the Capital City, had acquired some two hundred regular customers—people who fly periodically. I asked them how they had done all this in so short a time.

Christopher V. and Lalo Pickup smiled.

"By making them say 'There's nothing to it,' just as she did," he told me. "Turn a couple of somersaults with a passenger, and he'll tell you what a wonderful pilot you are; but he'll hug the earth forever after. Moreover, he'll tell all his friends what a scare he got in the air; and they'll never go up. Most people go up in an airplane because they're curious, not brave. Make them feel as safe as if they were in a sight-seeing bus, and they'll wonder why they didn't go a year before. The next day, their friends, having been assured that there's nothing to it, come for a ride too.

"Mrs. Pickup always accompanies me," he explained. "That's another part of our psychology. She can pilot a plane; but her job is not to keep up the plane but to keep up the spirits of the passengers."

"Our customers know I wouldn't be going up if there was any real danger," said Mrs. Pickup. "Even men are silently grateful when they realize I'm going along."

The Pickups build their planes together. Pickup took construction courses at Princeton. Mrs. Pickup studied domestic science at a girls' seminary in Nebraska; but she prefers grinding valves. While he installs the motor, she stitches the wings, mixes the paint, and adds another coat of varnish.

Fifteen years ago she shocked the villagers of Thayer, Missouri, by trundling down the main street on a motor-cycle. Pickup was ransacking his mother's attic for muslin for his kites and airships. One summer he went from Kansas City to the Ozark Mountains, where Lalo lived. He showed her one of his airships, and their flying career was planned.

"I am going to have a real one some day," he confided, and added: "You can come up in it with me."

It took ten years before he could fulfill his promise. A war had to be won, and following the war, air mail had to be perfected. Pickup played a perilous part in each. He was one of the thirty-four survivors of the fifty-seven original mail pilots. He made the first night flights and ninety thousand miles in thirteen months.

In 1921, he helped to inaugurate air mail in Mexico. A bronze tablet has been dedicated to him and placed conspicuously in the post office at Mexico City.

© NATIONAL PHOTOS

Mr. and Mrs. Christopher V. Pickup inaugurated mail service in Mexico, piloted a honeymoon special in California, and are now flying on an aviation field at Arlington, Virginia. In the past two years they have themselves built twelve planes, and carried fifteen thousand tourists over Washington without an accident

Mrs. Pickup was the first woman seen in an airplane there. Some of the natives had heard of a great winged bird which would one day come out of the East; but this woman—they felt her arm to be convinced—was real.

The winsomeness which to-day puts her passengers at ease, then won the friendship of the natives.

Outside of Toluca, where they were giving exhibition flights for the Y.M.C.A., they were kidnapped. Their plane had stalled and they accepted an offer of assistance from some Mexicans. But instead of driving them back to the aviation field, as they had promised, the Mexicans sped them on in the opposite direction.

Mrs. Pickup realized the deception and prodded her husband. Pickup questioned his captors, who gruffly told him to be patient. As the car rolled on over strange territory, the Pickups became alarmed. Inquiries, promises, and threats were, however, of no avail.

In the midst of a settlement they finally came to a halt. All of the natives were called out and the Pickups were surrounded. Their suspicions were confirmed when the master of ceremonies pulled out a long gun.

"Shoot me," he said, handing it to Pickup, "if I am not a good man."

He was the Don or land owner of the settlement, a beneficent lord, who had kidnapped the couple to show them off to his settlers.

At Saltillo they were arrested for landing on forbidden ground. After talking to them, the general not only ordered their release but also detailed men to guard their plane.

During their sojourn in Mexico, all their money, invested in a private airplane corporation, was lost by the outbreak of a Mexican revolution. But a mere financial crash could not upset the Pickups. They flew to California to find a new fortune.

They piloted a honeymoon special for the movie stars. It was tremendously successful.

As soon as they were able to fly for themselves, the Pickups purchased a site at Arlington, near Washington. Unlike most flying fields, this one is right on the open road, where it cannot be missed. To bring aviation still closer to the people, they lowered the prevalent rates of five and ten dollars to two dollars and fifty cents.

By playing safe with the public, the Pickups are making money. Even on a mildly windy day they will not carry passengers—not because there is really any danger, but to prove to their patrons that safety is their motto.

Although they have never had an accident, the sign on the field does not reveal this fact.

"Why suggest the possibility of one?" says Mrs. Pickup.

A New Orleans flyer who came to work for the Pickups because his own field was fruitless, said, after the first day:

"Why, Pickup, I'm amazed at you! I know what you can do with a plane; but you're not showing the public a thing."

After the third day he left for New Orleans to try out the Pickup system on his own field.

How easy it is to serve the finest tomato soup!

IT IS A well-known fact that the blending of tomato soup to suit exactly the tastes of many different people is a task that challenges the highest skill of the soup chef.

Haven't you had this experience at some time or other? A plate of tomato soup has been set before you. You looked forward to real enjoyment of its refreshing flavor. You took the first spoonful and it tasted somewhat "flat". Something was missing.

Why? Where did your sense of taste get its "education" in tomato soup? The tomato soup you serve regularly at home, the tomato soup which is most likely to be served to you when you are entertained—that has taught your appetite the true blend. Anything less is bound to be a disappointment.

And this blend is a condensed tomato soup—Campbell's. By blending it from an exclusive recipe that produces always the same uniform richness of flavor, and by condensing it so that it is available everywhere to the public in such convenient form, Campbell's lessen the housewife's work in the kitchen and offer even to the humblest table in the land, tomato soup as fine as it can be made.

So people everywhere have learned the important lesson of Soup. The sheer enjoyment of its delicious flavor. The healthfulness and invigoration which are derived from it. Its tonic and stimulating effect upon the appetite. More and more people every day are realizing that this hot, liquid food called soup, encourages the flow of the digestive juices and increases the benefit from all the food we eat.

Tomato is an ideal soup—appropriate for formal occasions, a wonderful standby for the regular family menus, splendid for the children, and unfailing in its invitation to the appetite. And housewives use Campbell's Tomato Soup for a great variety of their dishes to give extra zest and flavor. Try it as a sauce for meats, fish, sausage and salads and for added tastiness in spaghetti, rice, eggs or vegetables. Delicious mixed with roast beef gravy. Of course, it makes the most tempting Cream of Tomato Soup!

"Nevada"

(*Continued from page 13*)

beggin' pardon, Mr. Franklidge, an' of you too, Tom," he drawled, in slow, cool, easy speech. "I couldn't help heahin' all you said, an'—wal, it knocked me off my balance."

"Wal, see heah, you long, lean, hungry-eyed Texan," spoke up Day, forcefully, "jest *why* did I knock you off your balance?"

"Tom, I reckon I happened to hit on a way to fix the rustlers," replied Jack, nonchalantly.

Judge Franklidge sat up with a jerk.

"Wal, what is this idee you hit on?" demanded Day.

"Shore it's as simple as A B C," rejoined the cowboy, blandly. "Somebody has got to ride down into the brakes an' get thick with the rustlers, then shoot up the Hatts an' mebbe the Stillwells. An' kill some of that Pine Tree outfit—in particular the hombre who's at the haid of it."

"Is thet all? My lord, Jack, you're loco!" exploded Day. "Shore you hit on the way to fix the rustlers. Shore! But who's goin' to do it? Was you figurin' on us hirin' some fancy gun-slingers to do the little job? Kingfisher from Texas, huh? An' Wess Hardin? Or mebbe you had in mind some new Bill the Kid, or Pat Garrett? Or more like, perhaps, Jim Lacy, who, they say, has been hidin' quiet in Arizona for a long time!"

TEXAS JACK'S tan appeared to become a shade less brown. He grew tense, steely-eyed.

"Tom Day, how long have you known me?" he demanded, in a voice that rang.

"Two years an' more, son," replied Day, surrendering to something compelling.

"Would you trust me?"

"I shore would. With my stock, my money, my reputation . . . with my life, so help me Gawd!"

"Judge Franklidge, how long have I worked for you?" queried the cowboy, turning to the other.

"About a year and a half, as I remember."

"An' what is your opinion of me—as a man?" flashed the cowboy.

"Jack, you're the squarest and best man, the finest hand who ever worked for me!" responded the judge, feelingly.

"Thank you. Reckon you can have no idea what that means to me," returned the cowboy. "An' you'd trust me?"

"As well as I would my own flesh and blood."

Texas Jack removed his sombrero and sailed it against the wall. His brow was broad and pale, his clear light eyes seemed to burn with a steady flame; there were white hairs in the long locks smoothed back over his ears; under the thin bronze beard cheeks and lips set hard.

"Wal then, it's my job to fix the rustlers," he said deliberately.

"You! Nonsense," declared the judge. "You wouldn't tackle that alone? Nonsense, I say!"

"Judge," interposed Tom Day, "it shore does look thet way; but wait. This cowboy has got somethin' up his sleeve. I always knowed it . . . Come heah, Texas Jack. Spring it."

What shrewd, hard, comprehending, yet wondering light flashed from the old rancher's eyes!

"Listen," went on Jack, bending to his hearers. "To serve Arizona an' you an' your good friends, I've got to become a rustler. I may have to go a long way to find the leader of this heah Pine Tree outfit. I'll have to drink an' steal an' kill. Shore, I may lose my life finishin' the job. An' I want my secret kept till it's ended. Then, if I come back alive I want my name cleared."

"Who'n thunder *are* you?" asked Tom Day in a low and husky voice.

"Man, you're forcing me against my will," said the judge, rising to his feet. "I don't want you to attempt this thing alone. It's a wild cowboy idea. You'd only be killed. But I admire you, Jack. If you're going to persist in this mad plan, I'll make you a deputy sheriff right here and now."

"No. I'll never be an officer of the law; but I'm shore goin' through with this, whether you stand by me or not," returned the other grimly. "It's too late now. I've got a reason, Judge. But it'd only be fair for you to uphold me—to tell in court, if necessary, that you an' Tom Day were parties to the job I undertook."

"Jack, you misunderstand," replied Franklidge hastily. "Don't make me ashamed. I will give you any support and authority right here and now. In writing, if you want."

"Only your word, Judge."

"There! You have it. And here's my hand."

Texas Jack broke from that handclasp to make the same proffer to the other rancher.

"Tom, will you stand by me—when I come back?"

"Lord, yes!" boomed Day, as he pumped the cowboy's arm up and down.

Abruptly then Jack wrenched clear of the vigorous grasp and wheeled to a post of the porch, against which he leaned and clutched hard. But, whatever the strife was, it passed as swiftly as it had come. Then the cowboy turned again, somehow different, so that the judge and Day had awe added to their surprise.

"Gentlemen, I shore hate to give myself away," he drawled. A smile outshone the strange, steely light in his eyes. "But I reckon it's got to be done. Tom Day, I'm the starved cowboy you once took pity on. But that starved cowboy happened to be—Jim Lacy!"

IT WAS Sunday, and that hour of the afternoon when all the men off duty at the Franklidge Ranch would be anywhere except around the bunk-house. The cowboy Texas Jack, striding in, was relieved to find himself alone. He made for his bunk for the purpose of hurriedly packing his few belongings. An old pair of black chaps, worn thin, hung at the head of his bed, with a belt and gun. An instinct prompted him to flash out his hand. There, as if by magic, the gun whirled in the air.

"Reckon it was fate," he muttered, as he sheathed the gun. "Somethin' never let me stop practicin' that old draw!"

In a few moments his belongings had been tied into a small roll to go behind a saddle, and he strode out into the rude yet comfortable living-room. Something prompted him to step before the mirror.

"Wal, so long, Texas Jack," he said to the image reflected there. "Reckon I been almost happy with you. A shave an' a hair-cut will shore say adios to you forever. . . . An' then there'll be men who'll recognize you as Jim Lacy!"

A QUARTER of an hour later he rode briskly down a trail that led into the cedars. He had taken his own saddle, but the horse he bestrode was one long discarded by the boys at the ranch. Once under cover of the cedars the rider pulled his mount to a walk. It was nineteen miles to Sunshine, and he wanted to reach that station after dark, and board a night train without being seen.

A melancholy resignation had no power to cramp the slow-mounting exaltation in Jim Lacy's breast. Once free of the need to hurry, his mind reverted to the cause of this extraordinary adventure he had voluntarily accepted. Facts were cold, hard things. He had hidden his real identity; he had buried the past; he had risen on stepping-stones of his dead self to honest, useful service; he had earned peace and victory, if not real happiness. And then, like a thunderbolt from heaven, an inevitable, irresistible fate had confronted him.

What he had suffered during the moments when Tom Day had talked to Judge Franklidge about Ben and Hettie Ide! The old wound had not healed. The old love lived in his heart, stronger for the years of denial and repression.

"I shore knew it—all these weeks I knew," whispered Jim huskily. "Ben come to Arizona to find me! . . . Didn't he comb California—didn't he send men to all the ranges in the West? . . . Didn't Tom Day tell me no more'n a month ago how Ben Ide wanted to know if he'd ever met a cowboy called Nevada? . . . That was it—the name Ben gave me—Nevada! . . . He never forgot!"

How terribly sweet and soul-satisfying that knowledge, and yet somehow bitter. In one tremendous moment of decision it had flung him back into the past, once more to own to an infamous name. It had destroyed all he had built up. Only through the power of his dreaded name could he ever bring to successful issue the task he had set himself. What irony of fate that the fame he hated must be his open sesame to the rendezvous of the rustlers who were ruining Ben Ide!

"Like as not in the long run I'll stop a bullet," he muttered. "But hardly before I get the job 'most done. . . . An' shore that'd be better so. Ben would never know I'm Jim Lacy. An' Hettie—*she* would never know. . . . But I reckon that's not my kind of luck. Like as not I'll run

A Story in Nutshells

Review again a few of those well known slogans which Dodge Brothers have published on the Nation's billboards during the last eleven years—

A Good Name
Dependable
Dollar for Dollar
Long Life
World-Wide Good Will
Better Than Ever

To build a product of which these things can truthfully be said, is a record of which any great organization might well be proud.

And it explains the implicit faith that millions everywhere repose in the integrity of Dodge Brothers and in the goodness of the motor cars they build.

Sedan $895 — Special Sedan $945
De Luxe Sedan $1075—f. o. b. Detroit

plumb into Ben before it's over. An' Hettie too!"

He rode on through the waning afternoon, absorbed with the strife of his soul. When darkness fell he had reached the outskirts of Sunshine, and he halted under a clump of cottonwoods. Here, removing saddle and bridle from the horse, he turned it loose. That act seemed to sever the last thread which bound him to the ranching life he had followed for long.

It had, too, a singular effect upon the emotions which had beset him. The hour had come when he must plan his return to the old life. Wherefore he sat down beside his saddle and pack, and with bowed head and a wrenching rending of his spirit he slipped, as into a long-unused garment, back into the old personality. And it seemed that the instant this transformation was consummated his plan for the perilous adventure at hand was simple and complete. He had only to *be* Jim Lacy.

The whistle of an approaching freight train inspired him with an idea more satisfactory than the one of waiting for the passenger train. He would steal a ride on the freight, thus obviating any risk of being recognized at the station. To this end he shouldered his pack and saddle and, hurrying to the railroad track, which was only a few hundred paces away, waited beside the slowly halting train, peering through the gloom for an empty car. At length it reached him, just as the train stopped. Jim threw pack and saddle aboard and climbed in.

DAYLIGHT found him across the territory line into New Mexico. When the train stopped outside of a town at a water tank he threw his baggage out, down over a grassy embankment, and got off. He had some money, besides the considerable sum Judge Franklidge had forced him to take. And it was with something of an old familiar zest that he strolled into the town.

Before encountering any riders or cattle men Jim entered a barber shop, from which he emerged a changed man. Next he purchased a complete new outfit of rider's apparel, the costliest he could find. Jim Lacy, he remembered, had once affected something near to dandyism. He retained only his gun and chaps, which were things more intimate than clothes, and were not to be discarded.

His next move was to buy a good horse. Lastly, he led the horse out of town, found his saddle and pack, and was soon riding back across the line into Arizona.

Traveling leisurely, and stopping at ranches and stations convenient to the day's travel, Jim Lacy in due time arrived in Winthrop.

The day was a Friday, toward the close of afternoon. He made his way to Beacham's corrals, where overnight visitors to town usually left their horses to be cared for. Several rangy, dusty-garbed riders had just ridden in, evidently behind a dilapidated old wagon drawn by a shaggy, gaunt team. The driver, a lanky man, dark of face and bearded, clambered down with the cramped movements of one more at home in the saddle. Jim had seen him before, but could not place him. There was a young girl sitting on the driver's seat, and she appeared quite pretty in a wild-rose way.

Jim led his horse somewhat closer to the wagon and, choosing one of the covered stalls adjoining the fence, he leisurely began to remove the saddle, while his eyes roved elsewhere. He noted presently, when the girl jumped down, that her slim brown legs were bare, that she wore beaded moccasins, and that the rest of her apparel showed further indications of the backwoods. As she passed out of the corral with the bearded man, Jim had a closer scrutiny.

"Shore I'll bet that'll be Elam Hatt an' his daughter Rose," muttered Jim. "An' if so, those three riders are the other Hatts. . . . Reckon the ball is openin' pronto."

By the time Jim had turned his horse over to the Mexican stable boy the Hatts had gone into town. Jim got out just in time to see them turn a corner. He followed very slowly. Turning into the broad main street he strolled along, seeing everything while not appearing to be interested in anything. He passed several persons whom he knew well. They did not give him a second glance. The restaurant keeper, standing in a doorway, did not recognize Jim. A cowboy came along on his horse, evidently going home. It was Jerry Smith from Franklidge Ranch. He saw Jim, yet did not look twice.

THE later afternoon hours were the busy ones in the stores of Winthrop, owing to the heat of midday. The saloons were always busy, all day and all night.

Jim had never entered a saloon in Winthrop. He would break that record presently, but not just yet.

He crossed the side street and went on down toward the center of the main block. Presently he came to the entrance of a store, and espied the girl he had taken for Rose Hatt standing in the door.

"Excuse me, miss," said Jim, doffing his sombrero, and stepping up to her. "Don't I know you?"

She looked up at him with big hazel eyes that had not been long free of tears.

"You might, mister, but I sure don't know you," she replied.

Jim decided she was more than pretty, and not such a child as he had first supposed. She had wavy brown hair, rather rebellious red lips, and tanned, rose-tinted cheeks.

"Aren't you Rose Hatt?" he asked.

"Sure."

Jim leaned easily against the door post, smiling down upon her. "Reckon I thought so. Shore there's not many girls as pretty as you in these parts."

"Put your hat back on, mister," she replied tartly. "Standin' bareheaded don't go with such taffy. Besides, I ain't used to it."

"All right," returned Jim, good-humoredly. "Bad habit of mine. I'll get sunstruck some day."

"Say, you'll ketch worse if my dad comes along," she said, laughing, "unless you tell me pronto who you are."

"Wal, Rose, I understand there's a dance to-night," drawled Jim. "I may drop in on it. If I do, I'll tell you my name then."

"Mister, I knowed that was comin," she returned. "An' I'll bet you never met me before!"

"Wal, to be honest, I never did."

"Reckon it ain't no difference. But I'm afeared I can't promise to dance with you. Dad says I can go, but Cedar—he's my brother—he says no. An' Cedar is boss of our outfit."

"Wal, if your dad's willin', why, go ahaid. He's your father."

"Say, mister, I reckon you ain't acquainted with Cedar Hatt," declared the girl, almost with scorn. "You're sure a stranger in these parts."

"Yes, I am, sorry to say," replied Jim thoughtfully. "But what's so bad aboot your brother?"

"He's only a half-brother, same as Henny an' Tobe, an' I hate him!"

"WAL! Why do you hate your own kin, little girl? Shore it's not natural," went on Jim, in his slow, persuasive drawl, so full of interest and sympathy.

"Reason enough! It was his fault that Clan Dillon took to runnin' after me."

"*Dillon!*" flashed Jim, in an amaze too swift and deep to hide.

His tone, his look betrayed to the simple, passionate girl that she had allowed her tongue too much freedom.

"Say, mister, here I am talkin' like an old woman," she cried, almost in affright. "I'm beggin' you to keep mum that slip of my tongue. Cedar would half kill me."

"Shore I will," returned Jim, in his former kindly tone. "Rose, you just happened to run into a man you can trust."

"You look it, mister. I like you," she replied, with relief.

"Thanks. I'm shore the lucky hombre. But I reckon, now, you're engaged to marry this Clan Dillon."

"Marry!" she exclaimed, suddenly almost fierce again. "I wouldn't marry him to save his life, the handsome, smilin'-faced liar. Not even if he wanted to, which he sure don't. I be only a sheep-skin rug to Clan Dillon!"

Jim dropped his head, conscious of an inward shrinking of tingling nerves to the coldness of ice. It had come again—that thing which had not frozen within his breast for years. How life tracked him down! Then he looked again at the girl. She was recovering composure. Manifestly she was a primitive little girl, as much like a wild-cat as a wild-rose. Jim felt intuitively that she was good. The flame left her hazel eyes and the hardness around her lips softened. Jim did not need to be told more about her life.

"Rose, have you any friends?" he asked. "Shore, I mean women-folks who could advise a young girl like you."

"Me? Why, mister, didn't I tell you I live down in the brakes!"

"Haven't you a man friend, then, or even a boy—who's good?"

"No. But I was makin' one fast enough," she replied. "A boy from California! Say, he was nice! But Cedar caught me with him."

"Too bad. What'd Cedar do, now?" queried Jim, much concerned.

"Not much, for Cedar," replied the girl "He drove my boy friend off into the woods. Dodgin' bullets! An' he kicked me till I couldn't set down for days."

"Wal! . . . Look heah, girl, you're old enough, and you've sense enough, to know a friend when you meet him, aren't you? Now, who's this California boy your brother caught you with?"

Our Trial Opens

when you accept a 10-day tube of this unique shaving cream—and find out for yourself whether the claims men make for it are justified

GENTLEMEN:

The big argument we advance for Palmolive Shaving Cream is that millions of men, once wedded to rival preparations, have tried it—and adopted it.

In the last few years, the success of this unique creation has been a business sensation. Irrespective of tremendous competitive pressure, it has risen from beginning to a top place in its field.

Sixty years of soap study stand behind it. Our whole experience as the makers of Palmolive, a world's leading toilet soap, is embodied. 130 formulas were developed and discarded before we found the right one.

It may please you or not. We can't say. So we urge you not to buy, yet; but first to accept a 10-day tube of this amazing shaving cream to try.

These 5 advantages

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Just send coupon

Your present method may suit you well. But still there may be a better one. This test may mean much to you in comfort. Send the coupon before you forget.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of shaving cream. There are new delights here for every man who shaves. Please let us prove them to you. Clip coupon now.

"Swear you'll never tell?" she returned impulsively, drawn by his potent sympathy.

"Rose, I'll shore keep your secret, an' more. I'll help you to *make* a friend of him."

"His name is Marvie Blaine," she whispered.

Jim Lacy drew a sharp, swift breath that seemed to cut him like a knife as it swelled his breast. He leaned down to the girl.

"Listen," he whispered. "I will be your friend—an' this boy's—if you'll keep your mouth shut."

"Lord, mister, you needn't be afeared of *me*," replied the girl. "I wouldn't dare. Sure I don't know why I ever talked to *you*. But you're different. An' oh, how I need someone to talk to!"

"Shore you've found someone. Me! I'll be goin' down into the brakes."

"But who are you, mister?" she queried, aghast at his assertion.

"Did you ever heah of Jim Lacy?"

Her red lips parted to let out a little gasp, and her brown face paled. "My heavens—are you *him*?"

"Yes."

"Hear of you, Mr. Jim Lacy!" she ejaculated, her eyes dilating. "Ever since I can remember I've heerd of you. Many men ride to my dad's ranch, an' none of them but speaks your name. Some of them have seen you, an' two of them at least knowed you once."

"Rose, I'll tell you their names—Hardy Rue and Cash Burridge."

"Yes—yes! Oh, you *are* Jim Lacy! An'—an' I'm not scared a bit," she whispered. "Why, it ain't so long ago that I heerd Cash Burridge tell of seein' you call out an' kill a man for beatin' a girl. . . . Oh, Mr. Lacy, no one ever taught me about God, but I've prayed—prayed night after night—for someone to come an'—"

"That your dad right heah?" interrupted Jim.

"Oh yes. . . . What'll I say?"

"Nothin', lass. He hasn't seen us. Don't forget. Keep mum. Good-by."

JIM strode out as if he were just leaving the store, and passed Elam Hatt so close he might have touched him. Hatt was walking with a man as rough in garb and hard of face as he was himself. Neither appeared to notice Jim. After a few steps Jim glanced back. The girl had disappeared and the men were passing on.

"Good!" said he to himself. "That lass is game; but she's only a kid, an' I reckon it's better her dad didn't see her with me. Wal, wal! The old luck of Jim Lacy! Half an hour in Winthrop, an' I'm on a hot trail."

He strolled the length of the main street, and, crossing, strolled back again. He had the pleasure of meeting Judge Franklidge face to face in front of the hotel. The rancher saw Jim only as a passer-by.

It would have been the opposite of pleasure, however, for Jim to have encountered Ben Ide face to face; and that was one reason Jim's keen eyes sighted every man first. But accidents could happen. It would be well for Jim, while in Winthrop, to keep under cover of the saloons or places not likely to be frequented by Ben. At most, Jim's hours in town would be few and far between.

He went to a side-street restaurant to get his supper and engage lodgings for the night. As darkness came on he ventured into a store, where he made a few purchases, and then returned to the corral for his pack. This he carried to his room.

The small mirror showed his eyes piercing and light, like points of daggers gleaming out of shadow. He stood an instant, motionless in the chill, lonely silence of the room. He knew that when he went forth again it must be into the raw, evil life of outlaws, gamblers, murderers—all that riff-raff of the Southwest which like a murky tide had rolled into Arizona. He calculated coldly that he must be all he had ever been, all that his name had ever meant. And he must add to these the intelligence which had sharpened in the years of peace.

Before the mirror, with a grim smile on his face, he came at last to the practical business of the matter. Though the success of his enterprise depended upon his cunning and his knowledge of the outlawed men with whom he must throw his lot—and the more of such qualities he exercised the surer his chances—the cold, hard fact was that all hung upon the deadliness of his skill with a gun. This job had to do with death.

SUCH was the wildness of the time and the evil code of outlaws, that he could kill this one and that one, any number of them, and only add to his fame, only give himself greater standing among them. True, by so doing, he must make bitter and relentless enemies; he must face the strange paradox that many an incipient gunman, or notoriety-seeking desperado, or drunken cowboy, would seek to kill him, just because he was Jim Lacy.

Whereupon, with cool deliberation he treated himself to a tense exhibition of his swiftness of eye and hand. In secret he had practiced all through these peaceful months while engaged in honest labor. A nameless impelling force had exacted this of him. He understood it now. And with a dark satisfaction he realized that he had gained in speed, in sureness of hand. Beyond these he had in large measure the gift peculiar to all gunmen who survived long in the Southwest—and that gift was the ability to read his opponent's mind.

"Reckon I might have bit off more'n I can chew," said Jim, as he sheathed his gun. "But from the minute I step out this heah door I shore won't be makin' many mistakes!"

The Lincoln County War in New Mexico had ended recently. It had been the blackest and bloodiest fight between rustlers and cattle men—and many others who had been drawn into the vortex—that had ever been recorded in the frontier history of the Southwest. As such it had possessed an absorbing, even a morbid, interest for Jim Lacy. It had had in its beginning something analogous to the present situation here in Arizona. Jim did not believe there could ever again be such a fight as the Lincoln County War.

But there was no telling. Some of the characters prominent in the Lincoln County War had not been killed. They had disappeared. It was not unreasonable to suppose that one or more of them had drifted into Arizona. To be sure, Billy the Kid, the deadliest of all the real desperadoes of the Southwest, had fallen in the Lincoln fight, along with the worst of his gang. But they had not all bitten the bloody dust of New Mexico.

"Shore I'll run into someone from over there," said Jim. "When I do, I'll shoot first an' ask questions after!"

With that he opened the door, to step out into the dark, oppressive August night.

During the early evening hours Jim Lacy visited some of the main street saloons, steering clear of the Ace High, and others of prominence. He lounged about the bars and tables, agreeable and friendly to anyone who wanted to talk, willing to buy cigars and drinks, while he made some excuse or other for not indulging at the time. Cowboys were all friendly folk, except now and then one whom drink made mean. Gamblers and hangers-on, Mexicans and Indians, attracted by Jim's liberality and presence, added their little to the sum of information he was gathering. At length he left the last resort, intending to hunt up the dance hall.

"Shore that wasn't so bad for a start," mused Jim, as he summed up and sifted the bits of talk in which he had found significance. "Cash Burridge, sold out an' gamblin' his fortune away, spends half his time heah in town. Thick with some Spanish girl. Same old Cash! . . . Clan Dillon one grand hombre, eh? Wal, wal! Tom Day just as liable to be boss of the Pine Tree outfit as anyone. That'll shore tickle Tom.

"The Hatt outfit, except Cedar, just no-good homesteaders, low-down enough for anythin' not really big an' dangerous. Cedar Hatt, though, is a plumb bad man. Not the even-break kind. But crafty as a redskin, treacherous as a greaser. The Stillwells hardest nuts down in the brakes. Never come to town! Now, that's shore worth rememberin'. Last an' perhaps meanin' most to me—what that half-drunk sheep herder told me. Strange riders often seen by herders passin' through the Mongollons. Wal, most of all this sounds familiar, as I think back. But now it comes close."

JIM, by following in the footsteps of hurrying young people, soon found where the dance was being held. It was on a side street, almost at the edge of town, in a low, wide adobe building of Spanish design, very picturesque now with its hanging colored lanterns, its trailing vines over archways.

Presently Jim believed he had caught a glimpse of little Rose Hatt at the far end of the terrace. So he arose to walk in that direction. At the end of the terrace he found her, just stepping out upon the floor. It was a transformed Rose. She had on a gaudy, cheap, flimsy dress, with shoes and stockings to match, but these changes did not detract from her prettiness. She was young and radiant. Her partner was a cowboy not much older than herself. They stood a moment, holding on to each other, self-conscious and awkward, before they began to dance. Rose did not know how to waltz, but she made a valiant effort.

Jim watched the couple until they were lost in the whirl of dancers. This end of the terrace opened into a garden or yard, where a walk wound between clumps of

Williams lather takes up lots of water but holds its thick, rich bulk until you are through shaving.

Razor blades stay sharp longer because Williams saturated lather soaks the beard soft making your beard far easier to cut.

Quicker shaves! *Sharper* blades! *Smoother* skin!

WILLIAMS SHAVING CREAM has won its immense popularity for a very good reason. It simply does a shaving soap's job just a little bit better than any other shaving soap we know.

First, the rich mountain of quick lather whisks away the water-resisting oil film from the beard.

Then, the enormous amount of moisture held in Williams lather simply drenches the beard bristles—soaks them soft so the razor glides through.

Furthermore, Williams lubricates the skin for easy shaving—leaves it glove-smooth—gives you that barber's massage feeling.

A Real Tip! The double-size tube of Williams Shaving Cream at 50c is a real economy. It holds twice as much as the regular 35c large-size tube.

Free Trial Tube

We want you to try Williams shaves for a week FREE. Send the coupon below, or a postcard, and we'll send you a free trial tube.

shrubbery. There were benches at each column of the arches, and some of these were overshadowed by vines. Jim watched the dancers, hoping to see Rose again, and perhaps catch her eye. But he missed her in the whirling throng, and when the dance ended he retreated to a seat on the adobe wall of the terrace.

PRESENTLY a couple approached out of the shadow from down the aisle. As they reached a point beyond, yet near, where Jim sat half concealed, the girl halted.

"Please—let's go outside," begged the man.

His voice prompted Jim to turn so that he could see better. The man had the build of a rider, lithe, tall, small and round of hips, wide in the shoulders. He wore a dark suit and had a flower in the lapel of his coat. His face had a compelling attraction. But Jim, in his quick glance, could not decide whether it attracted him because it was a handsome, unusual face—or because of some other fascination difficult to grasp on the moment.

"No, Mr. Dillon, I don't care to go further," said the girl.

Jim sustained such a violent start that he almost fell off the low adobe wall. That voice! He would have known it among a thousand voices. His cool curiosity vanished in a rushing tide of emotion. He flashed his glance from the man to his companion. She stood full in the soft rose light of one of the colored lanterns. Hettie Ide! His heart leaped. The face that had haunted Jim's camp fires in the lonely watches of the nights! The same rippling fair hair, the deep, earnest eyes, the rich, clear complexion that spoke of contact with the open, the strong, full lips, more hauntingly sweet than ever for the sadness which had come!

So rapt, so agonizing was Jim's attention that he lost something of the words which passed between the two. . . . It was the name "Dillon" that roused Jim from his trance.

"Mr. Dillon," she was saying, "the reason I can't marry you is that I don't love you."

"But, Hettie, you will—you must love me, in time!" he returned passionately, seizing her hand and trying to pull her into the shadow.

"I never will," she said, with eyes and cheeks flaming. "What kind of man are you—that you persist so rudely? I liked you—even admired you until you forced such attentions as these on me. I've overlooked them because my brother Ben thinks so much of you. But, no more, Mr. Dillon!"

Her dignified yet spirited reply might as well not have been spoken for all the effect it had to restrain Dillon. He burst into low, impassioned appeal, and backed her under the overhanging vines against the wall.

"I—I thought you were a gentleman," she burst out.

"No man thinks of bein' over-gentle when he's in love," retorted Dillon. "I tried that with you. And, to tell you the truth, I wasn't so natural then as I am now. I've plumb lost my head. I tell you, I love you, an' I'm goin' to have you! What do you say to that?"

"I say this, Mr. Dillon: We've all got you figured wrong," she flashed.

"Sure you have," he rejoined, with an

AT NEW LOWER PRICES, *the Chrysler "60" is instantly removed further than ever from any other light six in the industry*

CHRYSLER "60"

Nothing so surely emphasizes the unique value that Chrysler "60" offers as the attempt to compare Chrysler "60" performance with that of other cars in its price class.

The difference is so pronounced—in smoothness of operation, in wealth of power, in alert response to steering wheel and throttle—that anybody driving or riding in the Chrysler "60" recognizes it at once.

An hour behind the wheel, threading easily through traffic, flashing effortlessly past other cars, or in open country sweeping up to 60 miles and more per hour to hold the pace *smoothly* as long as you wish—

Try it and you will convince yourself utterly that the Chrysler "60" is *beyond comparison* with any ordinary type of six, even many that are far higher-priced.

But this is no more than should be expected of a car so designed and built that it can give maximum performance, if required, every mile and minute of its life.

The model number "60" means a 60-mile-an-hour standard of performance. This, combined with characteristic and proved long life of Chrysler products, is made mechanically inevitable by the unique Chrysler plan of Standardized Quality manufacture.

At its new lower prices, the Chrysler "60" stands forth more emphatically than ever—a value not even remotely approached by any other light six in the industry.

Now . . . your senses say

CLEAN

This dual-action dentifrice brings a new cleanness you can taste and feel

ONE minute after using Colgate's Ribbon Dental Cream, your senses tell you that your teeth are clean—your mouth pure—your breath wholesome.

The touch of your tongue against the back of your teeth, the feel of your lips against the front of your teeth, leave a refreshing consciousness of being *clean*.

Modern hygiene demands a dentifrice with a dual cleansing action. Colgate's formula is based on this principle. As you brush, Colgate's expands into a plentiful foam. First, this foam loosens imbedded food particles and polishes all tooth surfaces. Then it thoroughly washes teeth, gums, tongue—sweeping away all impurities. Thus the dual action of Colgate's brings unequalled cleanness—removes the causes of decay.

A normal, healthy mouth needs no drug-filled dentifrice. Visit your dentist at least twice a year. Brush your teeth with Colgate's at least twice a day. Then you need never worry over mental dental ills, for you have done all you can do to keep your teeth healthy and clean.

© 1927, C. & Co.

Colgate & Co. Est. 1806—NEW YORK

exultant laugh. "An' here's how!" With that he attempted to seize her in his arms. But he had cornered the wrong girl. Supple and strong, she wrestled free in an instant, and wheeled away from the wall.

"What do you—think—Ben will do—when I tell him—you've insulted me?" she panted, backing into the aisle.

"IF YOU'VE got any sense you won't tell him," replied Dillon, in a flash changing from an ardent lover to something almost menacing. "Ben Ide's in bad here. Arizona isn't California. There are rustlers here, an' you can bet some of them are the ranchers he thinks his friends. I know this cattle game. I know these men. He's lost most of his stock. If he buys in more he'll lose that too. Hettie, I'm the only cowman in Arizona who can save him from ruin."

"Indeed! Are you aware that I have a share in the Ide ranch?"

"That's news to me," said Dillon. "But it sure makes my case stronger. What ruins Ben Ide will ruin you!"

"The loss of a few thousand cattle won't hurt either my brother or me," she returned, almost flippantly, studying his face with steady, penetrating eyes. She was seeing the man as if he had suddenly unmasked.

"You must be pretty rich to talk like that," replied Dillon.

"Quite well off, thank you. I often wondered if that didn't interest you, and now I know."

He laughed in a way that would have been a revelation to an older woman well versed in the life of the frontier. But Hettie did not grasp what seemed as plain as print to Jim Lacy, crouching like a tiger under the shadow.

"Thanks, you're very smart," he said. "But I'd be crazy about you if you were as poor as Rose Hatt. I tell you, I love you—want you—need you so terribly that if I don't get you it'll make a devil out of me."

"I'm beginning to think the process of making has gone pretty far already."

"You've got cat in you—same as other women," he retorted. "Listen, we're wastin' talk. If you'll marry me, I'll save Ben Ide. If you won't, I'll quit him an' use my influence all over the range. I'll make ranchin' impossible for him in this country. An' I'll get *you* in the bargain."

Hettie Ide turned so pale that her eyes shone black.

"Mr. Dillon, weeks ago, when you first came to us and began your—your attentions to me, I thought there was something odd about you. You were too good to be true, as old Raidy said. Well, I think now you're as bad as you seemed good. I think you're a contemptible, conceited ass. I think you're a deep, cunning scoundrel. . . . You need not return to Cedar Springs to-morrow. Marvie Blaine will drive me home. Right here and now, you're discharged."

Hettie Ide abruptly turned her back upon Dillon and walked away, to disappear in the crowd of dancers.

Jim Lacy strode out from under the vines and the shadow.

"Howdy, Dillon," he said.

A lightning-swift glance took Jim in from head to feet and back again.

"Howdy yourself. Reckon you've got the best of me," returned Dillon gruffly.

the Nightmare of Inventory

Christmas joys are no longer marred by the nightmare of the year-end inventory that lies ahead.

Burroughs has taken the worry and burden out of inventory time. It has taken "CLOSED FOR INVENTORY" off the doors.

With Burroughs to help you, you can complete this year's annual inventory accurately and quickly. And for all the rest of 1927 you can keep a complete, more efficient record of sales, costs, stock and turnover.

The figures obtained by use of Burroughs Machines tell you which stocks are idle or slow, which are getting low—provide a dependable guide to purchasing and selling—check leaks, losses and errors at their source.

With a Burroughs Portable Adding Machine, the items are listed, extensions made and printed proofs of accuracy provided far faster than you can do the work with pad and pencil. The Portable is easily moved from place to place. A girl can handle it. It takes up little space. It has the standard full-visible keyboard.

The Burroughs Calculator too, is a rapid figuring machine that has greatly simplified inventory work in many large institutions.

Why dream and fret about inventory, when Burroughs will banish the nightmare forever? Put yourself at the helm of your business with Burroughs. Leave worry behind with your pad-and-pencil competitors!

The Burroughs Portable Adding Machine

Adds up to $1,000,000.00—standard full-visible keyboard—one-hand control—slightly larger than a letterhead—easily carried from counter to office, desk to desk, or business to home.

Price only $100—delivered in U. S. A.—easy terms if desired.

The Burroughs Calculator

Adds, multiplies, subtracts, divides. No larger than a letterhead—weighs only eleven pounds—durable, efficient, speedy, unfailingly accurate—costs less than any other machine of its type.

Price only $200—delivered in U. S. A.—easy terms if desired.

What Some Users Say:

"If we used our Burroughs for inventory alone, and then put it away until next inventory time, it would more than pay for itself."
—Bilsborough Shoe Store
San Francisco, Calif.

"During the past four years we have been using Burroughs Calculators on inventory work and have found that these machines effect an almost unbelievable saving of time. We would not consider handling our inventory work in any other way."
—S. S. Kresge Company
Detroit, Michigan

"Inventory never interrupts business in our store. With our Burroughs it is done in a day and a half instead of a week, saving time, labor and many dollars."
—A. T. Vaughn, Inc.,
Greenville, S. C.

100 questions which only *You* can answer

QUESTIONS about yourself—questions about your health—questions pertinent to your welfare and your very life. Get the questions—write the answers.

How much do you know about yourself and your chances for a long and happy life? Wouldn't you rather know about the little ills before it is too late to head them off—while they can still be prevented from causing big troubles?

Fourteen years ago the Life Extension Institute was founded for the purpose of protecting and prolonging life. To-day the Institute is a powerful national organization waging active warfare against disease and early death.

The Life Extension Institute makes it possible for you to know just how you are. The 100 Questions which only you can answer come from doctors who are familiar with the obscure causes of possible future sickness.

The health examination of the Institute begins with these 100 Questions. Not until these questions are answered does the actual work of examination by the medical staff of the Institute begin—an examination which discloses 75 or more additional facts and physical indications. The examination shows you as you are from head to foot—heart, lungs, vital organs, blood, nerves, muscles, bones, teeth, eyes, nose, throat and ears.

FREE EXAMINATIONS

to many of the policyholders in any one of these 42 Life Insurance Companies:

Metropolitan Life	Guaranty
Guardian Life	Wisconsin National
Southern Union Life	George Washington
Midland Mutual	Ohio State
Inter-Southern	Wisconsin
Southeastern	Great Northern
Alabama National	Montreal
Oregon	Western & Southern
Ontario Equitable	Midwest
Penn Mutual	Independent
Columbus Mutual	Gem City Life
Volunteer State	Berkshire
Mutual Life of Canada	Baltimore
Cedar Rapids	A. O. U. W. of Kansas
Merchants	West Coast Life

Liberty Life of Illinois
United Life & Accident
Des Moines Life and Annuity
American Insurance Union
Standard Life of America
Guarantee Fund Life Ass'n.
California State Life Ins. Co.
Occidental, Los Angeles, Cal.
Northern, London, Ont.
Provident, Bismarck, N. D.
People's, Frankfort, Ind.
Home Life, Little Rock, Ark.

Fill out and mail the coupon to see whether you are entitled to a free examination.

Perhaps you are entitled to a free health examination. The progressive life insurance companies listed herewith have made it possible for large numbers of their policyholders to receive an examination by the Life Extension Institute without charge. The report about your physical condition is strictly confidential between you and the Institute. You can be examined in your home city.

More than half a million persons are glad they have applied for this opportunity to make their health better—among them some of the most able men and women in this country. Would you like to see the 100 Questions that they were asked—the same questions that only you can answer for yourself? Send the coupon and we will mail the important data, together with copies of our booklets, "How to Live Long" and "How to Keep Well".

COUPON *Send coupon to* Life Extension Institute, Inc. 25 West 43rd St., New York

Western Headquarters: Tower Building, Chicago
New England Headquarters: Chamber of Commerce Building, Boston

Please send me, without cost or obligation, your "100 Questions" and your booklets, "How To Keep Well" and "How To Live Long".

☐ I am a policy holder of the _____ Company. Am I entitled to a Free Health Examination?

☐ I am not a policyholder in any of the insurance companies listed, but send me free books and information about Institute's examinations for individual subscribers.

"Shore. I reckon I have," drawled Jim, with cool significance.

"Who are you?" queried Dillon, sharply.

"I might be Peter Punkins—only, I ain't."

"Pretty smart, aren't you?" rejoined Dillon, feeling his way. He knew men, he knew the West. "Reckon you're more Simple Simon than Peter Punkins. I don't care. But I'm curious about where you sprung from just now."

"Dillon, you're figurin' quick," returned Jim, in slow deliberation. "Wal, I was settin' right heah on the adobe wall."

The man cursed under his breath, and flung his cigarette down so hard that the sparks flew from the stone pavement.

"You set there watchin'—listenin'?" he demanded, with sudden and powerful self-control. "Stranger, where I come from men got shot for such offense."

"I reckon. That's why I'm not apologizin'."

Dillon seemed to accept this as confirmation of the suspicion which had evidently been growing with his thoughts. Abruptly his bullying manner changed. The swift retreat of his personality was almost as remarkable as the new one which took its place. He stood unmasked, as far as his pretense was concerned. Cautious, steady, cold and hard he stood a moment, his strange green eyes trying to pierce Jim's mind. He was searching more for Jim's intent than for other knowledge of him.

As for Jim, he measured Dillon to be a Westerner vastly different from the character he enjoyed in that section of Arizona. He did not recognize a kindred spirit, but he read in Dillon the depth, the cunning, the courage, the desperate experience of a man used to the rawest and deadliest of frontier life.

"Ha! I see you pack a gun, stranger," coolly remarked Dillon. "Reckon you see I don't?"

"Shore. I saw first off you didn't, an' then just now I read it in your eyes."

"Mind reader, eh? Well, it's a helpin' trait for some men."

"Are you meanin' any particular breed?" queried Jim dryly.

"Yes. Spies, gamblers, thieves, gun throwers, an' the like."

"Thanks. I'm shore appreciatin' the way you speak. An', not wantin' to be outdone in compliments, I'll just repeat what Miss Hettie Ide called you. . . . A conceited ass! A deep, cunnin' scoundrel!"

"YOU heard all she said?" snarled Dillon. Deep and crafty as he was, he could not help the rise of passion, though he controlled it.

"Shore. An' I never heard a low-down man called more proper. Tickled me more because only to-day someone else called you a handsome, smilin'-faced liar."

"You're a brave man, stranger," returned Dillon. "But I'm tired listenin'. You excite a little suspicion yourself, considerin' this country is full of outlaws an' rustlers."

"It shore is. That's why I come here," returned Jim meaningly.

For the first time the dark red showed in Dillon's face.

"I'll have you put out of here," he said. "An' I'll tip Sheriff Macklin off that you need watchin'."

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The entire automobile industry urges you not to buy oil indiscriminately.

Your instruction book tells you how much importance the maker attaches to correct lubrication.

609 automotive manufacturers approve the Mobiloil chart ··· because ···

they know that scientific lubricating facts alone form the basis for these recommendations. They know that Gargoyle Mobiloil engineers thoroughly and painstakingly study each make and model of car before the recommendations are made.

Today, 3 out of every 4 motorists who buy oil by name, ask for Mobiloil.

Let the nearest Mobiloil dealer fill up the crankcase of your car with the correct grade of Mobiloil. Then see for yourself how much longer Mobiloil lasts, how it increases power, cuts carbon and repair bills.

30c a quart is a fair retail price for genuine Mobiloil from barrel or pump. (Slightly higher in Southwestern, Mountain and Pacific Coast States.)

Make this **CHART** *your guide*

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc"), Mobiloil "A," Mobiloil "BB," and Mobiloil "B."

Follow winter recommendations when temperatures from 32° F (freezing) to 0° F (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

If your car is not listed here, see the complete Mobiloil Chart at your dealer's.

Stiffest Beards yield *to this Small-Bubble Lather*

Feel how easily the razor glides when each whisker is softened scientifically at the base

FIRST fuzz of sixteen, wiry beard of forty—all whiskers yield to this modern shaving cream. It softens beards in a scientific way.

Colgate lather is different in formula, in action, in result, from anything you have used before.

This radical difference is all in the bubbles, as the lather pictures shown below prove. Colgate bubbles are far smaller and wetter. They contain an abundance of water and very little air. For this "small bubble" lather is based on a scientific fact—the fact that the water in the lather is the real beard softener.

How Colgate Lather Works

The moment Colgate lather forms on your beard, two things happen:

1. The soap in the lather breaks up the oil film that covers each hair, and floats it away.

2. With the oil film gone, millions of tiny water-saturated bubbles bring and hold an abundance of water down to the base of the beard, right down where the razor does its work.

Because your beard is properly softened at its base, your razor works easily and quickly. The keen blade glides smoothly *through* the toughest whiskers—not over them. Every hair is cut close and clean. And your face remains cool and comfortable throughout the day.

A Week's Better Shaves—FREE

Once you try this unique "small-bubble" lather, you will never go back to ordinary shaving methods. Prove this for yourself—at our expense. Just clip the coupon. We will send you a generous trial-size tube—free.

ORDINARY LATHER
This lather-picture (greatly magnified) of ordinary shaving cream shows how large air-filled bubbles fail to get down to the base of the beard; and how they hold air, instead of water, against the whiskers.

COLGATE LATHER
This lather-picture of Colgate's Rapid-Shave Cream shows how the tiny moisture-laden bubbles penetrate deep down to the bottom of every hair, holding water, not air, against the base of the beard and softening it right where the razor works.

SOFTENS THE BEARD AT THE BASE

"Wal," drawled Jim, with his glance cold and set. "Go ahead. But be shore to tip him off that I'm Jim Lacy!"

Dillon's stalwart frame jerked with a perceptible tremor. A slow, pale shade began to blot out the brown of his face.

"You expect me to believe you're Jim Lacy?" he demanded hoarsely.

"Wal, I'm tellin' you; but it's nothin' to me what you believe," returned Jim icily. This interview was about to conclude.

"All right," went on Dillon, breathing hard. "But I still figure you a liar."

Jim sprang forward and knocked Dillon down.

"Wal, shore it may take more'n that," he said, in slow accents; "but I told you who I am. An' that's somethin' you didn't tell me!"

Jim, wheeling away to go, found himself confronted by Rose Hatt, standing on the steps above the terrace.

"Oh—mister!" she cried, as he brushed past her.

The dancers were trooping off the floor. A tall youth, with features strangely familiar to Jim, appeared behind Rose. She clasped his arm, while she stared from Jim to Dillon, who had not attempted to get up.

"My lord! Who was that?" called out someone Jim took to be the youth with Rose. The voice added to the stirring of Jim Lacy's memory. And it urged him faster through the throng of dancers, out into the street.

"It was Marvie Blaine, God bless him!" whispered Jim, as he gained the darkness. "That was shore a close shave for me!"

(*To be continued*)

Boneheads I Have Known

(*Continued from page 37*)

schooling Watson obtained was not from any interest or desire or initiative on his part. He had no enthusiasm for facts. When he entered school, he was led there, struggling and weeping, by a husky and energetic parent who was burning with ambition for the intellectual future of her son.

Watson had no desire for geographical or mathematical information and theories. Literature and history did not allure him. He couldn't spell "laboratory" and he shied whenever anyone tried to introduce him to one. Through the stimulus of harsh words and the lash, he finished the sixth grade by the time he was fifteen, and then he ran away from home for a year or two.

During all his fifteen years, no one had ever seemed to notice that Watson had been almost abnormally interested in seeing things go 'round, and in constructing queer machines. Machinery of any sort held his attention. The old barn back of the house in which he lived was full of curious contraptions run by wind and by foot power and by awkwardly contrived batteries.

He was ignorant of the theories of electricity, but when it came to fixing things, to making balky machinery of any sort function, Watson was at home.

Tuck him in~ Safe

WHAT a joy it is to tuck him in his warm, fleecy blankets—happy in the thought that everything that can be done to keep him safe from harm has been done.

FORTUNATE are the mothers of today. They can tuck their babies in bed and rest secure in the knowledge that many of childhood's greatest enemies need never touch them. For one thing, their babies probably will never have smallpox. These wise mothers have seen to it that their little ones are protected by vaccination.

How different it was before vaccination was discovered. Then mothers were powerless against this terrible disease. Among children who died, under 10 years of age, smallpox was responsible for one out of three deaths. Smallpox was more prevalent than measles. Few escaped and the children suffered most. Over and over again it swept the world, leaving its thousands of dead, thousands cruelly disfigured, thousands blind and deaf.

Then came the history-changing discovery—vaccination—and the number of deaths from smallpox went down and down. The end would have been reached but for the well-meaning, but misinformed persons who clamored that "vaccination is a crime"—that "sunshine and cleanliness, not vaccination, drive out smallpox".

If such reckless statements are believed and parents do not have their children vaccinated, smallpox may again attack the children as it did a little more than a century ago. In certain parts of the country, smallpox among children is again on the increase!

In the past, when arm to arm inoculation was common and persons were inoculated direct from smallpox patients, there were many deaths following attempts at prevention. Today, vaccination is safe. The only mishaps that can occur are due to carelessness in protecting the vaccinated area. The vaccine now used is produced under the control and supervision of the United States Government.

Smallpox comes from unsuspected sources. Because it takes 12 days to develop, it is possible for immigrants or returning travellers to bring smallpox into the country with them.

Smallpox can be stamped out only by systematic vaccination. Every child should be vaccinated before he is one year old and again during school years. Immunity wears off in time—anywhere from five to fifteen years—*and leaves one again susceptible.* Is it more than seven years since you were vaccinated?

Now—before the danger is upon you—make sure that you and yours are properly protected. Be safe.

Before the Philippine Islands were occupied by the American Army in 1898, thousands of persons died from smallpox every year. Vaccination carried on under the direction of Army officials drove smallpox down to only 273 deaths in one year.

Then came a period when vaccination of children was neglected. As a result, the worst epidemic of modern times broke out in 1918-19 with 60,855 deaths—75 per cent of which were of children under 9 years of age.

Our 48 states can be classified in three groups—those in which vaccination is compulsory, those in which it is optional and those which have no laws for vaccination.

Statistics show the lowest average number of cases per 100,000 of population in the "compulsory" states, the next highest average in the "optional" states and the highest in the "no-law" states.

The Metropolitan Life Insurance Company will gladly mail, without cost, booklets which give the facts — "Smallpox" and "The Story of Edward Jenner", the man who discovered vaccination. Send for them.

HALEY FISKE, *President.*

"Service Beyond Price"

TRAINING men in industry to become more skilled workmen and helping men and women promote their knowledge of business is service.

Service in the International Correspondence Schools goes beyond the enrolment of students. It is a matter of pride with us to be able to give the student more than the written terms of the scholarship. We view the student as a friend as well as a student.

Between friends there must be more than a mere business relationship. Between friends there must be loyalty and interest in all things affecting one or the other. The interest of the I. C. S. is the interest of a friend.

The student has come to our institution in the hope that we can serve him. That hope is bred of praiseworthy ambition. Such a student is an educational ward of our Schools.

It is our duty to go to the uttermost to maintain this ambition and to help the student in every way at our command to master the course. That we cannot—*will not*—do half-heartedly. The brains and the educational resources and facilities for service of the International Correspondence Schools belong to the student.

We are not content with the service we give, we aim all the time to give more. Our texts must be the best we can obtain; our examination and correction of studies as perfect as human machinery can make them; our students must have prompt service; our viewpoint must ever be forward-looking; ours must be genuine sympathy with the ambition of the student to go onward and upward.

We want no student to stop. We want all students to finish their courses so that they may secure the practical reward that follows increased knowledge, and the satisfaction and strength that come of having mastered something worth while.

So to help ambitious men and women over the boulders and barriers is a fine and constructive work. That is our mission. That is what we mean when we speak of "service beyond price."

Canadian address—International Correspondence Schools Canadian, Limited, Montreal

Broken-down flivvers, electrical flatirons, doorbells which had gone out of business, watches that wouldn't tick, he adjusted instantly. He had an electrical and mechanical instinct. He was a genius: that is the only explanation of his having devised without education or scientific training, an electrical system for the control of traffic which has made him a fortune, and which has contributed enormously to safety in congested streets. Yet, at school, Watson was a hopeless bonehead. He had shown only the slightest reasoning powers. He could never understand *why*; but he knew *how*.

"What makes the thing work?" someone would ask him. He could not answer the question, but he knew that the thing would work. And it always did!

I SHOULD not want to leave the impression that all the stupid people I have known have been males, though chivalry might lead me to confine my reminiscences to that sex. I knew a young woman once who was neither good-looking nor smart.

Even Sarah's most ardent admirers never accused her of having brains; that is, brains which could be utilized for purposes of learning things. She was unbelievably stupid in the grades. She gave up trying to learn the multiplication table, and on Friday afternoons, when the children spoke pieces she could never commit the first four lines of "Mary had a little lamb." She stumbled along in high school for a time, and that was the end of her formal educational career. And yet—

There was a gray spot inside of Sarah's skull concerned with cataloguing and managing men. She could look a man over, and tell almost instantly what would most appeal to him. Sarah didn't know anything about mathematics, or philosophy, or literature, or psychology; she wouldn't have known an inferiority complex if she had met one in the road; but she could size up men. She's doing it now quite successfully for one of the big manufacturing concerns in the East. And she has been wise enough during the assorting and sizing-up process to pick out a thoroughly first-class husband for herself.

If a man needs an alert mind and a quick brain to do well in anything, it seems to me that he would need it in business for himself. And yet, there was Anderson. He stumbled into a job some way with a steel company, but he proved hopelessly incompetent. If he were sent on an errand, he would forget before he had gone a block where he was going and what he was going for. If you'd write down the directions, Anderson would lose the paper on which they were written. He was the original dumb-bell.

"Here's an order from St. Louis," the boss would say to Anderson at nine o'clock, "which has been delayed in the mails, and which should get out immediately. Get it to the shipping clerk as soon as possible."

An hour later, the boss would inquire, "Did you get that St. Louis order out to the clerk, Anderson?"

"What order was that?" Anderson would ask, with a face as innocent as an infant's.

"The order I gave you an hour ago."

"I don't remember any order you gave me," he would answer.

"Detained at the office . . . again!"

THE WORLD does not always pity the "business widow." She, too, may be to blame. Neglect by the husband is often the result of the wife's neglect of *herself*.

For youth and health need not fade with marriage. Modern science provides a simple protection: Sane habits of living, plus the proper practice of feminine hygiene.

But do not *experiment* in so vital a matter as personal hygiene. Use the disinfectant which is safe and certain.

"Lysol" Disinfectant, for over 30 years, has been the standard with physicians, hospitals and fastidious women. It is reliable. Its strength never varies. And it *cleans* as it *kills germs*.

Send for the booklet offered below. It was written for women by a woman physician. It is frank and explicit and tells what feminine hygiene really is. It should be read by every woman.

Just mail the coupon to us and this booklet will be sent to you, free.

Made by Lysol, Incorporated, a division of Lehn & Fink Products Company. *Sole distributors*, Lehn & Fink, Inc., *Bloomfield, N. J.*

Your personal life chart

What will it show in 1927?

In many successful businesses, the management keeps a chart showing the course of sales. At the end of the year they have a graphic picture—a line whose ups and downs are a record of the past, and a guide for the future.

How reasonable that we should apply some such constructive thinking to our physical health and welfare. How much more important, *to us*, than the welfare of any business!

IMAGINE a chart based on your health and efficiency, day by day. The ups and downs. Picture the path of your health line during a whole year—during 1927.

A disregard of the causes of day-by-day slumps will almost certainly result in the line moving generally downward. What *are* the causes, in your case? Have you experimented, to find out?

One of the most widespread habits is the use of caffein at mealtime. Caffein temporarily deadens the sense of fatigue—*seems* to give new energy. The "new" energy is actually withdrawn from the body's reserve store.

Hundreds of thousands of men have found in Postum a way to avoid caffein, thus safeguarding their reserve energy. It is a satisfying, full-bodied drink made of whole wheat and bran. It doesn't excite the nerves, or interfere with sleep. It adds much to the enjoyment of the meal, with none of the penalties of caffein.

As one way toward removing the cause of slumps in your health line, we want you to make a 30-day test of Postum. Note the results—*then* decide. This test has helped many a man's record. Try it!

Carrie Blanchard's Offer

"Let me send you one week's supply of Postum, free, and my personal directions for preparing it, as a start in the thirty-day test.

"Or if you would rather begin the test today, get Postum at your grocer's. It costs less than most other mealtime drinks.

"Please indicate on the coupon whether you prefer Instant Postum, made instantly in the cup, or Postum Cereal, the kind you boil."

P.—A. M.—1-27

POSTUM CEREAL CO., Inc., Battle Creek, Mich.
I want to make a thirty-day test of Postum. Please send me, without cost or obligation, one week's supply of
INSTANT POSTUM . . . . . ☐ *Check which you prefer*
(prepared instantly in the cup)
POSTUM CEREAL . . . . . ☐
(prepared by boiling)

Postum is one of the Postum Cereal Company products, which include also Grape-Nuts, Post Toasties (Double-thick Corn Flakes), Post's Bran Flakes, Post's Bran Chocolate, Jell-O and Swans Down Cake Flour. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

"Do you mean to say that you don't recall that I explained to you about the delayed St. Louis order, and asked you to hustle it out to the clerk pronto?" the boss would shout, growing angry at the man's hopeless stupidity.

"I don't remember anything." Then Anderson would stir up the papers on his desk, and finally discover the order mixed up in a pile of papers.

You can see without further illustration that Anderson had little chance of ever being president of the steel trust. The boss worked with him for a year, and then let him go, with the statement that he'd have either to fire Anderson or to throw over his religion.

I hadn't heard of Anderson for ten years until the other day when I was in Chicago. Then a mutual acquaintance told me that Anderson had developed into a captain of industry and a real man of business. He had sold his proposition to some man who had more money than he knew what to do with, and had started a chain of stores to sell something or other. Anyway, he was making a lot more money than he needed and almost as much as he wanted. People looked upon him as possessing a keen business instinct and remarkable organizing powers. Well, he certainly seemed thick-headed enough when I knew him.

POSSIBLY there is an explanation. We are likely to catalogue our intelligence according to conventional standards. Failing to find what we consider an essential of intelligence we overlook a quality or a characteristic which may lead to a real accomplishment.

Meeks was a genius of a certain sort, as were the others. He had character, which counts for much in advancing a man, and he had a personality so winning that if you did not give him too careful a mental examination you attributed to him all the other mental characteristics of greatness.

Johnson had persistence; he stuck to a thing doggedly until he worked it out. Nicholi had intuition as to the direction a town would take in its development and as to real estate values. He was in his particular way a genuis, and genius works according to no law. Watson knew instinctively how to make things work. He couldn't explain why. They just did. Sarah understood human nature; she never could explain how or why. I can't explain Anderson.

Even the most "hopeless bonehead" has possibilities if he can only get on the right track!

A PERSONAL narrative that will strike home to most folks appears next month under the title of "It's Mighty Hard to Be Honest in My Town." . . . Is it expedient to tell the truth? Should civic and local pride blind your eyes to the failings of your town and townspeople? Must the college you attended be the best in the world? These, and numerous other issues, are forcefully handled by a man who, in endeavoring to follow the poet's advice, "To Thine Own Self Be True," ran up against mistrust, misunderstanding, and dislike.

"You Didn't Say a Single Word All Evening"

"HOW could I? I didn't even know what they were talking about."

"Well, Ralph, I wouldn't brag about that."

"But how was I supposed to know that they were going to talk literature and art? If they had discussed real estate, I could have chatted with them easily—all evening. . . ."

"Business, always business! If you were a big enough real estate man you'd know how to forget business and talk of other things in company!"

"I never felt so uncomfortable in my life," he said ruefully. "Couldn't even follow the drift of things. What was all the discussion about some poet who was killed in the war?"

"Really, Ralph—you should keep more abreast of things. I was surprised that you didn't contribute at least one idea or opinion to the whole evening's discussion."

He turned to her, curiosity and admiration mingling in his smile. "You were certainly a shining light tonight, Peg! You made up for me, all right. Where did you ever find out all those interesting things?"

Many Wives are Keeping Pace with Successful Husbands —This Pleasant Way

Peg was grateful for her husband's praise.

But, instead of answering his question, she smiled enigmatically.

He moved closer, glad to have diverted attention from himself. "You were the prettiest and cleverest woman at that dinner, dear!" he said.

"Just for that," she beamed, "I'm going to tell you why I was able to join in the conversation tonight—and you were not."

"Oh, that's easy," he said, man-like. "You get more time to read than I do."

"Is that so!" she retorted. "I don't get the chance to read a good book from one month to the next. But I've solved *that* problem. I have a copy of Elbert Hubbard's Scrap Book."

"What's that?"

"It's a whole library condensed into one fascinating scrap book. It contains only the best thoughts of the best minds of the last four thousand years—the 'high lights', you know."

"That sounds interesting. Tell me more about it."

The Famous Elbert Hubbard Scrap Book

By the time they reached home, she had told him all about the unique Scrap Book. How Elbert Hubbard, many-sided genius, began it in youth and kept it throughout life. How he added only the choicest bits of inspiration and wisdom—the ideas that helped him most—the greatest thoughts of the greatest men of all ages. How the Scrap Book grew and became Hubbard's chief source of ideas—how it became a priceless collection of little masterpieces—how, at the time of his death, it represented a whole lifetime of discriminating reading.

"Imagine it! This Scrap Book has now been published and anyone can have a copy. Do you know what that means? You can get in a few minutes' pleasant reading each evening what it took Elbert Hubbard a whole lifetime to collect! You can get at a glance what Hubbard had to read days and days to find. You can have the finest thoughts of the last four thousand years in one wonderful volume. If you read in the Scrap Book occasionally, you'll never be uncomfortable in company again. You'll be able to talk as intelligently as any one."

May We Send It to You for FREE Examination?

The Elbert Hubbard Scrap Book radiates inspiration from every page. It contains ideas, thoughts, passages, excerpts, poems, epigrams—selected from the master thinkers of all ages. It represents the *best* of a lifetime of discriminating reading, contains choice selections from 500 great writers. *There is not a commonplace sentence in the whole volume.*

This Scrap Book is a fine example of Roycroft book-making. The type is set Venetian style—a page within a page—printed in two colors on fine tinted book paper. Bound scrap-book style and tied with linen tape.

Examine it at our expense! The coupon entitles you to the special five-day examination—if you act at once. Just send off the coupon today, and the famous Elbert Hubbard Scrap Book will go forward to you promptly. When it arrives, glance through it. If you aren't inspired, enchanted—simply return the Scrap Book within the five-day period and the examination will have cost you nothing. Otherwise send only $2.90, plus few cents postage, in *full payment.*

We urge you to act now. We want you to *see* the Scrap Book, to judge it for yourself. Mail this coupon TODAY to Wm. H. Wise & Co., Roycroft Distributors, Dept. 331, 50 West 47th Street, New York City.

Wm. H. Wise & Co., Roycroft Distributors, Dept. 331, 50 West 47th Street, New York City.

Taking the hurdles of everyday life—

GRANTED, they may be little tasks: for instance—determining not to roll over for another forty winks when you know you should get up; brushing your teeth; shaving when you have trouble keeping your eyes open; getting under the shower.

All these early morning hurdles when you're still half asleep are not jobs you tackle with eagerness. Still you know they must be done.

But when they are accomplished, how refreshed you feel! And how you rebuke yourself later in the day if you've been lazy and overlooked any one of them.

Particularly tooth brushing: next perhaps, only to the bath; it's not only the most refreshing thing in your morning routine but how important it is to your own well-being!

Still to most of us it seems every day only as another necessary job—one of those little hurdles.

Realizing the truth of this, the makers of Listerine set out deliberately to formulate a dentifrice that would furnish the *easiest, quickest way* to clean teeth.

In short, a tooth paste efficient even in the hands of lazy people—for in tooth brushing, at least, the word *lazy* applies to so many of us.

Listerine Tooth Paste is really very *easy to use.* It works fast. With just a minimum of brushing your teeth feel clean—and actually *are* clean.

You have the job done almost before you know it.

This is on account of the way Listerine Tooth Paste is made. It contains a specially prepared cleansing ingredient—entirely harmless to enamel*—plus the antiseptic essential oils that have made Listerine famous.

And how fine your mouth feels after this kind of a brushing! Then, besides, you *know* your teeth are really clean—and therefore safe from decay.—*Lambert Pharmacal Co., St. Louis, U. S. A.*

P. S.—By the way, Listerine Tooth Paste is only 25 cents for the large tube.

**This specially prepared cleansing medium (according to tests based upon the scale of hardness scientists employ in studying mineral substances) is much softer than tooth enamel. Therefore, it cannot scratch or injure the enamel.*

At the same time it is harder than the tartar *which accumulates and starts tooth decay.*

Banishes

Fear!

from your home

Night loneliness . . . the sound of stealthy tampering at the door . . . a moment of helpless terror . . . *Has she forgotten to lock it?*

But the Yale 44 Automatic Deadlatch needs no remembering. When you shut your door, the heavy square latch bolt is *automatically* thrown nearly twice the usual distance into the strike and deadlocked!

Thus it is proof against forgetfulness from within and violence from without. It cannot be left unlocked. It does automatically what you might forget to do manually.

Be sure you have the right locks on all your entrance doors.

Look for the Yale trade-mark. If it's *marked* Yale it's *made by* Yale. No other locks *are* Yale.

Send for booklet, "Let the Yale 44 Automatic Protect You"

The Yale & Towne Manufacturing Co.

Stamford, Conn., U. S. A. Canadian Branch at St. Catharines, Ont.

YALE MARKED IS YALE MADE

Yale 44 Automatic Deadlatch

Only a Cop

(*Continued from page 27*)

taste for it, and still less taste for staying indoors to learn it. I've never had much use for the inside of a house, except to sleep there; and as a young, healthy lad—for I was just short of twenty years old—I wanted to be out in the open. So I joined a professional ball team; and for almost a year, while my family thought I was studying dentistry I was swinging a bat instead. I never learned to make a plate of false teeth," he laughed; "but I scraped an acquaintance with a good many 'home plates' on the baseball diamond.

"Finally my folks found out what I was doing and why I was doing it. They didn't want me to be a professional ball player, so they began to look around for another kind of open-air job; and somehow—I don't remember just how—they got me a chance to go on the police force. That was fifty years ago; and here I am to-day, still a policeman."

"How did it happen that you didn't become a sergeant, or even something higher?" I asked. "Didn't you have the opportunity?"

"Oh yes," he said indifferently; "at any time, after a few years' service, I could have taken the examination for promotion. But promotion would have meant sitting at a desk in a police station. I had no taste for that, any more than I had for pulling teeth in a dentist's office."

"AMBITION," said I, trying to look wise, "often means giving up what we do want, in order to get something we really don't want."

"Yes," he said, looking wise *without* trying, "people trade their health and their happiness for a few gold stripes on their sleeves, or for whatever stands for gold stripes to them.

"That's all promotion would have meant to me; some gold braid on my uniform and a bit more money in my pocket. They're both well enough, in their way; but in order to get them I'd have had to give up things I liked better. My job always seemed more interesting, and suited me more, than the ones higher up.

"If you had watched people as long as I have, you'd know that they're just like these children. A few of the boys and girls here are the leaders. One of 'em says, 'Now we'll do so and so!' And there's always a bunch of children that does it; maybe running around like mad, when they're too tired to run; playing ball when they'd rather be skipping rope, or skipping rope when they really want to be playing ball.

"But there's always a few that don't make themselves miserable, trying to do something, just because the rest are doing it. And that's the way it is with grown folks. Most of them are scrambling after the leaders who tell them, 'This is the thing to do!' There's only a few that go their own way; the way that suits *them*."

"And you were one of that kind, were you?" I said.

"Yes, I guess so," he replied, with his quiet smile. "Being a patrolman was a job I liked, because it kept me outdoors and was full of variety and interesting

Enter
Health, Energy, Ambition

This simple food conquers constipation, corrects skin and stomach disorders in an easy, natural way

NOT a "cure-all," not a medicine—Fleischmann's Yeast is simply a remarkable fresh food.

The millions of tiny active yeast plants in every cake invigorate the whole system. They aid digestion—clear the skin—banish the poisons of constipation. Where cathartics give only temporary relief, yeast strengthens the intestinal muscles and makes them healthy and active, daily releasing new stores of energy.

Eat two or three cakes regularly every day, one before each meal: on crackers, in fruit juices, water or milk—or just plain, in small pieces. *For constipation dissolve one cake in hot water (not scalding) before meals and at bedtime. Dangerous habit-forming cathartics will gradually become unnecessary.* All grocers have Fleischmann's Yeast. Buy several cakes at a time—they will keep fresh in a cool dry place for two or three days.

And let us send you a free copy of our latest booklet on Yeast for Health. Health Research Dept. J-36, The Fleischmann Company, 701 Washington Street, New York.

"I BECAME VERY RUN DOWN. As a ballet dancer the demands upon my energy were too great. I suffered from loss of vitality. After a performance I would be so tired I could hardly walk. I was advised to try Fleischmann's Yeast. I did so. In a few weeks I noticed a remarkable improvement. Now my energy is completely restored and I feel well in every way."

HARRIETTE G. BENDLE, New York City.

"FOR MANY YEARS I SUFFERED FROM CONSTIPATION, due to my constant traveling. I am something of a soldier of fortune, having lived in every country of the planet. A friend in the Antipodes advised Fleischmann's Yeast. Those cakes kept me in the pink of condition and my constipation is gone."

THOMAS STAPLETON, San Francisco, Calif.

"FOR THIRTY-FIVE YEARS I HAD BEEN A VICTIM OF INDIGESTION. Then I began eating three cakes of Fleischmann's Yeast regularly every day. In two weeks I began to improve and now I can indulge myself with *anything* I wish to eat."

J. A. RITCHEY, Baltimore, Md.

THIS FAMOUS FOOD tones up the entire system—aids digestion—clears the skin—banishes constipation.

WILL YOUR WHITE HOUSE BE *WHITE* NEXT YEAR?

© N. J. Z. CO. '27

Hour by hour, time tests the paint on your house. More than half the homes in this country are said to be painted white. But mighty few are really white a year after they are painted.

If you want a white house that will keep on being white over a period of years you must use a white paint that will stay white.

40-40-20 is that kind of paint. Its brilliant fresh whiteness lasts during all of its long life. It covers well, spreads smoothly, and wears long. Six years of use have demonstrated it to be a high grade paint. Yet it costs no more to use than other good paint.

40-40-20

REGISTERED TRADE MARK OF THE NEW JERSEY ZINC CO

The Permanently White Outside Paint

40-40-20 is made by 108 paint manufacturers and is readily obtainable from their dealers. These manufacturers are authorized by The New Jersey Zinc Company to use its registered trade mark, 40-40-20, on paint made from its specified products according to its specially developed formula. 40-40-20 is made in ready-mixed form in white and many beautiful tints, and in paste form for the professional painter's use. Look for the genuine which carries 40-40-20 on the label. Booklet giving full information on 40-40-20, and list of authorized manufacturers will be sent on request.

experiences. So I stuck to that job.

"For the first six years, I was on duty in lower New York, near the Battery. The district included the financial and wholesale business section; but it also took in the streets along the water front, and that was a tough neighborhood, where I saw a good deal of the seamy side of life.

"IT WASN'T much like this place here," he said, nodding toward the children who played almost under our feet. "There were drunks and thugs and criminals of all sorts; sailors from all over the world; longshoremen from the docks; a rough lot, most of them.

"I've been shot at more than once. Had a pretty narrow escape one time. I had just arrested a man, and he fired his gun at me through his coat pocket. The bullet went across my chest, cut a button off my coat and made a furrow in the cloth. But I took away his revolver and landed him in the station safely enough.

"Now, that was more interesting than to sit at the station desk and just write the man's name in the record, wasn't it?" he asked.

"After that, I was on duty several years at the courts; and that was interesting too. I heard some of the biggest lawyers in the city and listened to some famous trials. It was like having a free seat in a theatre every day—only I didn't have any seat!" he added. "That's about the only experience a policeman doesn't know much about, the experience of sitting down.

"But I did have even that one when I was assigned to the prisoners' ward at Bellevue Hospital. If a man gets sick while he is in the Tombs, awaiting trial, he is sent to this ward; and as all the patients there are still prisoners, a police detail is always on guard.

"I was there four years. During that time, we had some famous murderers in our charge; men who afterward went to the electric chair at Sing Sing. One of them was Doctor Waite, the dentist who murdered his father-in-law and, if I remember rightly, his wife.

"Maybe," with a twinkle in his eye, "'Doc' Waite had made the mistake which I *didn't* make. Perhaps he hadn't wanted to be a dentist any more than I had. And maybe he came to a bad end because he made the wrong kind of start, the wrong one for him, anyway. If he had become a policeman, and I had become a dentist, who knows?" he demanded, the twinkle in his eye becoming an open smile, "we might have met in Bellevue—but with the situation reversed."

"Instead of which," I said, "he lies in his grave, and you are here; the friend and protector of children."

"Yes," he said; "and it's a good place to be. At any time during the past thirty years, I could have retired on a pension. Of course the longer I served the larger the pension would be. But that wasn't what kept me on the job.

"I love children. I've *always* loved them. And here I have them with me all the time, winter and summer. Even more in winter than in summer, for that matter; because most of my little folks, the regular ones, go away for the summer.

"For some reason," he went on, "the Mall seems to sort of belong to the children of the nicest families. They live close

UPSON BOARD

IS YOUR CELLAR space wasted? Here is a quick, easy, inexpensive way to make it useful with Upson Board.

Build in a cool-and-dustless fruit closet—a bright, clean laundry—an extra bathroom—an attractive workroom!

Partition off a furnace room, so coal dust won't seep through the house.

One man can do the work, because Upson Board comes in big strong panels, so light one man puts them up, even on ceilings. Then paint, apply wood-trim, and the job is finished. Upson Fasteners (patented) make Upson Board *the one board without ugly nail marks.*

Once up, an Upson Board room should last as long as the building stands. Properly applied, Upson Board *should never warp or bulge.* It can't crack or fall. There are no expensive repairs.

Upson Board resists jars, heat, cold, moisture, fire. Certified tests prove Upson Board 40% to 150% stronger than other boards tested—an excellent insulator, the equal of 11 thicknesses of building paper. Dozens of letters in our files prove it retards fire and resists moisture.

Why not try Upson Board for just one room? See for yourself how easily it reclaims a cracked ceiling—builds in partitions—adds useful rooms in the cellar or attic, saves fuel by protecting against winter-cold or summer-heat.

Ask your lumber dealer or builder today. Or, we invite you to write, describing the work you plan. Enclose 10c for full-sized blue print, painted samples, interesting booklet. Address The Upson Company, 121 Upson Pt., Lockport, N. Y.

"You, too, can enjoy

Instant Sleep

when you go to bed"

Try this delightful, new food-drink from Switzerland that brings all-night sleep—all-day energy

When you go to bed do your nerves stay up? Leaving you dragged out on the morrow—your mornings logy, your energies drained by afternoon? Modern science has found a natural way (a way without drugs) to overcome this—a way to sound, restful sleep that quickly restores your tired mind and body.

Morning finds you a new man. Fresh, clear-eyed, buoyant. You have the energy to carry you right through the day and into the evening.

That is the experience of most Ovaltine users.

A 3-day test will show you. We urge you to make this test. It is well worth while.

Sound sleep—active days

Taken at night, a cup of Ovaltine brings sound, restful sleep and all-day energy quickly and naturally. This is why:

FIRST—it digests very quickly. Even in cases of impaired digestion. It combines certain vitalizing and building-up food essentials in which your daily fare is often lacking. One cup of Ovaltine has more real food value than 12 cups of beef extract.

SECOND—Ovaltine has the power actually to digest 4 to 5 times its weight in other foods which you eat. Thus, soon after drinking, Ovaltine is turning itself and other foods into rich red blood.

This quick assimilation of nourishment is restoring to the entire body. Frayed nerves are soothed. Digestion goes on efficiently. Restful sleep comes, and as you sleep you gather strength and energy.

Hospitals and doctors recommend it

Ovaltine is a delightful pure food-drink. In use in Switzerland for 30 years. Now in universal use in England and her colonies. During the great war it was included as a standard ration for invalid soldiers.

A few years ago Ovaltine was introduced into this country. Today hundreds of hospitals use it. More than 20,000 doctors recommend it. Not only as a quick "pick-up" beverage, but because of its special dietetic properties, they also recommend it for restless sleep, nerve-strain, malnutrition, backward children and the aged.

Just make a 3-day test of Ovaltine. Note the difference, not only in your sleep, but in your next day's energy. You tackle your work with greater vigor. You "carry through" for the whole day. You aren't too tired to go out for the evening. There's a new zest to your work; to all your daily activities. It's truly a "pick-up" drink—for any time of day.

Now—more than 20,000 doctors recommend Ovaltine

A 3-day test

All druggists sell Ovaltine in 4 sizes for home use. Or they can mix it for you at the soda fountain. But to let you try it we will send a 3-day introductory package for 10c to cover cost of packing and mailing. Just send in coupon with 10 cents.

OVALTINE

Builds Body, Brain and Nerves

© 1926 T. W. C.

I had not been able to sleep well. After taking Ovaltine for one week I could sleep the whole night and fall asleep as soon as I lay down. Ovaltine is the best thing for sleeplessness.
Sol Ellman,
Chicago

Before taking Ovaltine faulty digestion kept me awake at night. After taking Ovaltine two nights I found that I could get more sleep and that sleep came quicker and easier than before.

by, in Fifth Avenue, Park Avenue, and the cross-streets between. Almost every child has a nurse, sometimes two nurses. Some of my children come in the morning with a German nurse, and in the afternoon with a French one. Some of them have French maids and English governesses.

"Now, I'm not what you might call snobbish; but here's an interesting thing: So long as I have only that class of children to deal with I don't know the meaning of the word trouble! Because those children have been taught to behave themselves; to be gentle and polite and obedient.

"This is the way I figure it out: The nurses and governesses are fond of the children—but they're not too fond! It's their job to teach the children *behavior;* and they teach it to them, the way they would teach 'em to read or to spell. And so long as a child is behaving itself, the nurse lets it alone. She isn't always fussing at it, or over it, either.

"A few children come here with their mothers. Very nice women too, they are. But most of them can't seem to let their little folks have any freedom. You can always see the apron strings," he laughed; "and the little one tied to them.

"They're always calling the child from play, for one thing or another; brushing the dirt off its clothes, putting its little hat on straight, giving it a kiss maybe. They can't keep from fussing over it.

"Now, I've been watching children, right here as you see them to-day, for fifteen years. I've learned the way to get along with them; and I believe it's the way to get along with anybody."

"How do you do it?" I asked.

"Well," he said slowly, "you've got to make them like you and *respect* you. If you can't control yourself, you can't expect to have control over anybody else, even over a child. In a kind of way, you've got to keep yourself *to* yourself, if you understand what I mean.

"You can see that I don't run around after these children, either to correct them or to pet them. But they know I'm here! They know I expect them to behave; that they can depend on me to take care of them, but that they can also depend on me to keep order.

"THAT'S a big thing in getting along with children. They like to feel that you will keep on doing whatever you start to do. They like kindness; but they don't like familiarity. There's something about it that makes them respect you less. They will love you just as much if you don't gush over them, and they will respect you more.

"I wish I could show you two of my children who aren't here to-day; a little boy and his sister. They had a nurse—they called her 'Bridgie'—who had been with them since the boy was a baby. A few weeks ago, she left to be married; and both the children were just broken-hearted.

"The other day, the little fellow ran up to me and said, 'I *love* you!'

"'Do you?' I said. 'I'm glad of that.'

"The new nurse, who was with him, piped up and said, 'Do you love *me?*'

"'No!' he exclaimed. 'I love Bridgie!'

"Now that nurse made a mistake. Love doesn't come for the asking. Nothing does! You've just got to go on, being yourself, and *something* will come to you.

Silent, infallible, permanent radio power *from the light socket* with Balkite "B" and the Balkite Charger

Balkite Trickle Charger

MODEL K. Can be left on continuous or trickle charge thus automatically keeping the battery at full power. In effect converts your "A" battery into a light socket "A" power supply. Charging rate about .5 ampere. Over 200,000 in use. Price $10. West of Rockies $10.50. (In Canada $15.)

Balkite Combination

Supplies automatic power to both "A" and "B" circuits. Controlled by the filament switch already on your set. Entirely automatic in operation. Serves any set now using either 4 or 6-volt "A" batteries and requiring not more than 30 milliamperes at 135 volts of "B" current—practically all sets of up to 8 tubes. Price $59.50. (In Canada $83.)

All Balkite Radio Power units operate from 110-120 volt AC current with models for both 60 and 50 cycles. The new Balkite Charger is also made in a special model for 25-40 cycles.

Over 700,000 radio set owners are now using Balkite Radio Power Units because they provide silent, infallible, permanent power from the light socket. They are noiseless in operation and can be used during reception. They employ no tubes. They have nothing to wear out or replace, and no dials to complicate tuning. Other than a slight current consumption their first cost is the last. They are permanent and unfailing in operation. They are based on the same Balkite principle now commonly used in railway signaling, hospital lighting, and numerous other systems where power must be infallible.

One way of equipping your radio set with Balkite is to merely add Balkite "B" and the Balkite Charger. Balkite "B" eliminates "B" batteries entirely and supplies "B" current from the light socket. It is the proved popular "B" power supply. Of the 85,000 now giving satisfactory service, some of which have been in use for three years, to our knowledge not one has ever worn out. The new Balkite "B"-W at $27.50 serves sets of 5 tubes or less requiring 67 to 90 volts, Balkite "B"-X sets of up to 135 volts and 8 tubes and Balkite "B"-Y any standard set.

The Balkite Charger, with both high and low charging rates, when used as a trickle charger automatically keeps your "A" battery always fully charged. In effect it makes your "A" battery a light socket "A" power supply. Used as an intermittent charger, its high rate provides a ready reserve for heavy duty use.

Add these Balkite Units to your radio set. Then it will always perform at its best. Then you will enjoy the last word in radio convenience and economy. *Ask your dealer.*

[Balkite "B"-W $27.50; "B"-X $42; "B"-Y $69; Balkite Charger $19.50, West of Rockies $20. In Canada: "B"-W $39; "B"-X $59.50; "B"-Y $96; Charger $27.50.]

Fansteel Products Company, Inc., North Chicago, Illinois.

Listen to the Balkite Radio Symphony Concerts with Walter Damrosch and the New York Symphony Saturday Nights 9 P. M. Eastern (8 P. M. Central) Standard Time, over WEAF, WEEI, WGR, WFI, WCAE, WSAI, WTAM, WWJ, WGN, WCCO, KSD, WDAF, WOC.

Doctor Recommends This Tobacco to Pipe-Smoking Patients

There seems to be an unwritten law among pipe-smokers. When one man discovers a way to get more enjoyment out of his pipe, he feels obligated to tell the "pipe-smoking fraternity" about it.

So it is not surprising that when Doctor Gardiner of Florida found a tobacco that really enabled him to enjoy a pipe for the first time, he made a point of recommending it to all his pipe-smoking patients.

You'll find his letter interesting.

Larus & Bro. Co.,
Richmond, Va.

Dear Sirs:

No harm done, I hope, if I feel like I want to say a word of praise for Edgeworth Ready-Rubbed.

I have tried many kinds of tobacco in a pipe, but until I got to smoking Edgeworth I never really enjoyed a pipe.

Frequently I say to patients who must smoke: "If you're going to smoke your pipe, use Edgeworth."

I like it and recommend it whole-heartedly to anyone who enjoys smoking.

Yours truly,
W D. Gardiner, D. O.

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3-M S. 21st Street, Richmond, Va.

We'll be grateful for the name and address of your tobacco dealer, too, if you care to add them.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Edgeworth Ready-Rubbed for the same price you would pay the jobber.

[On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 256 meters.]

Whatever it is, it will be the thing you have earned. If it isn't the thing you want, then it's your fault. But you won't get what you want just by demanding it."

"You have what *you* want?" I asked.

"I have!" he said with emphasis. Then, with his slow smile, he added, "It's almost a crime to be getting money for a job like this. I've never had to take a day off for sickness. Living out of doors has kept me well. Even in the winter, I like it. So do the children. They come in all kinds of weather, and they thrive on it just as I do.

"I guess they help to keep me young and interested in life. They're just as different as grown folks are. Do you see that little girl over there? The one with the yellow curls and the big blue eyes? She's a frail little thing, and sometimes I'm afraid—"

He shook his head; and his eyes followed her with a look of grave concern.

"She's been coming here for more than a year," he said, after a moment. "At first, she was very shy with me. But I just went on, as I told you, quietly being myself; and finally, one day, she came to me, and what do you think she did?

"She looked up into my face and said, 'You may kiss my hand.'"

"Did you do it?" I asked.

"I did, indeed!" he replied. "And I've done it many a time since. Sometimes she's here with the nurse and sometimes with her father and mother, for they're very tender of her, because she's not strong. But no matter who is with her, she will leave them, run up to me, and say, 'You may kiss my hand.'

"I don't know where she got the idea. But wouldn't any man be proud to have a delicate little child, like her, come to him of her own accord and say a thing like that? If I'm the King of the Mall, like some folks call me, then she's the little princess.

"YES," he went on, "my life suits *me;* and since I have to live it I guess I'm the one to *be* suited. You'd hardly believe how interesting it is, anyway. There's wonderful music here in the summer. It brings a crowd; but you can be pretty sure that folks who want to listen to music won't give you any trouble. Then we sometimes have big meetings here, and I have a chance to hear good speakers. That's interesting, too.

"Oh, it's never dull! Not even when there's nothing to watch except the trees and the clouds; or maybe the squirrels and the birds. In their way, they're friendly too.

"I've seen some wonderful examples of that," he said. "There's one lady, a Mrs. Smith, who's been coming here to the Park, to feed the squirrels, ever since I was first stationed here. That was twenty years ago, for I was here even before I was assigned to the prisoners' ward at Bellevue. I left there to come back here.

"This lady and her husband, who's dead now, used to drive in the Park before ever I saw them. He'd stop his horses now and then; and she'd get out and walk under the trees and call the squirrels to get their daily ration of cracked nuts. She still comes—by herself now; and it does seem as if the squirrels knew her as well as I do myself.

"Then there's a man named Rice. He tells me he's a carpenter by trade; and that he lives near the Park, just so he can come here to feed the sparrows. Think of that! Most folks don't pay any attention to the sparrows; but Mr. Rice has sort of adopted them. He's hardly missed a day in five years; and he says that the sparrows would have to go hungry many a time in winter, if it wasn't for him. He was born in the country himself. He says he couldn't stand living in New York if he couldn't come in here, where it's green and quiet and peaceful.

"AT THAT," said Charlie Sands, shaking his head, "it isn't so green as it used to be. Hundreds of the old trees have died—more's the pity! But," and his face lighted up with interest, "have you seen the new trees they've been setting out?

"Just come over here a little way and let me show you. See that new planting down there? Eleven trees—and they cost the city six thousand dollars! Thirty years old they are; and they come from miles away, from the Amawalk Nursery; up back of Peekskill. When they were set out last April they brought some elephants from Ringling's circus at Madison Square Garden to lift them into place. Now, *that* was interesting, too! I expect you missed seeing it."

"I'm afraid I did," I admitted.

"You see!" said Charlie Sands, mildly triumphant. "This is really a wonderful place to be.

"I hope those trees do well," he went on. "You'd be surprised, maybe, to see how different trees are. Just like people! Some of 'em can live through anything, and be hale and hearty. Others—well, you can give 'em everything, pamper them and coddle them; but," half pityingly, half contemptuously, "they never amount to anything.

"There's a fine young plantation of pin oaks over there, across the road. Doing splendidly—all except one or two. Funny, isn't it? And around toward the Seventy-second Street entrance there are beautiful, healthy lindens—with elms dying just across the driveway. They get just the same air and sun and rain. But one tree thrives and another one dies. That's something to think about."

"You seem to have a good many things to think about," I said.

"Well, he replied; "I guess it's because I don't fret about hunting for them. I don't run around after something to interest me; and so, like the children here, the interesting things come to *me;* which is the way I like best."

I have set down here the substance of what Charlie Sands said to me; but I have not shown the long quiet pauses, during which we simply stood there, an inarticulate part of the peace and sunshine and happy movement about us.

But those long pauses spoke with their own eloquence. And when I finally turned away—taking the path which would lead by the beautiful lindens—the memory I carried with me was of those silences, during which there had come over my restlessness something of the serenity of Charlie Sands's own mind and heart.

"People," he had said, "trade their health and their happiness for a few gold stripes on their sleeves—or for whatever stands for gold stripes to them."

That, again in his words, was "some-

What could *you* do with a tooth brush and thirty-five dollars?

—from immigrant to executive

James C. Norgaard

the man—and his letter!

GEO. C. LARSEN, Pres. C. F. STANLEY, V.-Pres. GEO. YUNG, Sec.-Treas.

Farmers' Union Creamery Company

Dealers in
DAIRY PRODUCTS

JAMES C. NORGAARD, Manager Superior, Neb.

LaSalle Extension University,
Chicago, Illinois.

Gentlemen:

When I arrived in New York, in 1914, I had a toothbrush, $35 in cash, a lot of pep, and not an English word in my vocabulary.

My first job, in a Wisconsin creamery, paid me $10 a month and board. At night school, in Green Bay, I learned English.

In the winter of 1919 I took my first course with LaSalle—in Traffic Management. From 1919 to 1921 I pursued LaSalle training in Business Management, and to this course I attribute most of the progress I have since made; as without the knowledge and inspiration it gave me, I am sure I should not have attained the position I now hold.

Naturally I am enthusiastic about LaSalle Training, and do not hesitate to say that any man who is eager to get ahead in business will find it the most profitable investment he ever made.

Very truly yours,

James C. Norgaard

Manager.

DO you feel that Fate has handicapped you by a lack of opportunity?

If you don't believe that all a man needs is determination to *make* opportunity—to start right where he is and land 'way higher up the ladder—consider James Norgaard.

He didn't understand a word of English, as he stood on a New York dock. His equipment for success was $35.00—and a toothbrush.

Today he's an officer of the grain exchange, director in the local building and loan association, president of an ice cream company, and general manager of one of the largest co-operative creameries in the world.

And it took him only about ten years on the way up.

The really interesting thing is that there's nothing unusual or startling or extraordinary in the plan Mr. Norgaard followed.

Thousands of other men find the same help in LaSalle home study business training. It's open and available any and every day, to any and every man of aggressiveness and determination.

See LaSalle clearly. View it simply as a proved short cut to increased earning ability—to money and position and opportunity. It's here for you and as near to you as the mails.

These Free Books Show How

You are eager to get ahead—you will find it of vital importance to learn more of the success-methods James C. Norgaard and thousands of others have employed so profitably. We have therefore prepared a special 64-page booklet which outlines these methods in detail. It also points out the big opportunities in the field you are in or wish to enter—shows you how you can fit yourself to get them.

The coupon brings this booklet to you without cost or obligation—also a copy of "Ten Years' Promotion in One," the inspiring story of how one man, after many wanderings, found the path to responsibility and power. A pencil—an envelope—a postage stamp! Get these two books now—and make your start TODAY!

these books free

Find Yourself Thru LaSalle!

thing to think about." I am still thinking about it.

EDITOR'S NOTE: Next month Mary B. Mullett tells you the story of a minister to the poor; a preacher who has built up one of the most remarkable churches in America. This will be the second of the "Just Folks" series; interesting and stimulating articles, all of them, that give you the stories of ordinary men and women who have done amazingly well in the great adventure of life. Here is what one man says about the preacher whose story you will read next month: "The man is a marvel. He doesn't pester us into doing things. Yet we do them! Men who are not members of his church will come down and do whatever he asks them to do, and on Sundays you are likely to see kneeling at the altar rail in his church, a 'washlady' and a woman of wealth, side by side That's the kind of religion he believes in—and practices!"

JUST A LITTLE MATTER of disturbed dust, and in a split second the keen eye and quick brain of Colonel Braxton had solved a mystery. With the key to the problem in his possession, this astute and eccentric lawyer takes justice in his own hands and metes it out with a picturesque and dramatic intensity which makes "The Heir at Law," appearing next month, one of the finest legal mysteries that Melville Davisson Post has yet written.

In the Valley of the Shadow I Found the Golden Key

(*Continued from page 9*)

discomfort and financial loss, because I had discovered the inherent and blessed goodness of humanity. One who will not learn some other way has to suffer greatly to learn that humanity is tender of heart and inherently good, and that he has many friends.

When a fellow is up on his hind legs fighting for himself, and in every way able to take care of himself, no one is likely to pay very much attention to him. Neighbors may pass him hurriedly by with a conventional greeting or a perfunctory nod. He proceeds to hustle for himself, and to carry the impression that no one cares about him very much.

One forgets that one's neighbors have to hustle for themselves too, and are so absorbed in their own troubles and afflictions that they really don't have time to be as considerate and sociable as they would like to be. That was my case.

We are prone to forget that the other fellow has his problems; we may live next door to and have frequent intercourse with a neighbor who is harassed by financial difficulties, or inflicted with a physical disorder which he nurses in secret. He never tells his troubles, and we never know. Indeed, we often wonder why he seldom smiles; we may even set him down as a grouch, when, if we could only know the truth, he may be staggering under some grievous financial, physical, or mental handicap that we ourselves could not bear.

We may condemn him for his unneighborliness, his lack of patriotism, lack of civic-mindedness or indifference to community activities; the while he has just all he can do to keep a roof over his family and send his children to school.

But beneath the mask of indifference which men appear to wear in the midst of the terrific economic struggle in which they are absorbed, beat hearts that are full of warmth and humanity. In the mad struggle of life they may cuff and kick one another in their heedlessness; but let one fall or but cry for help, and a community will rush to his rescue to lift him up, sustain him and comfort him. The fallen one may have been a great transgressor; but his faults are forgiven and forgotten when he is in need.

We expect and demand too much of human reason, and human reasoning is therefore often disappointing It is in the hearts of men that one will find much gold; it is in the subconscious mind or heart of every man that you will surely find a spark of divinity itself, that is revived into a very generous flame of love and sympathy for one who may be afflicted.

Sickness, pain, affliction are, after all, necessary and beneficent phenomena of life. But for distress, perhaps none of the higher human virtues, none of those noble, godlike qualities that distinguish men from brutes, would have been developed.

Out of much suffering has man evolved those divine attributes of pity, tenderness, sympathy, love, and self-giving. In the presence of sickness and pain, he first learned to pity, then to love. In his ministries to the sick and afflicted, he learned to forget self and made that most wonderful of all human discoveries, that in service to others the greatest joy and satisfaction of life is most surely found.

As I lay convalescing, I thought what a beautiful world to live in this will eventually be when we have found some more ready key than human pain and suffering to unlock the hearts of men. The words of Jesus, assuring his disciples that the kingdom of God was within them, came to me with a sudden new and vivid meaning. The kingdom of heaven is verily at hand, the brotherhood of man is not a remote ideal!

Day by day the flowers withered in my room. One by one the vases that had held them in the beauty and glory of their freshness were removed. I knew that I was getting well. My neighbors were back about the business of looking after their own families.

But I am not disillusioned; I know that I have found the key to the greatest gold mine on earth; and I know I shall forever have a greater love for my fellow man, feel greater security in his society, and have a greater faith in him and in his potentialities.

Safer Driving for Everybody

Talk to the women who drive their own cars today and see how many of them are depending on the safety features of Firestone Gum-Dipped Balloons! For Firestone engineers have designed and built these big tires—with full appreciation of their responsibility for the safety and comfort of that big army of women and children who use the motor car.

With Firestone Balloons there is no skidding, slipping or sliding. The tread is broad and scientifically designed to hold the road—on oily boulevard, slushy highway or frozen, rutted places. In a pinch of traffic or parking—for quick starts and stops—it is a joy to feel the control of wheel and brake which these tires give. The children and you will delight in the way the tread seems to iron out the road beneath you, giving freedom from jolt or jar.

The Firestone process of Gum-Dipping adds so much strength and flexibility to these tires that you get much more mileage and are relieved of annoying tire-troubles. To get full benefit in the healthful daily spin go safe and care-free on Gum-Dipped Balloons!

The Firestone Dealer will not only see that you have these better tires but he will give you better service. Ask him to call and explain details.

The *Glamour of the Old West—the Magic of*

HERE in the Northwest is our last vast open space, where rich plains still wait for the plow of the skilled farmer and incalculable mineral wealth lies idle. Here a new civilization is building its foundations solidly in the Twentieth Century. Brilliant new towns are rising at strategic points. And the modern prospector is harnessing water-power.

This immense block—roughly one-fourth the nation!—consists of rich prairie and bench-land, sweeping, magnificent, through which wind tremendous streams—the tawny giant Missouri; the upper Mississippi, blue and dimpling among its green hills; the cold brawling Yellowstone; and the monster of the mountains, the Columbia, charging under claret-colored headlands. Green mountain barriers in the West rise wave on wave until they go tumbling down into the warm Pacific.

The mellow loess farms of the central river basins still look eastward. But farther west the rising flood of corn is sweeping into the wheatland. Red barns and silos in tidy groves of planted trees dot the plain as far as the upper Missouri. Wheat is spreading over the range.

Four bridges have recently been flung across the river. Settlement, checked for a while, is flowing on with increased impetus to the edge of the Belt Mountains. And on into the warm fruitful valleys beyond. Diversified farming has already enormously increased agricultural production.

Here and there pockets of minerals have been opened. In South Dakota the greatest gold mine in the world is operating within sight of the best alfalfa-seed farms in America. Within a small cup in the mountains of Montana, two billion dollars' worth of copper and allied minerals have been mined. At Great Falls alone 150,000 horsepower in electricity is being generated. Washington can supply the nation with coal for 126 years. And the timber of the Pacific Coast is inexhaustible.

Spirit of the Northwest

For those who have not seen the new Northwest a revelation waits. Even towns of a few thousand inhabitants possess well-paved streets, white lights, thoroughly modern hospitals, schools, stores, equipment, the latest fashions. There is no isolation. Young blood is pouring in, impatient at the dull monotony of old communities, and insisting upon the utilization of every modern invention.

Great regional centers and industrial communities, such as Chicago, Milwaukee, Minneapolis and St. Paul, Butte and Great Falls, Spokane, Seattle and Tacoma, are increasing with wonderful rapidity in size and importance.

SHORTEST AND MOST MODERN ROUTE TO THE PACIFIC AND FAR EAST

the New—the Challenge of the West to be—

What the railroad has done

The railroad, cutting through the mountains and sweeping across the plains, has opened up this last great block of the nation to settlement and development.

The Chicago, Milwaukee & St. Paul has 11,000 miles of track linking up the important points from Chicago to Kansas City, Omaha and Sioux City; to Milwaukee, Upper Michigan Peninsula, Twin Cities; and to Spokane, Seattle and Tacoma, and the Olympic Peninsula. Its connecting lines and spurs form a network over the Northwest.

Like the great artery of a powerful body, surging with life, this railroad system brings nourishment and energy to the vast territory it serves. Machinery, tools, manufactured products, pure-bred stock, high-grade seeds, and people in an endless stream, pour through it into the Northwest. Pulsing back comes the torrent of raw products upon which the industrial centers of the East feed. The railroad brings life to the Northwest; and the Northwest gives health and strength to the railroad.

The Chicago, Milwaukee & St. Paul is *electrified* 660 miles across four great mountain ranges to shipside on Puget Sound. This is one of the greatest achievements in modern railroad engineering. The power used is generated from the enormous hydro-electric resources of western Montana and Washington.

It is the shortest line from Chicago to the Coast

Take your trip to the Coast over this route—where the highest peaks, the greatest rivers, the most splendid plains, the most bounteous valleys, and range after range of glorious mountains, are all incidents. Let its startling beauty refresh you; meet the promise of its opportunities with a rested body and a clear mind.

Places to go
Things to eat
Parties·Worries·Work

Little wonder the nervous pitch of living . . . rich food . . . no exercise . . . lead to Auto-Intoxication — which is to blame for so many ailments.

UNDER the strain of a fast moving day, can we avoid the headaches, the indigestion, the weariness so common to American men and women? Must we pay a price for every hour of play and pleasure with a day of dull depression?

We rush to meetings, we dash to parties. We are on the go all day long. We exercise too little and we eat too much. And, in consequence, we impair our bodily functions—often we retain our food within us too long.

And when that occurs, poisons are set up—Auto-Intoxication begins, bringing a host of ills in its train.

Varied as the outward form of this self-poisoning may be, nearly all its effects are taken away when we make and keep ourselves internally clean. For internal purification helps keep the blood stream free of poisons and aids the body in its fight against disease.

* * *

In keeping clear of Auto-Intoxication, the first step is to correct "stoppage" and to sweep away the enervating poisons of waste. Sal Hepatica, an effervescent saline combination, is the approved way to do this quickly, safely and thoroughly. It is a stand-by in hundreds of thousands of homes.

* * *

Send for the new booklet on Auto-Intoxication which tells you how to keep physically fit.

For booklet please address

David's Star of Bethlehem

(*Continued from page 23*)

little figure trudging off in the gray dusk persisted, despite her efforts to forget. It was Scott who spoke, saying out of a silence, "I wonder how old he is."

"The—the little boy?"

He nodded, and she answered gently, "He seemed no older than—I mean, he seemed very young to be milking cows and doing chores."

Again Scott nodded, and a moment passed before he said, "The work wouldn't hurt him though, if he were strong enough; but—did you notice, Nancy, he didn't look half fed? He is an intelligent little chap, though, and his voice— Good lord!" he broke off suddenly, "how can a shrew like that bring such a child into the world? To burn his book! Nancy, I can't understand how things are ordered. Here's that poor boy struggling for development in an unhappy atmosphere—and our Jimmy, who had love, and understanding, and— Tell me, why is it?"

She stretched out a tender hand; but the question remained unanswered, and the meal was finished in silence.

DAVE did not come with the milk next morning. They waited till nearly noon, and then tramped off in the snow-clad, pine-scented woods. It was a glorious day, with diamonds sparkling on every fir tree, and they came back refreshed, and ravenous for their delayed meal. Scott wiped the dishes, whistling as he worked. It struck his wife that he hadn't whistled like that for months. Later, the last kitchen rites accomplished, she went to the window, where he stood gazing down the trail.

"He won't come now, Scott."

"The kid? It's not three yet, Nancy."

"But the party begins at four. I suppose everyone for miles around will be there. I wish—" She was about to add that she wished they could have gone too, but something in Scott's face stopped the words. She said instead, "Do you think we'd better go for the milk ourselves?"

"What's the use? They'll all be at the shindig, even that sour-faced woman, I suppose. But somehow—I feel worried about the boy. If he isn't here bright and early in the morning I'll go down and see what's happened. Looks as if it were clouding up again, doesn't it? Perhaps we'll get snowed in!"

Big, lazy-looking snowflakes were already beginning to drift down. Scott piled more wood on the fire, and stretched out on the settle for a nap. But Nancy was restless. She found herself standing repeatedly at the window looking at the snow. She was there when at last Scott stirred and wakened. He sat up blinking, and asked, noting the twilight, "How long have I been asleep?"

Nancy laughed, relieved to hear his voice after the long stillness.

"It's after five."

"Good thunder!" He arose, putting an arm across her shoulders. "Poor girl! I haven't been much company on this trip! But I didn't sleep well last night, couldn't get that boy out of my mind. Why, look!" Scott was staring out of the window into the growing dusk. "Here he is now! I thought you said—"

He was already at the door, flinging it wide in welcome as he went out to lift the box of milk jars from the sled. It seemed to Nancy, as the child stepped inside, that he looked subtly different—discouraged, she would have said of an older person; and when he raised his eyes she saw the unmistakable signs of recent tears.

"Oh, David!" she exclaimed, "why aren't you at the party?"

"I didn't go."

The boy seemed curiously to have withdrawn into himself. His answer was like a gentle "none of your business;" but Nancy was not without a knowledge of boy nature. She thought, "He's hurt—dreadfully. He's afraid to talk for fear he'll cry; but he'll feel better to get it off his mind." She said, drawing him toward the cheerful hearthfire, "But why not, Dave?"

He swallowed, pulling himself together with an heroic effort.

"I had ter milk. The folks have gone to Conroy to Gramma Hawkins's! I *like* Gramma Hawkins. She told 'em to be sure an' bring me; but there wasn't no one else ter milk, so . . . so . . ."

It was Scott who came to the rescue as David's voice failed suddenly.

"Are you telling us that your people have gone away, for *Christmas*, leaving you home alone?"

The boy nodded, winking back tears as he managed a pathetic smile.

"Oh, I wouldn't ha' minded so much if—if it hadn't been for the doin's at the school. Miss Mary was countin' on me ter sing, and speak a piece. I don't know who they could ha' got to be that wise man." His face hardened in a way not good to see in a little boy, and he burst out angrily, "Oh, I'd have gone—after they got off! *Darn 'em!* But they hung 'round till almost four, and—and when I went for my good suit they—they'd *hid* it—or carried it away! . . . And there was a Christmas tree . . ."

HIS voice faltered again, while Nancy found herself speechless before what she recognized as a devastating disappointment. She glanced at Scott, and was frightened at the consuming anger in his face; but he came forward calmly, laying a steady hand on the boy's shoulder. He said, and, knowing what the words cost him, Nancy's heart went out to her husband in adoring gratitude, "Buck up, old scout! We'll have a Christmas tree! And we'll have a party too, you and Mother and I—darned if we don't! You can speak your piece and sing your carols for us. And Mother will read us 'The'"—for an appreciable moment Scott's voice faltered, but he went on gamely— "'The Night Before Christmas.' Did you ever hear it? And I know some stunts that'll make your eyes shine. We'll have our party to-morrow, Christmas Day, sonny; but now" (he was stooping for his overshoes as he spoke), "now we'll go after

Wanted—Your Services

As a Real Estate Specialist

Make big Money—I made $100,000 in less than 5 years. Learn how I did it. Use my successful system. Begin at home—in your spare time. Make money my way. Start now. Free book tells how.

Are you in the same hole I was in?

Are you stuck in the rut of *hard work* and *poor pay?*

Are you dissatisfied with your job, your *income* or your *prospects?*

Are you having a struggle to make both ends meet?

Are you putting up with the *crumbs* of life while others are getting all the *cake?*

Then you are the man I want to talk to.

Listen!

When I made up my mind to get started in the real estate business, in my spare time, I was receiving a salary of $100 a month.

I was doing work I was not fitted for and which I thoroughly disliked.

I was living in a gloomy boarding house, wearing cheap clothes, striving to keep out of debt, and getting mighty few of the good things of life.

In less than two years after I started to specialize in real estate, I was making nearly *one thousand dollars a month.* And in less than five years, I cleaned up a net profit of *over one hundred thousand dollars.*

To get the whole story of my success in real estate, and how you, too, can succeed, write at once for my free book "How To Become a Real Estate Specialist." It contains *my history* and *your opportunity.*

Follow in My Footsteps

If you want to learn the secret of my success—if you want to use my money-making methods—if you want to follow in my footsteps—this is your chance. And *now* is the time to get started.

I have studied real estate conditions in this country very carefully, and my investigations convince me that the next ten years are going to be banner years for real estate.

Furthermore, my experience satisfies me that there is no better business to get into, It is more healthful than most indoor jobs—you can start in spare time—you can begin with little or no capital—it does not require years of study like medicine, pharmacy, dentistry, law, engineering, electricity, architecture, etc.—the beginner is paid the same rate of commission as old-timers—the business is practically unlimited—it is estimated that there are thirty million properties in the country and that ten million of them are always on the market—it is a permanent business, not affected by fads or fashions—it is constantly growing as population increases—it puts you in touch with the best people—it is a dignified, pleasant and worthy occupation with great possibilities for big profits.

If you want to make big money as a Real Estate Specialist—if you want to use my amazingly efficient system—let me hear from you at once. I will send you—*without cost or obligation*—my free book, which fully explains how you can get started—in your spare time—just as I did—in a new kind of real estate business that

Put your name before the world

is as far ahead of the old, moss-covered methods of the average real estate agent as the automobile is ahead of the ox cart of our forefathers.

What Others are Doing

As positive proof of the success of my modern methods, read the following brief extracts from some of the letters that come to me from those who are using my scientific system—following in my footsteps—making money my way:

"It may astound some to know that I have made between $8,000 and $10,000 over a three-month period, which may be directly attributed to your splendid Real Estate System."—A. W. Fosgreen, New York.

"I have been helped a great deal by your system. I have now a new car, two new typewriters, a stenographer and a dandy office, and money in the bank, all through my own efforts and without any capital to start with."—Alice Moore, Conn.

"I was a Ford salesman earning $300 a month. Your Real Estate System increased my earning power 200%. I now own a Chrysler Sedan, up-to-date office equipment and have increased my bank account."—Alfred J. Bennett, Mich.

"Your System is wonderful. Without giving up my job as stationary engineer I made $900 in three months in my spare time."—Matthew J. Stokes, Penna.

"Without your Real Estate System I would still be making $35 a week instead of around $200 as a starter."—E. K. McLendon, Ore.

"I have sold many thousand dollars' worth of Real Estate and have deals pending that will go beyond $300,000 mark. Owe all my success to your comprehensive System."—Carrie Marshall, Miss.

There isn't room here for any more such letters, but send for my free book, "How to Become a Real Estate Specialist." It is filled with stories of success. And it makes plain how you—too—can use my money-making methods to build a profitable independent business of your own—just as others are doing.

Act Promptly

Investigate this splendid business opportunity at once. Learn how easy it is to follow my methods and get big money for your services as a Real Estate Specialist.

The business needs you. It offers rich rewards for trained men. A recent article in the *Saturday Evening Post* says: "Realty needs a Moses; it shrieks aloud for a teacher; someone to make the masses realize that it has been following a blind leadership; that the dicta of the narrow and the prejudice of the few should no longer hold sway . . . Realty is a comparatively new field of endeavor . . . Apply the same acid test to it you would to any other business. Reason out for yourself the whys and wherefores and then act. The age of inquisitional realty criticism is past; the renaissance is at hand; great progress, with resultant profits for the thinker, is in the making."

So, mail the coupon *now*—before you lay this magazine aside—and receive, without cost or obligation, a copy of my new book, "How To Become a Real Estate Specialist." From it you will learn how you can use my successful system to make money my way—how you can get started right at home—in your spare time—without capital or experience—and establish yourself as a Real Estate Specialist, in a high grade, money-making business of your own.

Be prompt! Your opportunity is *here* and *now.* "Wise men act while sluggards sleep." Write your name and address on the coupon and mail it at once to American Business Builders, Inc., Dept. 4-AA, 18 East 18 Street, New York. You will then have the satisfaction of knowing that you have opened the way to a profitable business career for yourself as a Real Estate Specialist.

American Business Builders, Inc.,
Authorized Capital $500,000
Dept. 4-AA, 18 East 18 St., New York.

Send me—**without cost or obligation**—your free illustrated book, "How to Become a Real Estate Specialist."

THERE are adequate "reasons why" for St. Louis' remarkable growth and development. St. Louis has an ideal combination of the chief factors in a successful industrial city and distribution point:

Central location.
Nearness to raw materials.
Fuel, water and power.
Economical distribution.
28 railroads "to everywhere."
River transportation.
Satisfactory labor conditions.
More than 3,500 factories.
211 different kinds of industries.

These are some of the reasons why ***196 new industries*** have come to St. Louis in the last six years. St. Louis manufacturers ***Ship From the Center—Not the Rim.*** Your factory in St. Louis would have a distinct advantage over competitors not so favorably located.

The complete story is told in our new booklet, "Why St. Louis Grows." Write for it.

Address Dept. 12

ST. LOUIS, U.S.A.

that tree before it gets too dark! Come on, Mother. We want you, too!"

Mother! Scott hadn't called her that since Jimmy left them! Through tear-blinded eyes Nancy groped for her coat in the diminutive closet. Darkness was coming swiftly as they went into the snowy forest, but they found their tree, and stopped to cut fragrant green branches for decoration. Not till the tree stood proudly in its corner did they remember the lack of tinsel trimmings; but Scott brushed this aside as a mere nothing.

"We've got pop corn, and nothing's prettier. Give us a bite of supper, Nancy, and then I'm going to the village."

"The village! At this hour?"

"You take my sled, mister," cried David, and they saw that his eyes were happy once more, and childlike. "You can coast 'most all the way, like lightning! I'll pop the corn. I'd love to! Gee! it's lucky I milked before I come away!"

The hours that followed passed like magic to Nancy Carson. Veritable wonders were wrought in that small cabin; and oh, it was good to be planning and playing again with a little boy! Not till the child, who had been up since dawn, had dropped asleep on the settle from sheer weariness, did she add the finishing touches to the scene.

"It's like a picture of Christmas," she murmured happily. "The tree, so green and slender with its snowy trimmings—the cone-laden pine at the windows—the bulging stocking at the fireplace, and—and the sleeping boy. I wonder—"

She turned, startled by a step on the creaking snow outside, but it was Scott, of course. He came in quietly, not laden with bundles as she'd expected, but empty-handed. There was, she thought, a strange excitement in his manner as he glanced 'round the fire-lit room, his eyes resting for a moment on David's peaceful face. Then he saw the well-filled stocking at the mantel, and his eyes came back unswervingly to hers.

"Nancy! Is—is it—?"

She drew nearer, and put her arms about him.

"Yes, dear, it's—Jimmy's—just as we filled it on Christmas Eve three years ago. You see, I couldn't quite bear to leave it behind us when we came away, lying there in his drawer so lonely—at Christmas time. Tell me you don't mind, Scott—won't you? We have our memories, but David—he has so little. That dreadful mother, and—"

SCOTT cleared his throat; swallowed, and said gently, "He has, I think, the loveliest mother in the world!"

"What do you mean ?"

He drew her down onto the settle that faced the sleeping boy, and answered, "Listen, Nancy. I went to the schoolhouse. I thought perhaps they'd give me something to trim the tree. The party was over, but the teacher was there with Ira Morse, clearing things away. I told them about David—why he hadn't shown up; and asked some questions. Nancy—what do you think? That Hawkins woman isn't the child's mother! I *knew* it!

"Nobody around here ever saw her. She died when David was a baby, and his father, half crazed, the natives thought, with grief, brought the child here, and lived like a hermit on the mountain. He died when Dave was about six, and as no one claimed the youngster, and there was no orphan asylum within miles, he was sent to the poor farm, and stayed there until last year, when Clem Hawkins wanted a boy to help do chores, and Dave was the cheapest thing in sight. Guess you wonder where I've been all this time? Well, I've been interviewing the overseer of the poor—destroying red tape by the yard—resorting to bribery and corruption! But— Hello, old man, did I wake you up?"

DAVID, roused suddenly, rubbed his eyes. Then, spying the stocking, he wakened thoroughly and asked, "Say! Is—is it Christmas?"

Scott laughed, and glanced at his watch.

"It will be, in twelve minutes. Come here, sonny."

He drew the boy onto his knee, and went on quietly: "The stores were closed, David, when I reached the village. I couldn't buy you a Christmas gift, you see. But I thought if we gave you a *real mother*, and—and a father—"

"Oh, Scott!"

It was a cry of rapture from Nancy. She had, of course, suspected the ending to his story, but not until that moment had she let herself really believe it. Then, seeing the child's bewilderment, she explained, "He means, dear, that you're our boy now—for always."

David looked up, his brown eyes big with wonder.

"And I needn't go back to Hawkins's? Not *ever?*"

"Not ever," Scott promised, while his throat tightened at the relief in the boy's voice.

"And I'll have folks, same as the other kids?"

"You've guessed right." The new father spoke lightly in an effort to conceal his feeling. "That is, if you think we'll do!" he added, smiling.

"Oh, you'll—"

Suddenly inarticulate, David turned, throwing his thin arms around Scott's neck in a strangling, boylike hug. Then, a bit ashamed because such things were new to him, he slipped away, standing with his back to them at the window, trying, they saw with understanding hearts, to visualize this unbelievable thing that had come, a miracle, into his starved life. When after a silence they joined him, the candle on the table flared up for a protesting moment, and then went out. Only starlight and firelight lit the cabin now; and Nancy, peering into the night, said gently, "How beautifully it has cleared! I think I never saw the stars so bright."

"Christmas stars," Scott reminded her and, knowing the memory that brought the roughness to his voice, she caught and clasped his hand.

It was David who spoke next. He was leaning close to the window, his elbows resting on the sill, his face cupped in his two hands. He seemed to have forgotten them as he said dreamily, "It's Christmas . . . Silent night . . . holy night . . . like the song. I wonder—" He looked up trustfully into the faces above him— "I wonder if—if maybe one of them stars isn't the Star of Bethlehem!"

The Road You Follow To-day is Part of Your Goal

(*Continued from page 16*)

those of a shop foreman or workman who has spent a loyal lifetime at the bench. Picture him sitting in a good-sized, simple office, containing, besides the ordinary furniture of an executive's room, a handsome grand piano; and listen to the story, step by step, as it falls from his lips.

"I was born," said Mr. Gulbransen in his clipped, precise, and never fluent manner, "in Oslo, the capital of Norway, in 1860. My father was an employing cabinetmaker there, and had his shop in the same building in which we had our home.

"One of my earliest recollections is of a day when I was about five. A wagon drew up before the door, and workmen loaded into it all the tools that belonged to my father: clamps, planes, glue pots, hand screws, benches, everything. I remember feeling sad to see them taken away, for I had enjoyed playing near them in the shavings and sawdust.

"For my father, that day meant the end of his business; for his family, it meant the beginning of hard times. He had cultivated his friends at the expense of his business, and he was bankrupt.

"IN THOSE days, when such a calamity occurred, it seemed to be natural to go to the United States and make a new start. That is what my father did. He could not afford to move his family at first; there were eight children. We stayed with my mother in Oslo, and waited for Father to send for us.

"During that time, we were very poor, My father sent money from time to time, but never enough, even for our simple needs.

"The letter bidding us come to America and sending money for the passage, arrived five years later, when I was ten. We went directly to Chicago; but in less than a year we moved to Mendota, Illinois, where Father got a job in an organ factory."

It was in Mendota that Axel Gulbransen, for a brief and bitter period, and for no fault of his own, became a small boy who was picked on.

"When I went to school in Oslo," he explained, "I was the smallest boy in the room. In Mendota, I had to start all over in the lowest grade, and although I was small for my age I was the biggest boy in the room, an eleven-year-old among very little boys and girls. That helped to single me out for ridicule. Then, I could not speak the language. Naturally, the boys picked on me. I was at a sensitive age. The things they said and did, hurt.

"I had many fights. Some I was pushed into; others, because of the treatment I received, I sought. I found that when I met boys outright and settled with them, they usually respected me afterward, as Billy Jenks did."

Lessons in the Mendota school came hard at first; but soon Axel became very much interested, and was doing well. But he was barely thirteen when his father decided that it was time for him to begin his apprenticeship in the organ factory in earnest.

"My first work was sandpapering pieces of wood," said Mr. Gulbransen. "When I started full time, I kept right on at the same bench.

"In time, my father let me try the more difficult cabinet work, for the sake of the training, and it was not long before I became a pretty fair workman. I put my heart into it, and remember feeling a sort of fury at the thought of idling or skimping.

"I was sixteen years old, I think, when the son of one of the owners of the firm we worked for established a business in Worcester, Massachusetts. At his request, I went there to work for him. It was my first experience away from home.

"At this time, and for a number of years, I used my leisure time outside of shop hours studying music. I thought I was cut out for a musician. There was a band in Mendota, which I joined. Finding I could pick up different instruments and learn to play them rather easily, I was made a kind of utility man, and at one time or another played the clarinet, cornet, baritone, and alto.

"But the violin was the instrument which interested me most. I took violin lessons for a number of years, and in Worcester, after working at the shop all day, I used to go to my room and practice for two, three, or four hours nearly every night. Tone interested me, and I made experiments, adjusting the sounding post for the different effects I could get."

These studies, particularly the experiments in tone, were of great value to Gulbransen when he was perfecting his piano-player.

"Seeking further experience and having saved some money in Worcester, I quit my job and went home for a little visit," he told me. "A little later, I enrolled in a business college in Chicago."

Gulbransen then was nineteen. The studies he took were chiefly spelling, writing, and arithmetic, and at this time, conscious of the defects in his education, he became a great reader and, by this means, made up for much that he had missed.

He stayed as long as his money held out. Only once afterward and then for the very briefest period, did he ever again see the inside of a schoolroom as a student.

GULBRANSEN'S next job was one he kept, except for a break of one year, for a long time.

"I had a fine letter of recommendation in my pocket," he said; "but decided to see if I could land a job without showing it. I used to get the first copies of the first editions of newspapers, and rushed to all the firms that advertised for cabinetmakers. For six weeks I couldn't land a thing.

"Finally, when I was short of money and desperate, I showed my letter and got a job the first thing, with a company that made pianos and organs. I decided that a

"I want a NOGAR suit like that."

Let NOGAR set you up in business!

Be your own boss in 1927. We will provide the capital and the goods.

Earn the money you know you are worth and ought to have.

Sell NOGAR Utility Clothes and enlarge your income

You can do it, and you don't need experience to sell these wonderful, long-wearing garments. Hundreds of our representatives who came to us from low-salaried positions are earning two or three times what they formerly did. Think of men's suits and topcoats at $12.50 and $13.50, and boys' suits at proportionately low prices! Can't you imagine how easily they sell?

It costs you nothing to become established in business for yourself, if you adopt our plan. We provide you, free of charge, with all necessary information. We *guarantee* our garments to be right. We pave the way for you by extensive national advertising which gives the public confidence in you and the goods you are selling.

There is only one NOGAR Cloth and we make it. It is the strongest fabric used in clothing. The public knows this and has been warned against imitations.

Mail coupon at once to secure territory.

Towers of Southern Industry

GREAT towers of slender steel march Indian file up over wooded hills and down through valley fields, carrying power and light to the farms, homes and factories of the South.

The rapid increase in the production of electricity in the South, from water and steam power, is an outstanding industrial achievement of our time. It has risen more than 375% since 1912—in the rest of the country about 275%.

Cheap and abundant electricity is a magnet to modern industry. It effects economies and makes for better industrial methods.

This is one of many advantages that are making the South a national manufacturing center—that already have made the South the textile center of America.

Railroad transportation has always been one of the cheapest things the American people buy. The charge on the Southern Railway System for hauling a car of 30 tons of freight one mile averages only 35¢.

The Development Service of Southern Railway System, Washington, D. C., will gladly aid in securing industrial locations, farms and home sites in the South.

SOUTHERN RAILWAY SYSTEM

THE SOUTHERN SERVES THE SOUTH

good record is a handy thing to have!

"My new foreman, I soon found out, had never learned organ making properly, and really had no business holding the position he did. I had been hired to do special work, making pieces which were to fit around organ valves. The lumber would come to me somewhat warped, and I took pains to work each piece until it was smooth, in order that the parts might fit perfectly.

"'You don't need to do that,' the foreman said.

"I explained that if I didn't, the finished organ would be leaky.

"'Don't you worry about that,' he said.

"However, I kept on; and was not popular with him.

"In a short time, something the foreman did got him into a dispute with the owners, and he was let out. Unexpectedly, I fell heir to his job.

"The department was not large, perhaps a dozen men altogether. It was known as the action department; we made the 'insides,' or action parts, of organs. The firm was doing a lot of experimenting; and as the heads of the business were not technically trained, and knew only in a general way what they wanted and how to get it, they left details to me.

"One of my first crises as foreman came when I found I had to lay out work for the other men. Making experimental templates and patterns required blue prints, and blue prints called for a knowledge of drafting which I didn't possess. I hastily enrolled in a night school, and in a few lessons mastered the principles well enough to do the work acceptably.

"At the other end of our floor other assembling was being done, and the work of my department was passed on to them. The foreman of this department had difficulty in keeping up his work fast enough to use what we sent him. When he got much behind, we used to turn in and help him. After a while, he was transferred to another department, and I was given the whole floor.

"I got a real kick out of rearranging things and devising methods to do this work faster than ever before. The previous output of the department had been about twenty instruments a day; while in the same space and with no more men we raised the average to forty-five instruments. For taking this additional department," he added, "I was paid fifty cents more per day."

THERE now came to Gulbransen a new experience, tough but useful, and reminiscent of Billy Jenks and the Mendota days.

"My former employer in Worcester," Mr. Gulbransen explained, "had opened a plant at Brattleboro, Vermont. He was bound and determined to have me come there and work for him, and he offered to put me in charge of a department doing about the same kind of work as my department in Chicago. I finally accepted.

"I was still in my early twenties. All of the men in the Vermont plant were older than I was; one was old enough to be my father. Probably it wasn't very wise to put me in charge, for it was natural that men who had spent years in that shop should resent a youth and a stranger in a place of authority.

"I didn't understand their attitude at first. I began introducing little kinks

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and short-cuts, and was surprised when the men didn't respond. Gradually, it dawned on me that it wasn't my methods but *me* that they objected to.

"In short, the men had made up their minds that they didn't want me for a foreman; and they did everything they could think of to put me in wrong.

"One of them, a smooth, oily fellow, and a good talker, began to come to my room evenings, and made himself agreeable. I was glad to have company and talked freely, saying anything that came into my head. I was immensely interested in the work, and neither there nor anywhere else ever hesitated to criticize adversely anything I thought wrong.

"My guest was a tale-bearer. He led me on to say things, simply so he could go and tell the others. By twisting what I said just enough so it sounded malicious, his stories were circulated and came to my employers, as they were meant to. The object was to get me fired, if my position couldn't be made so unpleasant that I would quit of my own accord. Fortunately, my employers realized what I was facing, and stood by me.

"I WOULD have been glad to quit a week after starting, but I felt it was a situation I ought to face out. I hated to admit I couldn't handle the job. Fortunately, I realized that I had to fight a perfectly natural hostility. And I simply decided that I could never count myself the winner unless I made the men my friends, and got them to like my methods.

"Nothing spectacular happened. The change I hoped for came gradually. One fellow wasn't as hostile as the others. I made a template one day, to serve as a guide in driving pegs in piano cases. That caught his eye and he thought it a good stunt. He soon became friendly. His folks lived in the country, and he invited me to their home, where we had a pleasant holiday together. He was the first to think well of me. While the others stood around knocking, he began putting in a word for me.

"Meanwhile, I attended to my business, and proved I knew it at least as well as any of them. One or two cases called for discipline, and I backed up my authority. One man regularly got drunk on Saturday and failed to show up on Monday; I warned him I would fire him if it happened again, and when it did happen, the very next week, I made good my threat. He had been in the company's employ a long while, and thought the works couldn't go on without him. He raved and threatened, but the discharge stuck. Such things had an effect.

"I stayed on the job a full year, then resigned and returned to Chicago. Several months before leaving, the hostility of the men had completely disappeared.

"I returned to Chicago with an offer of an entirely new job in my pocket, but I had hardly started when I learned I could have my old job in the piano and organ factory. I took it, and remained there, as I told you, nearly twenty years."

AT THE age of forty, Gulbransen was superintendent of the factory, and was getting about four thousand dollars a year. He quit to take a similar position at a similar salary with one member of the firm who was forming a separate company.

SONNY!

You would do the big things for him . . .

Will you do this little thing?

SINCE he was a baby you've worked for him, spent for him—this little son of yours. Nothing is too big or too hard to do for this man you are making.

But the little things, the everyday, simple things—how easy it is to lose sight of what they mean to your child!

Yet some of these seemingly unimportant things have been found by school authorities to be absolutely vital, if your children are to grow and learn as they should.

One thing they are pointing out today as having special importance is the matter of breakfast.

In an exhaustive study of school children's needs, the National Education Association and the American Medical Association report that breakfast should consist of *fruit, hard bread, milk, cooked cereal.*

They emphasize the necessity of *hot cereal* because tests show that the child who eats it regularly for breakfast is more alert mentally and more fit physically.

So important is the Breakfast Rule considered in the school health program that it is displayed on thousands of school room walls:

"Every boy and girl needs a hot cereal breakfast"

For Sonny! For your little daughter! Of course you would do this simple thing for them! Everywhere mothers are taking a new interest in sending their children to school prepared with a hot cereal breakfast.

They like to vary it, of course. But always one food is the favorite. Good old Cream of Wheat!

For 30 years Cream of Wheat has been recommended by physicians because it has an unusual combination of food values.

First, it is a wonderfully rich energy food. You can count on it to furnish the physical and mental energy a child needs from breakfast until noon.

Second, it is in a simple form, very easy to digest. It contains none of the harsh parts of the wheat which delay and make digestion harder.

You do the big things gladly—will you do this simple thing for your children tomorrow morning? Supply the energy they need for their school work by giving them a steaming bowl of Cream of Wheat! Your grocer will send you a box today.

Cream of Wheat Company, Minneapolis, Minn. In Canada made by Cream of Wheat Company, Winnipeg. English address, Fassett & Johnson, Ltd., 86 Clerkenwell Road, London E. C. 1.

To mothers

We have a booklet for you which contains authoritative information on correct diet for children from 6 months to high school age. We will gladly send it free with a sample box of Cream of Wheat. Sign your name below and send to Dept. P-1, Cream of Wheat Company, Minneapolis, Minnesota.

McK

He was permitted to buy a very small interest in the business, and was given complete charge of manufacturing; but he soon found himself exceedingly unhappy.

"Every place where I worked," he explained, "I was as much interested in the welfare of the business as my employers; in fact, in most places I think I was more interested. I lived with the work day and night. Purchasing, for example, was one of my duties. I used to run all over Chicago to get just the machine I wanted, and at the right price, though the money to pay for it, of course, didn't come out of my pocket.

"In this new job, one of my early tasks was moving the plant to a town about sixty miles from Chicago. It kept me humping; I usually spent half my time in Chicago and the other half in the town where the factory was to be, and worked harder than I ever had before. One day I asked my chief to go to the town with me to see about arranging certain partitions. It happened to be a bitterly cold day. His reply was:

"'I wouldn't go out there if the darn plant was burning down—not on a day like this!'

"I didn't like the weather either, but I went; I wanted the work done."

SUCH incidents were straws in the wind. Gulbransen wanted to keep the job he had. He liked it. He was not eager to make a lot of money for himself. But he cultivated a passion for right methods, and when, as he thought, he saw them violated, and was unable to do anything about it, he resigned. This was in 1906. The plan he had in mind was to start a little business of his own. He did not anticipate anything big.

Gulbransen's wife objected to this step, and most of his friends sided with her. At the time, they seemed to have good sense on their side. He had reached the age of forty-six. For thirty-three years, and more, he had been an employee. His worldly wealth, after all these years, consisted of a house worth about three thousand dollars, a block of stock in the company he had been working for, and some cash: in all, about eight thousand dollars.

While it was true that he had made himself an expert in manufacturing, and had had good experience in purchasing materials, also in handling men in the factory, beyond this he knew next to nothing about business. Is it any wonder his relatives, hearing of his proposal to go into business, said:

"This will finish Axel!"

But the steel of character, by steady tempering for years, had been taking a keener edge than anybody knew.

"My idea for a business was modest," said Mr. Gulbransen. "For years, people had been experimenting with devices to play pianos automatically. The first pneumatic piano-player was patented in France as early as 1863. During the next forty years, numerous devices were tried and many patents issued, but the first automatic piano-player ready to use was built in this country in 1897. The business, therefore, was new, and it had been part of my job, while working for others, to supervise or participate in experiments of one sort or another with piano-players.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Now, I knew that thousands of pianos stood silent and useless from year's end to year's end, for lack of somebody who could play them. It occurred to me that it would be possible to invent a simple apparatus, different from anything yet devised, that could be installed in an ordinary piano to make a player-piano of it. My idea for a business hinged altogether on inventing such an apparatus, and getting people to let me install it in their old pianos.

"A salesman who worked for a lumber firm from which I had bought a good deal, wanted to go into partnership with me. I believed that would be a good idea, for I thought I was no business man, and believed he was. We reached an agreement, each investing such small amounts as we had.

"THE first thing to do, then, was to invent the device. I had ideas, but they were not worked out.

"For a few dollars, I bought an old upright piano and installed it in the basement of my home, where I fitted up a small workshop. There I puzzled over plans, made patterns, experimented with different types and sizes of apparatus, discarded or revised previous plans, ran into a hundred problems with blind ends, and with it all, managed to make progress.

"The principle of the piano-player, as you know, is simple enough. Air pressure is used instead of finger pressure to cause the keys to strike the strings. Which keys are struck is determined by the perforations in the music roll. You can't patent a physical force, like air pressure, but you can patent any number of devices for making use of such a force.

"Nobody was much interested in my efforts. Nearly everybody supposed I was wasting my time and money. Certainly, as things were going, all the money went out and none came in.

"A little tow-headed neighbor girl, however, with pigtails down her back, used to come to the door of my shop and chatter brightly. She never saw me reach for a tool without wanting to know what I was going to do with it.

"Chatter, chatter! Her questions weren't very intelligent, but I think I have a good deal to thank her for; her interest was like sunshine through clouds on a dark day.

"Within a few months, although my experiments were not finished, nor the invention perfected, I found it necessary to have more room, and I rented a small loft in Chicago. Here I had one boy, my nephew, to help me. This expansion caused the money to disappear faster than ever. The time came when I would walk several miles instead of taking the street car, in order to save the five-cent fare. Often my lunch was eaten standing at a free-lunch counter, because I couldn't afford to spend any money on food. These things didn't worry me. I had faith—and hope.

"Within a year the invention was perfected and thoroughly tested. I applied for my patent and prepared to build the modest little business I had in mind.

"Up to this point, I had been on familiar ground. Experimenting with musical apparatus had been part of my work and play ever since I monkeyed with my violin to see if I could improve its

FALLING HAIR? DANDRUFF? TOO DRY? TOO OILY?

The help one rare ingredient gives

"I AM only twenty," writes a university student, "yet I am already getting bald. What shall I do to prevent this?"

Falling hair. Dandruff. Oily hair. Dry hair. These common troubles worry 8 out of 10 of the many hundreds who ask our advice.

Yet in most cases these wrong conditions yield to intelligent care—to such simple treatments as we outline below.

The value of pine tar

Practically every medical authority who has written on the subject, has endorsed pine tar in the treatment of common hair and scalp troubles. And the basis of the treatments below, Packer's Tar Soap (of which pine tar is an active ingredient), has been recommended by physicians for over 50 years. It is as safe and as efficient a shampoo soap as can be made.

DANDRUFF

Dandruff need not result in serious consequences if carefully and properly treated, and treated early. The Packer Method of treatment, based on modern thought, will be found in the booklet which comes with each cake of Packer's Tar Soap.

DRY HAIR

Successful shampooing removes the accumulations of surface oil from the scalp. This makes the hair seem dry at first, but this dryness is usually temporary and only noticeable for a day or two. You will find an authoritative treatment for dry hair in the booklet packed with each cake of Packer's Tar Soap.

OILY HAIR

A special treatment for oily hair, including correct way to massage, is given in the booklet packed with Packer's Tar Soap.

FALLING HAIR

You will find a discussion on falling hair in the booklet which comes with each cake of Packer's Tar Soap. If, however, the regular use of this Packer treatment does not stop the loss of your hair, consult your family physician.

Send 10c for sample and New Manual

On receipt of 10c (stamps or coin) we will send you a generous sample of Packer's Tar Soap and a copy of our new Manual, "The Care of the Hair." This profusely illustrated 28-page book has recently been re-edited to present the most modern scientific thought on the care of the hair. It contains dozens of authoritative suggestions for keeping your hair healthy and young-looking. It gives in great detail treatments for the hair conditions briefly discussed on this page. Fill in the coupon, clip and mail today.

PACKER'S *Tar Soap*

Never too Cold to Drive

With Arvin Heat in Your Car

ARVIN HEAT! It keeps you warm and comfortable as you drive. Tames the wintry blasts that sweep about your car. Gives you a "sheltered feeling" that makes cold weather driving a pleasure instead of an ordeal. And the cost is trifling.

With an Arvin in your car you say goodbye forever to freezing feet and frosty fingers. You're through shivering and shaking when those busy, bustling Arvin Heat waves start breezing up around you. A million and more motorists already have Arvin Heat in their cars. You ought to have it, too.

There's an Arvin for your car—for every car—priced as low as $1.75 for Fords and only $7.50 for the most expensive cars. All accessory dealers sell Arvins—under a direct from factory to user guarantee. Your dealer will tell you which Arvin Heater is best for your car. You or your garage man can install it. Get your Arvin today.

The Low Cost of
ARVIN HEAT
for ALL CARS

ARVIN Heaters are made in several types. There is a model for your car—for all cars—priced as low as $1.75 for Fords and only $7.50 for the most expensive cars. All accessory dealers sell Arvins. Your dealer will tell you which Arvin Heater is best for your car. And once installed, Arvin Heat never costs another cent.

ARVIN HEATERS

ARVIN HEAT

They Sure Do Heat!

tone. Now, however, I had to try running a business, something absolutely new for me.

"Money was the first big problem. I tentatively approached a banker, and was rebuffed promptly, by an expert. My partner and I talked over the situation, and decided to incorporate, so we could sell stock. As he was the business man of the concern, I depended on him to do the selling; but to my disappointment, the days passed and he didn't sell a share.

"The time came when we had to have money. I had hardly taken a buyer's dollar for anything in all my life, but I made up my mind to see if I couldn't find some buyers for that stock myself. The experience was a fine lesson in common sense.

"Without being aware of it, I found I possessed qualifications that I now know go a long way toward making a salesman anywhere and at any time. In the first place, I was in deadly earnest about wanting to sell: if I didn't get money, I was sunk. In the next place, I firmly believed that with money we could build a nice little business. Finally, I didn't know any 'tricks' of salesmanship—all I knew was to go to honest, friendly, respectable people I was acquainted with, foremen and workmen for the most part, my old friends, who might have a little money laid aside, explain what we were doing and what our plans were, tell them we had put in our money, and if they wanted to take a chance, we'd be glad to have them with us.

"The method was successful. I think there wasn't one person I approached in this way who didn't sooner or later invest something; altogether, my efforts netted about twelve thousand dollars.

"The stock control at that time passed out of my hands. Later, I bought it back, buying out my partner also, and I was glad for the sake of my friends that I had to pay them a good deal more for the stock than they had paid.

"Selling the product was started equally simply, but here a rather surprising thing happened. My helper and I fitted up a nice-looking piano with the player apparatus, and put it on display in a Chicago hotel. As a builder of pianos, I was known in the industry. The news of my invention spread, the trade papers and newspapers giving us notices, and gradually a little actual business came our way. But it took an entirely different form from what I expected.

"I HAD thought of installing the apparatus in old pianos. It now developed that piano manufacturers wanted it for new pianos. We began selling our entire output to them.

"On that basis, the business grew much faster than I had anticipated. In half a dozen years, instead of part of one floor, we occupied the whole of a six-story building.

"One day there came a larger opportunity, and with it a revolution in the business. A piano firm had recently failed. The factory was a white elephant on the hands of the bankers who had taken it for their debt. We arranged to buy it; and at that time decided to quit selling our player apparatus to other manufacturers, and to begin putting it into pianos we made ourselves. That has been our business ever since."

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Although Gulbransen had no detailed knowledge of how other manufacturers sold their pianos, it is not likely he would have been impressed if he had known, for he had discovered that common sense and straight thinking were safer guides for him than imitation. Perhaps this is why in a few years he practically revolutionized the selling methods of the industry.

At that time, selling pianos was more or less a case of shutting your eyes and holding your hands behind your back for whatever might fall into them. The big problem was prices. Hardly any two dealers bought pianos from the same manufacturer at the same price. There were exceptions, of course, but as a rule the man who knew how to bargain best, or was most persistent, got the lowest prices; others might pay half again as much.

"It looked to me," Mr. Gulbransen said, "as simple as two-and-two, that if we sold our pianos this way, soon a dealer in one town would learn that a dealer a dozen miles away had the best of him in prices, and that would create bad feeling. I decided to set a fair price for each style of piano, and charge every dealer that price.

"Another thing: Pianos are heavy; freight is an important item in their cost. It seemed unfair to penalize a dealer and his customers in, say, Denver, because they lived farther from Chicago, where our factory was, and had to pay more than customers in, say, Indianapolis. We worked out a plan to equalize freight charges for the entire country.

"When these policies were announced, we speedily learned what fools we were. The salesmen of competitors told dealers, dealers told our salesmen, and our salesmen told me. I had it on fine authority that pianos could not be sold that way.

"However, we stuck it out a while, to see. To-day most of the others have changed their minds."

BUT Mr. Gulbransen's musical interests extend far beyond his own business. When it was proposed to have Christmas carols sung in Chicago in the streets, schools, universities, churches, public offices, business houses, institutions, hotels and every other place of meeting, Mr. Gulbransen alone financed the movement, without any self-advertising or desire for reward. For years he has fought for grand opera to be sung in English in this country, and for recognition, opportunity, and equal salary for American opera singers. His personal and financial force are behind the movements for better music in America and musical instruction in the public schools.

In the building of his business, to-day so much bigger than he ever guessed it would be, Gulbransen did not escape the final test of fire. His great crisis came almost at the moment of greatest achievement.

"In 1920," he explained, "we had just completed a new factory building at a cost of over a million dollars, and we had spent more cash than we possessed. I had favored raising the money by means of a bond issue, thus protecting ourselves in case of sudden changes in business conditions. But the bankers assured me bonds were costly and unnecessary.

"So it came about that we owed the

There can be no Compromise with Safety

Wet Rubber *Slips*—
WEED CHAINS *Grip*

When the gates lower . . . . when a train comes thundering by . . . . then driving is a serious job. Then you've got to know that you can stop. For a skid may mean disaster. And the most liberal insurance coverage will never heal a hurt, mend a break —or restore a life. It takes only a few minutes to put on WEEDS.

For in rain, snow or *slush* wet rubber slips. But WEED Tire Chains hold tight to the road.

Buy WEEDS wherever automobile accessories are sold. You can identify WEED Chains by their red connecting hooks, gray galvanized side chains and brass plated cross chains with the name WEED stamped on every hook.

ASK . . ANY . . RADIO . . ENGINEER

This is the

Burgess Radio "A" Battery

A SPECIALLY designed "A" battery for radio service. There is nothing like it in its field.

Proportioned to permit ease of handling and convenience of cabinet assembly and storage, you may expect this new Burgess creation to give you the length of service and dependability under all conditions for which all products of Burgess are noted.

If you are using the ordinary type of No. 6 "A" battery, we suggest that you learn for yourself from the Burgess Radio "A" the measure of service you have a right to expect.

bank more than half a million dollars, and our supply houses three quarters of a million—when simultaneously, the business boom collapsed, and our bank failed!

"I did not lose faith. Even in this crisis, I felt we would pull through somehow. But there were days and nights of terrifically hard work trying to find a way.

"The solution, when it came, dropped into our laps from an unexpected source not of our seeking. I was coming from a talk with one banker when I met another banker with whom I was acquainted.

"'Mr. Gulbransen,' he said, 'could you use half a million dollars in your business?'

"'No,' I replied, 'I could not. But I could use three quarters of a million.'

"Within two days a loan of that amount was arranged. He had been watching us for years, liked our ways, and had faith.

"For myself, I do not feel that I have had any hardships worth mentioning. I, too, have had faith—faith in myself and in my ideals. And I am surer than ever that being boss does not mean being excused."

Ten Things the Boss Doesn't Know About Us

(*Continued from page 25*)

end of business was where the big money could be made.

"In a country that is growing as fast as this one," I have heard him say, "the man who can sell goods has no limit to his possibilities. The market is tremendous."

He believed that, even as a boy, and he pestered one of the shoe salesmen who visited the store until that individual found a place for him at the factory. Shortly thereafter he was on the road. A little later he was sales manager and when, after a decent period of years, the owner of the business passed out, and the sons were messing around in the factory, he talked a banker into putting up several hundred thousand dollars, and proceeded to buy out the boys and allow them to give all their time to golf and horseback riding, while he began to realize his dreams of what the business really ought to be.

Do not think that I underrate his ability or that I have anything but admiration for the sort of courage and self-confidence that, in the characters of such men, have made this country what it is. Nothing makes me so sick as the cynicism and "smart-aleckness" of certain people who poke fun at American business leaders, as much as to say: "Of course, we could become rich if we had cared to debase our pure white souls and make the effort." It's a lie. They never could have become rich. I never could have become rich. To build a big business or a big fortune requires more than the ability to read and write and think. It demands all these, *plus* the element that I lack; and I know I lack *guts*, the willingness to put a great big bet on one's self; the calm capacity to face the chance of losing everything in order to win a lot. I do not have it; few men have it. I am one of the millions who have played safe all my life. To us comes contentment, if we are wise enough to accept it; but the big prizes do not come.

SO MY boss is rich, and intelligent in his fashion, and deep down in his nature he has a considerable measure of real idealism. He is a pretty ruthless competitor; but he would rather have his right arm cut off than to let the quality of his product deteriorate by one millionth of one per cent. His business is his life, and he is as proud of it as he is of his wife, his son on the college football team, and his daughter, who has just made her début.

He gives liberally to such causes as, according to his own standards, are "worthy." He has been president of the Chamber of Commerce (an officer elected by the merchants of the city), and would like to be mayor (an office controlled by the common people). When he has "done so much for the city," it seems a perverse ingratitude on the part of the people that they refuse him in this desire of his heart.

But he can't be mayor, for the same reason that will keep him from ever being really popular with those of us who are dependent upon him for our daily bread. He just falls short of being a really hundred per cent good fellow, and there are too many things about us that he just doesn't know.

Without wasting any words about it, let me set down ten of these shortcomings in his knowledge.

FIRST. He doesn't know our names. That sounds like a very petty complaint. I can imagine someone saying, "Fancy that chief clerk expecting the head of a business to memorize the names of fifteen hundred people. Doesn't he suppose a president has anything more important to remember than that the red-headed man at the shipping desk is Doyle, who has five children and a paralyzed father, or that the third girl from the left in the accounting department, with the tilted nose, is Madeline Tompkins, whose mother runs the stationery store on G Street. Let him sit at the president's desk for a day," my critic will say, "and deal with some real problems. Then he will understand why the president doesn't know everybody's name."

All of which may be very true, and I have no doubt that the president himself argues in just that way. But the fact remains that if he cared to spend half an hour a week in memorizing names and faces it would make more money for him than he could make in the same amount of time in any other way. And I think I can prove that statement: Average up the pay roll of our fifteen hundred people at a thousand dollars apiece; there's an annual million and a half. Suppose that the enthusiasm and efficiency of the whole crowd could be increased ten per cent, with no increase in the pay roll; that would be a net gain in profits of one hundred and fifty thousand dollars a year. I believe the boss could make that extra profit just by walking through the

At home but never alone.

Great music — *at home*

as you never could get it before

WITH this remarkable development, RCA has led radio through a new era, and has brought a new conception of fine music to thousands of homes.

Now — much imitated — it stands out preeminently, the tried, tested and perfected product of the great engineers who developed it.

This combination of Radiola 28 with RCA Loudspeaker 104 does not just work on the house current with a battery eliminator . . . . . you find plenty such sets today. But this wonderful performance is built upon new electrical principles, *based on the use of the house current.* New power Radiotrons had to be developed for it—and a new loudspeaker. Now all these have had the test and proof of time. No longer experiments, they have captured the nation and brought a new radio age.

RADIOLA 28 *with* RCA LOUDSPEAKER 104 *has brought the nation a new conception, not only of radio, but of music*

RCA Loudspeaker 104, complete, $275. Radiola 28, with eight Radiotrons, $260. A. C. Package for adapting Radiola 28 for use with Loudspeaker 104 on 50-60 cycle, 110 volt current $35

What has it done, this Radiola with its power speaker—so simply tuned with a single finger? It has brought *reality* to radio. It reproduces the actual tone of the original. It reaches the full volume, even of an orchestra, without blurring or altering the tone. It captures the quality of beauty that makes great music great. And how swiftly the musical world saw the undreamed-of possibilities of making America a new nation in musical understanding.

Now this new RCA Radiola is a proved success, and thousands of people everywhere are getting something more out of radio than just dance music, entertainment, speeches. There's nothing like an RCA Radiola 28 with its power speaker for making these things real. But there is something more . . . . a new day of great music *in the home!*

works occasionally and calling us by our names.

There is no more effective appeal to a man's self-pride than to hear his name spoken by a person of importance. Big institutions know this. One of the large railroads in the country furnishes its conductors with the names of all the passengers in the Pullman cars, and a few minutes after the train has started the conductor passes through, with his courteous: "Are you comfortable, Mr. Smith?" and "Is there anything you want, Doctor Jones?" Hotel men practice the same subtle flattery.

The biographers of James G. Blaine say that he made it a rule before retiring to spend half an hour in reviewing carefully every event of the day, and speaking distinctly to himself the name of every man and woman he had met. By that discipline he schooled himself never to forget a name or face, and it was one of the big factors in making him the idol of his party.

If remembering names was not too unimportant a detail for men like Blaine and Roosevelt, for big railroads and hotels, it is not too unimportant for the attention of my boss. But he passes quickly through the office, absorbed in his thoughts, nodding absently to right and left. And we in whose direction he nods have the feeling that we are merely cogs, wearing out and soon to be replaced.

SECOND. Since he does not know our names, it goes almost without saying that he never suspects our troubles. At least, hardly ever.

When somebody in the office dies, or when a worker is absent and the story goes 'round that he has been taken to a hospital for a serious operation, the boss sometimes hears of it, and his secretary writes a few words on one of his cards and sends up a bunch of flowers. But the thousand and one little problems and cares that make up our fifteen hundred lives—these might just as well be in another planet, for all they mean to the boss. Let me tell a story to illustrate:

Emma Hanson works in the accounting department, at eighteen dollars a week. At our annual convention, when the men from the field come in to get their injection of "pep," there is an opening session which we office folks are invited to attend. Always the boss delivers the same speech, pointing out the essentials of success, and urging upon us, among other virtues, the necessity for a regular plan for saving money.

It is interesting to watch Emma during that part of the talk, interesting and pathetic. For up in a little bit of an apartment, over a grocery store, she lives with an invalid father and a brother who will never be mentally right. After her day at the office she goes home to cook supper and spend the evening with these two, doing her best to keep them from thinking about themselves. And every penny that she earns goes to their support.

You can't expect the head of a business to play the part of Providence in the lives of all his employees. But, let me tell you, there are times when it would help a great deal to be able to go to him for a bit of advice. And a kind word, or an extra dollar or two once in a while for Emma and some others who are heavily burdened—well, it would just change their whole world.

THIRD. He doesn't know how often a very little thing becomes a very big thing to one of us.

A few weeks ago a matter developed in the office which meant a considerable amount of extra work. We had been expecting it for some time, and if the boss had passed it over his desk promptly in the morning we could have cleaned it up before the end of the day. But he dallied with it. He let a dozen people break up his morning; then he went to the club for lunch and didn't get back till nearly three, so it was within an hour of closing time when the work was ready for us. And that meant at least three hours after supper to get the last letter in the mail that night.

And I'm not complaining. If we had been warned about it we could have made our plans. But I happen to know that at least six of the girls had been invited to the theatre that night, and could not get there until the second act. The boss is a tremendous worker himself; an evening at that office is a very little thing to him. But girls who work for a living don't have many chances at the theatre, and that particular evening at the office was a big, tragic thing to them.

FOURTH. He doesn't know that his wife and daughter are a bad influence for us.

His wife is one of the big ladies of our city, big physically, big in society, big in all sorts of charities, and she rides through a room like the "Leviathan" coming up the harbor. The daughter is a very self-satisfied, and rather insolent young lady.

In their own world they are doubtless quite acceptable; but they ought not to come to the office, at least not so often. They are so extravagantly gowned, as compared with our wives and daughters, that we just can't help thinking our work, as well as the boss's, paid for the gowns and jewels. As they sweep through the office they look at us in a condescending fashion. And they have an annoying habit of sending us on little personal errands. The boss pays for our business hours, and we are glad to give him the best we have. But we didn't hire out as domestic servants, and some day, when Madam comes marching through with the request that one of the girls "run over to the store and match a ribbon," there is going to be a riot. Somebody will lose his job, but I predict that Madam and the daughter will appear no more at the office.

FIFTH. He doesn't know that his "welfare work" leaves a bad taste in our mouths.

In many respects ours is a model factory. There are nice tiled shower baths for men and women; there is a hospital with a trained nurse in attendance. In the summer the girls may, if they choose, go to a camp in the country which the company owns; many of the girls *do* choose to go once, but not many go a second time. All this is worthy, and if it sprung from a little closer personal acquaintanceship on the part of the boss, and if it were not referred to quite so often in such a self-satisfied fashion, it would probably be much appreciated.

for Christmas *and the* New Year

Send The American Magazine— as your personal gift

You think of your friends not once a year but many times. And they, too, often think of you. For friendship is a precious thing.

These friends to whom you send this twelve-fold gift will think of you each month, and you will think of them as you receive your monthly copies of THE AMERICAN MAGAZINE. You will read together its gripping fiction, laugh together at its hearty humor, find a common inspiration in its stories of real people who have won their goals through tireless courage.

It is indeed the ideal gift, bringing you and your friends together again—not once but every month throughout the year.

Two Subscriptions for $4.00

A single year's subscription is $2.50. But during December only you can enter your own subscription for one year and send a gift subscription to a friend—both for $4.00. Or, you can enter your own subscription for two years—or send a two-year gift to a friend—either one for $4.00. Add $2.00 for each additional one-year gift subscription; $4.00 for each additional two-year subscription. Send your orders in today.

And a beautiful etching will announce each gift

The subject is St. Paul's, in old New York. Across its steeple the artist has thrown a wreath of Christmas stars. Reproduced by a wonderful new offset process, it comes in a window mat, 10x8¼, all ready for framing. And with it goes an engraved card bearing your message and your name—announcing your gift to come twelve times next year.

Safeguard *all* your teeth *with the* Pro-phy-lac-tic

Three unique features distinguish this brush from any brush you have ever used. First, the curved bristle surface. Second, the large end tuft. Third, the curved handle. The result is thorough cleansing of every tooth surface every time you use the Pro-phy-lac-tic.

© 1927, P. B. Co.

The "personnel director" is a smart young chap, a nephew of the boss, who followed up his college course with a year of special training in a school of advanced social thought. He has us all indexed and card-catalogued, and three or four times a year he goes to conventions of personnel managers and makes speeches on such subjects as "How Can We Keep Our People More Interested in Their Work?" or "Cutting Down Labor Turn-over Through Personal Contact." The speeches are printed in a trade paper, and always a copy manages to drift back into the office to be read with considerable interest and a good deal of crude and sometimes profane comment.

The boss, too, likes to show visitors through the plant, pointing out with expansive pride how much he is doing for us, and usually in his annual report to the stockholders he brings in some reference to the contented spirit of the workers, fostered by the company's welfare activities.

As I have said, the activities are all good, but they are administered in such a way that whenever you accept any of their ministrations you have the feeling that you are an object of charity. The flavor is all wrong, and the boss doesn't know it.

SIXTH. He doesn't know how much we know about him.

The community thinks of him as "a good man;" he thinks of himself as such, and as men go he is good and generous in his own showy fashion. But he steps out of the straight and narrow path occasionally, and, with a queer childlike trust in his own shrewdness, he thinks that no one suspects. But *we* know; the whole office knows and titters up its sleeve.

We know, too, that since prohibition he occasionally takes a drop of Scotch in his office with an out-of-town customer, a lapse that would cost him dearly if the town ever suspected it. We older men in the office do not like it, because we believe the boss ought to set an example for the boys.

I do not mean to give an exaggerated importance to these little failings. They are quite incidental, and the boss has moral strength enough so that he would stop them immediately if he had any idea of what we think and say. I refer to them merely to make this point: that the head of a business is as exposed to the keen eyes of his employees as a pie in a bakeshop window, and any boss who thinks for one minute that he is fooling the folks around him just doesn't know.

SEVENTH. He would be amazed and resentful if he ever suspected what we say after one of his annual "pep" talks. He takes a great deal of pride in them, and when he finishes we all applaud, and the general manager tells him that he has put spirit and ambition into us that will be worth a million dollars in additional sales in the coming year. He eats that up. I have heard him say, in one of his moments of self-revelation, that "an executive who knows his business can put enough steam into an organization in half an hour to run it for a year."

But we are not children. We are mature men and women, the fathers and mothers of children—many of us at least; and we know our limitations. It is foolish for him to tell us stories about John D. Rockefeller and Carnegie, with the inference that any one of us, by getting up a half-hour earlier and working a little harder, could do what they did. We know we can't, and we suspect that there were fortuitous circumstances in the careers of those gentlemen which never have and never will occur in our lesser lives. If he would only cut out the high-flown oratory and just sit on the edge of the table and talk to us as fellow workers, tell us a little about the inside of the business, its problems and its hopes, that *would* do us good. But he talks down to us and, somehow, instead of leaving the room with a sense of exaltation, we leave with an accentuated realization that we are only the help, and he is our great and gracious boss.

EIGHTH. He doesn't know what we think about his son.

He is a good, bright boy, and we like him as a human being. If the father would only allow him to follow his own bent, he could become a very useful doctor or lawyer or editor or bond salesman. But the old man is determined that the lad shall inherit the business, and "keep it going as a monument to the family name," and he rubs that in with a lack of tact that hurts the morale of the whole office. What I mean is that a couple of times a year he walks the boy through the plant, like Cæsar showing off his dominions, and in tones that are loud enough for all to hear he says: "It's a great business, my boy, and I'm building it up just for you. Never forget that one day it will be yours."

The boy is embarrassed by talk like that, and every one of us at the head of a department says to himself: "I wonder if the youngster is going to start in by taking *my* job? What's the use of slaving away if the whole thing is going to be passed over to the boy?"

Personally, if I owned a business, I should not want my boy to be in it, unless he himself expressed a keen desire to do so. A boy has only one life to live; why deprive him of the great adventure of choosing his own career and making a reputation on his own merits? Maybe I should change my mind *if* I were a boss; but I'm sure of one thing at least: I shouldn't hurt the spirits of the men by making them feel that they were working only to build up the business for *my* son. I'd try to make them feel that it was partly *their* business, and that they were working for their sons as well as mine. For it is partly *our* business, isn't it? The boss has put in his money and his managing ability but we have put in our lives.

NINTH. He doesn't know that what he whispers across his desk is broadcasted to the farthermost branch office by a 'grape vine" that works almost as fast as radio.

If I were a boss there are some words and phrases that I should eliminate from my vocabulary. Among them would be "confidentially" and "not for repetition" and "strictly between ourselves" and "I know you won't pass this along." I shouldn't say anything to an employee that I didn't want repeated, because everything that a boss says *is* repeated, and every little white lie, every implied promise that doesn't come true, every

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

comment or criticism, sooner or later is laid up against his account.

Ours is a medium-sized city, and our plant is at one end of it, so that the employees live in a close little community. The boss is discussed around several hundred dinner tables every night of the year; his most casual smile or frown, his slightest remark is made the subject of thorough analysis. And the only really safe course for him is to tell nobody the things that he doesn't want repeated, for whatever he says we *know*.

TENTH. Finally, and most important of all, he doesn't know that none of us ever tells him the whole truth.

That may sound like a very damning admission, and I hesitate to set it down. But he himself is responsible. With all his sturdy qualities, he is more susceptible to flattery than almost any man I have ever known. It would amaze him to read that. He prides himself on being outspoken, on caring nothing for criticism, so long as his own conscience tells him that he is right. He insists that the letters of complaint be shown to him personally, and he always says: "Tell me the *bad* news!" But the truth is that he hates to face bad news, and falls into such a valley of gloom when things go wrong that he depresses the whole office.

We had a general manager once who was a two-fisted, hard-boiled individual with the courage of a bear-cat and the nerves of a concrete bridge. He used to talk turkey to the old man, and he thought he was going to get away with it. The boss pretended to like it. "Johnson is my type," he would say. "He gives me the facts. I like him." But he didn't really like Johnson, and after a few months he let it be known that Johnson was too rough-shod with the organization, a "disturbing influence." Johnson is a boss on his own account now, and we who want to hold our jobs are careful not to be "disturbing influences." We do our work and keep out of the boss's office as much as we can. But when we do go in we try to tell him the things that we think he would like to hear. And he doesn't suspect that we never, never tell him quite the whole truth.

As I read this over I wonder if I have given an unfair picture of the boss, of myself, and my associates. What I should like to have you feel is that ours is just an average business, no better and no worse than many others; and that our boss is, according to average standards, a good boss and that we are "loyal" subordinates. But we could help him to be a better boss, and we could put a new spirit into the whole outfit, if he only knew a little more about us.

It is said that when Napoleon slept on the field with his armies, his enemies counted his presence as equivalent to another hundred thousand men. He was called the "hundred thousand man" on that account, because when he was with the troops every man felt as if *his* shoulder was against his general's. This is the difference, I take it, between being a boss and a leader. "Go in and win, boys!" says our boss in his pep talks. But the leader says, "*Come* in," and the men follow because they know him and because there isn't a thing about them that he doesn't know.

✣ ✣ ✣ ✣ ✣

Smiles are dazzling white when film is gone. Teeth sparkle like polished jewels. Gums firm to healthy coral tint. Thus tooth care becomes the greatest beauty treatment of the day

The Film on Teeth

To which science now ascribes many common tooth and gum disorders

THAT many of the commoner tooth and gum troubles, and most cases of so-called "off-color" teeth, are due to a film that forms on teeth which ordinary brushing does not successfully combat, is the consensus of today's dental opinion.

Run your tongue across your teeth, and you will feel this film — a slippery sort of coating. Film absorbs discolorations and thus makes teeth look dull and dingy. It breeds germs and bacteria and invites tartar, decay and pyorrhea. It is a menace to teeth and gums that must be constantly combated.

To gain clearer teeth and healthy gums many authorities advise that film be combated daily, a new way.

Thus dental authorities now seriously urge that film be removed at least twice every day—in the morning and at bedtime. One can't expect glistening teeth and proper gum protection unless this program be followed regularly.

To do so, obtain Pepsodent — a special, film-removing dentifrice most dentists favor. It curdles the film, then removes it and polishes the teeth to high lustre in gentle safety to enamel. It combats the acids of decay. It acts, too, to firm and harden the gums; thus meeting, in many ways, the requirements of modern dental findings.

Old-time dentifrices did not adequately fight film. That is why this modern protective way, as a twice a day habit in your home, and at least twice a year calls on your dentist, are being so widely advised today.

Accept this test

Send the coupon for a 10-day tube. Brush teeth this way for 10 days. Note how thoroughly film is removed. The teeth gradually lighten as film coats go. Then for 10 nights massage the gums with Pepsodent, the quality dentifrice, using your finger tips; the gums then should start to firm and harden.

FREE — Mail coupon for 10-day tube to The Pepsodent Company, Dept. 989, 1104 S. Wabash Ave., Chicago, Ill., U. S. A.

"I Never Learned to Live Until I Was Fifty"

(*Continued from page 41*)

year, almost all of my pictures were of apple blossoms. The orchards throughout Worcester County were at the height of their glory. And an apple tree in full bloom is probably the most beautiful thing God ever made. All the world, I find, loves them. I have tried the public on winter scenes; but they don't want pictures of snow banks. When blizzards rage outside, they want blossoms on their walls to make them think of spring."

There were years when Doctor Nutting could not go on a train, or in any crowded place, without becoming faint. He was too ill even to ride his wheel any longer, but he got around this by getting a horse. No matter how bad he felt, he could nearly always lie back in a buggy and drive all day, keeping a sharp lookout for beauty—and in doing so, forget his own sufferings. "There's one thing I've never been able to understand," he observed, in referring to these years, "and that is how any man can ever bring himself to give up."

Mrs. Nutting frequently accompanied him on these trips, when she would take one side of the road and he the other, so that they should miss no charming effect. After a while, he found the horse too slow, also it couldn't take him far enough afield, so he bought an automobile.

"BUT the sort of pictures for which I am always searching are not to be found at every turn," he told me. "Even when discovered, they are not always easy to obtain.

"Only about once in a hundred times do I succeed in getting just what I want. Sometimes the day is too windy, or the sun can't be got at my back—perhaps it temperamentally refuses to show itself at all. One summer I drove two hundred miles without getting a single picture. Again, when I had gone to another part of the country to take some photographs, it rained for seven solid months.

"After all the pictures had been taken and the cuts made for my Pennsylvania book, in the States Beautiful series, I looked over them and thought, 'This isn't going to be a very good book. It is not up to my standard.' So I threw them all away, went back to Pennsylvania and took them over again. This time everything went just right.

"I don't mind obstacles, however," he assured me cheerfully. "It's good sport coming up against them; they lend zest to endeavor.

"But I didn't narrow myself down to the producing and marketing of my pictures," he continued. "That wouldn't have been enough. I think a man should make of his life the biggest job of which he is capable. God has set us an example in this, as in all things. He has assigned Himself an infinite job, and slowly, perfectly, He is working out His dream. We hear people grouching over the imperfections of this planet—why, it is not nearly finished. Give the Master Artist time. When it is done, it will be an entrancing world to live in.

"Even with the work of us mortals, as we become absorbed in it, we find it continually widening out, and taking in all kinds of associated subjects. That is what makes it so fascinating—one thing leads to another. There need never be a limit to a man's achievements.

"It was the weather that drove me indoors and started me to studying and recording the beauty of old American homes during the Colonial period. I wanted to show what those lovely homes of the first Americans were like, and I tried to find houses that were typical of that time. But nowhere could I discover these. If the house was right architecturally, the furniture was all wrong. And I couldn't say to the obliging mistress of the dwelling, 'Madam, your house and your furniture don't go together. Do you mind if I move everything out in the yard and take a few pictures of the bare rooms?'

"I finally decided that the only way to get interiors that would be accurately representative of those years, would be to buy one of these old places, restore it, and furnish it perfectly in every detail—just as they used to be. I did this, and the photographs that I made were so satisfactory that I repeated the experiment with several other houses. In each of these I placed women dressed in the costumes of those years and engaged in all the various tasks which occupied the attention of women of that period."

AFTER getting all the pictures that he wanted from these model Colonial dwellings, he sold them. One was bought by the Metropolitan Museum, another by the Colonial Dames, and others by historical societies. But the simplicity and beauty of these early American homes had taken deep hold upon him. He began to accumulate rare pieces of old furniture made by our Pilgrim ancestors, until now he possesses a collection which is perhaps unequaled in this country.

The artist in Doctor Nutting, however, could not be satisfied with merely owning things; he wanted to create them too. And after years of preparation he began to make certain types of Colonial furniture. The Windsor chairs of the early seventeenth century especially appealed to him.

"I bought one hundred and forty different models of these," he said, "measured thousands, and spent two years learning to make a vase-turned leg. I read every book that I could find on the subject and studied the ideal that the designer of each type had tried to bring out.

"Everything worth while takes time. First, there is the long work of preparation; and then one must be willing to go slowly enough to make each detail as beautiful as he can. Patience, I think, is the most important requisite to success—patience and a long look ahead."

This is a Secret!

You know how fussy editors are about what's coming — well here are some things I have picked up that you, I think, should know.

Yesterday I overheard PETER B. KYNE talking over his *new serial.* A 1927 feature in Collier's. You remember "Cappy Ricks" and "Matt Peasley"—well, he has a new one—his name's "Jim". You won't want to miss a word of it.

Perhaps I shouldn't say anything about Collier's other serials, but standing here looking over these manuscripts starts my tongue wagging automatically. You remember *"Devil-May-Care"* and those other corking stories by ARTHUR SOMERS ROCHE? Don't tell anybody, but he's written another and just between us it is—well if you start it you'll be pushing my hands around to make the weeks shorter between installments — and in addition think of this—another serial by none other than GEORGE WESTON and one by ALBERT PAYSON TERHUNE. Do you blame me for being enthusiastic?

Oh! yes, and E. PHILLIPS OPPENHEIM has written a fascinating series of ten stories about a lawyer and a nobleman who turned detectives — *great* stories.

Of course our old friend H. C. WITWER will be with us. He has a brand-new series. A real surprise for you—he brings back an old friend.

Yes indeed, the famous short, short stories will continue. OCTAVUS ROY COHEN, SAMUEL MERWIN, BRITTEN AUSTIN, WALLACE IRWIN, RUPERT HUGHES, and many more will be back with new ones.

Oh! I had almost forgotten our famous short features. "THE GENTLEMAN-AT-THE-KEYHOLE," with his low-downs on high-ups in Washington political life has some scandalous news for you, and JACK BINNS has *"Picked Out of the Air"* some radio information that will give that set of yours a new and broader personality. Our old friend EDWIN E. SLOSSON in *"Catching up with the World"* showed me some eye-opening facts about this old planet that he's written for you. As for TOM MASSON'S column I refuse to write anything about him. The minute I do I start to chuckle.

Honestly, there won't be a dull moment in Collier's during 1927—52 numbers crammed full of humor, drama and romance—timely articles about current events—pictorial pages and the famous short features. 52 weeks of entertainment for the price of just one book.

Take my advice—fill in that coupon *right now.* You can't beat this for tremendous value at trifling cost—so act promptly.

Learn at Home
Easily—Quickly

THE tremendously increased interest in Interior Decorating has created hundreds of very unusual opportunities for ambitious men and women. It's easy now to establish a business of your own in full or spare time—to qualify for a high salaried, attractive position—or to mould for yourself an interesting, remunerative and highly respected Career.

$50 to $200 a week—New Uncrowded Profession

Take advantage of the wonderful opportunities resulting from the pressing demand existing right now for trained Interior Decorators. Get into business for yourself, or earn $50 to $200 a week in work that is fascinatingly pleasant. Either full or spare time. Scores of properly trained Interior Decorators are urgently needed right now—by home builders, large Interior Decorating firms, Department Stores and a great variety of stores selling household furnishings.

And now Interior Decorating can be learned easily—at home in your spare time. Prominent New York Decorators give your work personal attention throughout your course. No preliminary training is necessary—no special talent. It is astonishingly easy to learn Interior Decorating under this remarkable home-study method.

Send for FREE BOOK on Interior Decorating

It is most emphatically worth while getting full details of this wonderful, new, attractive big-pay profession. A new, up-to-date booklet has just been prepared which explains the splendid opportunities in Interior Decorating as well as this easy new home-study plan. Also tells about special offer to new students. It is FREE—not the slightest obligation. Send for it—now! National School of Interior Decoration, Dept. 351, 2 W. 47th Street, New York City.

City.....*State*.....

In the end, he learned to make these chairs so perfectly that many of them were bought up by certain dealers and sold as antiques for five hundred dollars and one thousand dollars apiece. When he discovered that this was being done, he refused to sell to those dealers again.

"Once," he related, "a friend exhibited to me a Windsor chair that he had bought at auction for five hundred dollars. 'I have been offered one thousand dollars for it,' he said; 'but I don't want to sell it.'

"A former owner had loaned it to a family of fifteen children, to age it, and it bore every mark of having passed through a long and arduous existence. I turned it up, bored under the seat, and new pine shavings came out. It was one of my chairs, but my name had been burned from the bottom."

FROM collecting and reproducing these charming old objects, it was but a step to writing and lecturing about them. "Several publishers came to see me about getting out my book, 'Furniture of the Pilgrim Century,'" he stated. "But when they learned what it would cost, they began to talk about the weather. I financed its publication myself, and it went through two editions. Later, I had offers from publishers who wanted to bring out the first book of the 'States Beautiful' series in a cheaper form. But I felt that this would destroy much of its value, and so I preferred to publish that, also, myself. Five thousand copies were sold in the first month.

"In going about the country getting my pictures, I have sometimes met people who seemed perfectly blind to the beauty that lay all about them, until it was pointed out to them. One of these was a man who lived in a small New England village that was surrounded by charming landscapes. I got a number of pictures in the locality and later showed the prints to this man. He was especially attracted by one of a lovely lake and asked, 'Doctor Nutting, where did this one come from?'

"'Within a stone's throw of your house," I told him. 'You have passed it every day for forty years.' He couldn't believe it. Once the beauty of his own home town was revealed to him, however, it had an astonishing effect. Always, theretofore, he had been very much ashamed of the unassuming little one-horse village of his birth. Now his attitude changed completely. He bought pictures taken of all the views in the vicinity; erected stone gates at the entrance of his place, and emblazoned a grand name above its portals. When last I saw him, he was looking up his ancestors.

"One of the most observant persons whom I have ever met is Henry Ford. On his first visit to my house, he looked up at a fine tree in my yard and remarked at once, 'How fortunate you are, Doctor Nutting, to have that splendid old red oak right at your door!' He is the only man who ever came here who immediately knew the name of the tree.

"Invariably, when I go to a new place, the people will urge me to climb to the highest hill and get the wonderful view from there. They don't realize that a hill is far more beautiful from the valley than is a valley from the hill.

"Another common misconception is that going down-hill is easier than climbing up, when the exact reverse is true. In going down-hill one has to use up lots of energy in holding back, whereas, in climbing, you just take a long breath and forge ahead. The latter is much pleasanter."

Life he defined as properly directed work and energy. "Work that is diversified becomes the most fascinating form of play," he declared. "There is no other amusement to compare with it. My working day is sixteen hours long, and I have often stretched it out to twenty. But I vary my occupations—that is the secret of the keen enjoyment which I get out of life. For two hours I write, then I go out and take pictures for five or six hours. After this, I superintend the making of furniture, or the developing and painting of the pictures. I rest from this by studying for several hours. When I have learned one subject, there is always another waiting that I am eager to turn to.

"For many years my mind was so tired that it was a great effort to concentrate, and I had to drive myself. But that is over now, and during the past five years I have been in better health than ever before in my life, and my work is the most delightful of pastimes.

"Some people seem to think it extraordinary that I should have begun life over at forty-six, and won. But age was the least of my difficulties. As a matter of fact, I never learned to live until I was fifty. But work was my salvation. By keeping busy every moment of the time I was enabled to forget myself. If I should live to be a hundred, I should wish to work every day and all day."

A YEAR or so ago, Doctor Nutting sold the plant where he gets out his pictures and furniture to a firm of wealthy men, and became "Wallace Nutting, Inc." Financially, the deal was highly satisfactory. But after a few months he found that the company was sending out pictures and furniture that did not satisfy him. The result was that he bought the whole thing back again, and began himself to operate the business once more.

To Doctor Nutting the making of money is always a minor consideration. His aim is to reveal to the American people the wonder of their land, the grace of old, forgotten things. Barred from the ministry by ill health, he became an apostle of beauty. And in every picture that he has taken, every old, lovely piece of furniture that he has reproduced, every chapter that he has written, you will find a sermon, if you look for it.

"YOU Have Plenty of Energy—But What Do You Do With It?" The answer to that pertinent question is given next month by William Frederick Book, Professor of Psychology at Indiana University. We all have leaks in our strength that we would like to plug up. Doctor Book, out of his years of experience with wasted energy, has formulated ten rules for its conservation which, if followed out, will enable everybody to *do* more and *be* more, with no more effort than he is expending at the present time.

"The supreme combination of all that is fine in motor cars."

Flexibility · To say that the improved Packard Six now has forty per cent more power, does not adequately impress its truly remarkable performance.

To add that even the largest closed models, fully loaded, will easily reach 75 miles an hour does not sufficiently explain the enthusiasm of new owners. For few men wish to use such speed.

But translated in daily use, this surplus power, this capability of great speed, means supreme flexibility—a thrilling, effortless response to the driver's will—a lithe agility in traffic and on hills, previously unknown. It means easy, restful driving—the constant delight of smooth, silent motion which recaptures the lost zest of motor travel.

With this matchless new performance added to its traditional comfort, beauty and distinction, the improved Packard Six is converting new thousands to the economy of fine car ownership.

Smoking refreshment that never ends

WHY is it that the enjoyment of Camels never fails? That you can light them all day and far into the night with never a loss of smoothness, mildness and incomparable fragrance? It's simply a question of quality. Camels contain the choicest Turkish and Domestic tobaccos grown. Camels are given an expert blending found in no other cigarette.

First thing in the morning. Late at night. Before or after breakfast, lunch or dinner. Light Camels as liberally as you choose, one after the other, as often as you desire the cheering comfort of a cigarette. You will get always the refreshing thrill of smoking pleasure.

Camel perfection has resulted in a demand that has never been known before or since. There has never been cigarette popularity that could compare with Camel's. Each year, millions of experienced smokers, who are willing to pay any price for quality, find in Camels every good thing ever wanted in a cigarette.

Here's a smoke invitation that's leading millions to an entirely new conception of cigarette contentment and satisfaction—

"Have a Camel!"

When I Need Quick Action I Go to the Men at the Top!

(*Continued from page 15*)

But King Albert apparently didn't mind. Or, if he did, he had a curious way of reproving my presumption. For, some months later, he sent me a morocco case containing an enamel cross hanging from a purple ribbon.

Here is another incident which backs up my contention that the way to get quick action is to go to the man at the top.

The early summer of 1919 found Mrs. Powell and myself on our way to visit the King and Queen of Rumania at their Castle of Pelesch, in the Carpathians. At this time Budapest, the Hungarian capital, was occupied by Rumanian troops, sent there to suppress the Bela Kun revolution, and all foreigners, including newspaper correspondents and photographers, had been excluded from the city.

While passing through Bucharest, I ran across an American newspaper photographer named Thompson, who had been in my employ during the early days of the war in Belgium. He told me that he had spent a fortnight attempting to obtain permission to go to Budapest, which was at that time an important center of news interest, but that his requests had been curtly refused by the Rumanian military authorities.

"I've seen the chief of staff, and the minister of war, and even the premier," he said disconsolately, "but they've all turned me down cold. I guess this is one of the times when there's nothing doing."

"Why not go a little higher," I suggested, "and see the King?"

"But," objected Thompson, "he probably wouldn't listen to me, even if I could get to him."

"Of course he would listen," I assured him. "A king is just as eager for publicity, provided it is favorable, as the head of a business concern. I'll tell you what I'll do. I'll telephone to the court chamberlain and get permission for you to accompany us to Pelesch—it's on the way to Budapest, you know—and then we'll put it up to the King."

The next noon saw us at the chateau—a rambling, medieval sort of place, with steep-pitched roofs and towers and battlements, standing in a clearing of the splendid forest which clothes the slopes of the Carpathians. It was an exceptionally sultry day, I remember, and after luncheon we chatted over the coffee and cigarettes in as friendly a fashion as though we were at a country house at home.

TAKING advantage of a lull in the conversation, I related some of Thompson's exploits during the war.

"It's a pity that you can't go to Budapest and take some pictures of our brave troops, Mr. Thompson," said King Ferdinand. "I should like to have your country-people see how they have brought order out of the chaos precipitated by Bela Kun."

Now, Thompson has a poker face—the best I have ever seen. Not by so much as a gleam of the eye did he betray his jubilation.

"I only wish I could, Your Majesty," he said regretfully.

"You would be rendering a great service to Rumania in showing the people of the United States that our soldiers are not the brigands and ruffians that they have been depicted," said Queen Marie, "and the King and I would never forget your kindness, would we, Nando?" addressing her husband by his pet name.

She was very beautiful and appealing in her picturesque peasant costume, with a scarf of white and silver twisted about her glorious hair. I would have gone much farther than Budapest to please such a woman.

While the queen was still talking to Thompson, King Ferdinand rose and entered the chateau. Through an open window we could see him at his desk writing. In a few minutes he returned with three letters, which he handed to Thompson.

"Here," he said, "are letters to the commander-in-chief of my forces in Hungary, to the chief of the general staff, and to the chief intelligence officer. I have instructed them to let you go wherever you please, to see anything you wish to see, and to afford you every facility for taking pictures. We have nothing to conceal. I have ordered a car to be ready in an hour."

"Gee!" Thompson whispered to me as he was climbing into the big gray staff car which was to bear him northward, "but that was certainly a cinch. You'll never catch me bothering with office boys again when the boss is on the premises!"

THE most picturesque illustration which I can recall of one of these "appeals unto Cæsar" occurred a good many years ago in the capital of a certain revolution-ridden Central American republic which shall be nameless. One president had recently been assassinated, and when his successor received visitors he did so with his hands in his coat pockets and in each hand a derringer pistol.

I was leisurely breakfasting one morning beneath the portico of the Hotel de Colon—every Latin-American city has a hotel named after Columbus—looking out on the colorful panorama of native life which unrolled itself before me on the sun-drenched plaza. As I was lighting my cigar, a man approached me. Rarely have I seen a more disreputable-looking person. A stubble of beard covered his chin; his bare feet were thrust into native sandals; his cheap cotton garments looked as though they had been slept in. Yet, despite his shabbiness, there was nothing hang-dog or furtive about him. He stepped out smartly, chin up and shoulders back, with a gleam of confidence in his eyes:

"Pardon me," he said, and his tone bespoke education and breeding, "but aren't you an American?"

Your face will like it ✓✓✓

and show its appreciation all day

EVERY masculine face likes Mennen Skin Balm. I've never known a fellow yet who didn't admit it's the best after-shaving preparation he ever met.

Skin Balm is refreshing. Non-greasy. Quickly absorbed. It gives a cool tingle to the skin. It is pleasantly astringent. Skin Balm corrects abnormal oiliness, gives a clean, fresh, well-groomed look that lasts the whole day.

Skin Balm is magic for healing little cuts, roughened places, skin eruptions, chapped hands or lips.

Costs only a half-dollar. Try-out tube for a dime. Buy a big tube. I guarantee you'll like it. If you don't, send me the tube. I'll refund your money plus postage.

Jim Henry
(Mennen Salesman)

For women, too

Women like Skin Balm. It's ideal as a powder base—astringent and never "spots through." Smooths your skin and improves its texture. Excellent for chapped lips and roughened skin. Skin Balm comes in tubes. You'll like it much better than liquid lotions for your hands.

Just try it.

Save Fuel!

Speed up steam heat and secure continuous heating comfort

EVEN a beautiful house is not a home unless it is adequately and economically heated. With Hoffman No. 2 Vacuum Valves you can have just the right temperature of radiator heat to meet outside weather conditions. You can have this comfortable heating and save money at the same time.

Hoffman Vacuum Valves make a remarkable improvement on any one-pipe steam system because they keep out The Heat Thief—AIR. This means quicker heat in radiators. And they will hold their heat much longer after fires are banked.

Furthermore, these advantages can be secured at a saving of one-third of your previous fire costs.

The coupon below will bring you an intensely interesting book explaining in simple words why Hoffman Vacuum Valves produce such an increase in your heating comfort and at the same time, save so much fuel.

Test one Valve

EVEN a single valve on your worst radiator indicates how great an improvement a complete equipment would be. You can obtain Hoffman Vacuum Valves at your neighborhood heating and plumbing shop.

HOFFMAN VACUUM VALVES

LOCK OUT THE HEAT THIEF-AIR

HOFFMAN SPECIALTY COMPANY, INC.
Dept. P9, 25 West 45th Street, New York City
The house I occupy has steam heat. Send me the booklet, "Locking the Door Against the Heat Thief."

City ..... *State* .....

I admitted it.

"I thought you were from God's country," said he. "That's why I'm taking the liberty of asking you a favor."

"Out with it," I said ungraciously, for beachcombers, down-and-outers, human derelicts, are common in those tropic lands.

"I want you," he said, looking me in the eye unflinchingly, "to lend me fifty pesos."

"Don't be so modest," I mocked. "Why not ask for an even hundred while you're about it?"

The man's sun-tanned face flushed crimson.

"I'm no pan-handler!" he burst out angrily, "though I may look it. I'm one American asking a favor of another. And I'm not asking you to give me the money; I'm asking you to *lend* it."

BENEATH the shadow of the Line men do things that they would not do in northern latitudes—the life and climate seem to produce a greater tolerance—so, instead of tossing him some silver and ordering him away, I told him to sit down and offered him a cigarette. Time hung heavy on my hands and I wanted to hear his story.

"Just out of curiosity," I demanded, "I would like to know what you would do with fifty pesos if I should lend them to you. Not," I added hastily, "that I have the slightest intention of lending you any such sum."

"You may believe me or not, just as you choose," he said bitterly, "but I was once an army officer—and a gentleman. At least, I was born a gentleman. I was educated at West Point, entered the army, finally obtained a captain's commission. What I did—how I got into my present mess—doesn't really matter, does it? It's enough to say that I was a wild one and went wrong. I had to resign—it was that or being dismissed from the service—and since then I've been fighting in little wars pretty well all over Latin-America. I suppose I'm a soldier of fortune; but instead of becoming a dictator I've become a down-and-outer. But I am still a soldier; there are a good many years of hard service left in me yet."

"Go on," I told him. "I like your frankness. Tell me what you want the fifty pesos for."

"I want them to get a bath and a shave and a hair-cut and a pair of shoes and some decent clothing. I want to look and feel respectable again. And then I'm going to get myself a job."

He pointed to where, across the sun-swept plaza, the white walls of the presidential palace, guarded by sentries in slovenly brown uniforms, rose above the trees.

"When I look like a gentleman again," he continued, "I shall go to the palace over there and ask for an audience with that poor little greaser president who doesn't dare to put his trust in any of the gang he has around him. 'Señor Presidente,' I shall say to him, 'I'm a graduate of the finest military school in the world, and I've held a commission in the finest army in the world. I'm the kind of man you need to drill your troops, for I know my trade and I have no interest in the politics of your country. You can trust me, because I'm an American.' And he'll give me a job."

There was so much confidence in the fellow's bearing, I was so impressed by his candor, that I gave him the fifty pesos. But, to be quite honest, I never expected to see my fifty pesos again.

The next day I left for a trip into the interior and three weeks had elapsed before I found myself back in the capital again. The morning after my arrival I was breakfasting at the same table, looking out at the same sun-swept plaza, when I heard behind me the clatter of spurs and a sword on the stone floor. The next moment a striking figure, resplendent in the comic-opera uniform of the country, stood beside me. It was my acquaintance of a few weeks before, but so changed in appearance, so soldierly and assured of manner, that for a moment I did not recognize him. He laid some coins on the table.

"Here are your fifty pesos," he said; "I'm more grateful to you than I can say for making me the loan."

"And what," I demanded, "are you doing in all that gold lace? You look like a field marshal."

"It is a rather silly uniform," he admitted, a trace of embarrassment in his tone, "but down here they go in for that sort of thing. You see, I'm a colonel now, and command the president's bodyguard."

I never saw the man again, but in the years that followed I occasionally heard of him. He served the president faithfully and well, I learned; and when the next revolution came he died defending him, on the steps of the bullet-riddled palace, revolver in hand. Whatever his past may have been, he finished in style. Curiously enough, I never learned his name—his real one, I mean.

IN MEETING for the first time highly placed and busy men, I have found that it is a good rule to post yourself in advance on those subjects in which they are most interested. Nothing is more certain to create an unfavorable impression than for one to mumble some inanity about the state of the weather or otherwise grope for a handle to the conversation. Ascertain the great man's pet hobby—nearly everybody has one—familiarize yourself with some phase of it, and start at once to talk about it. The chances are ten to one that you will get his attention. Lord Kitchener, one of the most taciturn public men who ever lived, would become almost voluble on the subject of Chinese porcelains. King Victor Emmanuel of Italy, by nature a shy and silent man, will discuss with the enthusiasm of a boy his collection of medals and coins. One of the most interesting days of my life was spent with Lord Bryce, then British Ambassador to the United States, who, it was not generally known, was an enthusiastic mountain-climber. I won his confidence by remarking that I had read his account of the ascent of Mount Ararat, which he had written when a young man. And, as I once discovered, any allusion to animals or sport could always be counted on to rivet the late President Roosevelt's attention.

Returning to the United States from Syria, where I had held a consular post for a time, I was taken to the White House by a friendly congressman. Now,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

t so happened that, while in Europe on eave of absence the preceding summer, I ad obtained permission from the Italian Government to attend the School of Military Equitation at Tor de Quinto, ear Rome, where the Italian cavalry fficers are trained, and had brought back with me some remarkable photographs of the amazing feats of horsemanship performed by those daring riders. Aware of the President's intense interest in all that pertained to horsemanship, I took the pictures with me to the Executive Mansion.

It had been a strenuous day for the President; a long line of politicians and office-seekers were waiting to see him, and, obviously tired and bored, he handshook them past with astonishing celerity, vouchsafing little more than a smile and an explosive "Bully!" or "Delighted!" to each one. But I was prepared for him.

"You might be interested to know, Mr. President," I said rapidly as he grasped my hand, "that I spent part of last summer at Tor de Quinto—the military school, you know, where the Italian cavalry officers are trained."

The effect was instantaneous. He clapped me on the shoulder and his tired features brightened.

"Now, *that's* interesting!" he exclaimed. "Bully! Perfectly bully! That's the sort of thing I believe in. I want you to tell me all about it. What sort of saddles do they use, and where do they get their horses? Do they breed them or buy them? And you have some pictures? Better still! Come into my office and let me see them. Loeb, tell the people who are waiting that I can't see them to-day."

With a wave of his hand he dismissed the score or more of persons who were still in line. Then, taking me by the arm, he led me into his private office. We spent an hour talking horse, and the friendship thus begun lasted to his death.

"NOW," he said, as I was leaving, "what can I do for you? What was it you wanted?"

I mentioned a certain post in the Diplomatic Service which happened to be vacant, and which I felt myself capable of filling.

He drew toward him a pad of paper and on it in pencil scrawled a few lines. That note is now in the files of the Department of State, but it ran something like this, if my memory serves me faithfully:

Dear Bob: This will introduce E. Alexander Powell. He can ride anything on four legs. He is the kind of man we need in our Diplomatic Service. *I want you to do something for him.*

T. R.

"Take that over to the State Department," said the President, "and give it to Bob Bacon (Robert S. Bacon, then Secretary of State). He'll do something for you. And come back here to-morrow afternoon. I want to talk horse with you again."

The prim and polished gentlemen in the Department of State, however, evidently did not regard my ability to "ride anything on four legs" as qualifying me for diplomacy. As things turned out, perhaps it was just as well, for then I took up writing. And as a professional onlooker my life has, at all events, been interesting.

* * * * *

Of Course

you *intended* to go a-shopping yesterday . . and the day before . . and now just take a hasty look at the calendar!

Perhaps you *did* try it today —and found yourself mired in a mass of jostling, juggling folk. No time to make a thoughtful selection of a "just-right" gift.

But there is *one* gift that never fails to bring a happy heart throb. *Send flowers!* Just telephone your florist to send fresh, fragrant flowers. That's all you need to do. Then it's only a matter of minutes until the messenger boy is on his way, to deliver your token of tender thoughtfulness.

Pathfinders

An advertisement of
the American Telephone and Telegraph Company

CHRISTOPHER COLUMBUS discovered America, thus adding a new world to the old. Alexander Graham Bell discovered the telephone, giving the nations of the earth a new means of communication. Each ventured into the unknown and blazed the way for those who came after him.

The creating of a nation-wide telephone service, like the developing of a new world, opened new fields for the pathfinder and the pioneer. The telephone, as the modern American knows it, has been made possible by the doing of a multitude of things in the realms of research, engineering and business administration.

Its continued advancement requires constant effort in working upon a never-ending succession of seemingly unsolvable problems.

Because it leads the way in finding new pathways for telephone development, the Bell System is able to provide America with a nation-wide service that sets the standard for the world.

The Greatest Emergency I Ever Faced and How I Met It—or Didn't

FIRST PRIZE

I Met a Train in the Middle of a Half-Mile Trestle

ON MY way to school one morning (I was a mere slip of a girl at the time), I was in the middle of a half-mile trestle when a long freight train came at full speed around a short curve, not a hundred yards away.

For one awful moment, I stood stunned. There was no railing to this trestle; there was nothing but the ties and rails built upon a framework, and I could not hope to get back or forward to safety before the train reached me. I had nothing with me but my book satchel—one of those old-fashioned saddlebag affairs made of a strong fish-net material.

Then a ray of hope darted through my mind! Emptying my book satchel as I ran to the edge of the trestle, I placed the bag upon one of the ties and swung myself off just as the train passed over my head.

I was suspended eighty feet above the waters of the Washita River, whose bed was full of treacherous holes, with only my book satchel for a hand-hold.

I glanced down at the water, and a panic of sheer fright took hold of me. I could feel my strength ebbing, and I wondered how much longer it could last. Every fiber of my being was fighting for strength to hold on.

After what seemed an age, I heard a jargon over my head, felt strong, capable hands upon my arms, and I was slowly lifted to the trestle. Two Indian fishermen had come to my rescue. B. B.

SECOND PRIZE

I Jumped, and My Parachute Failed to Open

AS a stunt aviator and parachute jumper I have had many big moments. But three years ago I met what I think was the greatest emergency of my life.

A fellow aviator and myself were giving an exhibition at a county fair. I was scheduled for a jump that afternoon at four o'clock. When we took off at three-fifteen, I had a premonition of impending disaster—although I had personally supervised the folding of the parachute, and had tucked it away myself in its inverted container beneath the fuselage.

At one minute to four o'clock our altimeter read 7,200 feet. Then I got what is commonly known as cold feet. But I knew that the people far below were looking forward to the exhibition, and I didn't want to disappoint them. So, climbing up over the cockpit, I leaped out.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Now, when you leap from a plane, you count the seconds—1, 2, 3. And if the parachute has not caught air at the fourth count, *something is wrong*. As I leaped from the plane on this occasion, I began my customary count—1, 2, 3, 4? . . . 5! 6! I was falling. The parachute had failed to open. With a superhuman effort, I brought my hands together above my head and gave the ropes a violent twitch. Instantly, it seemed, I was yanked strongly upward—the parachute had caught and opened, and I was eased to the earth. In some manner the ropes had become slightly tangled, and that twitch I gave them saved my life. P. J. B.

THIRD PRIZE

"Teacher, Teacher, the Prairie's on Fire!"

I WAS sitting, one day, some forty years ago, in a little frame schoolhouse of the box pattern, then in vogue in the sparsely settled cattle region of western Nebraska. Gradually I became aware that the sunlit sky of dazzling blue was growing blurred, and the still October air unusually warm and heavy.

Stepping to the door, I became conscious of a strong, pungent odor of burning grass. Somewhere out on the range a prairie fire had broken loose.

The schoolhouse, a little wooden structure, stood on a grassy flat, cupped by surrounding sandhills, and miles from any other house.

Even as I looked, great clouds of smoke came pouring over the western hills, and the children raised a startled cry: "Oh, Teacher, a fire, a fire! Let us go home, let us go home!"

I was a girl, not much older than the children. We had no water but a jugful for drinking purposes. If I allowed the children to go home, they would surely be overtaken by the fire. Already the smoke was changing from white to ominous black, and suddenly a tongue of lurid flame shot up over the summit of a hill.

It brought a shriek from one tiny girl: "Teacher, Teacher, will it burn my cheeks and my hair?"

There was just one thing to do, and that was to keep the children in the schoolhouse till the wall of fire ran by. Even if the wooden shingles should catch, the fire would race through the yard, leaving it black and bare; but not so frightfully hot that we could not run out of the burning house and find safety on that blackened ground.

But when the crimson wall of flames swept into sight, to hold the children was no easy matter. They made a mad stampede for the door.

I stood with my back to it, with a ruler in my hand, and by encouragement, coaxing, threats, and blows held the terrified little mob at bay. The fire, blood-red and fiercely hot, tore down upon us, surged up to the windows so that a little child screamed as she touched the hot glass. It choked us with smoke, passed over us, and left our schoolhouse a little gray oasis in a blackened waste.

I dropped my weapon, and thankfully gathered my weeping, terrified brood into my arms and comforted them. E. B.

if you live in a small town

you get a great deal out of life that is denied the city dweller. On the other hand, all city folk enjoy a blessing which most inhabitants of small towns miss.

That is water—pure and abundant. Many towns with electric light and the best of paving still struggle along with wells and pumps, or with a central water supply that trickles into failure just when it is needed most.

The only reasons are inertia and lack of information.

Any town of 500 or more—and some with less—can have a thoroughly up-to-date water supply and pay for it to a considerable extent out of savings in the cost of fire insurance.

Aside from the luxury of clean water and plenty of it, it is the one defense against fire. If your water comes from a well, if it comes from a pumping plant too small for the demand, or if the mains are inadequate, you are just as much in peril as a man who smokes in a gasoline refinery. Incidentally, the brakes are set on the growth of your town.

We have prepared a book, "Planning a Waterworks System," which covers the problem of water for the small town. A copy awaits the request of any interested person.

THE CAST IRON PIPE PUBLICITY BUREAU
122 SOUTH MICHIGAN AVE., CHICAGO

CAST IRON PIPE

These posters, 8½" x 11", have proven an effective aid in many campaigns for waterworks — we will gladly send a supply of them for any community.

Music Lessons UNDER MASTER TEACHERS At Home

A Complete Conservatory Course By Mail Wonderful home study music lessons under great American and European teachers. Endorsed by Paderewski. Master teachers guide and coach you. Lessons a marvel of simplicity and completeness.

The only recognized Conservatory of Music giving lessons by the UNIVERSITY EXTENSION METHOD.

The ideal of a genuine Conservatory of Music for home study based upon lessons containing the cream of the life's teaching experience of Master Musicians, reinforced by the individual instruction of specialists, is now attained.

The instruction of a master—the individual touch of an accomplished teacher—is yours to command from the very moment you enroll.

The University Extension Conservatory, by adopting the Personal Instruction Method, has placed home music study beyond question as to results. Anyone can learn at home.

Any Instrument Write telling us course you are interested in—Piano, Harmony, Voice, Public School Music, Violin, Cornet, Mandolin, Guitar, Banjo, or Reed Organ—and we will send our Free Catalog with details of course you want. Send now.

Florida's haven for "real folks"

Come to Lakeland with the idea that you'll stay. We have more than 20,000 "real folks" now and we want 20,000 more permanent, substantial citizens by 1930. And we'll get them—because our city is not merely a resort center, but the metropolis of the richest per capita county in the United States.

There are hundreds of very worth while opportunities in Lakeland every month in the year—and these opportunities for permanent, prosperous work and play-time pleasure are growing every day.

Lakeland wants more "real folks" in addition to the thousands of "real folks" who are finding Lakeland to be their ideal city.

Come to Lakeland this winter. We KNOW you'll like us.

Our booklet will give you more details—Write for it.

You'll like *Lakeland*

"My Boy Is Going to Have the Training that I Had"

BOYS! Get Your FREE Copy of the Daisy Manual from nearest hardware or sporting goods dealer. It tells how to be a crack shot!

The most justifiable pride in the world is the pride which one man will express to another concerning the upbringing of his son. Each of us has the right to believe in our own character. And every man should offer the best of himself toward his son's education.

That is why millions of boys gratefully remember the days when Dad taught them how to shoot with a Daisy Air Rifle. To those experiences you hear men everywhere attribute their alertness of mind and quickness of decision, their self-confidence and their own golden rules of sportsmanship.

Your attitude is right when you say, "My boy is going to have the training that I had!" Start him now with the Daisy. Put *The Daisy Manual* and a Daisy Air Rifle in his hands—and be his pal while he learns. Ask your dealer to show you the model illustrated here—the popular Daisy Pump Gun—a 50-shot repeater for $5. Other models from $1 to $5. Name of nearest dealer upon request—or any model sent on receipt of price.

"Snap!" Went the Furnace Door and Spencer Got His Big Idea

(*Continued from page 34*)

When I asked him how he could find his way through a trackless forest, he said, "Oh, that's nothing! Any woodsman can do it. You learn to notice little things: the lay of the land; the way the ridges run; the growth of the trees; the course of the streams; the direction of the sun."

"But suppose it is a cloudy day?" I asked.

"You can find the sun anyway," he said. "If you hold the blade of your jack-knife at right angles to your gun barrel, for instance, the reflection on the barrel will be strongest when the knife blade faces toward the sun, even though the sun is hidden by clouds."

I asked Mr. Spencer if he tried to invent things when he was a boy.

"No, not exactly," he said; "but I was always trying to figure out better ways, or easier ones, of doing my work. I lost several jobs because my boss objected to this.

"In one sawmill, I had to tend by hand a lot of chutes for sawdust and waste. I rigged up an arrangement that would operate them automatically, leaving me with practically no work to do. But when the boss saw what I had done he fired me. The fellows thought that was a great joke on me," laughed Spencer.

"When I was a boy," he went on, "I wasn't trying to invent something; but I was always taking things apart and putting them together again.

"I began with clocks. I wanted to find out how they were constructed and how they worked. Later, I used to do this with gasolene engines, automobiles, and motor-cycles. That's the way I learned mechanical principles.

"You see, I've always been just a *workman*. I didn't have any 'white-collar jobs.' I guess I was pretty restless, so I traveled around a good deal. I worked in practically every one of the New England states; usually running an engine in some shop or factory. I even went as far as Virginia."

ONE of Spencer's associates told me of a little incident which occurred at this Virginia plant. It is because similar incidents are always occurring, wherever Spencer works, that he has got the reputation of being a mechanical genius.

One of the pumps at a neighboring plant was out of commission; and after the men in charge of it had tried, in every way they could think of, to make it work, they appealed to Spencer.

He came over and just stood and looked at the pump for a while. Then, without saying a word, he simply gave it a little kick with his foot—and, presto! the thing began to work all right!

"They thought he was a wizard," said the man who told me the story. "But it

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

was just a case of understanding machinery so perfectly that he saw at once where the trouble was. Something was slightly out of adjustment. A well-aimed kick jarred it into place."

In talking with me, Spencer repeatedly referred to his having been "only a workman." He is keenly conscious of the fact that his education—the education gained in schools—is limited. But he has the far rarer, and infinitely more valuable, knowledge which is gained through observation, thinking, and doing.

Once, harried by my relentless prodding with questions, Spencer exclaimed, "I haven't been thinking about *myself!* I've been just a workman, thinking about my *work!*"

When he said this, I smiled. It answered a lot of the questions we always want to ask men who raise "million-dollar melons" of one kind or another.

"All right!" I said. "Let it go at that, and tell me when and how you became an inventor."

"Oh, that was after I came to Boston, about twelve years ago," he replied. "I used the idea I got from that old furnace cover, back in the Maine sawmill, to make a device which would automatically turn off, and turn on, the gas. If the flame was blown out, for instance, the gas would be turned off.

"The next thing I made was an automatic air vent for steam radiators. This is one of several gas and steam appliances now being manufactured by the Spencer Thermostat Company.

"BUT the field for such appliances was more difficult to enter at that time. Electricity seemed to be the coming thing. So I began to think about applying this same principle to electrical equipment.

"I didn't know much about electricity. At one time, I worked in the General Electric plant, at Lynn, near Boston; but I didn't stay long and I didn't learn much while I was there. My job was a routine one, where I did the same thing over and over again, hundreds and thousands of times.

"But in 1915 I went to work for a company manufacturing wireless equipment, mostly for steamships. As it was a comparatively small plant, I had a chance to learn as much as I wanted to; and I wanted to learn it all.

"Before I went there I never had seen a radio set. I didn't know a thing about wireless. Some of the men were experienced hands. And yet, when I had been there only five or six months, I was put in charge of the whole shop.

"After a few years with that company," Spencer continued, "I went with another radio concern; this time in their research department. The war came on, and my brother and I tried to enlist. He and I were in the same plant, which was then making wireless equipment for the navy. When the authorities found out what kind of work we were engaged in, they told us to go back to our jobs; we were worth more to the Government there than anywhere else.

"Meanwhile, I had been trying to make something which would automatically control the temperature of an electrically heated appliance. The idea wasn't original with me. Every electrical manu-

The Book-of-the-Month Club enables you to *make sure* that you actually obtain and read outstanding books that otherwise you may miss.

Handed to you by the postman—

the best new book each month!

Henry Seidel Canby

Heywood Broun

Dorothy Canfield

Christopher Morley

Wm. Allen White

IF you are a bookish person, you have probably heard about the Book-of-the-Month Club. Many of the most prominent people in the country have already subscribed to its service. Wherever books are talked about, it is likely to come into the conversation. Frequently, however, the simple idea behind it seems to be misunderstood.

There are hundreds of thousands of intelligent people in this country who are really anxious to keep abreast of outstanding new books, as they appear. But the average person *fails to read* most of these important books. He misses them because he is either *too busy* or *too neglectful* to go out and buy them. How often has this happened to you? "I certainly want to read *that* book!" you say to yourself, when you see a review or hear a book praised highly, by someone whose taste you respect. But, in most cases, you never "get around to it."

It is to meet this situation, chiefly, that the Book-of-the-Month Club was organized. It takes cognizance of the procrastination that forever causes you to miss the best books; *each month, without effort on your part, you will receive the outstanding new book published that month—just as you receive a magazine—by mail!*

How is the "outstanding" book each month chosen? How may you be sure it is a book that you would care to purchase anyway? In order to obtain a completely unbiassed selection, the Book-of-the-Month Club has asked a group of well-known critics, whose judgment as to books and whose catholicity of taste have long been known to the public, to act as a Selecting Committee. They are: Henry Seidel Canby, Chairman; Heywood Broun, Dorothy Canfield, Christopher Morley and William Allen White.

These individuals have no business connection with the Book-of-the-Month Club. They were simply requested to function as judges, for the benefit of our subscribers, and they agreed to do so.

Each month, the new books, *of all publishers*, are presented to them. From these, by a system of voting, they choose what they consider to be the most outstanding and readable book each month, *and that book is forthwith sent to every subscriber of the Book-of-the-Month Club.*

Tastes differ, however. You may concede that a book selected by such a committee is *likely* to be one that you would not care to miss reading. But you may disagree with their choice in any one month. If so, *you may exchange the book you receive for any one of a number of other books which the Committee simultaneously recommends.* Thus, your choice among current books is no more limited than if you browsed in a bookstore. The only result is—that you actually *do* obtain and *do* read the books you want to read. This you won't do, in most cases, if you rely upon your present haphazard methods of book-buying.

The cost of this service is—nothing. The cost of the books is, in every case, the publishers' retail price.

If you are interested in this idea and wish to know more about it, send for our prospectus, in which the simple details of the plan are completely outlined. Your request will involve you in no obligation to subscribe. If, however, you do subscribe at this time, you will receive special privileges as a "charter subscriber," which it will not be possible to offer later.

BOOK-OF-THE-MONTH CLUB, INC.

facturing company in the country was trying to perfect such a device.

"Take a common, everyday article like an electric flatiron, for instance. All women know that it is a wonderful convenience; but they also know the difficulty of controlling the temperature.

"That isn't the only trouble, either. Sometimes a woman is suddenly called away from the ironing board. The telephone rings; or the baby cries; or a book agent comes to the door; or the woman has to look at a cake in the oven.

"Whatever it is, off she goes in a hurry; and sometimes she leaves the iron *on the cloth*, and forgets to turn off the current!

"The result may be nothing worse than a burned garment—which is bad enough. But in some cases the result is a bad fire and a burned home. If you doubt it, ask the insurance companies.

"Well, I knew that a piece of metal, under certain heat conditions, would change its shape and position. Why couldn't I use a metal disk which, by this change, as it heated and cooled, would turn off and turn on an electric current?

"It sounds simple. But," and his face settled in tired lines at the mere recollection, "it took me more than ten years to overcome all the difficulties.

"At first I was living at home with my mother, who had moved to Boston years before. Her kitchen was my 'laboratory.' Her kitchen—and my own head; for the work of inventing is a fifty-fifty job between the brain and the hands.

"You plan a thing in your mind. Then you make it and test it. If it doesn't work right, you try to figure out why it doesn't and how to improve it. You keep on planning different details, making new models, testing them—over and over again.

"Sometimes I would throw the thing aside and try to forget it. But the first thing I knew I was thinking about it again; figuring out a new arrangement that might solve the problems.

"During the day I was busy at my regular job, so all my work on the thermostat was done evenings. As for thinking about it, I could do that anywhere; on the street, and while I was eating my meals, and after I went to bed.

"AT HOME, I didn't have the proper tools and machinery. So I finally told my employers that I was working on something of my own and asked them to rent me the shop at night and on Saturdays.

"You see, if I had used their equipment in developing an invention they would have had a claim on anything I made with it. By paying for the use of the shop, I owned whatever I produced there.

"People seem to think that the big thing in inventing is to get an *idea*, and to make something that carries out the idea. But that's a long way from being the whole story.

"For instance, other men had the idea of making a device which would control an electric current; and some of these ideas worked to a certain extent. But they didn't meet *all* the requirements. If an attachment to a flatiron made the iron weigh fifteen pounds, for instance, no woman would want it. You must not only make your idea work, but must make it work *practically*.

"And even that isn't enough. You've got to realize that your invention must be *manufactured*. So you have to produce something that can be sold for a reasonable price. It would be absurd, for instance, to try to sell a hundred-dollar contrivance to regulate the heat of a three-dollar iron.

"Then too, if it is something for which there will be a big market, you've got to show the manufacturer that he can turn it out in large quantities and at a low cost. I guess every inventor will tell you that when he has got his idea, his troubles have only begun."

"HOW did you work out your idea?" I asked.

"Why—wait a minute," he said, and got up and left the room. When he came back he brought an electric flatiron.

"This is the original iron with which I experimented," he said. "By the way, the Westinghouse people *gold-plated* the first one they turned out, and sent it to our company as a souvenir."

Opening the iron, he took out a metal disk, an inch and a half in diameter. There really were two disks, of very thin metal, separated by a space and fastened together with a small metal post at the center. The whole thing was only about a quarter of an inch in thickness. It fitted down into a round space which had been drilled out of the base of the iron, leaving the ironing surface intact.

That, if you please, was his "two-million-dollar melon." A baby could hold it in one hand. As he turned it over in his own palm, the tired lines came again into Spencer's face.

"In order to make it compact and fool-proof—that is, to put it where nobody could tinker with it—I determined to make a device which would be contained in the base of the iron itself. This base is only *three-eighths of an inch* thick; and I had to leave enough metal below the thermostat to give the ironing surface the necessary strength. This meant that I couldn't take more than a quarter of an inch in depth.

"One of the most troublesome problems was to get a device that would work with either a. c. (alternating current) or d. c. (direct current); for in some towns they use one, and in some they use the other. I wanted something that would work *anywhere*.

"The real trouble was with d. c.; for unless I could make my metal disks change their shape instantaneously, an arc would form which would burn the thing out and make it useless.

"I finally got it to the point where the disk would snap with a speed greater than that of a rifle bullet. It has been accurately measured by an oscillograph to be only sixteen one-hundred-thousandths of a second, and that is fast enough to beat the arc."

Spencer's experience with his invention made me think of mountain climbing. If you have tried this so-called sport, you know how often, in the course of a climb, you think you see the summit just above you. But when you have negotiated what seems to be the final scramble, you are confronted with another ledge, or cliff, or stiff rise. You are always thinking you have arrived—only to find yourself facing another obstacle.

After working on the thermostat for

January INVESTMENTS

LEADING financial authorities say that **real estate bonds offer the best yield of any high grade security of equal safety, but they advise investors to select guaranteed or insured bonds, issued by a house of long experience in the field.**

Compare the record of safety behind Adair Bonds. Investigate the guaranteed and insurable features and the attractive yield:

1. 61 years' experience in the first mortgage investment field without loss or delay in payment to investors of a single dollar of principal or interest.

2. Payment of principal and interest unconditionally guaranteed by Adair Realty & Trust Company.

3. The current financial statement of Adair Realty & Trust Company is always available to investors.

4. Adair Guaranteed-Insurable Bonds may be insured against loss for the full term of the bond in one of the country's strongest surety companies, with resources over $30,000,000.

INSURABLE AGAINST LOSS OF PRINCIPAL *and* INTEREST

seven or eight years, Spencer had brought it to a point where he felt sure that it could be made a practical commercial success. The average man would have stopped there. He would simply have tried to persuade some manufacturer to accept this belief.

But Spencer did *not* stop there. His goal was perfection; and this meant that he must solve the problems of manufacture as well as those of invention. So he set to work to demonstrate, not theoretically but by *actual performance*, that his device could be made economically and in quantity production. This meant that he must design the necessary machines for manufacturing, set them up, and train men to operate them.

But this would require money, a large amount of money; and Spencer had practically none. He was "only a workman." He had received good wages, but his experiments had used up every dollar he could spare.

In order to go on with his plans, he had to interest men who could afford to risk large sums on the outcome of these plans. That was one of the hardest places in his long climb, for he is not a business man himself.

But here too, he "made the grade." A company was formed. Men who believed in him and in his invention put up thousands of dollars as working capital. A shop was rented in Cambridge, and Spencer had a small force of assistants. For two years he worked day and night. Literally so, for he sometimes worked all night long. Legal holidays did not exist, so far as he was concerned, and he never took a vacation.

Step by step, one difficulty after another was met, overcome, and left behind. For example: Between the disks of the thermostat there are three points where contact is made and broken as the temperature of the metal changes. Originally, when there were only two of these contact points, tests made with a current of a certain voltage were disappointing, the current not being properly distributed. The men in the shop felt pretty discouraged; and probably Spencer shared this feeling. But if he did, it failed to stop his everlasting "figuring" on a way out of his difficulties.

"In thinking it over," he told me, "it occurred to me to try three contact points instead of two. We made a model with that arrangement, tested it, and it worked perfectly. That day," he added, with the touch of embarrassment which accompanied every reference to his own achievements, "the men stood around and cheered quite a bit."

WHEN the stage of actual negotiations with possible purchasers was reached, Spencer had to prove that all the problems of production could be met. For example, the Westinghouse people demanded a record of 350,000 actual performances.

In other words, they wanted proof that a thermostat had actually turned off and turned on an electric current 350,000 times without a single failure. This record was demanded as a guarantee of durability and reliability.

"To have the thermostat operate 350,000 times under the conditions of its ordinary use," Spencer explained to me,

Now 54 *years*

OF PROVEN SAFETY

Send for anniversary booklet and 1927 edition of "How to Build an Independent Income"

WITH the beginning of 1927, The F. H. Smith Company marks the completion of 54 years of continuous service to first mortgage investors—54 years in which every cent of interest and maturing principal has been paid promptly and in full. Founded in January, 1873, The F. H. Smith Company now has a record of

No Loss to Any Investor in 54 Years

Our anniversary booklet, "Fifty-four Years of Proven Safety," shows you how this record has been maintained, and how it has created world-wide confidence in Smith Bonds. It explains how every Smith Bond is secured by a first mortgage on modern, income-producing city property. It tells you why men and women in 48 States and in 33 countries and territories abroad have bought Smith Bonds by mail.

For 1927--adopt this plan to invest your monthly savings at 6½%

The 1927 edition of our booklet, "How to Build an Independent Income," tells how you can buy one or more $100, $500 or $1,000 Smith Bonds by ten equal monthly payments, and how your regular monthly payments earn the full rate of bond interest—6½%. It shows the results you can accomplish by investing $10, $20, $30, $40, $50 or more a month at 6½%.

For example, the booklet shows how an investment of $20 a month, at 6½%, with the interest reinvested at the same rate, grows in 10 years to $3,370.43; in 20 years to $9,760.20; in 30 years to $21,639.46; in 40 years to $44,395.30. It shows how your money is multiplied over and over again by systematic investment and reinvestment at 6½% interest.

"would have meant running it continuously for two or three years! We couldn't wait that long. So I devised a way of speeding it up, and got a record of 500,000 actual performances in a few months."

Even when the sale was finally completed, Spencer's work was not over. He had then to train a crew of Westinghouse workmen to operate the machines. And he had to install the equipment in a Westinghouse shop and organize the work there.

Which brings me to another phase of his character. He knows how to handle machinery—and he knows, also, how to handle men.

After he had put the thermostat production on a satisfactory basis, another company called him into its service. This company was trying to make the Raytheon tube; a non-filament tube for eliminating batteries in radio receiving sets.

"We were trying," a member of the Raytheon company said to me, "to make in a *factory* what was essentially a *laboratory* product: an article requiring the most delicate scientific accuracy. Yet, if it was to be of commercial value, it must be turned out in large quantities; and not by technical experts, but by ordinary workmen.

"We had a plant at Danvers, which several highly trained technical men had tried to run. But they succeeded in getting a production of only from 50 to 70 tubes a day, which was an impossibly small output.

"IN THIS situation, we engaged Al Spencer to take charge of the plant. Why? Because he had proved that he had an almost uncanny knowledge of machinery—and an equally remarkable knowledge of human nature.

"Well, he went to Danvers. Apparently, he didn't look the plant over to see what his predecessors had been doing. He had figured out his own plans; and he simply set to work to get his system in operation. Inside of two weeks, production ran up to *hundreds* of tubes a day, instead of a few dozens! It seemed incredible; but there were the tubes!

"We built a new plant in Cambridge, and made Spencer the factory superintendent. Production went up to 2,000 tubes a day and with only slightly more equipment than other men had used to produce 200 a day.

"We enlarged the factory. Or, rather, Al Spencer did it; for he planned and supervised the changes. He organized and trained the workers, and brought the production up until it is shortly expected to reach 5,000 tubes a day. These are rapidly becoming facts. Production when this article was written, the last of August, was 14,400 a week; and by the time it appears in print it will be 5,000 a day.

"The average superintendent, or foreman, likes to sit at a desk and issue orders. Al Spencer puts on overalls and shows his workmen, by actually doing a job, how he wants them to do it.

"After the papers printed the story that Spencer had received a million dollars for his thermostat, there was almost a procession of reporters coming to interview him. Among them was a young woman from a Boston paper. She arrived on one of Al's busiest days. He was covered with grease and dirt; and he couldn't stop to clean up, even to receive a lady.

"She looked at him, from head to foot, and wanted to know if *he* was Mr. Spencer. He said he was.

"'Mr. John A. Spencer?' she insisted.

"'Yes,' he said.

"Without another word, she turned around and walked out! It was a short interview, but she made quite a story out of it; all about a 'millionaire in overalls' and that sort of thing. The part about the overalls was all right, but she was 'way off about the millionaire. He isn't one."

Spencer himself told me that the printed report of his supposed sudden wealth has brought him dozens of letters, most of them containing pathetic appeals for help.

AS I explained before, this sudden wealth is a myth. With a two-million-dollar invention to his credit, he is not so very much richer than when he was just a workman. He lives very modestly. With his wife and baby he occupies the upper flat in a two-story house at Revere, a suburb of Boston. I went to see him in his home. And there, where it was very evident that his reward has been small in proportion to his achievement, I asked him a few leading questions.

"How did it happen," I said, "that *you* receive so comparatively little for your invention?"

"Because the company, which was formed to finance it, owns the patents," he said. "Perhaps I might have made a better bargain; but you must remember that I was young and unknown. When those men put their money into the enterprise, they could not be sure of the invention—or of me. The device wasn't perfected then. They couldn't be certain that it ever would be. I might get discouraged and give up the whole attempt. They were investing in uncertainties. And you can't expect men to run big risks unless there is a chance of a correspondingly big reward. Now that I have proved myself and my ideas, I will be in a position to make a better bargain the next time."

"Suppose the newspaper story had been true," I said. "What difference would that have made in your own way of living?"

"None whatever!" he replied quickly and emphatically. "Oh, I might have moved into a better house. I'll do that anyway, after a while. If I ever get money enough, I'll have a nice home in the country for my wife and baby; and I'll have a laboratory of my own where I can work out my ideas.

"Work! That's the big thing! If I had *ten* million dollars, I wouldn't stop working at things that will—will help to make the wheels of the world go round. Money is all right, I guess. I've never had enough of it to bother me. But the big thing—with me, at any rate—is the satisfaction of accomplishing what I set out to do."

With a little laugh he added: "I'd hate to give up and admit I was licked. I guess that's it."

How to Make A Week's Pay

in One Day

Fyr-Fyter is one of the most perfect fire prevention devices ever invented. Bears the label of the Underwriters' Laboratories. Fire Chiefs everywhere urge and endorse it. Hundreds of America's largest factories use it. The U. S. Government purchased over 250,000 Fyr-Fyters. There is a size and type for every building.

EVERY month, by hundreds and by thousands, American factories and homes are turning to this new way to fight fire. The field is enormous. Only 5% of the market has been supplied. Practically every factory, home, store, garage, school, church, hotel, theatre and public building is in need of fire prevention equipment. That's why Fyr-Fyter men find it easy to earn $100 to $300 a week. That's why any number of men report earnings of

$50 IN ONE DAY

You, too, can make this your lifetime opportunity. T. S. *Gill, who made over $600 in* one month and who has made as high as $122.50 in a day, says: "I am firmly convinced that any man joining the Fyr-Fyter force and working 8 hours a day will soon show a profit of $5,000 a year."

SENT FREE We give you an opportunity to join one of the highest-paid sales organizations in America. See how easy it is to start in almost any way that is convenient to you. Send for this free book, "Building a Permanent Income." See how W. E. Saal, Ohio, made $100 in six hours. How Hickey, Ont., made $148 in one day. How Payne, Iowa, made $159 his first 3 days. We do not ask you to do a day's work that will not pay you well. We give you a 90-page manual that covers every point. It tells you exactly what to say and what to do. (*Continued from page 59*)

just a guess that Beale couldn't use unless he could frighten it out of me.

"When I went to Beale's office, and he did try to frighten me and then tried to get me to tell him about it, I knew he hadn't anything he'd even try to use against you; and that I needn't give Cynthia away.

"But Tommy really thought I had married Fred. So I asked him to come to the wedding—so that he could see for himself—and explained how he'd made his mistake. There! I guess that's the whole story."

She'd told the last part of it in breathless haste, without any effort to give it plausibility, frantic to get to the end of it, to get the beastly taste of it out of her mouth. She was amazed that it had not broken down under her in the telling, that Phil had not interrupted to ask her why she was lying to him.

She had seen his eyebrows drawn down once or twice in perplexity, notably when she explained why she had let Tommy get into the taxi with her. It was, of course, fantastic to think that Celia would ever have done that. But it was plain that he had not really doubted her.

"What a hellish time you've had over it!" he said, when she had finished. "And what a—what a good sport you've been! I'm glad it's over." He drew in and let out a long breath. "It's too bad to have made you go through the whole thing again to-night. I'm glad you did it, though. I'm glad I know."

HER mouth had got a little dry, and she took a drink of water. Then she leaned back in her chair and allowed herself a steadying look at him. "You *don't* know," she said.

He looked back at her intently, and went a little pale, she thought; but he didn't say anything.

"What I've been telling you," she went on, "is—is the official version. It will do, all right, for that, because it's mostly true. Except that it's all a lie. You see—I'm really Cynthia, Phil. That is, I was—until Celia and I changed places to-day."

He smiled in good-natured perplexity. "What sort of riddle is that?" he asked. "I don't believe I get it."

She smiled back at him. "It isn't a riddle at all," she said. "It's perfectly wild; but it's true. It was Celia who married Fred, three years ago when she was in college, and thought it didn't count as a marriage, and married you. And I've never married anybody. . . . So we changed places. She's Cynthia now. Henry Pyncheon hasn't a doubt she is. She married Fred Carpenter this afternoon. Of course she was really married to him, already. And I stayed here and cooked your dinner. I'm Celia Rowland—if I'm anybody!"

She felt a flaming blush suffuse her face as she said that, but he, staring at her, saw nothing. She stretched out a hand for his coffee cup. "Better let me fill it again," she said, in the most casual tone she could manage. "And then light your

HANDIEST package ever invented for paste or mucilage. No cap to unscrew or lose. No brush. No water to supply. No drying up—seals itself when not in use. Clean to handle—no spreading with finger—never leaks. Operates with one hand. Handier than jar, screw-cap tube, ordinary spreader tube or water-well of stiff paste, liquid paste or mucilage.

Patented* NEW *Spreader Makes Pasting Easy

JUST squeeze the rubber tip between thumb and forefinger to open the patented slit in the rubber tip. Then, holding the tube vertically, as you would a paint brush, place the tip on the paper to be pasted, and spread, bearing down a little as you spread. The flexible rubber tip is an ideal spreader—works better than a brush. To make paste flow out faster, squeeze tube slightly as you spread. When you stop spreading, the slit closes. The tip will work perfectly as long as there is any paste left in the tube, even though you are months using it up.

Trial Dozen $1.00

JUST as you use LePage's Glue for a strong joint, use LePage's Spreader Paste for quick, convenient pasting—two different products for different needs. Give your office an opportunity to try the convenience of this new package. Send coupon and $1.00 for trial dozen regular-size tubes. Russia Cement Co., Dept. 05, Gloucester, Mass.

pipe. We won't bother about the dishes for a while."

The commonplace domestic touch relieved him for a moment. He gave her his cup and took it back again; got out and loaded his pipe. "I thought for a minute I was losing my mind," he said.

"I don't wonder," she told him, comfortably. "You see, the thing you have to begin with is that she and I look exactly alike. Nobody would ever admit it; not even our own families. But it's true. We used to change places and live at each other's house when we were children, without being found out. It seems so... unnatural that people think they can see differences in us. Henry Pyncheon told me, on the station platform this morning, that, though we looked a lot alike, he could see that I wasn't Cynthia."

"You *weren't* Cynthia!" he cried.

"I was, until this morning. I'd been pretending to be Celia ever since she went to Indianapolis to see Fred, a week ago. But I wasn't—permanently—until we changed places, to-day."

"But you *don't* look alike!" he protested. "You and the girl who was married here to-day."

"She'd been a week in the hospital and her face was bandaged. But she's the girl you spoke to for the first time up on top of the clock tower in Venice. She's the girl who was living here with you when you went to Springfield, last week. She wasn't your wife, really, because she was already married to Fred."

HE SAT back in his chair and tried to light his pipe, but his hands were shaking so that he gave it up. His control of his voice was not much better, but he managed to ask, "Then—then who are you?"

Her own lips were trembling, but she answered steadily enough: "The first time you ever saw me, I was quarreling with the dealer in a little antique shop in Venice. But I gave this dress to Celia and sailed the next day for Alexandria with the Pyncheons. And I never saw you again until you opened the door of this flat for me the night you came home from Springfield."

"Celia," he began, and then stopped with a sort of wince.

"That's all right," she reassured him. "I *am* Celia now. What is it?"

"I want you to tell me—why you did it."

"Why I came here and pretended to be Celia?"

"No. Why you changed with her—permanently. You've given her your name—and all your money. Why did you do it? Just to help her out?"

She shook her head. "The first time I saw you, outside that shop, you were so nice and friendly, just to *be* there, that I think I must have fallen a little in love with you then. But I didn't know it. I didn't know I wanted to be Celia till that morning when you brought me my breakfast and found me sitting up in bed—and kissed me. And I hadn't really remembered then who you were. I didn't until I found this dress in her closet."

He was sitting there like a man under a spell. She must break it somehow. She'd begin to cry, or laugh, in another minute.

"I don't believe the building would go up in smoke now—like an Arabian Night,"

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

she said, a little wildly. "If *you* want me to be Celia, I wish you'd come around here and kiss me!"

SHE was rather breathless, the girl who was learning to call herself Celia, as she rang the doorbell of Miss Rowland's house in North State Street, but this was not from climbing up the flight of steep steps to the high, old-fashioned stoop. It was an echo of those wild days, now more than a month past, when it had been a commonplace to stand before a supposedly familiar door, in total ignorance of what lay on the other side of it. She was better coached now than she had ever been then, yet she was worse frightened.

The firm, straight-backed, middle-aged woman in cap and apron who opened the door was exactly as Phil had described her; but "Celia's" voice all but died in her throat as she said, "How do you do, Hannah? I haven't seen you for a long time."

She thought the greeting surprised the old servant a little, but she took it all right. She actually was Hannah. That was the main thing.

"I believe Miss Rowland is expecting you," she said. "Would you go right into the drawing-room while I tell her you're here?"

Phil had prepared her for the room too, with its old-fashioned figured carpet, its carved marble mantelpiece, its Victorian furniture, and its fringed lambrequins. To the original Celia it had been an object of whole-hearted derision. To the new one its homeliness made an instantaneous appeal. She would have to hide this feeling in order to be a plausible Celia, just as she would have to hide some other more personal emotions.

She had not in any detail thought out the line to take with Aunt Ellen. Celia had not liked her, and had probably never pretended to, so she supposed it would not do to make the transition too violent.

HER heart began beating pretty hard when she heard the old lady's firm tread coming down the stairs; and when she saw Phil's aunt standing before her, something in her that had no regard for appearances or for consequences took charge. She went up to her new aunt and kissed her.

The unexpected warmth of the greeting—it seemed more like a purely external phenomenon than the deliberate act of either—disconcerted them both. Celia felt herself go red, and she marked, she felt pretty sure, an access of color in Miss Rowland's lean cheeks. If Hannah had not brought the tea in just then it might have been a little embarrassing. But the diversion served to put them on a more conventional footing.

Celia described their trip. They had set out the day after Cynthia's wedding in Phil's roadster, without any plan at all—just for a holiday. They had gone north at random up into Wisconsin. In Milwaukee, Phil had bought a camp trailer, one of those things that turns into a tent at night, and they had not slept under a roof more than half-a-dozen times during the whole month. The days had been lovely beyond words. She had never seen anything like the foliage in the northern part of the state.

Miss Rowland did not say much. She even listened musingly. But there was a

1000 Hotel Positions Open!

Hotels, Restaurants, Clubs, Apartments, Everywhere, Need Trained Men and Women. Over 70,000 High-Class Positions Paying $2,500 to $10,000 a Year Are Open Each Year in the Hotels of the United States. I Put My Students in Touch with Positions

All over the United States, they are eagerly sought by the biggest and best hotels in the country—my methods are endorsed by leading hotel men everywhere. Hotels start you at salaries up to $3,500 a year with your living usually included. If you want a steady, permanent position, with quick advancement, fine living, and big pay, which also usually includes free meals and apartment—you can find it in hotel work.

No Previous Experience Needed

You need no previous experience when you take the Lewis Course. We train you by mail in your spare time at home with the Lewis Simplified Study Plan, and put you in touch with big opportunities. All of your training under the personal direction of Clifford Lewis, former U. S. Govt. Hotel and Restaurant Expert, now Managing Consultant for over 225 hotels of 50 to more than 600 rooms each, throughout the United States, totaling over 26,000 rooms.

PROOF!

Our files are crammed with letters like these, which prove that the hotel industry is the field of big opportunity today.

Mr. J. L. MacDermott, Craig Healing Springs: "I have been appointed General Manager of this hotel property."

Mr. G. H. Seyffart: "Am with Evanshire Hotel as Catering-Manager. Thanks to your training we are now on a paying basis."

Miss Virginia M. Horan: "I have secured the position of Housekeeper at Log Inn. I will endeavor to be a credit to your training."

Miss Herma McKibben, Hamilton Hotel: "On the 22nd of December I was made manager of this hotel. I could not have considered it if it had not been for the course back of me and the fact I know I could call on you for advice."

FREE BOOK Gives Full Details

There are opportunities for you in this big paying hotel industry. Many students have obtained hotel positions paying as high as $2,500 a year, even before they had finished the course. My FREE BOOK "*Your Big Opportunity*" shows you how you can do as well.

The coupon above will bring you by return mail this vitally interesting, illustrated book, which shows how you can become a high-salaried hotel executive; also tells how our students are winning success with Lewis Training, and explains how you obtain Free Registration in our National Employment Bureau, and our Money-Back Agreement.

No More Blades to Buy!

Amazing Invention Revolutionizes Shaving

THINK of it! 365 keen, cool shaves a year from the same blade. That's what KRISS-KROSS is doing for American shavers everywhere!

This amazing invention marks such a radical advance in shaving comfort and economy that it deserves to be called much more than a stropper. Rather it is a blade rejuvenator. Makes hundreds of keen, quick shaves blossom where only one grew before.

KRISS-KROSS strops your blade (any make) on the diagonal just like a master barber. Pressure decreases automatically. Nickel jig flies up to notify you when your blade is ready, *with the keenest cutting edge that steel can take!*

And now for my surprising offer. To introduce KRISS-KROSS to those who have not yet seen it, I am giving with it Free a new kind of razor. Possesses remarkable features. Instantly adjustable to any shaving position. A flip of the finger makes it (1) T-shape; (2) straight (old-style); (3) or diagonal (new way). Gives a *sliding* instead of *pulling* stroke. Simply zips right through the toughest crop of whiskers and leaves your face satin-smooth and cool. Made of *rustless* metal. All one connected piece—nothing to assemble or screw up. Comes with 5 special-process blades and is entirely unlike anything you ever saw before!

Get Details of FREE Offer

This astonishing offer is limited. Send for information on amazing KRISS-KROSS inventions today. They are never sold in stores—and are even more remarkable than I can tell you in this short space. Clip the coupon today. No obligation.

RHODES MFG. CO.

It's time you read Riley again!

REMEMBER the mischievous Elmer Brown, "awf'lest boy in this here town" and "that old sweetheart of mine," and that rare old philosopher with his inspired thoughts on Whatever the Weather May Be; and old man Fessler who took his bees to Florida to see if he could get them to work in winter; and the unforgetable Little Orphant Annie whose "Gobble-uns'll get you ef you don't watch out?" Isn't it time you read Riley again, and introduced him to the young folks you know?

MORE THAN 1,000 MASTERPIECES AT A FEW CENTS EACH

Everything Riley ever wrote—all his poems, all his stories, the masterpieces that have caused the schools of his native state to have a Riley Day once a year, will be found in these ten beautifully bound and illustrated volumes.

You can enjoy these good books while you are paying for them. P. F. Collier & Son Company, since 1875, have brought good books within reach of all.

Without obligating yourself in any way, send for the free book, "Poems and Stories Every Home Should Know." It tells you all about Riley and his works. Fill out the coupon to-day; the book will come by return mail.

James Whitcomb Riley

sort of warmth about her manner that made it easy to go on talking.

When the recital was finished her comment was, "It has agreed with you. You're looking extraordinarily well. What's more, you look happy; and you've made Phil happy. I know that."

"Oh, have you seen him?" the girl asked.

Miss Rowland smiled. "No, nor heard from him," she said. "That's how I know."

The girl flushed. "He—he meant to write, I know. But camping out—"

"I haven't been jealous," Miss Rowland said. "I've been thoroughly happy, for the first time in a long while, about him."

Again the girl's heart began beating hard. She hesitated, then yielded to the overpowering impulse that had taken possession of her.

"We ought to have been happy," she said. "You see, it was—it was our honeymoon; literally, I mean. The first thing we did—almost the first thing—that first morning, was to get married. I felt, and so did Phil, that we never had been married before—really. I'm telling you that because—because I want you to believe that we've made a fresh start. Do you remember what you told me the day—the day before Cynthia's accident, about Phil? How he was fastidious of the truth. That's true about him. It's so true it frightens me a little sometimes. But at least he knows all about me now. I wanted to tell you that. That's why I wouldn't let him come with me to-day. I can't explain things to you. I'm not going to try. But I want to ask you to let me make a fresh start."

Miss Rowland poured herself a second cup of tea, strong enough to curl her hair. Her smile was very kind, and at the same time profoundly thoughtful.

"I shall find it easier, my dear," she said quietly, "to think of you as another person altogether. I've never expected miracles; but now that I find myself face to face with one I'm thankful I've got sense enough not to pry into it in an attempt to see what made it happen."

Then, without a pause, or even a look, she began talking of her own plans for the winter. She had always had a desire to go to Bermuda and it was one she had never gratified. This seemed like a good time to put the plan into effect. Celia had never been there, had she? No, she hadn't, though she'd heard it was lovely. In that comfortable vein they chatted for half an hour, and even when the girl took her leave there was nothing but a pleasant hand-shake and an invitation, casually given and taken, for dinner at the flat tomorrow night.

PHIL found his wife pretty thoughtful when he got home an hour later; but they celebrated their return to civilization by going to a show, and it was not till after they had returned home that she told him the story of her visit with Aunt Ellen.

"Do you suppose she meant it literally," the girl asked, "about my being another person altogether? Do you suppose she's guessed?"

He laughed. "That's something she'll never give away to either of us," he said, "even if we try to find out. And for myself, it's the last thing I'd ever think of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

trying. I agree with her. It is wiser not to pry into a miracle."

"By the way," she went on, "I reminded Aunt Ellen to-day of what she'd said about you, that you were fastidious of the truth."

"That was only a kindly way of saying I was a prig," he told her. "You've saved me from a horrible fate by showing me what a whole-hearted liar I can be in a good cause!"

"Isn't there *anything* about it," she asked, "to make you squirm a little?"

"You mean the fraud we put over on Henry Pyncheon? It did, till to-day. And then I thought of something. Suppose you hadn't come into the thing at all. Suppose you'd torn up the other Celia's letter and said you couldn't help her out. Well, I was ready to give up. I knew our case was hopeless. I'd have set her free the minute she asked me to. And I'd have settled an independent income on her. My memory of the girl in the antique shop would have made me want to do that. Well then, if I were to write to Henry Pyncheon and tell him that, as a matter of conscience I'd like to exchange checks with him once a year to the amount of Cynthia's income, there wouldn't be any fraud at all. You'd have your grandfather's money, and your sister would have mine. I'll do it, if you want me to."

She giggled at that. "Uncle Henry would spend the rest of his life trying to figure out how your conscience was concerned!"

"Well, it shows how silly a 'taste exact for faultless fact' can be, when it amounts to a disease."

She nestled contentedly in his arms.

"The truth isn't silly, though," she said. "Not the real truth. And it's none the worse because we have to keep it to ourselves."

"It's all the better!" he told her.

(*The End*)

The Courage of the Wild

(*Continued from page 53*)

her upper lip, and one front leg she raised, poising it ready for a swift blow. She looked so strange, so really dangerous, that the wild hog backed away, turned, and went grumbling off through the woods.

"Then I went over to where the fawn was lying. It was so young that it could hardly stand when it got up."

Here, then, was a case of one animal's meeting another under circumstances that promised a bloody encounter. Yet a very real and spirited display of courage averted a tragedy.

I do not believe that the normal combats during the season of mating indicate any especial courage. They fight then because of natural rivalry and because of a certain impelling lustihood. Having watched a good many of these combats, I have come to believe that these wild creatures get as much enjoyment and thrill out of such encounters as knights of the olden days received from unhorsing their opponents in the lists. Wild gobblers fight readily and ferociously; bucks

NEW IMPROVED MODEL **Campbell's Automatic**

Electric Fireless Cooker

Range

Let Me Quote You My Factory Price

Wm. Campbell The Original Fireless Cooker Man

Get my special introductory price on this wonder of wonders new electric fireless cooker range. Better yet, let me send you this range upon 30 days approval test so that you can cook and bake and find out just how wonderful it really is. Read my offer below.

Costs Little to Use

The same wires that light your home will do all your cooking. You will be surprised at how little it costs. Electricity in the oven turns on and off automatically.

Better Baking—Better Cooked Foods

Flaky pie crusts—cakes that just melt in your mouth—Roasts done to a juicy tenderness. Large Pyrex window in the oven door. Oven door clamps tightly—no heat wasted. Uses electricity only about ⅓ of the time.

The automatic control insuring steady, even heat uniformly distributed to all sides, top and bottom of the oven takes all the uncertainty out of baking. Once you use this range you'll wonder how you ever got along without it. Easy payments.

Current is used only about one-third of the time. Set the oven control for the heat desired and the automatic regulator keeps the heat at the same temperature. Never too hot—never too cool—always just right for best baking and roasting results. Oven door, large cooking top and splasher back made entirely of aluminum. Range beautifully finished with French Gray enamel. Large electric fireless cooker in the bottom slides in and out like the drawer in a desk. Takes up no extra room in your kitchen — also *automatically* controlled. Put in your cooking — turn on the electricity, when the right cooking heat is reached the electricity automatically shuts off and the cooking continues. Money saving—time saving—cooks foods better.

Write Today and Get My Special Offer

My new low price will amaze you. No dealers. I sell direct from factory. Cash or easy payments. Big illustrated catalog and health book sent free. Send me your name today for special introductory offer.

What Women Like!

WHAT women like in clothes is beauty—a certain *kind* of beauty. Not the kind which causes folks to say "What gorgeous clothes she wears." The type of beauty that the *clever* dresser likes in her apparel is beauty of such subtle quality that others all will think "How perfectly adorable *she* is."

That is the secret of Iron Clad silk. Iron Clad silk hose is made with such deft skill that every graceful feminine line—each soft, appealing curve of calf and ankle—is brought out with an increased loveliness. *Your* beauty is emphasized. *Your* charm is enhanced.

Ask for Iron Clad No. 806—an exquisite sheer silk stocking which will wear—and wear—and wear. 23 inches of silk instead of the usual 20. A powerfully re-inforced 4-ply heel and toe, and an especially elastic mercerized top. If your dealer can't supply you, mail us your remittance, and we'll send your Iron Clads *direct*. In ordering state size (8 to 10½, $1.00 a pair). And state shade desired (black, white, atmosphere, blonde, cedar, French nude, beige, leather grey, gun metal, maize, mauve taupe, biscuit, dawn, silver grey, toast, woodland rose, dove grey, parchment, grain, champagne). We'll pay the postage!

Raised My Pay 700%

This Book Showed Me How

How would you feel if your salary suddenly jumped seven times greater than before? That is exactly what happened to O. A. Jones of Missouri after reading this amazing book—now sent free to everybody. An unusual case? No. E. L. Palmer went from $3 a day to $4000 a year. F. J. Walsh went from $20 a week to $7285 last year. C. V. Champion became President of his company at a salary exceeding $10,000 a year! And all of them started by reading this free book!

The Secret of Big Earnings

Many of the successful men in the world today are successful salesmen. And every man is a salesman. If you want to make big earnings, you must learn to sell yourself. You must absorb the methods of saying and doing things that make men act as you want them to act. There is no more false statement made than the old saw about "salesmen are born—not made." Salesmen are made—not born! This free book shows how!

Big Demand for Master Salesmen

Master Salesmen are at a premium in American business today. They are never out of work. They can command their own salaries and their own time. They travel and see the country—the world. They dress well, live in the best homes, drive their own cars. Aren't these rewards worth going after?

How We Help You Succeed

For nearly twenty years, N. S. T. A. training has been developing Master Salesmen. The National Demonstration Method—an exclusive feature—gives you the equivalent of actual experience while studying at home. Our success in training inexperienced men into powerful salesmen is so world-famed that thousands of leading business houses have called on us to supply them with salesmen. This service is free—and we have placed thousands of men in good-paying positions.

Send for This Free Book

Don't say "I can't sell" until you find out whether you can or not. This free book, "Modern Salesmanship," proves that master salesmen can be made, regardless of personality, education or previous selling experience. Send for this free book right now.

resort to physical combat to test their supremacy; indeed, most males are, at times, fighters.

These encounters, however, are often little more than games; athletic contests, relished by the players themselves. Seldom do they end fatally, save by accident, as when stags get their horns locked. We have to look to other sources to find true courage. In essential courage, in true moral intrepidity, as far as my observation extends, the female is far superior to the male.

I HAVE long wondered whether the maternal instinct, which is essentially sacrificial, does not carry with it a quality of spiritual fiber that is peculiar to feminine nature. I realize that I am on the borders of a shadowy land when I began to talk of things spiritual; yet all of us are aware that motherhood has in it an element of divinity. The mother not only lays hold on immortality through the bearing of her child, but without the peculiarly superb quality of her devotion no species could survive.

In wild life, at least, males spend most of their time idling, sleeping, bullying, drowsing; their mates seem modest, industrious, invariably occupied with the preservation of the young. I recall how much impressed I was one spring day with the behavior of a wild turkey hen whose nest I had located in a tangle of greenery not far from the plantation house.

From the time when she begins to look about for a suitable nesting place until her young are fully reared, the female wild turkey lives apart from the male; she assumes the entire undertaking of hatching and rearing the young. It may sound simple; yet, by day and night, as she sits on her eggs, she has to overcome the fear of fox and weasel, prowling wildcat and roaming razorback.

Turkeys naturally roost in trees, and usually rather high up. This wild mother has to master the dread of sleeping on the ground, though the fall of night brings the deadliest dangers near. For nearly a month she resolutely stays on her nest, leaving for just a few moments a day. Then, when the young arrive, they have to be shielded, fought for, guided through wild woods, where a hundred dangers lurk. I think it takes courage to do all this.

On the day to which I referred, I went into the tangle of wild grapes and sweet myrtle to take a look at the turkey. There she sat, beside the old pine log, her beady black eyes fixed on mine. She had heard me and seen me first. If there is anything a turkey fears, it is a man, I'm sorry to report. I decided to go as close as I could, to test the wild mother's courage. For what else could it be—this desperate loyalty in the face of sudden death? To the end of the log I came; closer; now to the very last myrtle bush, under the canopy of which the beautiful bird sat. I could have reached down and touched her. Here was a pitch of steadfastness not often to be found save in some manner associated with motherhood. Here was faithfulness unto death. Here was that greater love that is willing to lay down its life for another.

This observation seemed to me to manifest true courage, very different, I

Every dollar that has become due on first mortgage building bonds sold by us has been paid to every investor

What Rich Men Know

The man who has worked hard for his accumulations, the man who is born into the responsibility of wealth, both know what is the first requirement of safe investment.

Indeed, they will tell you:

Be sure there's a Big Red "One" on the Label

Don't make the mistake of assuming that all packaged oils are alike. *They're not!*

3-in-One is a scientific compound of various oils and has very different properties than straight, light mineral oils.

Does your sewing machine, vacuum cleaner or other household mechanisms need *oiling?* Use 3-in-One.

Does your fine furniture, woodwork, floor or linoleum need *polishing?* Use 3-in-One.

Does your gas range, your nickeled plumbing need a *rust preventive?* Use 3-in-One.

Don't use a substitute, even if the price is lower—cheap oil is dear at any price. Ask for 3-in-One by name. The Big Red "One" on the label is your protection against imitations.

At all good stores in three sizes of bottles and 3-oz. Handy Oil Cans. The ½-pint bottle is most economical; the Handy Can is most convenient.

FREE: Generous sample and special folder, "79 Uses for 3-in-One In The Home!" Write for both on a postal.

think, from that savagery that we associate with predatory things. In general, the beasts of prey attack only their physically inferior fellow-creatures. If there be courage at all in these encounters, it is generally shown by the attacked rather than by the attacker; and sometimes, as the saying goes, "the porter wakes up the wrong passenger."

On a wild island near home I was once a witness of a case of this kind—when the would-be slayer was compelled to shift its mental attitude completely. I was ranging the desolate tract looking for some strayed cattle that, attracted by the fast-springing green on the wet island, had swum the creek. I was on an old bank, with a wide canal on either side, two dim waterways in which dwelt many curious and obscure creatures, among them fish of several kinds, serpents, alligators, and frogs. From the dense woods on the island all kinds of wild things came down to this water to drink. The day was warm and springlike. Certain moccasins I saw basking in the sun, huge reptiles of repellent aspect.

Down a log that ran from a clump of trees to the brink of one of the canals I saw a gray squirrel coming; gently, with fluffy tail arched, almost dancing its way down to the water. On the end of the log, in a depression made by the rotting away of a sappy spot, a moccasin lay. It was the largest I had seen. Toward it the squirrel advanced, unaware. Neither wild thing saw me.

The squirrel was within the snake's reach in a moment. Savagely the great reptile struck, but the lithe squirrel leaped like lightning. So swift was his leap that he did not heed the matter of direction. In short, to avoid being struck, the gray nymph of the woods jumped over the huge moccasin, landing on the tip of the log beyond the place where the grim waylayer sprawled.

Then the squirrel was in an evil case. Beyond him lay deep water; on either side of the log the mud was soft and miry. What would he do? The snake had turned now toward him, and I did not see much chance for the squirrel's escape. But that brave and artful creature seemed self-possessed. He gave a few chatters of defiance, then darted down, ran along the *side* of the log, over which hung part of the snake's body. In passing the enemy, the squirrel gave it a sharp bite, and in an instant was scampering away down the top of the log, and so into the haven of the woods. The snake, lashing itself furiously because of the pain, dropped to the mud, and began to crawl toward the water. I saw the wound that had been inflicted. The squirrel's behavior under the circumstances appeared to me nervy, interesting, and wise; and his adroit turning on his hideous enemy pleased me, because it showed me that the professional killer sometimes tackles a veritable tartar.

ANIMALS will sometimes do things which may appear incredibly heroic; yet upon close examination it will be seen that they were acting merely from hereditary deep impulses, more or less automatic. But there is no difficulty in bringing ample proof of the dauntlessness of the children of the wild. Perhaps the experience that Ned Fort had with a black bear will illustrate our point.

Wanted Women and Girls to Decorate Giftwares

Member National Home Study Council

No Special Ability Needed

This is the wonderfully interesting occupation that it is now possible for you to enter through the instruction of Fireside Industries. The work pays exceptionally well. There is no canvassing, no monotonous drudgery. Many say they never dreamed that such a wonderful way of earning money at home existed. New system of instruction devised by M. Gabriel Andre Petit makes the work so easy that almost any one can do it.

Fascinating Home Work

Can you imagine anything so fascinating as decorating Giftwares at home? Could any other kind of work be so pleasant as applying beautiful designs in colors to such artistic objects as candlesticks, wooden toys, parchment lamp shades, wall plaques, picture frames, sewing tables, gate-leg tables? Then there are greeting cards to be colored, and cushion tops, and other textile articles to be decorated in Batik, and fascinating objects of copper and brass to be etched in beautiful designs.

Many women do this work solely for pleasure, but it is also a splendid way to make money at home, for there is a tremendous demand for these giftwares.

M. Gabriel Andre Petit
Art Director

Satisfaction Guaranteed

Fireside Industries guarantees entire satisfaction to each of its members. If, after completing your instruction, you are not entirely pleased and satisfied, your money will be refunded in full. You have only to follow the directions and it is amazing to see what beautiful things you can make. Think of earning $2.00 in just one hour, for example, by decorating a pair of candlesticks! Do you wonder that members of Fireside Industries are so enthusiastic about the work?

BEAUTIFUL BOOK SENT FREE

The beautiful Book of Fireside Industries, illustrated in color, which explains all about this new way to earn money at home, will be sent to you on request. Read how women earn money and beautify their homes and their lives. Just like a dream come true. Wonderful outfit furnished without extra charge. Simply mail coupon, or write, enclosing 2c stamp to help pay postage.

Learning to Write Now Amazingly Easy Through New Method

THINK of the joy of opening a magazine or newspaper and seeing your story or article *in print!* Could anything be more gratifying, more thrilling than that?

A Remarkable New Method of Training

Whether you have ever written a line for publication or not, if you believe in yourself—if you really *want* to write—there is no longer any reason why you should not realize your ambitions. For under our new method of training anyone can learn to write for newspapers and magazines—and start to carve out a real career.

This new method of instruction—known as the "Copy Desk" method—was originated by a group of practical New York newspaper men who have learned by personal experience the things they teach you how to do.

Free Test!

Step by step, under their expert guidance, you are given a thorough, all-round training in every kind of profitable writing for newspapers and magazines. You are taught not only *how* to write, but *what* to write—the kind of material that editors are glad to pay real money for. There is no other course like it, either in character or extent—no other course that will prepare you for success so quickly and easily—*right in your own home.*

Your Writing Ability Tested—FREE

Send at once for our FREE Writing Ability Test which will enable us to judge your writing ability quickly and easily. No obligation. Simply mail the coupon NOW!

NEWSPAPER INSTITUTE OF AMERICA,
Dept. 11, 25 West 45th St., New York City.

Please send me your free writing ability test and free information on opportunities for profit in writing.

Dept. 17-05, 1300 W. Harrison St., Chicago, Ill.

Fort is a woodsman of the best Daniel Boone variety; he was born, and has lived all his life, in a wild, romantic swamp that has been misnamed Hell Hole. In truth, it is one of the loveliest spots in America; for it has the glamour of the South, the freshness of primeval forests, the luring charm of remoteness and virginity. It is a region where there is much more wild life than human life.

There Ned Fort roams at will the woods that are to him home; and there he has had many a strange experience with wild animals. He told me this one night when I was with a party of hunters bivouacked on the borders of Hell Hole. That it is true down to the minutest detail I have not the slightest doubt. I know Ned; and his speech is the language of truth.

I STARTED this bear," he told us, "when we were deer-hunting, and I shot at it. It seemed to be wounded, and I followed it on my horse. I had two dogs with me, and they kept the trail. At last the vines and bushes got so thick that I had to leave my horse and follow on foot.

"The bear had run into the last and thickest place in the whole swamp. He didn't want to go on, for beyond this place the woods began to open again. He decided that he wanted to stay right here. The dogs went in ahead of me; but they concluded they didn't want to stay at all. They were young dogs, and I didn't blame them. They looked to me as if they had seen something they would remember for a long time.

"I decided to go in after the bear. The vines grew over the tops of the little trees, forming a heavy canopy. I had to go under; then I found that I couldn't get through. I had to do so much climbing and fighting with the brush that I decided to leave my gun and reconnoiter without it. Fifty yards from where I had left it, I came to a little opening under the roofing vines; and on the far side of this, reared up against a big tupelo, was the bear, facing me—just waiting for me, daring me to come. I figured that this place was a sort of a den; and when the bear got to it, his courage rose.

"I have seen a good many wild creatures at bay, but this one did not seem at bay. He seemed ready to fight, not because he could go no farther, not because he was wounded, but because he felt that now he had managed to make the odds less heavy against him. As far as I could tell, he was not wounded. I thought he would break away and run as soon as he saw me. Instead, he dropped to four feet, growled, and took a step toward me. I left that place in a hurry, and without being careful to follow the route I had come. I lost my gun. I lost my dogs. Behind me in the thicket I could hear the bear growling to himself.

"My dogs were at home when I got there, and they were hiding far back under the porch too; and it was the next day before I got my gun. Sure I think a bear has courage, and of a fine sort. Let him pick his place to fight, and he will show you."

Long ago, hunting on the property now owned by the famous Santee Club, my pack of hounds, eleven in number, started a wildcat—a savage old brigand. He was jumped far from his wilderness haunts,

having, I suppose, prowled farther than usual the night before. An uncle of mine was with me, and together we followed the hounds and the fleeing marauder. He came to bay in front of the arm-chair roots of a massive cypress on the swamp edge. The tree sheltered his back, and the roots covered his sides.

I think I never saw a more savage creature; nor had those hounds ever met so warm a reception. Most of them that rushed in gladly and tumultuously got the jarring of their lives. The wildcat worked like a whiplash; and by the time we arrived on the scene, most of the dogs had lost interest. Some were sitting down soberly, some were licking wounds, some were barking valiantly, but at a discreet distance.

My uncle walked in, to encourage the dogs; but the cat, apparently no whit dismayed by the approach of more formidable enemies, took a lithe run along the ground that was like a spring and yet was not, struck out savagely with the right fore-paw, caught my uncle's boot at the top, and ripped it down to the instep. Then the cat returned to his coign of vantage in sullen triumph, the dogs opening a lane for him to pass. I think it takes courage, even though it be of a vindictive order, to face enemies of the deadliest sort with such cool intrepidity. I do not like wildcats; they are destructive and treacherous. But with my own eyes I have seen them display a courage that one has to grant is admirable.

The fortitude that a wild creature may show in danger can seldom be told by that creature's apparent temperament and manner of life. True courage, whether in man or beast, is a matter of spirit, and as such is not necessarily related to brawn. The otter, for example, one of the shyest, mildest, and most playful of animals, is, for its size, a most formidable fighter. Henry Mills, formerly a gamekeeper at the Santee Club, told me that one of the club's finest hounds had been drowned by an otter.

Nor is this difficult to credit, for anyone who has observed an otter closely will recall this graceful creature's litheness, its sinuous strength, its agility, and the clean perfection of its muscular development. It is said, and I believe it, that an otter is a match for any other wild thing its size. Called upon to fight, it will show the most pertinacious courage; yet most of its time it spends in catching fish and in playing. Indeed, it is one of the few animals in which the actual play-instinct is highly developed.

UNLESS my observations are inaccurate, or unless from them I am drawing faulty conclusions, I believe that the raccoon is possessed of a superior order of courage. You can look at a raccoon and see that he is not born a fighter. He is a thinker, a dreamer, a philosopher. Existence bores him sometimes. Nor is he physically equipped ably to defend himself. Yet he can show fine courage—not a blind fighting instinct, but a somewhat demure intellectual defense.

Late one afternoon I was out walking with two bird dogs on a swamp edge near home when a raccoon ran across our path. It was early for him to be out, but there he was, as big as life. The dogs gave excited chase. In his characteristic fash-

College Man Wins Big Advancement
—*by the Accountancy Route*

Ralph J. Daly, college-bred engineer, had made an excellent record at the University of Michigan—so satisfactory, in fact, that for three years he taught engineering at the University of Pennsylvania.

Seeking a greater opportunity, he gave up teaching for business—joined the Detroit Trust Company—but there he found himself doing little more than marking time.

Mr. Daly saw that he needed a grasp of business principles and methods which his college training had not supplied. He enrolled with LaSalle for home-study training in Higher Accountancy.

Today he is Secretary-Treasurer of the Detroit Fidelity and Surety Company—a position which he credits largely to the practical training which he got from LaSalle. *"I feel that it was the one great factor," he writes, "which enabled me to find myself in the business world."*

Send for Salary-Doubling Plan

Do you appreciate what accountancy *means* in the business world? Do you realize that it constitutes the indispensable foundation for success in any business undertaking? Would you seriously fit yourself for positions paying $3,000, $5,000, $10,000 a year, and even better?

LaSalle has prepared a 64-page book entitled "Accountancy, the Profession that Pays." The information it contains is of very real and definite value. It will pay you well to read it. And — LaSalle will send it to you *free.*

Balance the two minutes that it takes to fill out the coupon against the rewards of a successful career—then clip and mail the coupon — NOW.

ion, the 'coon did not incontinently flee, but appeared to be following tactics that he was thinking out as he was escaping.

There was a narrow stream ahead of us, across which an old log had been thrown. Up the end of this the 'coon scrambled, and I thought, of course, that he would cross it and disappear in the swamp beyond. But he had a plan of his own. Half way down the log he stopped, turned, and waited. As soon as the two dogs, noisy and excited, were on the log, slithering to keep their footing, the 'coon, to my surprise, made a short rush at them, actually swarming into the first dog. The dog yelped with surprise, lost his footing, and fell into the water. The other dog, seeing the fate of his comrade, decided that they had tackled the wrong animal. He took one look at the 'coon, that most ludicrously was making himself appear formidable, felt one foot slip, turned, and ran! Here was the old 'coon, master of the log; and below him were the disheveled and discomfited dogs, taking it all out in barking.

If the raccoon had showed nothing but arrant fear, he would have run on, and the dogs would have caught him. He kept cool—and that's a sign of courage. He attacked, and that's another sign. What he did not have of strength and ferocity, he put on; and that shows a certain readiness of nerve.

AS LONG as I have watched wild things, I have not discovered in them what we call "the yellow streak." Some are crafty, skulking, treacherous; but, from the smallest to the greatest, corner one, and you will see manifested that back-to-the-wall courage that all of us can appreciate, even though we may recognize it as futile. I do not find that wild things lie down and give up. The Old Guard is by no means the only thing that dies but does not surrender. That proud description is shared by the hosts of the wastelands. It is quite true that many wild things will not fight until they have to fight; but what of that? The great point to be remembered is that they will not give up without a fight. Only the other day I picked up a tiny titmouse that had had its wing injured. It attacked my hand as valorously as Jack went after the Giant. This kind of courage is not belittled by calling it the valor of despair. It is real; it is genuine manifestation of spirit. It is not only the badgered lion and the wounded elephant that will charge. Even a butterfly will bite its tormentor. I like this trait of not giving up. Wild things have it.

ALTHOUGH he was the poorest specimen in a litter, Sunnybank Sandstorm, alias Sandy, was picked out by Albert Payson Terhune to be *his* dog. Sandy not only had pluck, poise, and brain, but he also had more individuality than all his brothers and sisters put together. All of which goes to show that you cannot always tell a dog by his looks. Next month, in "The Biography of a Puppy," Mr. Terhune relates the fascinating history of Sandy's first habit-forming years. No dog lover should miss this. It will give him many tips about dog training.

I've Sworn Off Saying "Yes"

(*Continued from page 33*)

regard a debtor as dishonest because he is not able to pay his debt at a given time. We do, however, show him little consideration if he dodges our collectors or ignores our letters. We assume that it is possible for any customer to become 'hard-up' at an inauspicious time, and we ask only that his explanation be direct."

So it is that the man harassed by the worry of debt may find a certain freedom in merely being direct.

I was in the smoking-room of a train about a year ago, traveling from Chicago to New York. A card game was suggested by one of the passengers. Two were willing, but the third, a homespun fellow of evident small-town origin, said bluntly, "I never play cards with strangers." His bluntness apparently irritated the group. One inquired, "Do you intimate you are suspicious of us?" He replied, "I intimate nothing. I merely stated that I do not play cards with strangers."

The two who played lost several hundred dollars, and discovered next morning they had been trimmed by a professional train sharper, who disappeared from the train when the game had finished.

Out in Cincinnati some years ago, I visited "the poorhouse." I had been sent as a reporter to learn, if possible, what agency had contributed most to bringing these unfortunates to such low estate.

I had a long talk with the superintendent, which in the light of my own experience made an indelible impression. He said:

"Most of the inmates of this institution are honest. If they were not, they would be in penal institutions. But there is not one here who is not evasive.

"Ask any one of them if he can do a certain kind of work and he will intimate he can, when he knows he cannot. Most of them have been turned from job after job merely because they accepted work they knew they could not do.

"Thus, they become convinced they are rank failures when, as a matter of fact, they have not found their proper niches. Wherever you find men drifting from job to job with no direct effort to find congenial employment you can count on the inevitable result—poverty."

This to me was a startling revelation of the manner in which indirectness undermines and destroys men's usefulness. No problem is solved by evasion, although it takes many of us many bitter years to learn this truth.

TONS of hot water had deluged the workings of a mine in Nevada, and eight miners were entrapped in the boiling flood. The story of their rescue is an epic in heroism. "One touch of danger makes all miners kin," says Chief Dorsey J. Parker of the United States Mine Safety Service. Next month, in "Heroes of the Dark," you will read many thrilling stories of rescues underground, where no call for help is ever ignored.

The Best Story I Ever Found in Real Life

(*Continued from page 49*)

because he thought James Hollingsworth did not have the brevity and snap that a horseman's name should possess. Undoubtedly, when his later letters had not been answered, he had gone back to the old town in search of his mother, and had found no trace. Undoubtedly, the son's search had been as ceaseless and prolonged as had been the mother's. Only the son had never thought to search in Chicago; and the mother, eternally asking for Jimmie Hollingsworth, had no idea that her son was known in Chicago only as Ed Splain.

When my mind came back to the Police Station, the story was all but ended.

"And you say you've been living out at the poorhouse?" asked the millionaire son.

"Yes. For the last three or four years. They've been awfully good to me."

"And you were really arrested yesterday on the charge of being drunk?"

"Yes. But I'm sure the policeman thought he was doing right."

"And locked up all night in a cell with women like—like those?" He nodded toward the rear of the room at the dozen glowering at us from behind their bars.

"Yes. But they were nice to me."

"And then you were tried with them in police court this morning?"

"Yes. But the judge was nice. Everyone's been awfully nice to me."

IF POSSIBLE, Ed Splain's face was now an even harder and grayer granite; his big hands were crushing each other in an even fiercer wrestlers' grip.

"It's been mighty kind of you, mister, to visit me like this and listen to me talk about my boy Jimmie," she went on apologetically. Then she added wistfully, in a half-whisper, her blue eyes that could not see very well without her specs smiling up into his face, "I do so wish I could see my Jimmie once more. But I guess it's too late now. No, I'll never see my Jimmie again."

At that the self-contained Ed Splain abruptly got up and stared out of a window, his back toward us. He stood there rigidly for several moments. When he turned he addressed me. His face still had its granite hardness, but otherwise he was composed.

"Captain Denny told me that Mrs. Hollingsworth is in your custody, and that you can release her whenever you may decide to do so. Is that correct?"

"It is."

"I'd like to drive her back to the Infirmary. My carriage is waiting down in the street. I'd like to talk further to her about her son who was a hostler—perhaps I may be able to help her. Can I secure your permission to drive her home?"

I gave the permission. The black bonnet was tied upon the white head and the gray shawl draped about the thin shoulders, then the three of us descended the long flight of narrow stairs that led to the street. At the curb was a splendid closed carriage, a coachman in uniform on the box soothing to quietness a splendidly matched pair of blacks. Ed Splain helped my little old woman into the coach. She held out her hand to me in parting.

"You've been awfully good to me, mister, and I want to thank you," she said. "If you'll mail me your name and address out to the Infirmary, I'd like to send you a piece of my fancywork."

Then Ed Splain stepped in and the carriage rolled away. I stood rooted to the spot, watching it disappear. I knew perfectly well where the carriage was going. I tried to imagine the scene when he broke the news to her—that after thirty-five years their search for each other was ended.

THEN I thrillingly remembered that I was a newspaper man. That I was stationed at the Harrison Street Station by Pete Dunne and Gilson Gardner to dig up human interest stories. Oh, but didn't I have a human interest story for them! The biggest and best heart story that anyone had turned up in Chicago in years! Sensational—colorful—sentimental, with true sentiment. All based upon the great fire; heart stories of the fire always went big in Chicago.

The story had everything. Mother-love stuff. Son-love stuff. Thirty-five years' search of two hearts separated by fire. Son on Lakeside Drive, old mother in poorhouse. Mother in cell. Reunion at Police Station, and what led up to it. From poorhouse to home of millions!

Yes, that story had everything. And it was the kind that I could write. And it was a scoop, a beat. That story was mine—all mine. Not another reporter in Chicago had a word about it. Dunne would give me a first-page spread on it, and perhaps he'd stick a few dollars more to my salary.

I was already exultantly headed for the "Journal" office, which was only a ten-minutes walk from the police station. I planned my lead, I picked out the high points for my story. And then, just before I entered the "Journal" building, my mind amazed me by darting away upon an aspect of the story I had hitherto not seen.

Ed Splain was not one iota to blame for what had happened. What a proud, self-contained man he was!—and what sensitiveness of nature that control of his concealed! And how happy he must be in his reunion with his mother! But what a sickening blow it would be to his pride, his sensitiveness, his happiness, if my story were to shout to the world that his old mother had been in the poorhouse—that his old mother had been arrested as a drunk—that his old mother had been locked up with Customhouse Place's vilest riff-raff. . . .

By this time I was in the city room, headed for Gardner's desk to report. Dunne, a hand full of galley proofs, was just turning away from Gardner.

"I hope that for once you've brought in a decent story, Scott," Dunne said as I came up.

"Not a thing," I said. "Just the usual bunch of cheap ladies from Customhouse Place."

"You'd find plenty of stories if you'd only dig!" declared Dunne, a grim light gleaming behind his thick lenses. "And you'd better dig, or you may get a chance to work for a handsomer man!" With that he made for his office.

"It seems to me, Scott, that you wouldn't find it such a bad policy to let us have at least an occasional story," said Gardner in his soft, dry voice. "Well—rewrite this for half a column."

I took the City Press's yellow flimax which he handed me and went to my desk. Instead of the great story that had been throbbing through me a few minutes before, I wrote a dull story of an alleged arson conspiracy among a group of small retail clothiers.

Some few days later a story beginning somewhat as follows appeared in all the Chicago papers:

"Edward Splain, the well-known horseman, gave a dinner last night at his Lakeside Drive home to a small group of intimate friends in honor of his mother. Mrs. Splain has been living in retirement for a number of years, and only recently has her son prevailed upon her to join him. . . ."

Perhaps in this affair I was guilty of cheating my bosses; nevertheless, I have never been sorry that I did not write the story. I would not now be making this little record of it were not the son and mother both dead, and no pride or other mortal feeling remains which can be hurt. Furthermore, the names I have used to designate mother and son are not the real names.

"Treasures!"

(*Continued from page 47*)

he called again at the top of his voice.

Peter did not answer. Ollie ran to the edge of the gully, peered down the bank. Far down below, Peter's blue blouse made color against the brown of last year's leaves. Ollie slid, fell, down the steep slope. He tore his shirt, dug his elbow on a rock. Peter lay, caught by a crooked birch tree, very still, face down in the leaves. Ollie snatched him up.

"Peter, Peter!" Peter did not speak.

Ollie looked up at the banks. How could he ever get him up there? Down! That was better. He went as carefully as he could down to the water, walked along the edge, finally in the water itself. Peter lay limp across his shoulder.

"Good heavens!" Ollie thought, with his throat drawn tight as in a knot. "I almost went away and left him!"

Some new knowledge stirred and burned in Ollie. Something called "responsibility" entered into him. He'd go to the city, as his father wanted him to do, go into an office, learn to make a living right away—then he'd be able to take care of Peter better!

After all, there was no reason for Aunt Jen to support them all! And he ought to go, anyway, for his father's sake. In his thoughts, his father suddenly looked different to him, and he was ashamed of things he had thought before.

Scatter-brained!

No wonder he never accomplishes anything worthwhile!

HIS mind is a hodge-podge of half-baked ideas. He thinks of a thousand "schemes" to make money quickly—but **does** nothing about **any** of them.

Thoughts flash into and out of his brain with the speed of lightning. New ideas rush in pell-mell, crowding out old ones before they have taken form or shape.

He is Scatter-brained.

He wonders why he does not get ahead. He cannot understand why others, with less ability, pass him in the prosperity parade.

He pities himself, excuses himself, sympathizes with himself. And the great tragedy is that he has every quality that leads to success—intelligence, originality, imagination, ambition.

His trouble is that he does not know how to **use** his brain. His mental make-up needs an overhauling.

There are millions like him—failures, half-successes—slaves to those with **balanced, ordered minds.**

It is a known fact that most of us use only one-tenth of our brain power. The other nine-tenths is dissipated into thousands of fragmentary thoughts, in day dreaming, in wishing.

What can be done about it?

Find out by means of Pelmanism; then develop the particular mental faculty that you lack. You **can** develop it easily; Pelmanism will show you just how; 550,000 Pelmanists, **many of whom were held back by your very problem,** will tell you that this is true.

Pelmanism is the science of applied psychology, which has swept the world with the force of a religion. It has awakened powers in individuals, all over the world, they did not **dream** they possessed.

Among those who advocate Pelmanism are:

T. P. O'Conner, "Father of the House of Commons."
The late Sir H. Rider Haggard, Famous Novelist.
General Sir Robert Baden-Powell, Founder of the Boy Scout Movement.
Judge Ben. B. Lindsey, Founder of the Juvenile Court, Denver.
Frank P. Walsh, Former Chairman of National War Labor Board.
Jerome K. Jerome, Novelist.
Gen. Sir Frederick Maurice, Director of Military Operations, Imperial General Staff.
Admiral Lord Beresford, G. C. B., G. C. V. O.
Sir Harry Lauder, Comedian.
W. L. George, Author.
Baroness Orczy, Author.
Prince Charles of Sweden

—and others, of equal prominence, too numerous to mention here.

A remarkable book called "Scientific Mind Training" has been written about Pelmanism. **It can be obtained free.** Yet thousands of people who read this announcement and who **need** this book will not send for it. "It's no use," they will say. "It will do me no good." "It's all tommyrot," they will tell themselves.

But if you are made of the stuff that isn't content to remain a slave—if you have taken your last whipping from life—if you have a spark of **Independence** left in your soul, write for this free book. It tells you what Pelmanism is, **what it has done for others,** and what it can do for you.

The first principle of **your** success is to do something definite in your life. You cannot afford to remain undecided, vacillating, day-dreaming, for you will soon again sink into the mire of discouragement. Let Pelmanism help you **find yourself.** Mail the coupon below now—while your resolve to **do something about yourself** is strong.

Young outdoor men wanted

To a few sturdy young men—lovers of fresh air and sunshine—who want to get away from the grind of indoor work—John Davey's national organization, The Davey Tree Expert Company, offers an exceptional opportunity. Constantly increasing demand will create a limited number of openings. Those young men selected will be thoroughly trained by the Company and given a permanent position if they make good. If you are single, between 20 and 30 years of age, free to travel, healthy, industrious, having a good practical education, and able to furnish satisfactory references, you have a good chance to qualify. Pay is good at start, advancement assured on merit. We want only men who desire permanent employment in a growing organization and will accept only clean, sturdy young men, thorough Americans, not afraid of vigorous outdoor work. Write for additional information and qualification blank to serve in place of personal interview. The Davey Tree Expert Co., Inc., 655 Federal Bldg., Kent, Ohio.

Stand Supreme

He came, white with fatigue, up through the orchard at last. Jen saw him coming, hurried to meet him. She held out her arms for Peter; but Ollie kept on, carried Peter into the house and put him gently on the couch. He dropped to the floor beside him, his head tiredly down. He heard Jen calling the doctor.

Afterward, when Peter was sitting up, with his wrist bandaged, Ollie went out on the porch. Joe was there.

"Are you going to wear your best suit to-night?" Joe whispered.

"Oh, that's all off!" Ollie heard himself saying in a strange new tone, as if it were a small matter, of no account. Joe stared at him. Joe looked very young to him.

When his father came the next Sunday, they walked down in the orchard together.

"I'm glad you're going back with me for a year," John Crewe said presently, a little embarrassed. "I'd hoped it would be you—Joe'll take better to a profession."

Ollie stared at his father bewilderedly. John Crewe smiled quietly.

"Your aunt Jen's going to let me buy a share in the farm," he explained. "And I want one of you boys here with me—one that the land means something to. I have another year on my contract in the city but then—then!"

He put out a hand to a branch of an apple tree as if to a friend.

"I thought I'd like you there with me—a year—in *her* house—to read her books with me—to—to—" He paused, a look of such deep trouble in his eyes that Ollie turned away from him. But his father spoke next of the farm again.

"There's something about land—you're your own master. You can make things grow, and each year it's all new and beautiful."

"*Your own master.*" The words touched some spring in Ollie's mind. He looked about him quickly. Why, it was true! You would be your own master. You'd be like a—a king. That was, maybe, what gave Aunt Jen that look. It was the only place, really, where you *could* be your own master. A feeling of power lifted Ollie's head. The petals fell about him. This would be all red with apples in a few short months!

Ollie laughed suddenly aloud. He had wanted to go to Mexico!

Just before they left, John Crewe said: "Well, thanks for letting me have the boy, Jen!"

Ollie saw his Aunt Jen's smile, a little sad, but beautiful.

"Guess he isn't a boy any longer, John," she said.

At Parsons's, Ollie put out a hand suddenly.

"Stop here, Dad!" he said. Molly was out by the well. He went straight to her, pulled a stuffed handkerchief from his pocket.

"I wish you'd give this to Peter for me, will you?" he demanded. "I forgot! It's *treasures!*" he said, a little defiantly.

Molly took the things. Her brown fingers touched his, and she looked at him quickly, shyly. He heard himself saying something quite unintended.

"You write, will you, Molly?" he said. "I'll write back!"

It's Fun Being a Father

(*Continued from page 55*)

useless as a jib and mainsail on a dromedary.

Also, while I think of it, don't jump down your son's throat because he irritates you or upsets your ease and comfort. Look to the act. Maybe the thing he is doing is all right in itself and, if it is, let him go on doing it, even if it is playing a saxophone while you are trying to read the stock reports. Playing a saxophone is as important to him as your newspaper is to you, and, anyhow, you have no inherent right to ease and comfort. If you don't want to be disturbed, don't have a son. If you have a son, don't scold him for being one.

Don't embarrass him. Don't make him feel uncomfortable in your presence. Don't let him get the idea that every time you are together he has to listen to your ideas on morality and nobility and what-not. A boy is very easily embarrassed and put on his guard against you. Once his guard is up, you'll have the very dickens of a time getting inside it again.

Any father who amounts to a hill of beans must educate his son—or help educate him. We all have certain ideals. We all have certain ambitions. There are things we want to tell our sons, and things we want our sons to become. But ease it into them, don't whale them over the head with it.

I hope the ethics of my sons are sound. They are if mine are, which may be open to question. But I never have issued any commandments or made them listen to any homilies.

The concrete example is grand. If your son is fond of you, he will want to be what you admire. All right then, admire things so he can see you doing it, but not so pointedly that he will think you are trotting out a lesson for him. Discuss his friends and acquaintances.

For instance:

"Son, what kind of an egg is Bill Smithers?"

"Oh," says your son, "Bill's all right."

"Um. . . . Maybe; but somehow I don't just cotton to him. What's wrong with him, anyhow?"

"Well," says your son, "Bill's always got an alibi."

"Can't take his medicine, eh?"

Then your son will shrug his shoulders and edge away from the subject; but he knows you don't like fellows who are always making phony excuses for their failures.

Or: "Say, son, that was a pretty square thing Mike did in the yacht race yesterday, wasn't it?"

"When he fouled the other boat at the buoy and then withdrew from the race?"

"Yeah. The officials couldn't see it, and he could have stayed in if he'd wanted to."

"Oh, Mike isn't that kind of a bird," says your son, and the conversation closes. But he knows you admire good sportsmanship, and thereafter he is going to aim at good sportsmanship himself.

There isn't anything, from a respect for truth to the observation of the Volstead Act, that you can't get over to him by concrete example, and without a word of preachment. Show him what you admire; show him what you despise. And be sure you admire and despise the right things.

I HAVE just one set rule: I won't break a promise to my sons, no matter how slight it may be. Even if they trick me into it, which is sometimes the case. If I say I'll do it, then I'll do it, and no monkey business. That goes a long ways.

And let your boy know you are back of him. I remember saying to my son once, "Listen, fellow, you know what I'm here for. It's to get you out of trouble. You know as well as I do that I don't want you to get into any trouble, but any fellow is apt to get off on the wrong foot sometime. I'm here, and I'm always here, and my job is to get you out of any kind of a mess you get into. If you ever did anything rotten I'd feel pretty bad about it; but I would help you out of it if it cost every ounce and every cent I've got. If ever your foot should slip, make a bee-line for home, and you'll find me on the job. It's you and me against the world, old top, and never lose sight of that."

Now, maybe that isn't orthodox; but it's what I believe and what I would do. I believe it is what my boys would do for me. I hope so.

I've made them know I'm all lathered up with interest in whatever they are doing. A week or so ago my son played hockey on his school's team. It was an important game to him and to me. I rode two nights on a sleeper to see it. I wanted to. I wouldn't have missed it for twice the discomfort or expense. I'd go to the Pacific coast to see either of my sons jump through a hoop. And I don't have to tell them so.

My kids know I'd a heap rather have them fail every examination for the rest of their lives than to write the answers on their cuffs before going into the classroom. My effort has been to be on the level with them; always to play the game. In return, they have always played the game with me, and I want them always to play the game with the world at large.

Every once in a while one of them expresses his confidence in me by consulting me about some problem—either of practical affairs or of ethics. I try not to give advice. I say, "Listen, old egg, you've got brains and this is a slick time to use 'em. If you can't decide what's right to do there's no use coming to me. I don't know any more about it than you do."

You'll notice generally that when your son comes to you with a problem, it isn't because he doesn't know what he ought to do, but because he has a sneaking hope you'll find some indulgent way of letting him do what he wants to do, but shouldn't. So I always pass the buck right back, and let them make their own decisions. It puts them up against it, don't you see; and is good for the soul.

My pet theory is that a father can't *make* his son, but he can ruin him by neglect or by ill example or by evil instruction.

To a considerable extent, a boy brings himself up. He has within him the mak-

It Wasn't Temper
just lack of proper food

Her children were so fretful. Always ailing. Never abounding in joyful health. Her own nerves were frayed trying to keep them within bounds.

It wasn't temper. Just lack of proper food. For when she started them on Vita-Wheat, their dispositions improved—they ceased fretting. Their cheeks became like rosy apples. Nutrition was all they had lacked.

Vita-Wheat is so rich in gluten, food iron and lime and vitamin B that children thrive on it. Old folks too. It's a boon to mothers because it can be prepared so quickly. This delicious porridge appeals to every palate. Served regularly at the famous Battle Creek Sanitarium. On sale at all authorized agency stores. Try it today.

A Success for 15 Years

ings of what he is going to be. And the best a father can do is to provide the proper environment and example, and seek the lad's confidence.

Plant in your son, just as soon as he is old enough to have anything planted in him, the fact that you believe him to the hilt; that his word is good with you any day of the week against any circumstantial evidence or against anybody's testimony. The fact of perfect trust begets honor. And I'm very much in favor of honor.

On the other hand, I try to see to it that my sons believe and trust me as implicitly as I do them.

ALL children are selfish. All human beings are selfish. Altruism is the highest point in human culture, and few of us have reached it. I am selfish and you are selfish and your Aunt Sarah is selfish. It's as natural as breathing. But you can seduce your sons into qualifying their selfishness, which is a big thing.

Set out to convince them that it is a pleasure for you to make some sacrifice for their benefit, and you will discover that presently they will be finding pleasure in forgoing some desire for your benefit. It's give and take between father and son, just as between husband and wife. The days when Father demanded everything and gave nothing but bed and board and the razor strop are passed.

And, for heaven's sake, don't attach moral turpitude to peccadillos. If a boy skips school—as he is bound to once in a while—don't act as if he had stolen a gold watch from a blind uncle. He doesn't play truant because he wants to be bad; he plays it because life is still a game, and because skipping school is an adventure. Most mischief he gets into is through love of adventure. It's the contest of wits that he loves, and the contest of muscles and agility.

I'll venture to say that a majority of juvenile criminals are not criminals at all. They are boys who played a game, and got caught at it by thick-witted authority. Did you ever steal apples out of an orchard? Or did you ever swipe watermelons out of a patch? Well, why did you do it? For the adventure, of course, and to show your courage to the other fellows.

So, what is the difference between that and the unfortunate city child in squalid surroundings who steals his apple off a fruit stand, or who substitutes a bag of candy for the apple? It isn't that he wants the apple or candy, but that he wants to match himself against authority. So, go easy with the pot of moral turpitude. Mostly, there ain't no sich animile.

Also, don't forbid a multitude of things. A rule is an invitation. I never saw a "Keep Off the Grass" sign without wanting to walk across the lawn. And if you do forbid a thing, start, not by issuing an order but by explaining why such a thing ought not to be done.

A few years ago my younger son was detected by my wife in the heinous act of abstracting a cigarette for my elder son to smoke. She was immediately beset by alarms and tremblings, and demanded that I erect a gibbet.

"Now look here, Ma," said I, "you haven't ever been a boy since I knew you, and reports say you weren't one before. Suppose this time you sit on the side lines and see how quiet you can keep, and let me settle this outrage."

So she did. I let it ride along until, next day, my son sat down to read in the library. And then I tried an experiment. I passed him my cigarette case.

"Have one," says I.

He batted his eyes and swallowed a couple of times.

"Smoke, don't you?" says I.

"Yes," says he.

"Well," says I, "if smoking is what you're going to do, home is the best place to do it. If you're going to smoke I'd rather you didn't feel you had to hide behind a shed."

He was sort of dubious about it.

"But," I continued, "I didn't smoke until I was through college. It wasn't because I thought it was wicked to smoke; it was on account of my wind. I played football and other games, and the coaches and trainers said I could do better if I let smoking alone. I took their word for it, and didn't smoke. I'm just passing the tip on to you, and you can do exactly as you like."

That was that. A couple of days afterward he said in that nonchalant way kids have of making important announcements, "Dad, I've decided *not* to smoke."

"Good egg!" I exclaimed.

That closed the incident. Where was the use of smoking when the adventure was denatured out of it? He could smoke if he wanted to, so he quit fooling with it.

I LIKE the job of being a father. I get more pleasure out of it than out of anything else in the world. I don't work hard at it. I play at it. My sons do not address me as "Sir," or show a spurious respect for me. They call me "Dad," and we treat each other as equals. We are a gang. And I don't insist on being the leader of the gang more than my share of the time. They know me as well as I know them, and lots of times I catch them laughing at some crinkle in my *tout ensemble*. We are coöperative. We have our quarrels, and I can quarrel as heartily as any twelve-year-old. But we don't have any heavy father and subservient son stuff. No, sirree, not in *our* family.

A WIDELY KNOWN Wall Street banker sat facing an ex-convict, who was one of the most skillful burglars in the underworld. . . . "Then you are coming in with me?" asked the man who had seen the inside of many penitentiaries. "To the finish!" replied the banker, and the two shook hands on the deal. That was the beginning of an amazing partnership in the great business of salvaging human wrecks, a partnership that has resulted in putting more than six hundred down-and-outers on their feet. Next month you will read the story of the Good Samaritan of Wall Street, and of the ex-crook, who learned, at last, that the paths of respectability are the only ones worth treading. This is a truly remarkable article, packed with intensely interesting stories, and abounding in essential truths about human nature.

The Business for You

Marini of Cal. reports **$11275** sales in 3 months. Gordon of N. J. **$4000** profits in 2 months." Alexander of Pa. "**$3000** profits in 4 months." Shook **$365** sales in 1 day. Bram bought 1 outfit April 5 and 7 more by August 28. Iwata, bought one outfit and 10 more within a year. Mrs. Lane of Pittsburgh says "sold **8000** packages in one day." J. R. Bert says "only thing I ever bought that equaled advertisement." John Culp says: "Everything going lovely. Crispette wrappers scattered all over town. It's good old world after all." Kellog, **$700** ahead end of second week.

WE START YOU IN BUSINESS

Furnish secret formulas, raw material, and equipment. Little capital required; no experience needed.

Build a Business of Your Own

No limit to sale of Crispettes. Delicious food confection. Everybody likes 'em. Write for facts about business that will make you independent. Start now, in your town.

Profits $1000 a Month Easily Possible

Send postal for illustrated book of facts. It contains enthusiastic letters from others—shows their places of business, tells how and when to start, and all information needed. Free. Write now!

LONG-EAKINS COMPANY
113 High Street Springfield, Ohio

Home Made Candies for Profit

Our **HOME STUDY COURSE** of tested recipes, for ladies or men, taught by a man who himself made a big success in the Candy Business. Candy is the only business where the little fellow has the big fellow at a disadvantage. Turn your kitchen into a small Candy Shop-start making money from almost the first day. Many now rich, started with no capital. Free book explains. **CAPITOL CANDY SCHOOL, 100-P, 631 Penna. Ave., N. W., Washington, D. C.**

Learn to Make SHOW CARDS — Quick Easy Way!

Every store needs clever show cards. Earn $50 to $75 a week. Business of your own. Marvelous method makes it amazingly easy to learn at home. Write now for Attractive Offer and illustrated FREE book to Washington Show Card School, Dept. 351-E, 1117-15th St. N. W., Washington, D. C.

Earn BIG Money In Spare Time

Club Feet

Treated Without Plaster Paris Casts

Two photos, taken 11½ weeks apart, and mother's letter, show how McLain Sanitarium helped Elizabeth Ahern.

My daughter was born with a Club Foot. She suffered agony with plaster casts before we took her to McLain's. I think there is no hospital like McLain's and I advise parents with crippled children to go there. My child is cured.
MRS. WM. D. AHERN, Livingston, Montana

McLain Sanitarium (established 1898) is a private institution devoted to the treatment of crippled children and young adults. No surgical operation requiring chloroform or general anaesthetics. Plaster Paris not used. Patients received without delay. Parents retain full charge of children if desired.

WRITE FOR FREE BOOKS "Deformities and Paralysis," and "References," which show and tell of McLain Sanitarium's facilities for treating Club Feet, Infantile Paralysis, Spinal Diseases and Deformities, Hip and Knee Disease, Wry Neck, Etc. Also illustrated magazine, "Sanitarium News," mailed free every 60 days.

835 Aubert Ave., St. Louis, Missouri, U.S.A. K688

Nobody Graduates from Bill Hanley's University

(*Continued from page 43*)

unhappy. Your mental digestion never will be right until you shut out ever'thing else but one main purpose—an' how can you be happy when you got mental indigestion, which is worry?"

But to get back to our narrative:

Hanley and his brother forged eastward into a part of Oregon where only Indians and coyotes ranged. They discovered immense valleys where the grass was so high a horse could get lost in it—acres of rich, untouched pasturage, on which their herds fattened and multiplied. Eventually they reached the valley where Hanley now lives.

Winter and summer, they slept under the stars. When it snowed, they made a willow shelter. For nearly three years they didn't sleep in a bed. Wild life was abundant. Game birds of all kinds swarmed in the marshes.

"Many a mornin' we rounded up our stock an' found more antelope than cows in the herd," Bill told me.

In 1882, the end of the three years, another cowman drove into the country. He offered to buy the Hanleys out.

"JUST to show you how men loved horses in those days, I'm goin' to tell you how the deal for my part of the herd was finally made," Bill chuckled.

"They was about two thousan' dollars difference between us on the deal. We was sittin' on our haunches there tryin' to git together; but not havin' too much luck.

"I had a black pony with white legs, a purty animal, but he had a most uncomfortable gait for a ridin' horse. He was grazin' around us with his saddle on, an' we weren't payin' much attention to 'im.

"Well, they was a fence had been built right along there, an' at one place was a kind of a hurdle-like thing six or seven feet high. While we was talkin', my horse walked over to that hurdle-thing an' jumped over it, as purty as you please. I don't know what possessed him to do it, but over he went.

"The man th't was tryin' to buy hops up an' says, 'Who owns th't horse?'

"I says, 'I do,' an' he says, 'Well, throw him in an' the deal is made.' I says, 'You can have him.'

"I rode out o' th't valley only about twenty years old, an' with seven thousand dollars in my pocket.

"Th't was a small fortune then; but I had earned it, because I sure went through hardships gettin' it—cold, an' rain, an' loss o' sleep at times.

"One time I started out an' traveled two days an' nights tryin' to find an outfit I'd heard was in th't part o' the country. The mornin' o' the second night I was sleepin' on a table rock overlookin' a valley, havin' taken th't position to keep out of the path o' Indians. The Indians never done me any harm, but 'twas just as well, I thought, not to meet up with 'em.

"I hadn't had anything to eat for

SHOW CARD LETTERING *Learn at Home*

HERE is the very course you need if you want to get a good paying position as a Show Card Letterer or Sign Letterer, or have a business of your own. This course is complete and practical and especially arranged to meet the needs of the student who studies at home. It was written by E. L. Koller, Principal of the School of Art of the International Correspondence Schools, member of the American Federation of Arts, and The National Society of Craftsmen.

Mr. Koller has had twenty years' teaching experience, and his success in helping other men and women is an indication of what he can do for you.

H. L. Wood, a clerk, made more than $700 "on the side" before he had completed his course and also won $125 in prizes. Harry William Lord writes that he has more than doubled his salary as a result of studying this I. C. S. course in spare time. William Whitman, a former wagon builder, now has a sign painting business of his own and is earning *nearly three times* as much as he did before enrolling with the International Correspondence Schools.

There is no doubt that Show Card Lettering and Sign Lettering offer a real opportunity to ambitious men and women. Just mark and mail the coupon and we'll gladly send you a booklet telling all about the I. C. S. course in Show Card Lettering, or any other subject in which you are interested.

INTERNATIONAL CORRESPONDENCE SCHOOLS
Box 7461-E, Scranton, Penna.

Without cost or obligation on my part, please send me one of your booklets and tell me how I can qualify for the position or in the subject before which I have marked an X:

Is Your English a Handicap?

This Test Will Tell You

MAKE THIS TEST NOW
Correct answers shown in panel below

1. Would you write—

Between you and I	or Between you and me
I did it already	or I have done it already
Who shall I call	or Whom shall I call
It's just as I said	or It's just like I said
The river has overflowed its banks	or The river has overflown its banks
I would like to go	or I should like to go
I laid down to rest	or I lay down to rest
Divide it among the three	or Divide it between the three
The wind blows cold	or The wind blows coldly
You will find only one	or You will only find one

2. How do you say it?—

ev-en-ing	or	eve-ning
as-cer-tain	or	as-cer-tain
hos-pi-ta-ble	or	hos-pit-able
ab-do-men	or	ab-do-men
may-or-al-ty	or	may-or-al-ty
a-me-na-ble	or	a-men-able
ac-cli-mate	or	ac-cli-mate
pro-found	or	pro-found
ben-e-fi-shee-ary	or	ben-e-fish-ary
cul-i-na-ry	or	cu-li-na-ry

3. Do you spell it—

supercede	or supersede	repetition	or repitition
receive	or recieve	separate	or seperate
reprieve	or reprieve	acomodate	or accommodate
donkeys	or donkies	trafficing	or trafficking
factories	or factorys	acsesible	or accessible

Thousands of persons make little mistakes in their everyday English and don't know it. As a result of countless tests, Sherwin Cody found that the average person is only 61% efficient in the vital points of English. In a five-minute conversation, or in an average one-page letter, five to fifty errors will appear. Make the test shown above now. See where you stand on these 30 simple questions.

Sherwin Cody

New Invention Improves Your English in 15 Minutes a Day

Mr. Cody has specialized in English for the past twenty years. His wonderful self-correcting device is simple, fascinating, time-saving, and incomparably efficient. You can write the answers to 50 questions in 15 minutes and correct your work in 5 minutes more. You waste no time in going over the things you already know. Your efforts are automatically concentrated on the *mistakes* you are in the habit of making, and through constantly being shown the *right* way you soon acquire the *correct* habit in place of the *incorrect* habit. There is no tedious copying. There is no heart-breaking drudgery.

City ..... State .....

forty-eight hours. The first thing I heard when I woke up about sunrise was the howl of a coyote; then another one howled off somewheres else; then they all howled—an' I was so hungry I joined 'em! . . . Them's the kind o' hardships we sometimes met up with in this country in the ol' days."

After he sold out, Hanley returned to the Rogue River Valley and took charge of his father's ranches. By that time, the elder Hanley was feeling the strain of his advancing years.

Although he says he felt he was "just visiting" there from the great Harney Valley, where he had made his first little stake, time passed on and it was ten years before Bill went back to Harney Valley to stay and grow up, and influence its development.

THE seven thousand dollars he made when he sold out his first herds went the way that money often goes when it gets into the hands of young men; he "blowed" most of it in for a good time. He got his start—the one that laid the foundation for the present Hanley Stock Company—by taming a herd of wild cows. Through this experience, he also developed his remarkable ability to control "cow-brutes" en masse.

"These cattle was runnin' wild up in the Siskiyou Mountains," he explained, puffing reminiscently on his big pipe. "An' I mean they *was* wild!

"If you'd ride up on the ridge, they'd run for the bottoms and lay down an' hide under the brush, just like a flock o' prairie chickens. Just let one see you, an' he'd flash some kind of a secret, psychic something to ever' other brute in the herd, an' in two seconds they'd be wise to you.

"The men th't owned them was willin' to sell them for almost nothin'. In fact, them cows had been sold a time or two; but the purchasers found th't ownin' a wild cow an' controllin' one is two different things. Usually the buckaroos'd get only one animal out of a herd—an' they'd kill him a-doin' it! Them brutes would fight for freedom, an' they'd break their fool necks tryin' to get away from a rope.

"I bought hundreds o' those cattle, an' brought 'em over here, an' th't was the beginning of my herds. There was a time here when I was runnin' more than five thousand cattle."

"But how did you get the wild cows out of the mountains?" I asked.

"Well," Mr. Hanley continued, "at first when we rode up, they would hide until we went away. But we kep' a-ridin' up into their territory regular, until they got used to seein' us around. Even then, they didn't let us git familiar with 'em. If we moved very close, they moved on. We followed them, an' wherever they decided to stop for the night, that was good enough for us.

"Now, ever'thing in the world th't breathes wants something. If you c'n find th't thing, even with men, no matter how they may dislike you, they'll deal with you.

"My next move with these cattle was to give them the thing that they wanted more than anything else, an' that was salt. In a green country like th't, salt was scarce. I don't suppose them cows had ever tasted any quantity of salt until I gave them some.

"The first steer th't took a lick of th't salt had the most surprised expression on his face—like a country kid tastin' ice cream for the first time. He begin to send out his psychic vibrations, an' they flashed through the whole herd. In a few minutes there was a jam at the bargain counter.

"We strung 'em along like th't, droppin' a little salt here an' there, an' lettin' them see us do it. After a few days, them cows held some kind of a secret caucus, an' decided we must be all right. From then on, they'd let us drive 'em up an' down the canyon—but not out, you betcher life! Not right then, anyway.

"It was three or four weeks more before they'd agree to anything like th't. But one day, we got 'em out.

"It was so strange to them, they kind of hung around close to us—there was about two hundred head in all the first time, I guess. Whenever we'd meet up with a stranger, they'd hike for the brush an' hide, an' leave us out in the open alone! Then, after the stranger was gone, they'd come amblin' back!"

Several herds of this kind were driven across the state of Oregon to the ranges in the southwest, where the present Hanley ranches are.

In 1883, the country was surveyed, and boundaries began to be recognized. Although some land was taken up by homesteaders, Hanley never exercised his homestead right.

THERE was a road grant which crossed the state from Albany to Ontario. The latter town is the main line railroad point from which a branch now operates down to Burns. Odd sections along the grant were held as public domain, but even sections were for sale. From the proceeds of his cattle sales, Hanley bought many of these sections—so many he couldn't ride from one end of his holdings to the other in a day. Of recent years he has been gradually selling his lands, making way for the increasing population.

The town of Burns was started in the early eighties, and although settlers came in very slowly there were soon enough for a community consciousness to begin to develop. Hanley became, and still is, the leading citizen of the community. Even when his ranches were two hundred miles, and even more, from the railroad, he didn't permit himself to remain isolated. He went to the cities often, and he took an interest in legislation that would benefit his neighbors and himself—especially in matters having to do with the opening of the public domain to settlement.

He built miles of canals to carry water to his lands, and these canals are soon to become part of a system to irrigate eighty-three thousand acres of farm lands. Whenever he built a canal, he built a road on the bank, and countless hundreds owe to him the fact that they have been able to travel across an undeveloped country with comparative ease. In recognition of his work as a citizen, the Oregon State Chamber of Commerce once elected him as its president.

He has a wonderful ability to get results out of human beings through indirect methods, in illustration of which I can give you one example—his influence

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in getting branch-line railroads in Oregon. There was a line running crosswise through northern Oregon, and another going coastwise or southward through the valleys in western Oregon. But there were no lines running north and south through central Oregon.

Suppose you had laid down before you the problem of getting a railroad across your state. How would you go about it? This is the way Bill Hanley did it:

The railroads weren't interested at that time—about fifteen years ago—in any more extensions in Oregon; they were busy developing lines elsewhere. Bill Hanley started an agitation for a state-owned railway, which would divide the state of Oregon into four approximately equal quarters. C. E. S. Wood, an artist who had considerable ability as a speaker, joined Hanley in the scheme. Wood made a speech before the legislature, suggesting the bonding of the state to build the proposed road.

It was a radical scheme—entirely unbecoming, hundreds of his friends said, of Bill Hanley, who had always, until then, been known as a rather conservative man. The cry of "Socialism"—anathema in those days—was flung at Bill.

But he smiled, and made speeches.

"Whatever the flaw in the general principle," he said, "the fact remains that we need railroads in Oregon, and the necessity justifies the methods."

The scheme got rather popular. The possibility of getting a railroad thrilled many isolated communities.

One day Bill got a telegram from James J. Hill. This was exactly the chance that Bill wanted. Immediately he went to Omaha and saw the railroad builder.

He outlined to Hill the need of more railroads, and he was able to give important information about the possibilities of the regions in question.

"We're goin' to git some railroads out there, one way or another," declared Bill.

"You're right," said Hill. "But you don't need to bond your state to build your railroads. I'll build at least part of them for you."

Hanley and a friend then arranged for a right of way for Hill for a line through central Oregon, down the Deschutes River. Immediately another company started to build on the other side of the river! Where there had been no interest in the subject on the part of the railroads there was plenty of interest in Oregon now.

I SUPPOSE you've been looking, as you read this story of an old-time cattle baron's experiences, for some shooting and excitement. As far as Bill Hanley himself is concerned, you are going to be disappointed, for he was not a gun-totin' man.

His first, last, and only gun experience occurred when he was twelve years old, just after he had been made foreman of one of his father's ranches. The dénouement of this little incident will show you that, even then, Bill Hanley was an individual of character, for he did something that very few boys of that romantic, gun-carrying period would have done.

A cowpuncher much older than Bill resented the fact that so much authority had been given into the hands of a boy. He taunted young Bill all the time, and

Seven doctors out of ten said laxatives are harmful

IN a recent coast-to-coast investigation we asked doctors the plain question: "Do you consider the continued use of cathartics and laxatives harmful?" 72.24% answered unqualifiedly "Yes." Why do so many doctors condemn laxatives? Here is the reason one doctor gives: "Laxatives cause inhibition of the peristaltic action." In plain English, this means that laxatives make the bowels weak by doing their work for them. If expulsion of waste matter is forced by pills or other drugs, the bowel muscles soon become powerless to do their work without help. In other words, laxatives bring on the laxative habit.

Eight doctors out of every ten told us they were advising the Nujol type of treatment for their patients in place of laxatives. Why? For many different reasons, of which the following were the most important: 1. Nujol is not habit-forming; 2. Nujol is a more natural method; 3. A lubricant is better than a laxative; 4. Nujol does not gripe; 5. It is not irritating; and 6. Nujol gives lasting relief.

These reasons all spring from the fact that the action of Nujol is absolutely different from the action of laxatives. Laxatives and cathartics act by irritating the intestinal tract. They cause the bowels to frantically expel the contents of the intestines and thus rid the system of the drugs that pills and potions contain.

Nujol acts entirely differently. It contains no drugs, no medicine of any kind. Its action is not chemical but mechanical. It merely softens the dried waste matter in the intestines and lubricates the passage so that the muscles of the bowels can expel the waste matter regularly, naturally and thoroughly.

Nujol appeals to the medical man because it is a simple, scientific and safe remedy for constipation, no matter how severe the case may be and no matter what else the patient may be suffering from. It is gentle in its action and pleasant to take. Children love it!

Nujol is a pure, nature-given remedy. Get a bottle of Nujol from your druggist today and start treatment tonight. It is the way most doctors would advise you to overcome constipation, whether chronic or temporary.

"Such an Easy Way to Make Money"

EVERY time I think of the long time it took me to be convinced of the Club's money-making opportunities, why, I get simply furious with myself.

"When I first wrote to you, saying in about a dozen words that I wanted to make a few extra dollars, I am sure you never guessed how very unhappy I really was.

"That morning at the breakfast table my dear man told me quite sharply that I'd have to learn to economize. It was no surprise to me, for I knew that I had been spending far too much money on myself, also on clothes and tea parties. I can assure you I didn't blame him.

"I felt very much ashamed of myself but you know, dear Margaret Clarke, there is certain incomparable joy in having a home of which you are proud, in buying clothes as smart as your friends, in doing all the things that make us happy.

"I was thinking how thoughtless I had been, when the postman brought The American Magazine. As he handed it to me I remembered your invitation to join Club Members in their money-making. I turned to your latest talk and I wrote you. Well—

"In my first week I earned $10. In my second week I earned $14.75. Since then I have been spending and saving my Club dollars—to my heart's content.

"Then one morning John looked unusually worried and hardly ate his breakfast—because of a pesky bill. I asked him to let me have it.

"'What are you going to do with it?' he asked.

"And wasn't I proud when I could say, 'Why, pay it, of course.'

"'Frankly I was just a bit frightened because he never approved of women earning money. But when I told him about The Pin Money Club, why, he was as pleased as Punch. So you can see how much real happiness you have brought into my life."

* * *

I'LL not tell you this member's name—her letter is so personal that I am sure she wouldn't wish me to do so. But I do want to tell you that this Club is open to you and you are invited to come and join us in our money-making. Write to me to-day, addressing your letter to

Margaret Clarke

Secretary, Pin Money Club
The American Magazine
Department I
250 Park Avenue New York City

one night at a dance the feeling reached a climax. The cowpuncher announced that he was going to "slap the stuffin'" out of young Hanley.

He came outside the dance hall to make good his promise, and found himself staring into a gun. He started to run, and the boy took after him.

"I chased him out of sight, an' he never did come back," Hanley recalled. "But after he was gone, I looked at th't gun, an' then I looked at myself, inside. An' when I realized th't I had something awful in my heart, I threw th't gun away into a pile o' brush, an' I've never carried one since.

"Naw. It's only the man th't's scared that has to carry his brains in his hip pocket.

"There wasn't any law in this country in them days—not any what you'd call effective law. Men just settled things 'tween theirselves. Men've come to me an' offered to kill other men th't they thought'd done me dirt! Just gives you an idea of how things was bein' run in them days.

"BUT I never knew it to fail th't the baddest man always has some extraordinary streak o' goodness in him. Take ol' Long John, one of the worst gunmen th't ever hit this section. Dead now—so mean somebody just *had* to kill him.

"One night in a saloon a man got into argument with Long John. Words led on until they was passin' bad names back an' forth. All at once, Long John quit talkin', and his eyes got cold-like. I knowed what th't meant. I got hold o' Long John an' took him out o' there.

"'Look here,' I says, when we got outside; 'I know what you're aimin' to do, John—an' I don't want yuh t' do it. I know th't feller, an' I know his sister—'

"'As he got a sister?' says Long John, awfully surprised. 'As th't low-down, dirty dawg got a sister!'

"'Yes,' I says, 'John, an' she's a darned nice girl. An' his ol' mother, why, it'd ki—'

"'As he got a *mother!*' says Long John, like I'd told him something that was impossible. 'Him, with a mother!' He thought a minute, then he says, 'Bill, I got a mother too!'

"'Sure you have,' I says. 'I don't want you to do what you was aimin' to do to him.'

"'All right,' he says. 'Git me a horse.'

"I gave him a horse, an' th't night he rode out o' the country.

"Many a' ol'-timer, I suppose, has often wondered what ailed Long John—why it was that he took insults he'd never taken before without—without doin' something about it.

"But I'd found his tender spot: He loved his mother, an' for th't once, at least, he had spared another mother grief out of memory for her.

"Speakin' o' excitement, you're liable t' git th't anywhere, you know, especially with a herd o' cattle around.

"One night we was out with a herd o' them wild cattle I told you about. For two or three days they had been working down out o' the hills, callin' to each other, restless an' uneasy-like. Whenever you see a cow doin' th't—comin' down out o' the hills an' a-goin' 'Ahooo! Ahooo!'—git out yer raincoat, because there's goin' to be a storm. It may be two or three days away—but the cow knows what she's bawlin' about.

"I always say th't when a man says, 'I'll think it over,' he's admittin' he don't know; but animals don't have t' think it over—they *know*.

"WELL, this night I'm tellin' you about, a drizzly rain started. The cattle was tense an' nervous. Helpin' me was a boy from Jacksonville—a kid full o' energy. His father'd sent him with me to work some of th't extra energy out o' him.

"It was good and dark. The cows wouldn't lie down, but kep' kind o' millin' around. An', all of a sudden—*bang!* A bolt o' lightnin' struck some'eres near. It seemed like it just struck an' splattered, for y' could hear it crackling among them brutes' horns!

"For about ten seconds them cows stood like they was froze. Then they started down the slope—comin' toward us! Well, if that darned kid hadn't gone an' got down off his horse! Of course he didn't know no better. He didn't realize th't in a few seconds they'd be hundreds o' tons o' insane beef trompin' on the spot where he was standin'.

"I think maybe he thought he could shoo them cows back!

"I kicked my pony in the ribs, an' started to ride away from there. It was darker than a stack o' black cats. I couldn't see all the cows, but I could hear 'em. It sounded like a billion hoofs was hittin' the ground.

"As my pony jumped alongside the kid, I reached down an' picked him up. They wasn't no time to be polite about it; I just grabbed him aroun' the neck and under one arm. He pretty near choked to death, an' he wasn't sure whether I was jokin' or not—but I rode about a half-mile with him th't way at top speed, before them cows finally began to break up and run off by theirselves.

"It was lucky I grabbed th't boy. We went back an' found his pony tromped nearly to death. If he'd 'a' been there he would've been killed."

THERE is no task too delicate for the keen wits of Scattergood Baines. He will settle a case out of court, adjust a quarrel between husband and wife, pull a man out of financial bogs, or even dabble in the perilous task of making matches between young men and young women. Next month he encounters two young folks who have found that the course of true love is full of bumps, and of course he smooths out the bumps for them. "Scattergood Deals in Matrimony" is the title of this newest fiction adventure of the old hardware merchant of Coldriver.

THERE are still millions of people left in the world who love to do brain-teasers in the shape of puzzles. In "Do These if You Can," coming next month, these folks will have an opportunity to sharpen their wits and prove their mettle. A wide variety of puzzles to suit all tastes!

Be Prepared for the Best—It May Come Your Way!

(*Continued from page 19*)

she replied, as if the question seemed absurd to her. "It wasn't any secret anyway," she added, laughing. "I told everybody! I was as sure of being a motion picture actress as I was of the sunset and the sunrise. So I calmly stated it as a settled fact.

"There has been only one time, as far back as I can remember, when I felt any doubt concerning it. I'll tell you about that experience when I come to it in the story. It was the only time I have ever been downright discouraged.

"You know," she went on, with the look of a child who has made a great discovery, "I believe that what we *think* helps to make us what we *are*. I have so much faith in the power of thought that I simply shut my mind against doubts and fears.

"You asked if I told my parents about my plans. Yes; especially my mother. She is wonderful. She has always been more than my mother. She has been my intimate friend!

"In Tampa, I used to go to motion pictures whenever I had the chance. But I never had to do it sneakingly. On the contrary, I was always talking about it at home.

"Father and Mother might have forbidden my going. Instead, they went with me. Then we could discuss pictures together. That was a good thing, because they had better judgment than I had. I think they took the wise course.

"MOTHER never laughed at me when I said I was going to be a motion picture actress. She has always believed that parents should respect their children's ideas, not treat them with contempt. If I had a fixed ambition, she thought I should have the right to follow that ambition.

"She had to meet the test of this creed sooner than she expected," laughed Colleen, "but she was true to her convictions—which is more than can be said of a good many people.

"The year I was fifteen I was to be sent to a well-known boarding-school near New York City. The arrangements had been made, my clothes had been bought, and I was to enter in the autumn.

"We used to come North in the summer; and as my mother's sister lived in Chicago we usually stayed there during the hot weather. This aunt of mine always had wanted to be an actress. She had married, instead. And although she was very happy in her marriage, the old dream had never quite lost its charm. So you can understand that she lent a sympathetic ear to my own hopes.

"The whole family *had* to lend an ear, sympathetic or otherwise, for I was persistent if nothing else.

"Finding that pictures were being made at the old Essanay studio at Chicago, I begged my parents to let me apply there for work. They consented; and I

Held back by—what?

—perhaps it's *comedones**

FOR five years he had watched men come and go—up to better jobs. He knew he was not stupid. Something kept him back. Something made them promote other men—younger men. What could it be?

* * *

It is unfortunate that many men suffer from *comedones*—the scientific name for blackheads. These disfiguring blemishes keep you from being clean-cut and attractive.

They are often responsible for lack of business success. For while you yourself may not be conscious of them, others notice them. You may have wondered why success never comes. Perhaps it's *comedones*.

Pompeian Massage Cream helps you overcome *comedones*. It gets in where comedones form, rolls out all dirt and oily secretions. It stimulates a healthy circulation, keeps the pores open, and gives you a clean, ruddy complexion.

Try this treatment

After you shave, spread Pompeian Massage Cream generously over your face—and *rub*. Continue to rub until the cream rolls out. Note how dark the cream looks. That's the dirt that was in your pores.

Don't let comedones form. Use Pompeian Massage Cream every day—especially when social or business engagements demand that you look your best. It means a healthy, wholesome skin. It means more joy in living.

Use at Home after Shaving

To get full pleasure and benefit, use Pompeian Massage Cream regularly at home after shaving. Your face will feel and look like a million dollars. 60c jars at all drug stores.

***WHAT ARE COMEDONES?**

(*Pronounced cŏm'ē-dōnes*)

Dictionary definition: A small plug or mass occluding the excretory duct of a sebaceous gland, occurring frequently upon the face, especially the nose. It is often called blackhead.

FREE

The STANDARD DIARIES *make acceptable, unusual Christmas gifts—to men, women and children*

One of Many Standard Diaries

The STANDARD DIARIES
Diaries for Every Need

made my first appearance on the screen that summer as an extra.

"I worked in two pictures. In the first I was simply one of the mob. But in the second I had what is known as a 'bit.'

"All it amounted to was this: Dressed as a maid, I walked onto the set, spoke to the leading lady, and walked off again. Even a bit couldn't have been smaller than that! But I was so excited over it that I *telegraphed* my grandmother in Florida to be sure to see the picture and *me* in it.

"As for my aunt, she was almost as thrilled as I was. When the picture was shown in Chicago, she and my uncle went to see it. They had to wait a long time, for it was only a short film at the end of a vaudeville program. And when the moment of my appearance finally came—well, it was all over in a good deal *less* than a moment.

"To my aunt, however, it was the great scene of the picture. As I disappeared after my few seconds on the screen, she burst into tears and solemnly exclaimed, 'A born actress!'

"Now that's funny, of course," said Colleen, "but it shows you how my family helped me by *believing* in me. I have had many loyal friends, and I am grateful to them all. But the debt I owe to my own people comes first.

"MOTHER had consented to my going on as an extra, because she thought it wise to let me find out whether I really liked the work. I liked it so well that I couldn't bear to give it up! I wanted to go on with it; and my aunt aided and abetted me.

"Her husband was a newspaper man with a very wide acquaintance. Among his friends was David W. Griffith, then the most famous motion picture producer in the world. My uncle persuaded Mr. Griffith to give me a screen test. It was satisfactory, and Mr. Griffith offered me a chance to show what I could do. He was then the head of the Fine Arts Studio, in California. He promised me a salary of fifty dollars a week and the opportunity of acting in real parts.

"But my father promptly and vigorously objected. I was too young, only fifteen years old. Anyway, I must finish my education first.

"It was a severe test for Mother's ideas about children, but she was game. She understood me better than anyone else did. She believed that I knew what I wanted, and that I was desperately in earnest about it. She thought this was a marvelous opportunity for me to find out whether my dream was only a dream. If I hadn't the ability or the stamina to succeed, the sooner I discovered it the better it would be for me.

"'Suppose we deny Colleen her chance now,' she said to my father. 'It may change the whole course of her life. If she is disappointed and unhappy in the future, she may blame us because we would not let her follow her own instincts and desires. I won't run that risk. She has a *right* to this chance.'

"The result was that, instead of going to boarding-school, I went to California. My mother and my grandmother went with me. After getting us settled there, Mother came back home to be with Father and my young brother. Grandmother stayed with me.

"I never shall forget my first day at the studio. I was turned over to the wardrobe woman, who immediately took me under her kindly wing.

"'Mildred! Pauline!' she called to two girls who were sitting near us. 'Come and meet the new girl!'

"I almost fainted when she introduced them as Mildred Harris and Pauline Stark! When she called another girl, and introduced her as Dorothy Gish, my head actually swam.

"'Wouldn't you like to meet Lillian?' said Dorothy.

"When she took me to the star's dressing-room and introduced me to her famous sister, I was speechless with joy and wonder.

"I never have forgotten that day when I was 'the new girl' in a studio. I hope I never *shall* forget it. If I should, it would mean that I had lost what I most need as an actress—a sympathetic understanding of other people.

"In the first picture I made at the Fine Arts," continued Colleen, "I played the second lead. In the next, I played the leading lady, opposite Robert Harron.

"In that picture I wore high-heeled shoes for the first time in my life. I walked like this," she said, getting up and suiting the action to the word. "About as graceful as a lame duck! They had to cut out every long shot of me in that picture, because of my ridiculous walk.

"At the very start," she went on, "I made up my mind on one point. Perhaps I ought to explain to you that my mother is of Irish descent and my father is Scotch. I suppose I got some traits from one side and some from the other. One of my eyes, for instance, is brown; the other is dark gray. Fortunately, they photograph alike.

"In temperament, as well as in the color, or colors, of my eyes, I guess I have both a bit of Scotch and a bit of Irish. And perhaps the Scotch in me was responsible for the decision I just spoke of.

"I made up my mind that I would not work *twice* for the same salary! Whenever the salary question came up, I would ask for more than I had been receiving. It might be only a dollar more; even fifty cents more! But there must be *some* increase.

"I figured that if I could not get any advance at all, it would be a sign that I was *not making progress*. If I was *paid* more, that would be practical proof that I was *worth* more.

"At first, my salary was fifty dollars a week. Then it was raised to seventy-five. After my two pictures with Fine Arts, that company went out of business. In spite of my exhibition on high heels," she laughed, "I was not responsible for this. The motion picture business was uncertain then, although this was less than ten years ago. Dozens of companies were formed. Only a few lived and prospered.

"FROM the Fine Arts I went to the Selig company. Inside of a year, it, also, went out of business. This happened several times; but somehow I always had friends who helped me to find a new job.

"In half a dozen years I worked in as many, or more, studios. I was with Marshall Neilan, and with Cosmopolitan, Goldwyn, and Universal. I even made pictures with the Chester Comedies.

"I remember asking a friend's advice

Just 15 Minutes *a Day*

What it will mean to you is told in the FREE BOOKLET below

HERE are two men of equal position and business income. Which of them represents you?

They read about the same number of hours each week. But one has no plan for his reading; at the end of the year he has little or nothing to show.

The other talks like a man who has traveled widely, though he has never been outside of the United States.

He knows something of Science, though he had to stop school at fifteen. He is at home with History, and the best biographies, and the really great dramas and essays. Older men like to talk to him because he has somehow gained the rare gift of thinking clearly and talking interestingly.

What's the secret of his mental growth? How can a man in a few minutes of pleasant reading each day gain so much?

Dr. Charles W. Eliot, from his lifetime of reading, study, and teaching, forty years of it as President of Harvard University, answered that question in a free booklet that you can have for the asking.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me, besides, the way to a vast new world of pleasure." This free booklet describes the contents, plan and purpose of

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

Every well-informed man and woman should at least know something about this famous library.

The free booklet tells about it—how Dr. Eliot put into his Five-Foot Shelf "the essentials of a liberal education," how he so arranged it that even "fifteen minutes a day" are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

Every reader of this magazine is invited to have a copy of this entertaining book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

This Free Booklet gives Dr. Eliot's own plan of reading

P. F. COLLIER & SON COMPANY
250 Park Avenue, New York City

By mail, free, send me the guide book to the most famous books in the world, describing Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics), and containing the plan of reading recommended by Dr. Eliot of Harvard. Also, please advise how I may secure the books by small monthly payments.

about my doing these comedy reels, and he said it would be good training for me. I would learn speed and timing far better than I could in the 'straight' parts, or the character rôles, which I had been doing.

"In this moving about from one studio to another I had a good chance to use the salary scale as a measure of progress. Every time I went to a new manager, he would ask how much pay I expected. And invariably I set a higher figure than I had been receiving.

"I always got what I asked for. But, in the first place, I did not demand large increases; and, in the second place, motion picture actresses, with any ability and experience, were scarcer then than they are now. That probably helped to boost my salary.

"But I did my share!" she declared. "Sometimes, for instance, when I was under contract to one company, there would be intervals when I was not working. Instead of sitting around, idly waiting until they wanted to use me, I'd ask if they would 'farm me out' to another company.

"Of course they were glad to do this, because it would save them expense. It meant nothing to me—except extra work; for *they* would receive whatever I earned during these outside engagements.

"But although I did not expect to receive for myself a penny more than my contract called for, I always asked these outside studios for a higher salary than I had been getting! In the practical Scotch corner of my mind, I measured my progress by that scale.

"When I was under contract at two hundred dollars a week, I went to another studio and was engaged to do a picture at two hundred and fifty dollars a week—the price I asked. Rushing back to my own studio manager, I breathlessly told him the good news.

"'That's fine!' he said. 'We'll pay you all the extra money you earn over and above the expense of 'carrying' you.'

"That shows you how wonderful people always have been to me. He didn't *have* to give me that extra money. My services belonged to him, at no more than the salary he had agreed to pay me. Of course I had obtained the increase by asking for it; but I had expected it would go to the company, not to me.

"THINGS went on smoothly enough for about five years. My salary kept growing and I always had plenty of work. I was very happy, too. My family had moved to California and we were all living in Los Angeles. Most important of all, I had met my John. . . . Do you want to hear about that?" she asked, half shyly and half eagerly.

"Of course!" I replied.

"Well," she said, "it was just like a miracle. One day, Marshall Neilan—who had been my director and one of the kindest friends in the world—asked me to go to a dinner party. He is a born matchmaker, and was always having, as he said, 'a new beau' for me. Nothing came of these benevolent efforts in my behalf; but he never seemed to lose hope.

"On this particular occasion, he promised the usual 'new beau,' and, as usual, I laughed and thought nothing more about it. They called for me in a motor car. But I did not get a good look at the stranger until we were seated at the table.

"Well," she said, shaking her head, "I never had believed in such things—but it was all settled in that one look. 'Bang!' just like that! I turned away, feeling kind of queer and dizzy. Then I stole another look. It was no use! I knew I had met the one man in the world, so far as I was concerned.

"And it was just the same with him. All over, in that first look! Queer, isn't it? If it hadn't happened to ourselves, we wouldn't believe it.

"He tried to tell me, that night, how he felt; but I couldn't think it was true. I laughed and said, 'You won't be saying these things in the cold gray dawn of the morning after!'

"The next morning, at seven-thirty, he called me on the telephone.

"'It's the cold gray dawn,' he said, 'but I repeat all that I told you last night—and I've a lot more things to say now! Please have dinner with me and let me tell you what they are.'

"So we went to a restaurant and he ordered a wonderful dinner. Enough for a pair of truck drivers! But we just sat there, looking at each other, without even touching the food before us.

"I remember that the head waiter came up and said, 'What's the matter, Mr. McCormick? Is there anything wrong with the food?'

"'Oh no!' said John. 'It's delicious!' . . . And we hadn't even tasted it.

"INSIDE of two weeks, we were asking Mother's consent to our becoming engaged; but she insisted on our waiting at least a year. If we felt the same at the end of that time, all right.

"We did feel the same—only more so! We wanted to be married at once; but Mother insisted on still another year of waiting. She wasn't going to have any marrying in haste and repenting at leisure, if she could prevent it.

"When our two years of probation were up, in 1923, John and I were married; and we've had a wonderful time ever since. I don't believe we will ever grow up—if growing up means getting dull and prosy.

"As Western manager of the First National Motion Picture Corporation, John has a big job. I have a pretty big one too. We both work hard. But no matter *how* hard we work, we are never too busy to play together! He keeps me constantly interested and excited, because I never know what he is going to do next.

"Once he sent me about fifty telegrams in a single day. There was a regular procession of messenger boys coming to the house. The telegrams told a long story, each one ending in the middle of a sentence, or with something that kept up the suspense.

"Just before we came East on this trip, I was working at night, and would get home just as John was leaving for his office in the morning. We pretended that people were trying to keep us apart, and that we had to meet by stealth. We would sneak through the rooms—in our own house, mind you—talk in whispers, snatch a kiss, and tiptoe away, as if we had to escape some terrible conspiracy. It was great fun.

"It's wonderful, too, to be interested in the same work, and yet not have our interests conflict, as they might if both of us were actors. His being in the production end of the business is an enormous help to me. We are working for the same company. So when we help each other to make good, we are also helping the company.

"I SAID I would tell you about the one time in my life when I was discouraged. It was about four years ago, after I had worked steadily for five years. If one company went out of business, some other manager was always ready to give me a contract.

"Then, suddenly, I found myself out of a job—and for six months I couldn't find a thing to do! I went to one producer after another, trying to get work. But there was a slump in pictures then, and not a single engagement was offered me.

"I just can't tell you how black the future looked. I found myself saying that I had gone as far as I ever would. It must be that I was through! And for the first time I knew what it was to be afraid.

"Then, one day, I suddenly realized what I was doing. And I said to myself: 'This has got to stop right now! You're going to hold the one thought of reaching the top!'

"I deliberately set to work at *believing in myself;* and with John to help me, for we were engaged then, I got past that period when I seemed to be at a standstill.

"John was then Western representative with First National, but he constituted himself my personal agent on the side. Armed with a battery of photographs of me, he would talk by the hour to Mr. Rowland, general manager of the corporation.

"Finally, Mr. Rowland said to him; 'For heaven's sake, stop talking about this girl! If you'd keep still for a minute, I *would* engage her. But you don't stop long enough for me to *say* that I will!'

"So, either because of John, or in spite of him, Mr. Rowland gave me a three-year contract, and I started making pictures for his company. The first one was terrible! I don't know how Mr. Rowland felt, but he certainly met the situation nobly so far as I was concerned. Instead of treating me as if I had failed him, he stood by me like a brick.

"Among the pictures which First National was planning to produce was one called 'Flaming Youth.' I read it, and begged them to give me the star part, that of a gay young flapper.

"Everybody, except Mr. Rowland and John, laughed at the idea; and if you remember me in the rôles I had been playing, you will understand this ridicule. In most of my pictures I had been the unsophisticated country girl; always poor, usually pathetic, and invariably and desperately good.

"When Mr. Rowland gave me the part of this flapper, ultra-modern, and with a spice of naughtiness in her make-up, all Hollywood simply hooted. People out there declared it was a positive joke. When the picture proved to be a great success, they could hardly believe it.

"I really did make a hit—my first big one—in that rôle. The company officials were pleased, but still rather skeptical.

"'One big success doesn't prove much,' they said. 'The next picture will tell the story.'

Good Pay, but – They are Not Getting Ahead

Their Problem solved by this Rational Worryless New Life

THESE harried people under this combination of best working and living conditions, can make a moderate savings account lead to real independence. . . . It is possible to make one of these farms pay for itself in a few years. Add year round outdoor life, a summer climate the whole year and an attractive location on the beautiful Gulf and next to one of the finest of modern cities.

Venice a Natural All-Year Resort

Venice life is divided between agriculture, industry and resort activities. Vacationists remark the variety of diversions. Here one finds the West Coast's only mainland beach and its most famous fishing grounds. Here is a modern city planned and built by experts, which fronts on the beach. Adjacent to it is the largest and most comprehensive farm development ever projected in America.

Venice hotels, with fixed rates at $5 to $15, and plenty of rooms at $5, serve fruit, vegetables, milk and cream received fresh each day from Venice Farms nearby. Conveniently located are well kept golf courses, tennis courts, quoits and other games, and excellent hunting and fishing are found on the tropical Myakka River.

[We limit this advertising to demonstrable facts supplied by the Venice Farm Board and officials in charge of the City of Venice.]

THE VENICE COMPANY
Owned by The Brotherhood of Locomotive Engineers

Human Independence as worked out by a 63-year old Organization

HOW blindly do some people go along barely fighting off expenses! And yet how narrowly they miss a competence, miss independence. Capable and industrious, they occupy positions for which they are not suited and struggle against conditions which weigh them down.

Such a practical organization as the Brotherhood of Locomotive Engineers, whose financial operations extend from coast to coast, has for more than sixty years made a study of living and working conditions with a view to solving the problems of just such people as these.

If your earnings, though good, fail to yield a real margin above expenses, you can well investigate what the Brotherhood is doing on its farms at Venice on the Gulf, to provide a substantial basis of financial independence for families or a newer, freer life, in Florida's health-giving air and sunshine.

Venice Farms, in tracts from five acres up, offer a great variety of speed-profit crops, three or four a year if you like—which reach markets ten to sixty days earlier than other sections, and thus command highest prices.

Behind every Venice farmer stands the Venice Farm Board prepared to render helpful, intelligent field advice and service. The farms are sold by the Board, at moderate prices on liberal terms, with the land cleared and ready to plant. Near at hand are the facilities of the Venice Demonstration Farm, the Venice Nursery and the Venice Dairy Farms.

Mail this coupon for the Illustrated Booklet containing information and photographs supplied by the Venice Farm Board and Resort Officials, describing the opportunity to lead a new free life under ideal conditions at Venice on the Gulf.

THE VENICE COMPANY
115 Venice Boulevard
Venice, Florida

"Well, the next picture was 'So Big,' adapted from Edna Ferber's novel. I had read the book and I begged for the part. Thanks to Mr. Rowland, I got it. But when this became known in Hollywood, people again ridiculed the idea. This time they were *sure* it was a joke.

"You remember that it is the story of a woman's life, from girlhood to old age: a beautiful and serious part. I worked and studied as I never had before; partly because I never before had been given such an *opportunity* for work and study.

"When we came to the scenes where I had to be an old lady, I used to spend as much time as possible with my grandmother. She had lost a son years before, and I would get her to talk about this son, so that I could study her expression and her gestures; how she clasped and unclasped her hands and put her fingers against her lips; all the little unconscious ways in which she showed feeling.

"Does that seem terrible to you? I don't think it was wrong. I wanted to be so real and true to life that I would reach the hearts of the millions who would see the picture. Grandmother helped me to do this.

"When 'So Big' was shown in Los Angeles, I took her to see it. As we were leaving the theatre she said, 'You know, in those last scenes you remind me of someone; but I can't think who it is.'

"After a moment, she suddenly turned and gave me a sharp look.

"'Young lady, you've been copying *me!*' she exclaimed.

"'Do you mind?' I asked.

"'No, dear!' she said. 'I'm glad and proud that I could help you.'

"You see how it is. No one ever has had a more loyal and understanding family than I've had ever since I was a child, dreaming a wonderful dream.

"WELL, before I made 'Flaming Youth,' people had said *that* picture would tell the story of whether I could, or could not, achieve a really big success. After it made a hit, they said the *next* picture would tell the story. But after 'So Big' was produced, they said it would take *four or five* pictures to tell the story!

"I didn't let this procrastination bother me! I just went on making pictures. I didn't worry—but I did work! And, measured by my old scale, the scale of salary, the work I did in those three years told at least a story of progress. When I made a new contract with First National at the end of that period—well, I was almost tempted to paste it on the blank page in my old scrapbook; for it certainly seemed to prove that I really had become the 'famous movie star' I had said I was going to be.

"It has been a case of absolutely knowing what I wanted; of believing that I could achieve it; of honest and hard work to get it; and of always finding friends who were willing to help me. That is a combination which ought to keep anybody from failure.

"I've told you about some of my friends, but not about all of them. For instance, I can't even begin to count the friends whom I never meet, but who write me thousands of letters—'fan letters,' as we call them. My secretary reads every one of these letters. I, myself, read hundreds of them every week. Not to please my vanity! But because I want to make pictures, not for some vague, impersonal 'public,' but for real men, women, and children whom I feel that I know and understand.

"Not long ago, I invited a lot of children living in and around Los Angeles, who had written me letters, to come to a party at the studio. Someone intimated that it was a publicity stunt. But it wasn't! I wanted to meet those children, far more than they wanted to meet me.

"It is just as I said to you a while ago, if I ever stop understanding, and *wanting* to understand, other people, I shall have lost the thing I most need as a motion picture actress. If that time comes, I shall be through! I am sure of it. But, believe *me*, that time never *will* come if I can help it—and I know I can."

THE biggest three hours in Adolph Zukor's life were spent in the anteroom of some motion picture magnates who did not care to see him. Smarting under their refusal to admit him, Zukor decided to strike out for himself, and he struck out in such a determined manner that to-day he is the biggest single figure in the motion-picture-producing industry. Next month you will read the story of this obscure immigrant from Central Europe, whose influence is now felt 'round the world.

Dot and Will Find Out What It Means to Be Rich

(*Continued from page 31*)

sort of thing all the time; they could afford to give it up for once. There was no reason why I should have to.

And I might have stuck it out if, along toward five o'clock, I hadn't walked over to Betty Bartell's to take her Christmas present. She lives in a little house right next to the Gorsons' big one, and just as I was coming out of Betty's in the winter twilight I saw Mrs. Whiting arriving at the Gorsons' to get their supper party ready. And Jack was with her, carrying the suit case she always takes with her. At the gate, he set it down and they stood talking. Then she picked it up and went on into the yard. Jack walked away; he'd evidently come just to have that few minutes with her as she went from one job to the other.

She went around to the Gorsons' side door, and just before she went in she stood on the steps a minute looking back after Jack, going down the street in his sailor's suit. And it was just exactly as though I were standing there on those steps, myself, looking down the street after my own Jack. It was too much, at Christmas time and all. I just couldn't stand it. I went right straight home, called up Mrs. Gorson and asked if I might speak to Mrs. Whiting a minute. I told her she needn't come to me the next day.

She was perfectly delighted, said she'd never forget it, and that just as soon as the holiday rush was over she was going to come and get up a dinner party for me for nothing.

I turned away from the telephone, simply aghast at what I had done. Sometimes, when you do something like that, you have such a happy, warm feeling of having done the right thing that it will uphold you through anything. But I didn't feel that way at all. I hadn't done it because I thought it was the unselfish and the right thing to do—I had done it because I couldn't help it. It just seemed as though I hadn't any will power at all.

WILL was aghast at what I had done too, though he didn't blame me for it. He said he couldn't help feeling the same way, but, gosh all fishhooks, what were we going to do? A dinner party of twelve coming the next night and nobody to help me—what were we going to do? What *were* we going to do!

I felt suddenly the horrified, frantic way you do in a dream when you find yourself out on the street with nothing on but your step-ins. I never in the world could get up that dinner alone. It wasn't humanly possible. I had always marveled at Mrs. Whiting's being able to do it in one day; but she is the most wonderfully efficient person in the world. And I had left the silver to clean and the best dishes, which are always dusty, to wash—all the little extras to do, myself, the next day. And then I had the babies to tend to; two baths, their washing, their meals.

I awoke suddenly to the utter horror of what I had done. My first frantic thought, of course, was of Mother and Mother Horton. But Mother and Father had gone to Minneapolis this year to have Christmas with Kathie, and Mother Horton was having us and the whole Verblen tribe of cousins for dinner Christmas, and would be simply stampeded with her own work.

If I stayed up all night and then worked all day, could I possibly manage? I didn't know that I could—in fact, as I thought of the dinner I had planned, I realized that I couldn't. I knew but too well how much longer every detail takes than it looks as though it ought to.

I stared at Will, petrified with horror at what I had let myself in for. He was an angel. He never blamed me one instant

Today its fast freights move *with swiftness undreamed of* six short years ago

In 1920, after the years of war-time emergency, American transportation faced the greatest crisis in its history.

The entire freight system all but broken down. Maintenance almost completely neglected. Box cars scattered thousands of miles away from home lines. Congestion in the Southeast, where few freight cars were needed. Shortage in the Northwest, where grain lay rotting in the elevators, where live stock grew too old for market before it could be moved.

All railroads suffered heavily, and Burlington with the rest.

Today, on the Burlington, a change which has almost revolutionized business in the Middle West! Faster, more economical, more efficient transportation than ever before.

Shipments move with a swiftness undreamed of six years ago. Second morning deliveries where third morning deliveries were made before. Ten hours lopped off a single fast freight run, Chicago to Denver. Hourly freight capacity increased by 28.3% per train. Switching time, by a new system of classifying freight, reduced often from two hours to thirty minutes. A fast freight on time to the minute for thirty consecutive days!

Millions of dollars saved each year for merchants and manufacturers, more than twenty per cent of whose capital has been freed by speedier deliveries!

All this, and more, in six short years! Here was a task which required *Burlington men*, trained by over two generations of successful railroading experience.

A task whose gigantic proportions you can truly judge only by referring to the map above. Follow with your eye the main lines of the Burlington:

Eleven thousand five hundred miles of lines! Serving thirteen of our largest states, one-third our total land area. Reaching practically every important commercial center between the Great Lakes, the Ohio River, the Rocky Mountains and the Gulf of Mexico.

The largest food-carrying system in the world! For within this tremendous area are produced: Two-thirds the oats, more than half the corn, more than half the barley, half the wheat, half the hogs, nearly half the cattle, nearly half the sugar beets grown in the United States; vast riches in iron, timber, coal, oil, copper, silver, gold, wool and cotton.

Such has been the most recent chapter in the seventy-five year record of achievement by Burlington men. These men, numbering 50,000, serve you with pride in their record and with the profit of their experience.

For 75 Years

The Burlington has completed seventy-five years of successful railroad service. The Burlington has never been in the hands of a receiver; it has never defaulted on a financial obligation. The Burlington has counted success as necessary to a useful existence. It knows no other way to provide the high class of service the public has demanded and which the Burlington has made its first purpose.

President of the Burlington

11,500 MILES OF RAILROAD IN THIRTEEN STATES

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for having been so weak, just said he couldn't help feeling the same way I had.

"I can stay home from the office all right to-morrow," he said. "I can freeze the ice cream and do lots of the rough work—maybe together we can pull it off?"

His voice was dubious, and well it might be. I couldn't reassure him as I'd like—I honestly didn't know that we could, even together. Nobody who has never got up that kind of dinner for twelve people has the least idea of what it means.

"Well, we'll snap right into it this minute," said Will. "What can I do while you're putting the babies to bed now?"

And we certainly did snap. Will looking over the cranberries and getting them on to boil. By half-past nine that night I was thoroughly scared. For all that Will was such a peach about it, he really didn't know how to do much without my being right there all the time to show him. And the next day, with both the babies needing attention nearly all the time—we'd never make it in the wide world. And at twenty minutes of seven Elaine and her husband would arrive, like the day of judgment.

At half-past nine, while I was cleaning the turkey, the bell rang. It was Howard Merton. His brother had come unexpectedly to spend Christmas with them, and would it throw things off too much if he brought him along to the dinner party to-morrow night? Before I had time to tell him my terrible fears that there wouldn't be any dinner party at all, the bell rang again, and it was Roger and Dulcie and the Frank Kirsteads, stopping by to find out why we hadn't been to church. There had been a special carol service and everybody had been there.

I told them what had happened. For a minute, they just stared at me, realizing what a perfectly insane thing I'd done. But it was only for a minute. And then:

"WELL, I can see it's up to the old home guard," said Dulcie.

"Of course," said Mrs. Frank Kirstead. "I guess I can get Aunt Laure to take Frankie to-morrow. I'll be here at half-past eight."

"So will I," said Dulcie. "I'll have to bring little Dulcie right along; but she sleeps most of the time; we'll just put her up-stairs."

I shall never forget that heavenly moment! The ax wouldn't fall. The girls were going to help me out. I told them shakily how I'd expected to stay up all night; but they said not to be a goop, go on to bed, we'd manage all right.

While we were still talking and planning, Rosie Merton arrived. She said when Howard got over to our house she always had to come after him to get him home. His brother was there with the children, so she sat down while we told her what was up. Instantly there was another recruit to the cause.

"I can't leave the kids to-morrow," she said; "but I'll mix the salad at home and bring it over. You say you're going to have aspic jelly with mayonnaise? I can make that, all right. And I'll make some of my cheese-and-paprika crackers to go with it."

"You're an angel, Rosie," I said. "But don't bother about the crackers—we can use plain ones. There's no use our trying to put over the kind of dinner party Mrs. Whiting would have."

"Why not?" said Dulcie instantly. "Why can't we put over just as swanky a dinner as Mrs. Whiting or anybody else? We're no slouches of cooks, any of us, if we do say it ourselves. And I guess we know how to set a table and serve a dinner that even Mrs. Whiting wouldn't be ashamed of!"

"Couldn't you get that colored man she has to come and serve it?" Mrs. Kirstead asked.

"Mrs. Whiting spoke of that herself," I answered regretfully; "but she said she couldn't honestly advise it. She says he's worse than a total loss if she isn't right on hand to furnish the brains."

"That's a shame!" said Mrs. Kirstead. "His white coat and slick quiet ways do certainly add just the right touch."

"Never mind," said Rosie stanchly. "I guess our crowd can pull a party that will impress California without any outside help. Here's to Montrose!"

"To Montrose!" Will echoed. And because everybody's coming to the rescue like that was such a heaven-sent relief, we opened some ginger ale and drank the toast with as much gayety as though the whole thing were a gorgeous joke instead of the crushing responsibility it had seemed a mere hour ago.

AND a gorgeous joke it remained. Someone must have called up Scott and Corinne and told them about it, because at half-past seven in the morning Scott arrived with a perfectly beautiful nine-by-twelve Chinese rug that he and Corinne had got all their relatives to pool their Christmas money and buy for them.

"To help brighten up your 'little home,'" said Scott, moving our chairs back and unrolling it on our floor, giving the living-room a simply unbelievable air of luxury and riches.

Dulcie, who is the only one of the crowd who has sterling silver, arrived at eight, with little Dulcie in one arm and her entire dinner service in the other.

"Thank goodness, the monogram is so twisty nobody can read it. All you can be sure of is the first D," she said; "and that stands for Dorothy as well as Dulcina."

Mrs. Frank Kirstead came with the Sheffield platter her grandmother had left her, and saying that Frank said we were to use their new car to go to meet the train. It's a perfectly stunning car, though they've been sorry they splurged on it, it costs so much to run it.

"Frank says it will make such a nice setting for the 'small-town sweetheart'," said Mrs. Kirstead. At which we all giggled.

In fact, we laughed and giggled all day long. Many hands make light work and they didn't spoil the broth, either. Will froze the ice cream, and put the extra leaves in the table and polished the silver, and in general did the heavy work. We three girls divided up the rest of the preparations and took care of the babies. And it was all such fun. We hung holly wreaths in all the windows, and put tall red candles in all the candlesticks in the house, and Will kissed Dulcie under the mistletoe and we sang "Oh, Lady, Be Good," while we were stuffing the turkey, and "Only a Sailor's Sweetheart" while we peeled potatoes and frosted the cake.

At noon, Corinne came in with some almonds she'd blanched and a kettle of soup for our lunch, and a dozen perfectly heavenly blue glass salad plates that she'd just got for Christmas, and that she insisted on my borrowing for the party. She stayed and ironed out my best tablecloth, which had got creased in the drawer.

Then Dulcie and I started to set the table, singing "Always" while we did it, Will turning the ice-cream freezer in the cellar and coming in on the bass. In the midst of the fun, Howard Merton arrived. He is a dentist, and his last two appointments had been canceled for the afternoon.

"Hey!" he shouted. "Did you say you wanted a man to wait on the table? Rosie and I've got it all doped out. We've elected me. As near as I can see, all this colored man has is a nice, crisp, white coat and slick, quiet manners, and I've got 'em both. Here's one of my brand-clean office coats. Rosie spent my dinner hour coaching me: 'Serve to the left; remove from the right; take one dish at a time.' I thought of blacking up; but Rosie says I'd better be English, that's even classier than being colored."

"Oh, you couldn't wait on the table!" I protested.

"But why not?" Howard demanded. And "Why not?" Dulcie and Mrs. Frank Kirstead echoed, delighted with the idea.

"Howard's brother being here will make the table just even—and it will keep us from sitting down thirteen," said Mrs. Kirstead, who is terribly superstitious.

I'm not superstitious at all, but it had occurred even to me that thirteen at the table, specially on Christmas Eve, did seem like taking unnecessary chances—you can be conservative without being superstitious. Besides, everything comes by the dozen; we'd have had to use the odd dishes and napkins and everything. Will, appearing from the cellar, licking off the dasher, said:

"Sure, that's the best idea yet. Mert's got just the face for a butler, kind of sad and dumb!"

At which Howard chased Will outdoors and got the dasher away from him, and the fun went on.

There was a tremendously serious half-hour or so around six o'clock while everybody stopped fooling and got right down to business. Everything was timed to the minute. Mrs. Kirstead would put the twins to bed while Will and I went to meet the train; Dulcie would stay out in the kitchen till the last possible minute, to be sure about the turkey; Scott and Corinne would arrive a little early, so as to entertain Elaine and her husband while I slipped out in the kitchen after Dulcie'd gone, to make the gravy.

AND the funny part of it was that everything worked. Just exactly as it was planned. You'd think something would be sure to go wrong at the last minute; but nothing did. Will and I arrived at the depot in the stunning big Kirstead car just long enough before the train pulled in, so that there was no feeling of fluster. Elaine and her husband stepped out of the last Pullman exactly as per schedule. Elaine looked just as she used to at college, little and blond and pretty. She had on a perfectly gorgeous kolinsky coat and a close little gold-colored satin hat. Her husband was about forty-five, and you could tell just to glance at him that he was

3 8/10 *miles—the distance from the heart of Miami to its finest suburban unit, Coral Gables*

THE future of Coral Gables is indissolubly linked with the future of Miami. Their boundaries coincide for a distance of 13 miles. Every dollar spent in Miami and every addition to its population build Coral Gables' values. Coral Gables does not need to rely only upon its own resources, dependable as they are. For each of these cities shares in the other's prosperity. In fact many of Miami's prominent business men, literally hundreds of them, have chosen Coral Gables as their permanent home. Coral Gables alone offers the high type of suburban life that such people require. It is spacious and healthful, wonderfully beautiful in architecture and landscaping, and all shops and industries are permanently zoned away from the residential sections.

The selection of Coral Gables as the most desirable location in the Miami district has not been confined to home builders. When the site for the great Pan-American University of Miami was considered, Coral Gables was chosen. When the magnificent Miami-Biltmore Hotel was planned, Coral Gables was selected. Miami banks, business houses and social organizations are establishing branches and constructing buildings in Coral Gables. The new Ponce de Leon High School group, drawing pupils from the entire southwest section of Miami, is in Coral Gables.

In volume of building construction, Miami was the twelfth city in the United States during the first 6 months of 1926. In the same period, Coral Gables' building volume almost equaled that of Miami. The amazing rise of Miami from a village to a great city in 30 years is one of the most dramatic chapters in business history. As the gateway to Latin-America, as a world port, as the possible metropolis of the South, Miami's future seems as brilliant to the international economist as to the local business man—and where Miami goes, there goes Coral Gables. . . . Will you go with it? Write to Dept. A-2, Chamber of Commerce of the City of Coral Gables, Florida, for facts and full information.

Did you realize that the city of Miami, itself, bounds Coral Gables on two sides for 13 miles? Along the Atlantic, from Key Biscayne to Ragged Keys, Coral Gables' boundaries extend for 15 miles, and in addition there are about 6 miles of bay frontage, and about 25 miles frontage on canals and lagoons now partly completed. Its area is 16 square miles or about 10,000 acres.

This is the residence in Coral Gables of Clifton D. Benson, senior member of one of Miami's foremost law firms—Benson, McGarry and Sullivan. In the four-month period between May 1st and September 1st of this year, 71 homes in Coral Gables were bought by residents of Miami through a single broker.

The skyline of Miami. This magnificent city of 200,000 estimated population has but one suburb adequate to the needs and tastes of its best citizens—Coral Gables. The unequaled living conditions of Coral Gables are proving as irresistible to Miami citizens as to residents of northern cities.

A Unit of Greater Miami, Florida

The Coral Gables Rapid Transit Corporation gives frequent trolley service over its 17.2 miles of track in Coral Gables and Miami, running directly into downtown Miami over two separate routes, supplemented by bus services covering all residential areas.

rich and important; she hadn't been bluffing any on that.

Elaine kissed me, and we introduced our husbands. Then she glanced at the bags the Pullman porter had set on the station floor.

"Now you must let us get a taxi," she said. "And hadn't we better check our bags, leave them right in the station? We won't need our evening things, will we?"

Oh, Elaine hadn't changed one bit! Just taking it for granted that of course we'd planned to take them home on the street car. And that a traveling dress would be plenty good enough for any party we'd give. The satisfaction of answering casually:

"We have the car here. And if you don't mind dressing—I imagine the others will."

"Oh, no, of course we don't mind dressing," Elaine hastily retrieved her error. "We nearly always do dress. I just thought—"

But in spite of her hasty recovery and the supercilious "I just thought"—left tactfully unfinished—I could see that I had given her a bit of a shock. And the sight of the Kirsteads' car gave her a bigger one. It is a tremendously impressive car.

AS WE switched on the little ceiling light to get in, I saw that there were two fresh red roses in the little glass vase. If that wasn't sweet of Mrs. Kirstead! As we reached home, the porch light was switched on from inside, and Howard, all crisp and white, was at the door to take the men's coats. I didn't dare meet his eyes or Will's for fear I'd laugh, just hurried Elaine up-stairs to our room.

Mrs. Kirstead had turned on my dressing-table lights, and I saw Dulcie's lovely rose satin comforter folded across the foot of my twin bed and Corinne's blue satin one on Will's. I've always yearned for a satin comforter of my own, but I've never got around to make one.

The doorbell rang and Scott and Corinne arrived, to the very second of their promise. Then I heard the back door close, and knew that the turkey was all done and Dulcie was cutting across to her own back door; knew that she would arrive at our front one in about fifteen minutes, in her apricot dress and gold slippers, looking like the kind of girl who wouldn't know how to boil an egg.

Somebody had touched a match to the fire in the living-room at just the right instant, so that it was blazing brightly when Elaine and her husband came downstairs. Everything went as slick and smooth as it does in the big Curtis house with their three servants. And, some way nicer. Three servants seems prosperous; but this was more fun.

And the dinner went off just exactly as we had rehearsed it. Dulcie had a ring of tiny crisp sausages all around the turkey platter; Rosie's aspic jelly is always better than anybody else's; you can't buy store-blanched almonds that taste like Corinne's. Howard never so much as dropped a fork. His nicely kept dentist hands were just as deft with the finger bowls as they are with the electric drill. And never once did he change his expression from a regular butler look, solemn and haughty.

Long before the demi-tasses appeared on the little table before the living-room fire—the coffee in a beautiful silver urn that I had never even seen before—Elaine's spirit was completely broken. She wasn't one bit smug and patronizing. She couldn't be, she was so thoroughly on the defensive. You could fairly feel her thinking up things to say that would show us that she wasn't any slouch, herself. I saw her studying Dulcie's apricot dress with that sidelong look of reluctant respect that she'd never have wasted for a second if she'd dreamed that Dulcie had made it herself.

As everybody had given their best cooking for the dinner, so everybody gave their best conversation for the evening. Mrs. Kirstead, who had been to New York that fall, spoke of the new plays she'd seen. Roger Lane, who is representing a big Chicago stock and bond house, and is said to be doing awfully well at it, discussed market conditions with Elaine's husband—who listened with much more attentive interest than he probably would have if he'd known how few stocks and bonds Roger has ever bought for himself.

There weren't many jokes, of course. Elaine's husband was the kind of person you couldn't imagine joking with, quite heavy and solemn. Elaine played up to him, all the time, regular baby-doll stuff. Called him "Daddy." You could see that he was crazy about her. I'm sure the one thing that saved the evening for her was showing us the little-finger ring he'd given her for Christmas, a diamond that looked as big as a soup plate.

"I just tell Daddy it's almost vulgar," she laughed proudly in an undertone to Dulcie and me. "I'd really just as soon have something modest and simple—like Dot's"—glancing at my pin-point of an engagement ring. But that was positively the only Elaine-ish remark that she was able to rise to the entire evening.

And when, at quarter of twelve, Howard appeared again to hold the coats and carry their bags out to the car, and Will and I drove them down to their train, she bade me good-by in a respectful tone that proved what a staggering success the evening had been.

RIDING back home in the big Kirstead car, Will and I discussed them chummily. We both thought the same about her husband—you could tell he was an important person by the way he took it for granted that when he spoke any matter would be settled—there'd be nothing further to be said on the subject.

"He's got his wife right where he wants her, too," said Will. "She may be airy with you girls, but you can bet that in the bosom of that family what 'Daddy' says, goes!"

When we got back home, we found that the girls had got out of their evening dresses and into bungalow aprons, and the boys had tied rubber aprons around their necks and were all pitching into the dishes. We fell to also, of course, and with eleven people all at it that frightful mess just melted away like a February thaw. And along with our aprons we all put on our own lines of talk, again; cut out the New York plays and the new books and the market conditions. We kidded Howard and sang "The Bootlegger's Daughter," and broke a goblet and one bread and butter plate. Frank Kirstead stood under the mistletoe, and said we girls would have to seize the opportunity quick, he wasn't going to stand there and look inviting all night.

And finally, about one o'clock, we were all through. Everybody agreed that the party had been a huge success, a credit to the Middle-West, as Roger said. Scott rolled up their rug, and Dulcie got her knives and forks, and Corinne her plates, and Mrs. Frank Kirstead her platter. There was a rush of cold air through the front door, a last volley of laughter and "Good night" and "See-you-soon" and "Merry Christmas!" And Will and I were standing alone in the doorway.

We stood there, Will's arm around me, till the last flivver tail light had faded away down Water Street. Then we shut the door and turned back into the living-room.

"I suppose we'd better fix the babies' things before we go to bed, even if it is late?" Will asked, his voice lowered under the hushed spell.

I nodded, and we went to work in silence. Even the fire had stopped blazing and crackling, just shining now with a still, steady glow. We hung one little stocking at each end of the mantel, brought out all the babies' toys and put them under the tree.

AT LAST everything was done, the funny little stockings bulging, the stuffed dolls and woolly dogs balanced in the evergreen branches, one low baby rocking-horse on each side of the tree. Maybe it was just the firelight and the lateness and the stillness, maybe it was the baby toys waiting there—suddenly I thought of "Little Boy Blue," of those other waiting toys:

And they wonder, as waiting the long years through
In the dust of that little chair,
What has become of our Little Boy Blue
Since he kissed them and put them there.

Would there be a Christmas Eve sometime when I'd look back at this one, would see again the firelight glistening on the Christmas tree, the babies' toys waiting—I felt hot, quick tears come smarting to my eyes. Will, who had been standing looking over at the little horses, rocking one absently with his foot, looked up suddenly, came over and put his arm around me. In the stillness, we could hear a crib creak in the room above.

"Remember what we were saying one night last summer, Dolly?" he asked. "How you might be rich and never know it?"

I nodded, caught his hand and held it tight. Thinking of Mrs. Curtis, afraid that by another year she might be alone in her big house; of Mrs. Gorson, worrying over parties to keep her children home; of young Mrs. Jimmie Jason, whose husband didn't love her any more. Of Elaine, with diamonds and kolinsky coats, instead of young love and babies and fun and friends.

They had all given their thousands to the Christmas funds. I was glad *I'd* been the one to give Mrs. Whiting Christmas Eve with her boy. Not that it seemed much of a gift—not standing there with Will in the firelight, knowing together, if only for a wise, fleeting moment, what it means to be truly rich!

Prince Albert is surely one grand and glorious smoke

THE longer you stay with this fine old brand, the more convinced you become that no other tobacco is like it. Fads may come and fancies may go, but good old P. A. keeps right on, holding old friends and acquiring new ones by the thousand. And no wonder.

The very fragrance of P. A. in the tidy red tin makes your mouth water for a taste of it in your pipe. The very first pipe-load tells you the aroma has not held out false promise. Cool as the forward deck. Sweet as sunshine after rain. Mellow as moonlight.

No matter how hard you hit it up with your jimmy-pipe and Prince Albert, your tongue never says "stop." Slow or fast. Morning to midnight. Each pipe-load tastes better than the last. P.A. is a pal you can count on to cheer you or cheer *with* you, whatever your mood.

If you haven't smoked Prince Albert, you don't know complete jimmy-pipe joy. You may *think* you're all set in the matter of smokes. Never mind. Try Prince Albert. Buy a tidy red tin today. Then you will know "The National Joy Smoke" is no mere catch-phrase.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

The 45th Milestone

IN the years — now 45 years — since the Investment House of S. W. STRAUS & CO. was founded in 1882 —

Hundreds of millions of dollars of safe Straus Bonds have been underwritten and sold to tens of thousands of satisfied investors, all over the United States and in many foreign lands.

More than $200,000,000 in interest and principal of Straus Bonds have come due and been paid.

No investor has ever had to wait for payment of either bonds or coupons.

This record should warrant your confidence. We suggest that you write for literature describing safe Straus Bonds for January investment, yielding 5.75 to 6.25%. Ask for

45 YEARS WITHOUT LOSS TO ANY INVESTOR

THE FAMILY'S MONEY

We Claim That Our Budget is Now Foolproof

WE HAVE just lately discovered —and corrected—the fatal defect in our budget system. It was almost a year before we found there was anything wrong with our original plan.

There were two of us, living in an apartment in the suburbs of a large city on $50 a week. We divided our income as follows:

Rent	$10
Food	10
My clothes	3
His clothes	3
Maintenance	4
Recreation and development	4
Savings	16
	$50

At the beginning of each week, my husband divided the money as planned, placing in envelopes the money which it was my job to spend, and putting the rest in the bank. During the week, if I saw there was only a dollar left in the food envelope, and two days to go, for instance, needless to state I didn't buy lamb chops for supper. Likewise with the other envelopes.

SO FAR, so good. The scheme worked beautifully. You will observe that, according to our budget, we were saving $16 a week, a nice lot, we thought. But we were alarmed to notice that our savings account didn't grow as it should.

We went back over our accounts, and found the leak directly. It was that old ogre, emergency, that was eating our savings. As long as everything went along in the ordinary routine, the budget worked on oiled wheels. When we had trips, or Christmas gifts, or a new piece of furniture, or moved, we had no surplus in our various funds, and we would say, "Well, we've *got* to have it!" and take it out of savings, with disastrous results to the same. It seemed as though we were saving $16 a week, when, as a matter of fact, what was really happening was that recreation, maintenance, and food were going into debt and borrowing from savings whenever anything special came up.

So we revised again, with a firm resolution to stick strictly to our new arrangement. We decided to save by sending our money once a month to a building and loan association. This made our saving inevitable. You can't write to the association and tell them you've had to move, and that the robbers charged thirty dollars to move you around the corner, and there's no money in the maintenance envelope, so please send back your last instalment.

The upshot of it all was that we decided to save less, and save it surely. We saved $10 a week, and put $2 more in each one of the envelopes that had been running behind. The extra $2 was not spent unless absolutely necessary. In other words, instead of planning to have my envelopes empty each week, I planned to leave each one with $2 in it. Then the $2 was credited to food, or maintenance or recreation, and put into the bank, ready to be drawn on when we had many guests, the vacuum repaired, or new radio tubes.

We claim that our system is now foolproof. MRS. E. M. S.

EDITOR'S ANNOUNCEMENT: Beginning with next month's issue, this department will become THE FAMILY'S PROBLEMS. Heretofore, it has dealt only with money matters; hereafter, it will deal with all sorts of problems that are common to the average family, money matters included. There are scores of these universal questions that all families must face. For instance—getting along with relatives, with neighbors, settling quarrels among children, providing for education, selecting the best schools for the children, getting the right kind of books for home reading, controlling temper, dispelling gloom, answering questions about religion put by the children, selecting a place to live, finding time for recreation, and deciding upon the kind of recreation that is best, making arrangements for vacation, adjusting diverse tastes within the family, fixing of authority in the family, selecting the family's goal, apportionment of work about the home—and numerous others.

You needn't confine yourself to the strictly serious matters. It is quite a problem to keep the children from dropping crumbs—molasses-and-butter-covered crumbs—on the new parlor rug. And sometimes it is just as hard to make a husband stamp and brush the mud off his shoes before coming into the house. Perhaps, in your family, the husband hangs up his clothes neatly, and the wife doesn't put his things where he can find them. And perhaps—just *perhaps*, mind you—husband and wife have agreed that one or the other, or both, are responsible for the wasted money in the family, and that they will never again discuss financial affairs at the eating table! If any of this is true of your family, tell, in the interest of suffering domestic life, how it came to be true!

You have met and solved some of these problems, and now THE AMERICAN MAGAZINE invites you to tell specifically how you solved them. Your experience will be of help to others in the hurdle race of life. Do some careful thinking, select your family's great typical problem, state it definitely, and then relate in from one to two thousand words the story of how that problem was collared and thrown. You can tell the truth without fear, as no names will be printed with the articles! Address your manuscript to the Editor, The Family's Problems, care of THE AMERICAN MAGAZINE, 250 Park Avenue, New York, N. Y. All manuscripts accepted will be paid for promptly upon acceptance. These manuscripts need not be typed, though it is preferable to type them. Be sure to put your full name and address upon each manuscript submitted.

Left in the snow bank overnight —

In the morning TEXACO flows freely!

But you needn't wait for the first cold, snowy night to make sure of your oil. Try it with any other oil—and Texaco—anytime. Place the two bottles in a jar of crushed ice and salt for half an hour. The temperature will drop to about zero, yet Texaco flows freely.

When it begins to freeze, any motor oil not free of paraffin, begins to thicken

Then begins the starting resistance that burdens your battery—when every moving part is wiping its working surface bare of lubrication. One short minute of this action is more destructive than many miles of ordinary driving.

No such condition is necessary — Texaco Motor Oil flows at 32°, at zero — and below. For Texaco is free of paraffin wax, tars and cylinder stock. Be sure that your oil meets the severe test of winter driving. *Golden Texaco does.*

THESE CHOCOLATES INTERPRET ABOVE ALL THINGS THE CORRECT THING IN CANDY

The famous Reception Lounge of the Ritz-Carlton Hotel, where, it is said, during any twenty-four hours, every really smart person in New York may be seen.

YET you can obtain them, to meet the most unexpected of demands, almost instantly, at a store no more than a square or two away, no matter where you may be!

The new Choice Box typifies—probably better than any other—the socially accepted candy gift throughout fashionable America today. Twenty-two different kinds in one box to prove Variety IS the Spice of Life.

ALL things have their *modes.* In candy giving, it is Johnston's . . . among the leaders of things social in smartest gathering places of smartest America.

Thus in choosing this noted make of candy, one is sure of doing that which is admittedly the *correct thing,* either for one's own home or for a gift of thoughtful graciousness—

Conveniently available at the better stores throughout America, you can obtain Johnston's Chocolates at a moment's notice—any time—anywhere. The *new* Choice Box—containing twenty-two different kinds—is suggested as an ever welcome gift.

You will find a wide variety of Johnston's Chocolates at one of the better class stores in your neighbourhood.

Must you wheedle your child into eating?

Here's the answer!

Children love Wheatena!

The very aroma of hot whole wheat spurs the laggard appetite. The first mouthful is a revelation in deliciousness. After that, children ask for Wheatena themselves. They prefer its toasty golden goodness. So digestible doctors recommend it for infants during the first year.

Mother coaxes. Father is helpless. The child refuses to eat. Do you have this battle in *your* home?

Is it really the child's fault—or is it the food? Few healthy children will refuse to eat a delicious appetizing cereal.

Many mothers have told us that since they have been serving Wheatena they have, to a large extent, solved the feeding problem. Children welcome Wheatena and reach for it eagerly, often asking for a second helping. They never tire of its captivating whole wheat flavor, even if it is served every day.

Why not begin today serving Wheatena? Your family will agree that never have they tasted such flavor in any other food.

Wheatena is whole wheat at its delicious best, containing nutriments so essential for health, growth and energy; Proteins for body-building; Carbohydrates for energy; Mineral Salts for bone and tissue; Vitamins B and E for protection and vigor; Bran for safe regulation.

Treat your family to a Wheatena breakfast tomorrow. Ask your grocer for Wheatena—in the yellow and blue package. On your table in three minutes, at less than two cents a pound

THE QUICKEST WAY

The old quill pen was a slow and inefficient tool with which to produce a thousand copies of a letter or a document. The Mimeograph is the speediest and most efficient instrument that human ingenuity has devised for doing that job—and doing it well. Two extremes! Typewrite a letter, a bulletin, a form, or trace by hand a diagram, an outline drawing or a penwritten message, upon a Mimeograph stencil sheet, and within a *few minutes* the speedy machine will deliver a thousand exact copies thereof—at almost negligible cost. What was once the work of days and weeks is now done in minutes. Because it has so remarkably economized both time and money, the Mimeograph has become a tool of *great importance* in modern business and educational activities. Upon request A. B. Dick Company, Chicago, will send you free booklet showing how modern duplicating work can be well and easily done—the quickest way.

WHEN BETTER AUTOMOBILES ARE BUILT, BUICK WILL BUILD THEM

Praise for one Buick model is *praise* for all - -

Whenever motor cars are discussed, you are certain to hear Buick favorably mentioned. Notice that no particular Buick model is singled out for this praise.

This is significant. It points to the single standard of Buick chassis design.

Every Buick feature belongs to every Buick chassis, regardless of wheelbase or selling price.

Every Buick today has the engine that is *vibrationless beyond belief.*

Every model has Thermostatic Circulation Control, Vacuum-Cleaned Crankcase and many other vital advancements lately added to Buick efficiency.

Buick can do it because the savings of enormous volume are poured back continually into Buick value.

Buy any Buick with confidence, and with great expectations. It is supreme in value at its price. Its performance and high quality will win your warm approval.

A child who grew up and learned the safe way to loveliness

ONCE there was a little girl who believed that if one only *could* catch enough dew to wash one's face, loveliness like April would result!

As she grew older she collected several other strange ideas about beauty. To her skin, which was a very nice skin indeed—a little thin and sensitive, perhaps—she gave all sorts of elaborate treatments, instead of cleansing it with simple soap and water. Nothing spectacular happened, but her complexion began to lose its transparent freshness. She consulted her family physician and, at his suggestion, abandoned her involved cleansing methods.

"In fact," said she, telling us the story after she had grown to charming womanhood, "I returned to Ivory Soap and water, with a little cold cream now and then. And I'm sure that's all one needs."

For many years physicians have been urging simple care for the complexion. For a healthy skin, they say, soap-and-water is the *safest way to real cleanliness*, the only basis of skin beauty.

Of course, the soap must be pure. Only the purest soap can cleanse gently enough to guard your delicate skin. Ivory *is* pure—so pure that for nearly fifty years doctors have recommended it for the sensitive skins of tiny babies. Daily thorough cleansing with Ivory, cold rinsings, a little pure cold cream if your skin is dry—and you have found the safest way to your complexion's natural loveliness.

PROCTER & GAMBLE

SIR CHARLES FINDS BEAUTY IN ARCADY!

"Oh sir, have you seen a lamb with a pink bow at his left ear?"

"Lynette! You?" gasped Sir Charles. "Wait, don't run away. You must answer one question. Why did you desert me at the very moment of our wedding?"

"I—I just couldn't bear court life any longer. And when your sister, the Duchess, kept telling me and telling me that I really should spend an hour every day with lotions and remarkable soaps to keep myself beautiful, I—well, I just *had* to run!"

"Poor, misguided child. But you are more beautiful now than six months ago."

"That," smiled the lovely Lady Lynette, "is my secret. I met the nicest shepherd in the Forest of Arcady, and he promised me that I could wear adorable smocks and need never use any soap but Ivory. So, of course, I married him."

"Well, well," said Sir Charles. "Fancy that!"

The Biography Of A Puppy

By Albert Payson Terhune

SANDY'S first earthly sensation was of groping blindly, hungrily, squirmingly, against his mother's furry underbody; along with five similarly squirming and hungry and helpless canine atoms.

He weighed little more than a pound. He was blind. He could not walk. He could not stand. All he could do was to cluck like a hen and to squirm and to eat and to sleep. That was his life. He looked like a plump rat of no especial color.

When the babies were barely two days old, one of Sandy's brothers ceased to eat; and began to make queer intermittent shrill sounds that grew fainter, and fainter, hour by hour. "A squeaker," grumbled the Master, as he and the Superintendent stood above the litter.

"We'll just give him a drop of paregoric and bundle him in hot cloths, and do all the other things. But it won't be any use. A newborn collie puppy is either the easiest or the hardest animal on earth to raise. Some of them couldn't be killed by an ax. Others of them wouldn't live if they had three doctors and seven trained nurses working over them. The longer I breed them, the less I know about them."

The pitiful little "squeaker" died—a squirrel-sized and no-colored and futile morsel of doghood which might have grown into an international champion or into a life-saver or into the only chum of some solitary man or woman, or into a sheep-killing scourge. All those potentialities, and a hundred more, had lurked within his tiny brain and body. All had been wiped out by a single twinge of colic.

Lime water had been added liberally to the dam's food, to avoid this very thing. Yet it had happened. In dog-raising, the only flawless bit of revealed wisdom is: "Anything can happen."

But this is the story of Sandy: not of his less lucky brother.

At twelve days, Sandy had begun to look less like a plump rat than like a plump rabbit. His vague color had settled for the time into a gray-pink, with blackish blotches here and there. At twelve days too, his closed eyes opened for the first time. Two of the other pups already had their eyes open; two more had not.

Few of the countless absurd theories about dogs are more false than the belief that their eyes always open on the ninth day. Far more often they open anywhere from the eleventh to the fourteenth.

Sandy could see his surroundings, such as they were. He was housed in a room some seven feet long by a yard wide. A foot-high board cut off the far end of this room into a yard-square "brood-nest" whose flooring was cedar shavings, over which a soft old blanket had been tacked. Here Sandy had been born. Here must he stay, for another week. Then the board would be taken away and he and the other puppies would be at liberty to crawl clumsily all over the room.

FOR days thereafter he did not make any particular use of his new gift of sight. His acute sense of smell was enough for him. It told him, in pitchest darkness, just how and where to find his mournful-eyed, red-brown mother, Sunnybank Victrix. Her crooning little call was all that his flattened

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ratlike ears troubled to listen to.

His days and nights were taken up in eating and in sleeping. Nature was putting growth and strength into him in this immemorial way of hers. For he had an incredible lot of growing to do. A normal-sized man, making such proportionate increase in a single year, would become taller and broader than the Statue of Liberty.

LONG before Sandy made the least use of his beady eyes, they had caught the troubled attention of the humans at Sunnybank. For Sandy's eyes were a brilliant pale blue, shot with occasional brown splotches—the eyes of the typical blue merle collie. His sire, Sunnybank Gray Dawn, was a gigantic blue merle; yet he had dark brown eyes. In this, his baby son, the merle traits cropped out in the blue eyes as well as in a tendency toward the silver-gray coat of his sire. But the coat was more yellow than gray, giving it a ludicrous pinkish tinge.

In brief, Sandy was one of those chromatic anomalies, a "sable-merle" collie; with all the physical faults of both his parents without the physical perfections of either. Such a dog cannot hope to excel in the show ring or to command a high price as a pet. He is a misfit.

Luckily, Sandy had not the remotest idea he was any different from his handsomer brethren and sisters, though he had reached the age when he and they could romp awkwardly and slowly; growling in falsetto excitement as they rolled around the soft brood-nest in baby mock-warfare.

When he was three weeks old, he had an annoying experience—his first of many. His education began. The Master came into the brood-nest, an hour after the puppies' mother had been sent out for a run. He carried carefully the well-scalded top of a baking powder tin. It was full of warm milk into which part of an egg had been beaten.

PHOTOGRAPHS BY DREW B. PETERS

Sunnybank Sandstorm, better known as Sandy, playing with Victrix, his mother. Gray Dawn, Sandy's father, is lying in front of Mrs. Terhune. Victrix is in the center; and Sandy is at Mr. Terhune's feet at the right. (In the oval) Sandy seeking a very dead fish for his master

Setting the tin on the floor, the Master picked up one of the five pups at random. The pup happened to be Sandy. Putting the little fellow on the floor in front of the milk, the Master thrust Sandy's nose into it.

The nose was not kept there longer than the fraction of a second; but long enough to cover it with warm milk. It was a sticky and disagreeable sensation. Sandy resented it. He tried to wriggle free. Then he sought to cleanse his milky nose by washing it with his tongue. To the hungry baby's surprise the milk tasted good.

By the third day thereafter, he was able to crouch in front of the tin and to lap gawkily and half-ineffectually at its contents. Much of the milk was spattered broadcast and much more rolled off his unaccustomed tongue. But more and more of it, every day, went down his throat. Within a fortnight he could drink milk like a veteran, and could even begin to chew the bits of soft and soaked bread in it.

BUT he preferred to dine as always he had dined since the day he was born. There was too much effort and too little result in the tedious lapping. Here, however, came his second annoyance; this time a real grievance.

His big and gentle mother, Victrix, no longer summoned him to her furry side with that sweet little crooning sound. Indeed, she pushed him away when he sought to nuzzle against her. When he refused to take the hint, she growled, and then snapped dramatically at him.

Her strong jaws could have shorn the fat baby in two. But Victrix took good care they should not so much as pinch him. Her only object in the show of ferocity was to scare him into relying on his food dish alone for dinner. After a few such rebuffs, Sandy ceased to grieve wonderingly at her new crossness toward him; and he learned the lesson her snaps and growls had sought to teach.

It was not that Victrix loved him and her other babies no longer. She would fly ragingly at any other dog that loitered past the brood-nest or that nosed inquisitively at her young. But she was giving him his first lesson in self-reliance.

Then came a day when the five puppies and their mother were transferred into a space far larger than the Kansas prairies. To human eyes, their new home was merely a shaded wire enclosure, perhaps thirty feet long by twenty feet wide; with a low dish into which fresh water was forever trickling; and with a green-painted kennel house raised a foot or so above the ground, a sloping runaway connecting its entrance with the earth below. But to Sandy the spaciousness of his new abode was limitless.

The five pups, on fat legs which still were a bit shaky, explored slowly and marvelingly every inch of the vast territory. Hours a day were taken up in the exploration. Then, as the summer waxed hotter, they found why the long kennel house was so far above ground. Under it, there was soft and cool earth in which to grovel. A faint draft of air was passing through continually.

Here, a puppy could wallow deep in the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

dim-lit coolness, and could defy hot weather; only dashing clumsily out to greet such humans as might pass. For the first two weeks of his life, Sandy had been kept in a temperature of eighty degrees. Warmth and dryness are two of the secrets for keeping newborn animals alive. But now that he was two months old his coat was beginning to grow longer and thicker and fuzzier; and the cool of his earthy day-bed was refreshing.

FROM the time he and the others could waddle in the brood-nest, they had learned to look forward to the visits of the Mistress or the Master or of any of the Sunnybank workmen. From the first, they found it pleasant to be petted and talked to.

Now that they were living in the puppy yard, guests were brought out, every few days, to look at them and to pet them. For this was one of the Sunnybank theories: From babyhood, all puppies were taught to accustom themselves to be petted by strangers, and to understand that humans are friendly. Thus, none of them fled in terror to a far corner of the yard, as do so many puppies, at sight or sound or scent of unknown people. None had the faintest trace of fear or bashfulness. Out they would troop, as gayly as a comic opera chorus, when any human neared their yard.

Sandy was first of the five to catch scent or sound of such visitors. He it was that led the awkward gallop to the wire fence. He, too, it was that inherited most strongly of them all the battle secrets of his wolf ancestors.

Puppy play is an unconscious imitation of canine warfare. Sandy excelled in this. While the others were content to romp clownishly and purposelessly, he used brain and heredity in their sham battles.

Early he caught the knack of throwing his opponent off balance by a shoulder shove, and then of ravening playfully for the throat by the time the other puppy had fairly touched ground. Early, he learned the ancient wolf trick of feinting for the throat and then seizing a foreleg in pretended breakbone grip. Early he learned to lunge over an adversary's head and to catch him by the base of the brain.

He was not in the least quarrelsome. Never did he start any of the occasional hot little fights with which the pups punctuated their play. But, once attacked, he put into active use every inherited trick he knew. Always he won. Never, after the battle, did he bully his victim or hold grudge.

THE Master used to stand by the hour, to watch this incessant play. He was looking for something. At last, he found it. One day he said to the Mistress, who was watching the puppies with him:

"I've picked the dog I'm going to keep. I didn't plan to keep any of this litter; but I've found what I want. It's that little pinkish-yellow lop-eared chap; the one you call 'the Pink Puppy.' He wouldn't be worth a dollar to any professional breeder. But he has brain and he has pluck and he has heart and he has poise. Besides, he has a queer individuality that is all his own. He has more personality than the rest of them put together. He's going to be my house dog. I'll have him registered as 'Sunnybank Sandstorm.' We'll call him 'Sandy,' for short. I'm going to sell all the others. They're beauties, every one of them. Sandy is the only poor specimen in the lot. But I'd rather

42 Pictures Of Davy Crockett Help Run The Dallas "News"

"In every office of this newspaper," says George B. Dealey, head of the publication, "the hero of the Alamo looks down from the walls, as a reminder that the best policy is to be sure you are right, then go ahead"— Why Mr. Dealey regards efforts as more important than results

By George W. Gray

LAST summer I was in Dallas, Texas, to see Mr. George B. Dealey, the president and general manager of the Dallas "News." Before calling on the publisher, I decided to make a tour of the building, from the broadcasting station on the roof down to the great presses in the basement.

Up in the radio room my eye was caught by a steel engraving of a man. His old-fashioned dress and neckwear suggested a bygone age; but his long black locks and piercing dark eyes were features not soon to be forgotten.

I was still thinking of this striking countenance when, a few minutes later, I was conducted into the city-room on the third floor, and saw on the wall a duplicate of the picture. In the telegraph department, the picture again looked down on me. It confronted me in the editor's room, in the art-room, the composing-room, the press-room, and other departments. I began to feel haunted by it. And when at last I was ushered into Mr. Dealey's room, and saw another copy of the engraving on his wall, I could hold myself in no longer:

"Before I explode with curiosity, Mr. Dealey, please tell me whose face it is that confronts one everywhere in this building?"

"That is David Crockett."

I knew enough Texas history to remember that David Crockett was one of the six surviving heroes of the Alamo, and that he was massacred by order of General Santa Ana.

"But, why is his picture here? Is David Crockett one of the founders of the 'News,' or its patron saint?"

"He died many years before the Dallas 'News' was born," answered Mr. Dealey; "but I suppose it is approximately correct to call him our patron saint. His picture is here—in forty-two places—as a reminder."

"As a reminder of what?" I interrupted.

The publisher pushed back his chair from his desk and looked thoughtfully at the Crockett picture.

"There is a saying," he went on, unheeding my interruption, "to the effect that a man's worth is to be judged by his results. Mottoes have been coined to express the idea. 'Results count' and 'Nothing succeeds like success.' I have seen such mottoes hanging in offices, schools, libraries, and other places. But in my opinion—and it is based on more than sixty years' observation of life—results are secondary and not primary. One of the most valuable lessons I have learned in the school of experience is the importance of effort rather than results."

"That's a very interesting philosophy," said I; "but I don't quite see how it ties up with David Crockett's picture."

"I'm coming to that," he rejoined. "As I was saying, I believe that the effort you put into an undertaking is of greater consequence than the result you accomplish. You are not responsible, I am not responsible, for the results we get. How can it be otherwise? God alone can guarantee results. But we *are* responsible for the effort we make to get our results. So what really counts is the sincerity and quality of our efforts."

I nodded my approval of this sentiment.

"Nevertheless," continued Mr. Dealey, "a man usually gets praised only when he achieves some result. I recall reading a long time ago a remark attributed to Bismarck. He had represented his country at a very important international conference, and had accomplished all the results desired. The people were enthusiastic in their welcome when he returned, and thousands surrounded his castle and clamored for a speech. He refused again and again. Finally his secretary came to him and said, 'My lord, they want to acclaim and praise you.' Bismarck only shook his head, and muttered, 'What would they do if I had failed?'

"But what about David Crockett?" I prompted gently.

Mr. Dealey smiled. "I'll satisfy your curiosity at once," he replied. "David Crockett's picture hangs on our walls because we think he had the right philosophy of life, a philosophy which he summed up time and again in the simple phrase, 'Be sure you are right, then go ahead.' I don't say that he originated that principle, but his life was an exemplification of it.

"AND that's the principle on which we are trying to conduct our newspaper. I have had 'Davy's' picture put in every department in the building, as a constant but silent reminder that it is the effort that is put into a job that counts; that all we ask of our employees is that they make sure they are right, according to their best lights, and then go ahead. If every man in the organization works according to that fundamental precept, the management ought to be willing to accept responsibility for the results that follow.

"I am not blind to results. I want to produce a good newspaper. I have been working at that one job—and with this one publishing house—for fifty-two years, and naturally I am eager to have the paper grow. But I would rather have it a failure and know in my conscience that my efforts were right, than to have it a tremendous enterprise through dubious means.

"When a reporter is sent to get an item of news, we are eager that he should bring back the story. But we are much more eager that he should get it fairly and cleanly and write it sincerely, even if the final product lacks the kick of a faked or over-colored effort.

"The same principle applies in the business department of the newspaper—as indeed, it applies to all business. *How* we get our advertising and circulation is more fundamental than the amount of revenue we derive from it. I could cite many examples out of experience to illustrate this, but one case that happened only a few years ago will suffice.

"IT WAS during the period of the oil boom in north Texas. New petroleum wells were blowing in almost weekly, and oil-stock promoters swarmed in Dallas, Fort Worth, and other Texas cities. Much of their business was conducted by mail, and to get their offers of stock before the public they used newspaper space liberally.

"It was soon apparent that many of these promoters were offering far more than they could deliver. To sift the honest oil men from the dishonest was too formidable a task. So we decided in the 'News' office to close our columns against *all* oil-promotion advertising. At the same time, staff writers were sent to the various oil fields to find out the facts and report them truthfully.

"This policy represented our effort to do the thing that was in keeping with our standards, and we stuck to it, regardless of results.

"As was to be expected, many of the promoters boycotted the 'News.' Oil men canceled their subscriptions and refused to read the paper. The 'News' was

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

accused of 'killing business'—'blocking progress'—'besmirching the good name of Texas.' A number of the honest oil companies protested that an injustice was being done them, and no doubt it *was* hard to be lumped with fakers. But there was no other way for us to handle the problem. We held on to our policy, in spite of unpopularity and personal abuse, and faced a financial loss conservatively estimated at half a million dollars.

"Finally, the tide turned. Federal authorities swooped down on a gang of oil swindlers, rounded them up, and sent several to Leavenworth for various terms of imprisonment. Some of the people who had derided the 'News' for 'over-conservatism' now had the fairness to write and compliment us for our 'foresight' and 'courage.' Many of the writers bewailed their lost investments.

"This experience illustrates what I meant by saying that effort is primary, and results are secondary. Look to your efforts first. If they are right, results can be left to take care of themselves. To paraphrase David Crockett, 'Make sure your efforts are right, and then go ahead, regardless of results.'

"WHENEVER my mind gets to weighing the relative values of effort and results," went on Mr. Dealey, "I think of my father's life, and his struggles to rear a large family. As I look back upon those trials now, and remember how single-hearted and sincere he was, weaving religion into life in a way that made poverty and self-denial only incidental and inconsequential, I know that he was a great success.

"An early example of my father's attitude toward 'results' is an incident that is still vivid in my memory, though it happened in my childhood home in England, nearly sixty years ago."

(Mr. Dealey is a native of England, having been born in Manchester in 1859.)

"Father had gone security on a note for a friend in another city, and the friend had defaulted. The debt wiped out his business completely and, with a wife and nine children to support, he was faced with the problem of making a new start in life.

"But my father shook off that calamity as though it had been a mere incident. 'We'll go to America,' he announced. And without any crying over spilt milk, my parents began preparations to embark for the New World. We had a relative living in Galveston, Texas, and that circumstance determined our destination. Money was borrowed to meet the expenses of the trip, and these were kept down to the minimum by our primitive mode of traveling. We crossed the ocean in a cramped freighter. There being no passenger cabin, quarters were built on deck to house us. We cooked most of our meals ourselves in this deck camp during the six weeks of our voyage across the Atlantic and up into the Gulf of Mexico.

"It was tropical summer weather when we reached Galveston, and the thing that impressed me most was an enormous green pile of watermelons on the wharf. I had never seen melons before. And after I had my first taste of one I decided that I was going to like Texas."

Thus, through that incident, which seemed like failure in the Old World, the Dealey family, of father, mother, and nine children, was transplanted to this southwestern outpost of America, on Galveston Island. "It was the most fortunate thing that could have happened to us," said Mr. Dealey; "and I remember how Father used to joke about his good luck in 'failing' in England.

PHOTOGRAPH BY G. A. MC AFEE, DALLAS, TEXAS

For fifty-two years George B. Dealey, president of the Dallas "News," has worked for the same company. Soon after he came to America from England, where he was born in 1859, he began his newspaper career as an office boy. The Dallas "News," largely a product of Mr. Dealey's efforts, is one of the leading publications west of the Mississippi. The little girl in the picture above is the publisher's granddaughter

"How did you get into the newspaper business?" I asked Mr. Dealey.

"It came about this way," he answered: "As soon as we got settled in Galveston, Father opened a shoe shop. But as the family income failed to measure up to the family necessities, my elder brother, T. W., and I went to work. He got a job as office boy with the Galveston 'News,' and I found employment in a candy factory. On Sundays, in order to add a little more to the family purse, I pumped the organ and rang the bell at Trinity Church. Other jobs came my way from time to time. I was office boy for two cotton brokers, delivered telegrams for the Western Union, and worked in a grocery store, a saddle and harness factory, and a soda-water stand on the beach.

"One day, my brother, T. W., came home and said, 'George, Colonel Belo told me to-day that he is going to promote me to be mailing clerk. He asked if I had a brother who could come in and take my old job as office boy. Want to try it?'

"Did I? That was a red-letter day in my life. Colonel Belo, the publisher of the Galveston 'News,' was one of the great men of Texas; his newspaper was the leading publication in the state, and to be office boy on the 'News' seemed a great distinction. I was fifteen years old at this time.

"The next morning my brother took me to the office and introduced me to Colonel Belo. When I told him the various jobs I had held, he burst out laughing, and said, 'Well, George, you're versatile, and that's what we need in the newspaper business.' He engaged me at once, and I went to work that same day, at a salary of three dollars a week."

THIS was in October, 1874, and George B. Dealey is still working for the A. H. Belo Corporation.

To be sure, it is hardly the same company. Many changes have taken place in fifty-two years. The business has moved from Galveston to Dallas, and has expanded from a small partnership into a large publishing corporation. Colonel Belo and the other pioneers who worked with him in building up the "News" have passed on—all but this office boy of 1874. He has become, perhaps, the greatest builder of them all.

Fifty-two years with one employer! A lifetime of loyalty and application!

"The fact is," said Mr. Dealey, when I commented on this wonderful record, "nobody else offered me a job in those fifty-two years, so I hadn't an opportunity to break my connection. However, I doubt if anyone could have enticed me away. From the very first, I had a sense of belonging here. I felt sure I was on the right path, and so I just went straight ahead, putting my best efforts into my various jobs.

"Then, too, I had my brother's example to help me. I started in his shoes, and trailed after him fairly consistently for the rest of my career. When he was promoted to be assistant bookkeeper, I was given his job in charge of the mailing-room. He climbed on up until he was made a director of the company and secretary and treasurer. The Heir At Law

Colonel Braxton shows that where there's a will there's a way to find it

By Melville Davisson Post

ILLUSTRATED BY W. H. D. KOERNER

COLONEL BRAXTON was profoundly puzzled.

It was afternoon and he had made a considerable journey.

The house sat on a hill in a grove of trees, with only a path to reach it. The unused country road below ran through a forest to the little railway station at the distant end of the valley.

Colonel Braxton came up the path alone to the house.

Not a soul was to be seen, and opening an unlatched door on the portico he went in.

It was a library that he entered, a great room, the four walls of which were filled with books on open shelves to the height of a man's shoulder.

But it was a library that no occupant had ever used.

The man who built it, by political accident had been a senator, and for appearance had filled this room with government reports, gathered at no cost, and of no interest to any living creature.

The earth had finally received him, and the later occupant had acquired the property at the sale that followed. He had made no change in the room, for no book intrigued him. He had permitted the volumes to remain, as one permits a permanent decoration in his house. No hand had ever removed one from its shelf, and they became with time, like the beautiful walnut paneling above them, a part of the four walls.

There was a heavy, long, old walnut writing desk sitting near a window, with a worn upholstered chair. This desk the late owner used for his papers and accounts.

Colonel Braxton had stopped beside this desk as he came in.

The drawers had been pulled out, and the contents left in confusion. In the partly open drawer below the writing desk, a big pistol of an early model was half concealed. Colonel Braxton took it up for a moment, and then replaced it. He touched nothing else and went on to the middle of the room. Here a further thing caught his eye, and he remained unmoving, his hands behind him, his big shoulders thrown forward, his face fixed in concerned reflection.

He was, as I have written, profoundly puzzled.

Two things had happened on this morning in strange sequence:

A girl had come into his office and asked him to make this journey in the interest of her affairs, and then, just as he was setting out, a message had arrived from this same house, asking him to come at once.

He pointed the weapon at the lawyer. . . . "I

UNIVERSITY OF CALIFORNIA

There could be no collusion in these two events, as they were from opposing interests.

To Colonel Braxton their identity in time was the mere coincidence of chance. Another in the practice of the law might believe that opposing interests raced here for the option of his professional services. But in the obscurity that surrounded these events the colonel thought he saw the dim outline of a definite purpose.

The owner of the estate, Marshall Lurty, had been dead and buried ten days. He had come here from New Orleans, bought this house and lands at the sale of the deceased senator's effects, and had maintained the outdoor, leisurely life of a country gentleman.

He lived alone. No relative appeared until death removed him; then came the brother and this girl, as though they had winged out of distant countries, with no knowledge that either was on the way.

Of his dead client Colonel Braxton had no foreknowledge. But of this brother he had got on occasion a suggestive hint. The colonel had been attorney for the dead man in some simple matters, had seen him now and then, and had been in this house. It was in the chance vagaries of the dead man's conversation that he had learned a little about the brother.

THERE was a slight sound, and, turning swiftly, Colonel Braxton saw the new occupant before him.

He had entered softly through the open doorway at the attorney's back. And at once, when one saw the man, one understood that method of approach—the instinct of caution, as though he were accustomed to subterranean maneuvers.

But, also, at sight of him a doubt departed!

He was, what he claimed to be, the dead man's brother. The likeness was unmistakable. Here was no impostor. But this man was sinister, as though he might have received the last heavy dregs of evil lying in the blood of his race.

He was big, like his brother; but he looked soft, like a mushroom fattened in tropic cellars—a poisonous mushroom! And Colonel Braxton remembered the hint in the dead man's talk—counselor to doubtful enterprises, cunning, untrustworthy, and dangerous.

The stranger addressed the attorney with a courteous introduction.

He was Caleb Lurty, whom doubtless his brother, Marshall Lurty, had often mentioned. He was concerned in the settlement of the dead man's estate. He had sent for Colonel Braxton in order to make a certain inquiry. Would he be seated.

He crossed then to the big old walnut desk, and sat down behind it. Colonel Braxton replied with a conventional rejoinder, but remained standing, with his hands behind him.

Mr. Caleb Lurty seemed, for some moments, as though uncertain how the conversation should be opened.

Then he put this query:

"Colonel Braxton," he said, "you have acted as attorney for my brother?"

"Yes."

"He has consulted with no other?"

"No other," replied Colonel Braxton.

The man gave a little whistling sigh. There came a certain resolution into his face.

"Then you can settle an important point?"

He paused as though in reflection, and then got up.

"Pardon me a moment, sir," he said. "I will show you a daguerreotype of my brother and myself taken together, as an evidence of my identity."

HE WENT out, and in his absence Colonel Braxton moved toward the object on the wall that had caught his eye when he first entered the library. He was back in the middle of the room, however, when Lurty returned.

Paying scant attention to the old picture that Lurty had brought with him, he said, "I have no doubt of your identity. You are Caleb Lurty."

The man went back to his chair behind the desk. He seemed to gather himself together, as if to launch some pointed query. Then, as though the long habit of indirection prevailed, he turned obliquely:

"My brother doubtless spoke of me in discussing his affairs?"

"He mentioned you," replied Colonel Braxton.

will give you three minutes by the watch," he said

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"As his brother, the only member of his family living?"

"Among other things," replied the attorney, in a quiet drawl, "he also said that."

Mr. Caleb Lurty repeated three of those Delphic words softly to himself. . . . "Among other things! . . . Ah."

He hesitated on the query.

"You would know then that I am his sole heir at law."

"At law!" Colonel Braxton's voice went sharply up.

"Why, yes," the man repeated, "at law. It is by law that estates descend and are inherited. Does not Mr. Jefferson's Statute of Descents name the heirs who inherit in their proper order? If a son dies unmarried, his entire estate goes to his *father;* if the father be not living, then it goes to the mother, brothers, and sisters equally; if the mother be also dead, and but one brother be alive, that brother takes. Do I not state the law correctly?"

"You state it like a judge," replied Colonel Braxton. "It is Mr. Jefferson's Statute of Descents, and I fear it gives the world a false idea of Virginia's value of a mother."

HE TURNED about, his voice again in its lengthened drawl:

"Upon what theory of justice, Mr. Lurty, could such a law be founded? In what manner is our paternal ancestor of greater value to us, that a child's estate should go to the father, while the mother who brought him into the world takes nothing?"

"Upon the theory, sir," said Mr. Caleb Lurty, "that the man made the fortune."

"Upon the theory, rather," replied Colonel Braxton, "that the man made the laws!"

He shrugged his shoulders and looked about the room.

"When I consider," he added, "how our paternal ancestors thus concerned themselves with such little, covert precautions in their own selfish interest, I am obliged to believe that any generous and noble impulses in us are inherited from the other side.

"Observe, sir, if you please, the injustice of these selfish laws that our worthy fathers wrote down in their statutes. If the wife dies, the husband takes her whole estate; but if the husband dies, the wife takes only a third portion of his lands for her life. And it may happen, sir, that the foundation of the husband's fortune came to him as a marriage portion with his wife. Nevertheless, it passes on to others, and she gets a third! In caring for himself, Mr. Caleb Lurty, our paternal ancestor, in his laws, neglected no precaution."

COLONEL BRAXTON went on, his drawling voice sinking to a soft cadence:

"And in a further instance: If a child were born out of wedlock, observe how our fathers, in their laws, got themselves clear of that. Such a child could not inherit their estates—they saw to that. It could inherit from its mother—they conceded this generous privilege. But the father's money and lands were exempt from such a claimant at his death."

Again Colonel Braxton paused. Then he added a final sentence:

"And so, Mr. Caleb Lurty, when you ask me if you are your brother's sole heir at law, I have repeated those legal words, 'at law!' That is to say, sir, if Marshall Lurty's estate is to pass by operation of law, it goes to you."

The man behind the long, heavy walnut desk sat back and looked at Colonel Braxton. He did not seem wholly relieved by this conclusive verdict. He reflected as upon a doubtful matter.

Finally he spoke:

"You know about this child?"

"I do," replied Colonel Braxton.

The big pasty-colored creature leaned over and put his elbow on the table.

"It was a youthful indiscretion of my brother's. But there was no marriage. The eloping parties were too young; no court would grant them a license. The girl was sent to distant relatives and died at the daughter's birth. The child took the mother's name. It was never recognized in any legal manner by my brother. The thing was hushed, forgotten, dropped out of human knowledge."

Colonel Braxton's voice interrupted.

"Precisely," he said. "Out of *human* knowledge."

Mr. Caleb Lurty looked up sharply.

"What do you mean, sir?"

Colonel Braxton made a vague gesture. His voice drawled in an idle monotony.

"I was thinking," he said, "of a knowledge somewhat larger—I was, in fact, thinking of a verse in the Gospel of St. Luke."

A girl had come into his office and asked him to make the journey in the interest of her affairs

"The Gospel of St. Luke!" echoed Lurty. "What has the Gospel of St. Luke got to do with this?"

"It might have a good deal to do with it," replied Colonel Braxton. "A good deal to do with it before this thing is ended. Is not Marshall Lurty's daughter of more value than many sparrows?"

The big man behind the desk got up. He took a turn about his chair; replaced it, and sat down. In that instant, he decided to face the thing he feared.

"Colonel Braxton," he said, "I have sent for you to inquire upon a certain point. Did you ever write out a form of will for my brother, Marshall Lurty?"

There was profound concern in the thick voice.

Colonel Braxton replied at once and with no equivocation.

"I did not," he said. (*Cont'd on page 120*)

You Are Part Owner Of A Hundred Miles Of Books

They are in the Library of Congress, at Washington—three million volumes of them, in two hundred languages. In this vast treasure-house of information, you can study any subject under the sun, examine a million musical scores, see rare documents and pictures, and even obtain plans for your new home

By Helen Christine Bennett

TWO young people, a girl and a man, swung lightly up the tall flight of marble steps that leads to the Library of Congress. They were not Washingtonians. From the accent and inflections of their voices one would have placed them as northern, Michigan perhaps, or Wisconsin. Their clothes were new and smart, their faces alight with happiness.

"I can hardly wait until we get in," said the girl, skipping a step ahead of her companion. "See here"—the man paused and looked up at the gilded dome surmounting the building—"it seems a queer thing to ask in a place like this."

"I don't see why," retorted the girl. "Emma wrote, and they told her just where to get them, and Eleanor came here and they gave them to her. I'm sure we've got just as good a right."

"Of course," the young man assented. "Oh, well—"

They passed through the revolving doors, down long corridors where color ran riot, and up a flight of ornate stairs.

Following the directions of a guard they came at last to the room they were seeking, and found the man in charge.

"May we look at house plans, please?" asked the girl. "Some friends of mine got the plans for their home here; and I understand that you show people plans—"

"We do," replied the man in charge. "What price house are you figuring on?"

"Not over ten thousand." It was the young man who replied.

"Ye-es," assented the girl; "or even less."

A few minutes later they were seated side by side at a long table, eagerly studying plans. An hour later they were still at it. The genial gentleman in charge, who seemed prepared for any emergency, had supplied them with tracing papers and soft pencils, and beside each of them was a small pile of notes and sketches.

"We can look over furniture, when we get this done," said the girl to her companion. "We want to know good things. O-oh, look! Isn't this porch perfectly lovely?"

They had forgotten that this was their first trip to Washington, forgotten that the time was none too long for sightseeing, forgotten everything save the one thing that was to them of the greatest moment—the planning of their future home under the guidance, through the Congressional Library, of Uncle Sam!

"But isn't this a rare occurrence?" I asked the genial gentleman in charge. "Do many brides and grooms get their home plans from you?"

"Bless you, yes," he replied. "This isn't unusual. They write from every state in the Union, and they come here too, hundreds of them. They are not all brides and grooms, though. Occasionally an older couple comes in to plan the home they have worked for all their lives. One woman came not long ago for help in designing a sunlight house, to be so located that she could get sunshine in every room. But house plans are not the only things asked for. People come in and trace period furniture, rug and carpet patterns, styles in vases and ornaments, and look over prints of famous paintings and etchings. You must realize that although this is the Library of Congress it is also *our National Library*. And why shouldn't Uncle Sam help a young couple to build a good home, by offering them access to plans and books on furniture and decoration?"

Well—why not? If the National Department of Agriculture may help a farmer raise chickens, the National Library might well help a young couple in a vital matter such as the planning and furnishing of a home. But by virtue of its name, the Library of Congress had seemed to me to be a place of special purpose; and the fact that this wonderful building of ours, with its collection of books, the third largest in the world, exceeded only by the British Museum and the National Library of France, was being put to use day after day for practical ends by people all over the country, had not occurred to me.

THE Library covers three and a half acres of ground and there are eight acres of floor space. Within its walls are housed three million volumes, a million musical scores—which is the largest collection in the world—about half a million prints and photographs, two hundred thousand maps and charts, and a large collection of rare manuscripts. And so rapidly is the Library growing that one of the original courtyards has been built in solid to hold additional book stacks, and a second courtyard is now being built in like fashion.

Over a million visitors come every year to the Library of Congress; but few of them see many of the books. The shelves about the main (*Continued on page 154*)

The Most Popular Book In the Library of Congress

"ONE group of exceedingly serious students who come to the library are seekers of family history," says Mr. Ashley. "We have at least twenty-five family hunters a day, a few of them professional genealogists working on assignment for others, but most of them looking up their own ancestors. The library houses the largest collection of genealogies in the country, about ten thousand volumes; and this one," he added, handing a large book to Miss Bennett, the author of the accompanying article, "is one of our most popular reference books. I might almost say the *most* popular reference work in the building."

She took the book and looked at the title. It read:

"Americans of Royal Descent, by Browning"!

The Good Samaritan Of Wall Street

By Mildred Harrington

TWO men faced each other across a desk in a Wall Street office. Both had clear ruddy skins, and blue eyes that looked as if they might crinkle easily into laughter. But neither was laughing now. It was a tense moment. They were sizing each other up; making up their minds about something.

The man who sat behind the desk was a well-known banker. The one who stood on the opposite side, leaning slightly forward with the palms of his hands flattened against the polished top of the desk, was equally well known in his line. In the underworld of the biggest city on earth, he had an enviable reputation among crooks for cracking a bank vault and making a clean get-away.

"Somehow," thoughtfully said the man whose picture was prominently displayed in every rogues' gallery in the country, "I have a feeling that this is going to be the biggest job I ever pulled."

"I shouldn't be surprised if it turned out to be the biggest deal *I* ever had a hand in," agreed the banker quietly.

"Then you're coming in with me?" The other spoke eagerly, almost incredulously.

"To the finish," promised the banker.

"Shake, . . . pal!" And the man who had seen the inside of half a dozen penitentiaries extended a big hand with long, sensitive fingers.

The two shook hands.

In this way, seven years ago, was sealed an amazing compact between Edgar S. Baruc, partner in the firm of Colvin and Company, bankers of New York City, and Dick Watson, ex-robber of banks, ex-second-story man, and one-time professor in a school for pickpockets. And until the death of Dick Watson, a little more than a year ago, these two men, whose lives in most things had been as far apart as the poles, worked side by side in their self-elected job of putting jailbirds back into circulation as good citizens.

Since Watson's death, Baruc has "carried on" with the assistance of twelve or fifteen business men who have become interested in his efforts to salvage black sheep, and who, voluntarily, have given their time, their money, and their influence to the work. In the seven years since he started, with the help of his friends, Baruc has put more than six hundred and fifty "down-and-outers" on their feet again. And most of these men have stayed on their feet. A few had occasional lapses until they got used to the idea of being respectable; but the records which Mr. Baruc has kept show that, out of the six hundred and fifty who have made a fresh start under his guidance, or that of his friends, less than two per cent have gone back to their old ways!

Is it any wonder that to countless people, high and low, Edgar Baruc is known affectionately as the "Good Samaritan of Wall Street"?

"IT'S just a matter of lending a helping hand when a fellow needs it most," Mr. Baruc told me recently when I talked to him in the same room that had witnessed his pact with Dick Watson. "At some time in his life, every man reaches his point of least resistance, a period when he is so thoroughly licked by circumstances, or, worse still, by some weakness within himself, that it seems hardly worth while to put up any further fight.

"Imagine yourself in debt, without credit, or friends, maybe without confidence in your own ability to go straight any longer. Do you suppose you would find it altogether easy to prove to a critical and perhaps justly suspicious world that you had even the *right* to make an honest place for yourself?

"Long before I attempted to do anything about it," Mr. Baruc went on, "I had often wondered what became of the fellows who had 'served time,' when they bucked up against the world again.

"As a kid, I had none too easy a life of it myself. My father, who had been a well-to-do Southern banker, died heavily in debt, because he had signed one note too many for his friends. Shortly afterward, my mother moved to New York. Before I was twelve, I was earning my own living and taking something home every Saturday night. And even then I had already made up my mind to pay off my father's debts and reëstablish his name in the banking world.

"ONE of my early jobs was sweeping up the floor and washing out the dingy brass cuspidors in a cigar store on lower Fourth Avenue. There was a cheap pool room over the cigar store. I couldn't help seeing a lot of the sporty youths who frequented the place. And I soon learned that the line which separates black from white is sometimes very, very faint. I knew only too well that in bad company many a boy from a good, honest home barely held on by the skin of his teeth to his determination to keep straight.

"And the older I grew, and the more I saw, the more thoroughly convinced I became that there are plenty of highly respected citizens who could look at a poor street bum, and say, 'There, but for the grace of God, go I!'

"I say that I had thought of these things; but it never had occurred to me until that day, seven years ago, when Dick Watson walked into this office, that I could do anything more than haphazardly lend a hand, here and there, to those who seemed to need it most. It was a friend of mine— (*Continued on page 144*)

Why Men Go Wrong

"I HAVE found," said Mr. Baruc, "that, as a rule, you can count on one of two things being responsible when a man takes the wrong fork of the road. The first is bad associates, and the second is—the women of his own family.

"When women nag their men-folks for things they can't afford, they don't realize, of course, that often they are urging them to take a desperate chance. A man's primitive instincts are involved. His pride as a provider is at stake. Almost any man likes to feel that he can give the women of his family what they ask for. I'd hate to tell you how many cases I actually know where men have served jail sentences because their wives insisted upon living up to a neighbor's income.

"But above and beyond all other reasons why boys and young men get into trouble with the law is this: They drift into bad company. Never was a truer saying than the old one that you can't play in mud without soiling your hands. If you want to look to your son's morals, first look to his associates. They will tell the story!"

Edgar S. Baruc

IN THE business world, Mr. Baruc is known as a member of Colvin and Company, New York bankers. But to hundreds of down-and-outers whom he has helped to make a fresh start he is much better known as the "Good Samaritan of Wall Street." He was born in New York, but his father was a citizen of South Carolina. The elder Baruc died when Edgar was a small child, and a family that had never wanted for anything was plunged into poverty. It was Edgar Baruc's experiences while struggling to help his mother make a home and a living for her children that gave him an intense sympathy for people who find life hard sledding. Mr Baruc is thirty-nine years old, married, and has three children. He lives in New Rochelle, New York.

Daniel Murray Edwards

MR. EDWARDS is one of the most outstanding and interesting figures in the retail dry-goods business of America. He is sole proprietor of big department stores in Syracuse, Buffalo, and Rochester, New York, conducted under the name of E. W. Edwards and Son. He was born in Johnstown, New York, in 1861, and it was there he began his career as a merchant. Later he opened a store in Gloversville, New York, and from there moved to Syracuse, where he still makes his home. Twelve years ago Mr. Edwards suffered injuries which eventually confined him to a wheel chair but which have not loosened his hold on the details of his huge business.

"D. M."

By E. Alexander Powell

SHOULD you happen to be motoring on a week day along that broad concrete highway known as the Genesee Turnpike, which links the cities of Buffalo, Rochester, and Syracuse, the chances are at least even that somewhere in that stretch of one hundred and fifty miles you will be passed by a big gray limousine hurtling along at express train speed. On the front seat, beside the chauffeur, will be sitting a little stoop-shouldered man.

Upon entering the outskirts of any of these three New York cities, the car, in deference to municipal ordinances, slows to a more decorous gait. Weaving its way through the press of down-town traffic, it presently comes to a stop beside the curb in the retail district. The tall young chauffeur springs nimbly to the ground and unfolds a wheel chair which is strapped behind. He lifts his passenger from the car and deposits him gently in the chair—a gray-clad man who smiles constantly, partly from innate cheerfulness, partly to mask his pain. A second attendant pilots the chair through the throngs of shoppers who keep the doors of a huge department store swinging ceaselessly. Over the entrance to the establishment, be it in Buffalo, Rochester, or Syracuse, is the gilt-lettered legend:

E. W. Edwards & Son

The man in the chair has scarcely been wheeled across the threshold before he is surrounded by a group of managers, department heads, secretaries, buyers, credit men—a sort of general staff. Down the crowded aisles, from counter to counter, runs the whisper, "D. M. is in the store! . . . The Boss has come!"

The effect is galvanic, like the stiffening up of all ranks at an army post when the inspector general arrives. Saleswomen pat their hair and rearrange their stocks. Cash girls move rapidly. Bundle wrappers speed up with their paper and twine.

Like a ruler attended by his court, the smiling little man is wheeled from one floor to another floor, from one department to another department.

Seemingly nothing is too minute to escape his keen and roving eye. He examines everything, interrogates everyone. His observations are terse, penetrating, even caustic on occasion. He makes his decisions quickly, and issues his orders immediately.

"How long have these suits been in stock?" he asks in the suit department.

"We've had them in a couple of months."

"That's a month too long. Mark them down at once. We must keep goods moving."

The elevator shoots him and his entourage to an upper floor.

"Change these departments around," he orders. "Bring the household utensils up near the elevators, and move the rug department over near the windows, where there's better light.

"Those satin petticoats are out of date," he tells the woman in charge of another department. "Petticoats are worn only by grandmothers nowadays—and not by many of *them*. Mark the stock down, and keep on marking down until you get rid of them."

A secretary approaches with a sheaf of letters. The man in the wheel chair runs through them, dictating his replies so rapidly that the secretary's flying pencil can scarcely keep pace with his words. Executives and financial men appear with all manner of important questions requiring his decision. Though some of them involve sums running into seven figures, the little gray man disposes of them with rapidity. He radiates energy, he fairly crackles with enthusiasm.

"But," you ask, "who *is* this man?"

His name appears on the lists of numerous boards of directors and trustees—for he is associated with a score or more of commercial, financial, civic, religious, and philanthropic organizations—as Daniel Murray Edwards; but his business associates and employees invariably refer to him as "D. M.," while his friends know him as "Dan."

He is one of the outstanding figures in the retail dry-goods business of the United States. Sole proprietor of the great department stores which he operates in Syracuse, Rochester, and Buffalo (they have a total floor space of nearly a million and a half square feet and do a gross business of more than fifteen million dollars a year), he is the most important individual retail merchant between Fifth Avenue and the Loop in Chicago.

I do not find him easy to describe, and this in spite of the fact that I have known him intimately for more than thirty years. But I will do the best I can. You will picture him, then, as in the middle sixties—he was born in the year and month that Abraham Lincoln was inaugurated President of the United States—a clean-shaven, clear-complexioned, sturdily built man with silver-gray hair. The round full face is illuminated by an expression of kindness and good humor. The massive head, with the dome of a thinker, of a dreamer who makes his dreams come true, is set low between a pair of broad, stooped shoulders.

UNTIL a dozen years ago he was the very picture of health, the most vigorous, active man I have ever seen. But late one night, while leaving his Syracuse store, he fell into a darkened elevator shaft, sustaining injuries which deprived him of the use of one leg. After a few weeks he was able to get about with the aid of a cane; but the trouble gradually spread, acute rheumatism set in, and when he returned from Europe in 1924 he was unable to walk at all.

Shortly after his return, he was taken desperately ill. The doctors agreed that the case was hopeless. In the newspaper offices his obituaries were written and set up. On a day when his family had virtually abandoned hope, he beckoned one of his physicians to the bedside.

"Doctor," he asked, "where do most men die?"

"Why," was the puzzled reply, "in bed, of course."

"Then," the supposedly dying man announced, "*I am going to get up!*"

And he did.

He recovered by sheer, indomitable will-power—only to find that he had become permanently crippled, that he must spend the rest of (*Continued on page 162*)

"Snap Judgments? I Believe in Them!"

"MR. EDWARDS'S most characteristic quality, perhaps, is his capacity for making momentous decisions instantaneously," says the author of this article. "He and I were once discussing this quality, and he gave me his views on the subject.

"'Call them snap judgments, if you like,' said Mr. Edwards; 'but I believe in them. Far more money is lost by pondering too long than by deciding too quickly. A business man should train himself to think and act instantly, just as a prize fighter decides in a fraction of a second where he will strike, and then smashes home the blow. Deliberation is not a sign of business acumen; it is a sign of mental laziness.'"

Scattergood Deals In Matrimony

A Story

By Clarence Budington Kelland

ILLUSTRATED BY PAUL MEYLAN

"NICE-LOOKIN' girl," said Scattergood Baines, as Nellie Rockwell came out of Kittleman's store and walked toward the corner. "And up and comin'."

"Plays on the organ," said Pliny Pickett; "and they tell she makes all her clothes and trims her bonnets."

"Bert Knox is keepin' company with her, hain't he?"

"What time he gits fur it," said Pliny.

"Um. . . . Bert's standin' up to his neck in sisters," said Scattergood.

"Them two ol' maids clings to him like he was a plank and they was drowndin'."

"'Tain't right," Scattergood said ruminatively. "And then, agin, you can't help admirin'. But it does seem like life gits it in for some folks."

"Life gits it in fur everybody," said Pliny pessimistically.

"W-al, I dunno's I'd go so fur's that. But it does seem like them that least deserves it gits the hard jobs. I wonder how many young folks' lives has been ruined by older folks? Duty and sich-like."

"Plenty," Pliny said vindictively.

"Um. . . . Boys that can't marry on account of havin' folks to take care of. Like Bert, f'r instance. Them two twin old maids that he's bound to. I calc'late them is obligations nobody kin dodge; but somehow it don't seem right noways you look at it. Nobody's got the right to clog somebody else up and hold 'em back from livin'."

"Looks that way."

"Now, take Bert and Nellie. Like enough they want to marry. But there's Sairy and Mary. Bert can't marry with them on his hands, and so Nellie's got to set and wait and git older 'n' older—'n' maybe turn out an old maid herself. Kind of crim'nal, to my way of thinkin'."

"She could marry him anyhow," said Pliny.

"And go to be a hired girl fer them twins, and live under the roof with 'em and their ways. Uh-uh. Nellie's too smart fer that."

"I dunno what kin be done about it," said Pliny.

"Nuther do I; but I wisht I did," said Scattergood. "Um. . . . Here she comes, Pliny. Hain't you got suthin' to do some'eres else?"

"I could have," said Pliny.

"G'-by," said Scattergood, and Pliny, accustomed to these sudden dismissals, betook himself toward the hotel.

AS NELLIE came opposite the piazza of the hardware store, Scattergood cleared his throat.

"Afternoon, Nellie," he said.

"Afternoon, Mr. Baines." She stopped and smiled up at him.

"It's kind of hard on you, Nellie, that I'm a married man," said Scattergood.

"How's that, Mr. Baines?"

"W-al, if I wa'n't, I'd make an awful good husband for you. Kind and stiddy, and a good purvider."

"Maybe," Nellie said laughingly, "Mrs. Baines would get a divorce, if you told her you wanted me."

"No." He waggled his head. "Mandy's sot in her ways, and I'm one of 'em. The's two things she wouldn't part with, me 'n' her kitchen range. Got used to both of us. . . . Failin' me, Nellie, what d'ye calc'late to do?"

"Be an old maid," Nellie said promptly.

"The' hain't neither money nor credit in it," said Scattergood. "D'ye *want* to be an old maid?"

"Did any woman ever want to be?" she countered.

"Can't say offhand. I've knowed wimmin that wanted divers things no man could git through his head."

"I'm not one of them," said Nellie.

"Then why don't ye?" asked Scattergood.

"Why don't I what?"

"Git married?"

"I've asked a number," Nellie said, with twinkling eyes, "but they all had other views."

"Um. . . . No accountin' fer tastes. Hear you're keepin' company with Bert Knox."

"I understand it has been reported," said Nellie.

"Why don't ye up and marry Bert, then?"

"I'd just as soon marry Bert," she said, and her eyes snapped; "but when I marry it'll be just one man, and not a family."

"Um. Sairy and Mary, eh?"

"Sarah and Mary," repeated Nellie.

"Can't you elope Bert away from 'em?"

"I might," said Nellie, "but good wouldn't come of it. Bert's one that's bound to do his duty, and Sarah and Mary are a duty, he thinks. He can't leave them, because he can't make money enough to support them and keep up a house of his own."

"Kind of fond of Bert, Nellie?"

"Yes, Mr. Baines," she said promptly.

"He fond of you?"

"Yes, Mr. Baines."

"Um. Does he ever figger he's got a duty to you?"

"THEY come first, he says, because they were there first. And"—she paused and lifted her eyes to his—"I wouldn't have it any other way. Bert wouldn't be Bert if you could get him to think wrong was right."

"Why don't you all go in and live together?"

"I'd rather be miserable alone than to be pestered to death in company!" said Nellie.

"I allus maintained you was smart," said Scattergood. "D'ye want Bert?"

"More than anything in the world!"

"Um. I wonder how Sairy and Mary come to be old maids?"

"For one reason," said Nellie, "because they wore their hair in doughnuts at the back of their heads."

"I foller ye," said Scattergood. "And even now they hain't so aged."

"Thirty-five," said Nellie.

"Methuselah was older," Scattergood said sententiously. "Goin' to see Bert to-night?"

"If the twins don't make him take them driving," said Nellie, without a trace of malice.

"Handy with their needles, hain't they?"

"You mean Sarah and Mary? Yes, indeed, they are."

"But lackin' in judgment?"

"I think I follow you," said Nellie.

"Now about you—family got to have you around?"

"I earn my keep," she said; "but I could be spared."

"So? W-al, if you're set on bein' an old maid, why don't ye git suthin' out of it?"

"How, Mr. Baines?"

"Why, git to be independent—so's not to be a drag on somebody when you git past your usefulness."

"I've been thinking of it."

"To be sure. . . . Now, let's consider—there's the matter of bonnets and sich."

"What bonnets?"

"Any bonnets," said Scattergood. "We got grocery stores and clothing stores and dry-goods stores, but we hain't got a millinery shop."

"And I haven't the money to start one."

"Would it pay?"

"It ought to. I'm sure it would—the right kind, and properly run."

"How would your pa regard it?"

"You mean my running a millinery shop?"

"Yes."

"He'd have no objection."

"THEN," said Scattergood, "supposin' we call it a bargain."

"Call what a bargain?"

"Your openin' that shop. In that vacant store of mine across the bridge."

"But I told you I haven't any money."

"Lots of folks is in the same boat," said Scattergood. "However, I kin manage to scrape together a dollar or two mebbe, if you'll go in partners. There's jest one condition."

"And what's that?"

"That you'll hire Sairy and Mary for clerks."

Nellie wrinkled her forehead. "I don't follow you now," she said.

"Didn't calc'late to have you. Think it over, and lemme know when you git your mind made up."

"It's made up now," said Nellie.

"Mebbe Bert'll change his mind when he hears you give him up for a hat store."

"He can't," said Nellie.

"How old be you?" Scattergood asked.

"Twenty-two."

"Huh! Calc'late a year won't do ye no harm."

"I don't follow you again."

"Numbers of folks don't—sometimes," Scattergood said. "And there'll be jest your name on the sign, and nobody'll know you and me is partners. Equal. I find the money, you find the gumption. Calc'late that's fair?"

"More than fair, Mr. Baines; and I hope I won't lose money for you."

"A chance I allus got to take. Better kind of look over the store. Uh-huh. Then ye kin go to taown and buy what stock and fixtures you want to start with."

"Mr. Baines, I—I don't see why you are doing this?"

"Calc'late to make money," said Scattergood. "Allus on the outlook for it."

"When shall I go?"

"When kin ye?"

"To-morrow," said Nellie.

"Um. Stay a week and study up styles."

"I've studied styles."

"Calc'lated you'd give it some attention," said Scattergood. "From now on you're boss. I hain't goin' to be bothered. You got to run it alone. All I agree is to furnish what money's needed. . . . And hire them twins cheap. They hain't wuth much."

"That part of it," said Nellie, "I don't understand."

"That," said Scattergood, "is because you hain't a wicked old man that's had to do with folks all his life. . . . 'Nellie Rockwell, Millinery.' Goin' to look good over the store. G'-by. Don't want to hear nothin' about it. Git what you need, and I foot the bills.

"Johnny Bones'll draw up the partnership agreement. G'-by."

"Good-by, Mr. Baines," said Nellie.

IT WAS ten days later when Coldriver's curiosity as to what was going on in Scattergood's vacant store was satisfied. The stock was in, the sign was up, and

"Sairy Knox," she exclaimed, "what'n the world you got on? I kin actually see your legs!"

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Nellie Rockwell launched her business career. Scattergood walked past the door a number of times during the first week, but did not enter. He saw, however, that numbers of women did enter—not many to purchase, perhaps, but to spy out the land; and he saw Sarah and Mary.

These spinsters seemed to be taking their clerkships in a dignified and leisurely manner, for every time Scattergood looked through the window of the showroom he saw them sitting, one on each side of the room, straight and erect, in the attitude they assumed at home when receiving formal company in the parlor. It was what Scattergood called the haircloth-furniture attitude.

Once he passed young Bert Knox, and stopped him.

"Nellie say how business's gittin' on?" he asked. "Much trade comin' in?"

Bert frowned. "I don't hold with it," he said shortly.

"Don't, eh? W-al now! What you got agin it, Bert?"

"I just don't like it," Bert said; and that was all that could be got out of the young man. Scattergood grinned.

"It's becomin', Mandy," said Scattergood.

THEN one day, accompanied by Mandy, his wife, he entered the shop.

"Where's Nellie?" he asked of Sarah.

"Trimmin'," said Sarah; but made no move to be of assistance.

"D'ye s'pose she could pause in them activities long enough to sell one she's got trimmed?"

"I guess she could," said Sarah.

"How do I find out?"

"Ye could ask her," said Sarah.

"Now," said Scattergood, there's what I call brisk clerkin'. Um. . . . How about you, Mary? Be you as eager to serve the public as your sister?"

"I'm gainin' experience," said Mary.

"And gittin' paid fer it. Uh-un. W-al, s'pose you gain you some experience callin' your boss."

Mary flounced out of her chair and went to the work-room door. "Nellie," she said languidly, "Mr. Baines wants to see you."

Nellie appeared, brisk and businesslike. "How do you do, Mr. Baines . . . And Mrs. Baines. What can I do for you?" In an instant she had a hat in her hand, and was advancing upon Scattergood's wife. Scattergood smiled to himself. Here was business, a coming straight to the point.

"Me 'n' Mandy wants to buy a bonnet," he said.

"Half of me 'n' Mandy wants to," said Mrs. Baines dryly. "I calc'late to wear it most of the time, Nellie."

"Got a nice-lookin' place here," Scattergood said, looking with approval about the bright, inviting sales-room. "Um. . . . Sairy and Mary kind of sets it off."

Nellie turned her face toward him questioningly.

"Kind of like a temperance lecturer fetches out a horrible example," said Scattergood. "Or one of them before and after takin'. Um. That's an idee. Why not leave Sairy like she is, and fix Mary up like she ought to be. Then stick up a sign sayin', 'Before and after buyin' a Nellie Rockwell hat.'"

THE twins sniffed, and Mary said snappishly, "You calc'late you're funny, don't ye?"

"I do," said Scattergood placidly, and turned his back. "Seems to me, Nellie, everythin's right here, exceptin' them clerks. They don't match up." Scattergood winked. "They hain't appetizin'," he said.

"Scattergood Baines," said Mandy reprovingly, "you're givin' offense."

"Wa'n't calc'latin' to. Jest figgered on offerin' advice. Got your bonnet picked out, Mandy?"

"I kind of like this one."

"It's becomin'. . . . Mandy, you're gittin' to be a handsome woman, dog-gone if you hain't. Allus did admire gray hair. And you hain't by no means skinny, neither. Now, if you was to pull your hair back like these here twins, and do it in a kind of a doughnut, you'd look altogether different."

"Scattergood!"

"Yes'm. . . . Set your heart on that one, eh? . . . Um. If you're bound on keepin' them twins fer clerks," he said to Nellie, "why don't you kind of tidy 'em up?"

"You needn't to think," said Sarah, "just because you're Scattergood Baines, you kin say anythin' to anybody!"

"I kin try it once, to see how it comes out," Scattergood answered placidly.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"You're gittin' to be a handsome woman, dog-gone if you hain't"

"Um. . . . I kind of wonder how you'd look, Sairy, with your hair kind of fixed attractive, and some kind of a dress on that'd give the anxious public an idee they was a woman under it instid of a contraption of bean poles."

"Scattergood Baines!" said Mandy. "You hush up, and come right out of here. I don't see what's gittin' into ye."

"Why don't ye uniform 'em?" was his parting shot to Nellie as he was urged through the door by his irate wife.

NELLIE'S eyes were thoughtful as he left the store. She knew him, and was aware that he had not come for nothing; and back in the workroom, as she busied herself with the trimming of a hat for Mrs. Pratt, she gave the matter close scrutiny.

Presently she called Sarah, who entered grudgingly.

"I want to try this hat on you," said Nellie.

Sarah submitted. Nellie shook her head. "It won't do that way. . . . Your hair's too tight for this model. And I've got to see how it looks. Take it down, won't you—your hair I mean—and let me fix it the way it ought to be for this hat."

"Is that part of my duties as clerk?" asked Sarah sourly.

"It could be," said Nellie, and with deft hands she rearranged and embellished Sarah's coiffure, softening it about the lines of the twin's face, giving it a little tuck here and a little poke there. Then she set the hat on top of it all, and stood back to view the result. Her eyes twinkled.

"That's better," she said. "See if you don't like that hat yourself."

Sarah walked primly to the glass and peered at herself. She peered longer than she had expected to, and Nellie smiled as she saw the spinster turn this way and that way, studying herself with evident astonishment.

"All right," said Nellie presently. "I'll take it off now."

Sarah submitted, craning her neck now and then to catch another glimpse of herself in the glass.

"Now hold still," Nellie said, "and I'll fix your hair back as you like to have it."

Sarah pursed her lips, stole another look into the mirror and said snappishly, "I guess you kin leave it as it is. I kin stand it this way till I git home."

Again Nellie smiled.

SHE was not surprised when, next morning, Sarah appeared with her hair done in a bad imitation of the style Nellie had imparted to it. "Here," she said, "just let me give it a touch." Sarah submitted ungracefully, but throughout that day Nellie noticed the spinster looking at herself more than once in the glass. She noticed, also, how Mary cast innumerable sour glances at her sister.

A day or two (*Continued on page 194*)

You Have Plenty Of Energy— But What Do You Do With It?

Here are ten rules that will help you stop the leaks in your strength, and start you on the road to where you want to go

By William Frederick Book

PROFESSOR OF PSYCHOLOGY AT INDIANA UNIVERSITY

A STORY is told of a boy who became seriously ill, and had to be taken to a nerve specialist. Examination revealed symptoms of overwork. The physician rebuked the parents for allowing it, but learned to his amazement that the boy had done practically no work at all. His one task each day was to bring *one* pail of water from a spring a quarter of a mile from his home, a task required by way of discipline; but the boy dreaded it so much that he wore himself out thinking what a lot of hard work he had to do! Whether or not the story is true, it illustrates a fundamental human fact: a person can literally wear himself out doing nothing.

Here is a second story which I know to be true: A little girl named Helen could not learn her arithmetic and spelling lessons at school. She tried hard, but simply couldn't. Failure made her nervous, badly-behaved, and uninterested in play and games. Her teacher was in despair. Her mother punished her. And finally they brought her to me, for I was the principal of that school.

"I never *will* be able to learn," Helen assured me.

Now, a study of human beings covering a good many years has taught me something about the variable limits of "can" and "can't" under different circumstances; and I have faith in what people can do when they get off on the right foot. So I arranged to try what we may call a psychological experiment on ten-year-old Helen.

First, I asked her mother not to punish her any more for her failures in school work. Then I arranged with Helen's teacher to assign her special tasks, much easier than the other pupils of her grade were doing—tasks as simple as spelling c-a-t, and adding six-plus-six. Helen soon found, to her delight, that it was possible for her to do all of this new work. In a single week her attitude began to change. She became more confident. Whereas, previously she had known she couldn't, now she began to discover she could. It made all the difference.

The program was continued for several weeks. By that time Helen was gradually resuming the regular work of her grade, and found with fresh surprise and delight that she could do it all.

"Tell me what in the world you've done to Helen. It's a miracle," said her mother. "She's a new girl."

No miracle had been performed: simply a little experiment based on a fundamental human trait. Helen had been taught, by success, to believe that she could succeed. The entire experiment consisted of assigning tasks which she could perform, and continuing them, gradually increased in difficulty, until *the habit of success* was firmly implanted.

These two incidents may serve as a springboard from which to dive into a discussion of certain kinks in the human brain that make for or against effective accomplishment in all fields. In one of the cases given, a boy wore himself down to physical exhaustion merely by worry over a ridiculously easy task; in the other, a girl probably was saved from something similar by being trained to believe in her ability.

Psychologists to-day know that far more can be done when the state of mind is favorable—a fine record is sometimes wrested from failure; mediocre achievement is built into high achievement. What is more, happiness is oftenest wrought by intelligent and complete use of the powers we have; by driving them instead of allowing them to drive us. It is very much worth while, therefore, to know the nature of those kinks I spoke of, and the practical rules of life that follow from them.

OUR energy, as we all know, comes from the food we eat and the air we breathe. Different people have different amounts. For a given individual, the amount at any time is definitely limited. There is no exact way to determine how much each of us has. However, it is obvious that the amount I can apply to the things I want to do depends on how much I start with, how well I use it, and how effectively I create a new supply when the old is exhausted.

Most of our energy is used automatically maintaining the heat of the body. The surplus, the little remaining, is the "bank account," on which we can draw for whatever we undertake: building a business, writing a book, running a race, seeing a show, or what not. Everything we do draws on this store of energy. Expensive drafts are made by emotion. Anger and fear exhaust the supply very quickly. Fatigue is the warning signal of a diminishing supply. Sleep is the great restorer.

How, then, to make the energy we have go furthest becomes one of the greatest human problems. The ten practical rules that follow are the result of studies and experiments that have brought our knowledge of what the human machine can or cannot do, to its present state.

Make a Road Map for Yourself So You Won't Lose the Way

"TO MEASURE the practical value of a clearly defined course," says Doctor Book, "we use a very simple experiment:

"Walk aimlessly down a crowded street, toward no particular destination. Next turn and walk back (or repeat the experiment another day), but this time with a definite destination; you need not hurry or scramble, but walk steadily as you do when you mean to get there. Watch carefully and record what happens in each case, and answer the following questions: (1) How long did it take you to make each trip? (2) Did walkers impede your progress more in one instance than in the other? (3) Did people seem to step out of your way in the second instance?

"In short, did your experience lead to any conclusion about the truth or falsity of the saying, 'The world makes way for the man who knows where he is going'?"

After working at anything continuously for a long time, we get so we cannot do our best with it. Usually, there is a gradual decline in efficiency; we make more mistakes as the day wears on, and work more slowly. But, beyond this, there are real work limits, and sometimes after a long, hard grind we cannot work at all.

1. Learn your true work limits:

One scientist, after a day and evening at intellectual work, began at eleven o'clock at night to mentally multiply four-place numbers by other four-place numbers, working at top speed until a little after three o'clock in the morning. Then suddenly he was unable to continue. His brain refused to function on mathematics. He tried simpler problems; but could not do them, either. He had reached his work limit in that direction.

Again, another scientist and some volunteers kept themselves awake for seventy-two hours—some of them for ninety. They tried various types of mental work and tests during this period. After a certain degree of effort, they discovered that unusual incentives had to be applied to enable them to do the work, and finally they could not do it under any conditions.

These men were trying for scientific reasons to find absolute work limits. It is not necessary or desirable to go as far as they did, without a similar reason. But many people have the easy-going habit of quitting at the first symptoms of fatigue, thereby living always on a lower plane of endeavor than they are capable of. It is an illuminating experience to drive yourself to the limit and find how much you can do—your real work limit. There is no simple and perfectly scientific method of determining this. But there is a good, safe rule-of-thumb: when you have found the very most work you can do in one day, from which you can recover perfectly in one normal night's sleep, then you have discovered, for all practical purposes, a work limit.

2. Avoid excessive fatigue:

Sometimes we do not stop when we get tired. Then a curious thing often happens. After a while we experience what is known as "second wind." Every racer knows the feeling. It may occur in all kinds of work. After mental work, for example, has been continued all day and until one or two o'clock in the morning, the worker may be terribly fatigued. Suddenly, however, things begin to clear up to such an extent that the very best work of the day is performed.

These "second wind" states are intensely illuminating, but dangerous. It is good to know we have such reserve stores of energy that may be called on in extreme emergency; but it is not well to use them, except in such emergencies.

W. P. Fessenden, Secretary of the Treasury in Lincoln's Cabinet, signed one hundred and twenty-five thousand bank notes in seventy-two consecutive hours; that is, he worked without intermission for three days. As a result, Mr. Fessenden was a nervous wreck for the balance of his life.

Experiments made since that time have shown that he could have done the work in that time without bad results, if he had taken short periods of rest at stated intervals.

Excessive fatigue may result in mental collapse. A Vermont farmer was brought to a Boston hospital violently insane. The family history showed no trace of insanity in any of the farmer's ancestors; but the physician discovered that he had been working as a dairyman for four years, getting up at two in the morning to start delivering milk, and working usually until ten at night to complete his farm work. He had, in short, been trying to do two men's work. The treatment prescribed for him was absolute rest, special means of forced relaxation, good food, and plenty of sleep. This treatment effected a complete cure in a year and a half.

These first two rules, therefore, amount to this: Learn how much you *can* do; but, if you would live long and effectively, do not drive yourself continuously to the point of great fatigue.

Dr. William Frederick Book is one of the best known psychologists in the country. He is professor of psychology, and head of the psychological laboratory, at Indiana University. Among his best known works are "Learning How to Study and Work Effectively," "The Will to Learn," and "Intelligence of High School Seniors." In addition to his other duties, Doctor Book conducts several "How to study" courses at Indiana University. He was born at Princeton, Indiana, in 1872. His home is now at Bloomington, that state

3. Acquire the habit of working a little while and resting a little while.

Frederick W. Taylor was the first to demonstrate scientifically the importance of this principle in everyday affairs. His work is well known. He experimented with so simple a task as loading pig iron on flat cars. The workmen picked up a chunk of iron weighing ninety-two pounds, carried it onto a car, and dropped it.

By their ordinary methods, the men loaded an average of twelve and a half tons per man per day. Taylor tried all sorts of plans for resting them. He would have them work at top speed for thirty minutes, and rest five; work twenty minutes and rest three; and so on. He found ultimately that they did best when they were actually under load less than half of the working day. By this one change in their work, they were able to load *forty-seven* tons apiece daily, and were no more tired than when they worked in a haphazard way, loading only twelve and a half tons per day per man.

The principle has the very widest application. Mr. W. T. Hornaday, who for many years was director of the New York Zoölogical Park, describes an interesting case: Two men started on a sea voyage in a small boat down the Gulf of California; but lost their vessel and were stranded on the desolate shore of Lower California.

All the food they had during the several days it took them to fight back to human habitations was seven hard-tack biscuits, one tough coyote which they happened to shoot, a few oysters, and one fish—and they had to cover one hundred and sixty miles of the worst sort of desert country.

They were fortunately level-headed, and did not allow themselves to be stampeded.

Before starting on their desperate tramp, they made a plan: they decided to march fifty minutes of every hour, and rest ten. They adhered to the rule very closely. It may have saved their lives. They were exhausted when they got out; but conserving their energy in this way unquestionably was a big factor in seeing them through a nearly foodless and waterless desert tramp.

The only way to tell the proper length of time to work before resting, and the proper length of the rest period, is to experiment.

The habit of relaxing completely every little while is of the utmost value. Breathe deeply. Sit on a different chair. Lie down if possible. Let no muscle remain taut. The power of relaxing can be learned, like any other habit, and repays the learning a thousand-fold. (*Continued on page 189*)

He Captured The Vanishing West Before It Vanished

By Neil M. Clark

A HORSEMAN came riding out of the gray dawn.

"Howdy, kid!"

"Howdy!"

The youngster beside the chestnut-sorrel mare gazed at the newcomer with wide eyes. As evidenced by his appearance, this *vaquero* had wild, wide landscapes behind him. His hair and beard apparently had never known the touch of shears, and swept grandly over his chest and shoulders. His leggins were of fringed buckskin. On his heels clinked the jingling spurs of the wild-horse handler.

There was no "visiting" between the man and boy. They exchanged scarcely two dozen words. The *vaquero* slipped off his horse, tightened his cinch straps, and remounted. Some riders climb on a horse's back; others leap; but he simply *walked*. By a single movement, too graceful, swift, and easy for the eye to follow, the horse started, and he swept into the saddle as if they were creatures of one flesh and blood. Soon they were out of sight.

The youngster (he was hardly more than a boy) had never seen this *vaquero*, or his like, before, and never saw him again. A stranger, he appeared out of the gray dawn, and he rode into the sunrise still a stranger. But after his casual coming, life was never again the same.

"I mean to go where he has been," the boy said to himself.

Huffman was the youngster's name: Laton Alton Huffman. To-day when you meet Mr. Huffman half a century after that momentous gray dawn, you shake the hand of a man seventy-four years old, and yet younger on most counts, except years, than many a man of forty-five; you look into the eyes of a man who knew and loved the West when buffaloes roamed it; when Indians were not yet tame; when "bad" men finished arguments with six-shooters, and now and then one gurgled his last at the end of a rope; when cowboys who rode the great circle at round-ups and dragged calves to the branding fire were known by the names they gave, and no questions asked. Of all this he was a part; and of it all he has preserved a finer, more complete and veracious pictorial record than probably any other man.

The Huffman pictures, which he made and still makes, are famous. They date from the year 1878, when he carried a homemade camera to the wilds where the buffalo were, and photographed them alive and dead, after they lay by the hundreds, slaughtered for their hides and tongues. On pictures made from his negatives you may see how a wild horse was hobbled before mounting; how jerk-line twelve-horse teams were harnessed by freighters; you may look into the faces of many of the famous Indians and Indian fighters; you may see lodges, frontier towns, wolfers' lonely shacks, just as they were. In making his unique and valuable record, Huffman has lived the life; and it is his story I want to tell.

HE WAS born in northeastern Iowa in the year 1852, on a farm near Castalia, but he never took kindly to farming. Being s'ight of build, the work proved bad for him. He bound wheat behind hand-rake blue reapers before self-binders were invented, when he almost had to run to keep up with older and stronger men. From about that time too, he remembers a sour dominie, his teacher, who would thump him on the head when he stared wistfully out of the windows at the Big Foot woods, and who finally thumped him clear out of school.

His father, who in boyhood, like himself, was slender, sold his farm and opened a little photographic shop in the town of Waukon, near by. Here Laton learned the rudiments of making pictures. Later he

The round-up outfit on the move—a picture of life on the range in the seventies

moved to Postville, eighteen miles away, and opened a photographic shop of his own.

"I didn't earn much money," he said, "but I managed to drive fine horses; there wasn't a better turn-out in the county than mine. The girls were pleased to go riding with me. Among them was a red-headed school-teacher ten years older than I was, whom I considered the pick of the lot. I wanted to marry her; but it turned out she only wanted to be a sister to me, an older man had the inside track to her affections.

"My mother had died shortly before. The ties that keep a man in one place had loosened. So, when my girl turned me down, I again pulled stakes. You might say a red-headed girl started me West!—and, happily, I later found another red-headed girl in Montana, who became, and is still, my wife."

IN WESTERN Iowa, where Huffman stopped first, he worked for "Mose" Hostetter, a big wheat farmer, who had a good many cattle and horses. His ranches were on the edge of Indian country, and small settlers had hardly begun to come in. Huffman broke horses and carried messages; and it was while carrying a message to an outlying outfit that he was overtaken by darkness and spent his first night alone on the prairie.

"I was not altogether easy about it," he says. "Those blue-stem swales seemed endless. There was not a house, tree, hill or fence, as far as I could see.

"I made camp by a little stream near some sumac bushes, picketed my horse, and spent a watchful night. Noises startled me, things I never heard when the sun was up; strange night birds, unknown beasts and insects, wolves howling away off, my mare cropping grass. Particularly, the mare troubled me. If anything happened to her and I was set afoot, I knew I was as good as lost.

"But I slept. And there was no trouble. When I awoke the *vaquero* I told you about was in sight, and coming toward me.

"It's hard for me to explain the effect of that simple meeting and the few words we passed. I suppose it only capped the climax of tendencies already at work in me. My father and mother had been pioneers; they went from Ohio to Iowa when Iowa still seemed far west. The urge to be on the edge of things was no doubt in the blood, and fired me to go on, further and further.

"I had heard of Custer's tragic defeat on the Little Big Horn, which occurred in 1876. The last of the great Indian wars was being fought in the Northwest by General Nelson A. Miles against Sioux, Cheyennes, Nez Percés, and other tribes. I made up my mind to head toward there.

"After spending one day in Waukon with my father, I went to St. Paul. I believe I had twenty dollars and a little loose change.

"In St. Paul, through a dealer in photographic supplies, I learned that the post photographer at Fort Keogh, the headquarters of General Miles in Montana, had been dismissed, and no successor appointed. That looked to me like my opportunity.

"The Northern Pacific Railroad then was built only as far as Bismarck, North Dakota. Arriving there, I stood for a while on the bluffs and looked across the Missouri River. On the far side was Fort Abraham Lincoln. Beyond the fort, for hundreds of miles, lay the wilds: the wilds of the Indian and the buffalo, the trapper, the trader, the hunter, and the United States Army. It was for there I was bound!

"The weather was bitter cold. Transportation beyond Bismarck was by means of the Star Route buckboards, a pioneer mail route running every other day from Fort Abraham Lincoln to Fort Keogh. The distance was about three hundred and twelve miles. It took seventy-two hours, traveling day and night, to make the trip. The buckboards had two seats, with a space behind for mail sacks, and were entirely open to the atmosphere. At night the temperature got as low as forty below zero; and I was without blanket, buffalo robe, or even a reasonably heavy overcoat.

"When we started, I was the sole passenger. But another man joined us after dark. Nothing specific was said on the subject, but we gathered he was an outlaw, probably a horse-thief, making his get-away. Later, I knew him better, and had no doubt about his activities; but at the time he treated me well, as I'll tell you.

"By the time we arrived at Lake Station, I was in such bad shape from exposure that it seemed absolutely necessary for me to lay over till the next buckboard. The station proved to be a little one-room shack. The stock tender, Oscar Brackett, who was wolfing and skin-hunting on the side, first cared for the horses and then warmed me, and fed me his own cooking, which tasted mighty good. While there, I saw my first United States six-mule jerk-line teams, one of the famous 'window-shutter' trains bound from Fort Keogh to Fort Abraham Lincoln; and the three men in charge of it, Luther S. (Yellowstone) Kelly, Hunter Liggett, and Oscar F. Long, were to become my lifelong friends.

"I ARRIVED at Miles City, the civilian town near Fort Keogh, by the next buckboard. It was around two in the morning when we pulled in; but, late as it was, the town was wide open. It was a typical frontier town, with rows of board and log shacks on each side of the street, and wagon tracks in the middle winding around the mud holes. The places of business were saloons, dance halls, gambling establishments, and a trader's store, and most of them did a roaring business.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"My first meal, which I got in a hurry, consisted of buffalo meat, canned tomatoes, dough biscuits, and coffee. The price was one dollar. You couldn't get a meal in town for less.

"Immediately afterward I set out to hunt up the outlaw who had been my fellow-passenger on the first buckboard. When I laid over, he volunteered to take my carpetbag to Miles City and look after it. It contained all my worldly possessions, and I had become a little dubious about ever seeing it again. But I made the rounds of the town, and presently found my friend sound asleep on the floor behind the bar of a saloon. My carpetbag was his pillow. I recovered it, and everything was just as I had left it. That was my first outlaw; but not my last!"

THE following day, Huffman went to the fort, a couple of miles away. He became the new post photographer. It was a civilian position, with perquisites, but no pay; such money as he made came from the pictures he took and sold.

Very soon Huffman met adventure.

"I was crazy to get out and see buffalo and buffalo hunters," he said, "so, as soon as I could, I got a horse and some camp equipment, locked my shack, and disappeared in the wilds. I struck into the wild bad lands around Smoky Butte and north to the breaks of the Missouri River. After perhaps a week alone, I met a party of hunters headed by a man named Dock Zahl, afterward a famous skin hunter, and still living in North Dakota. I threw my 'war bag' into his wagon, and intended to keep with the party. But a day or so later, by accident, I became separated from them.

"For three days I was alone again, this time without most of the possessions I needed. I killed a prairie hen, which I cooked and ate without salt; it was about all the food I had.

"The second day I was riding toward a curiously-shaped butte which I meant to climb, thinking I could get a view of the country, and possibly sight Dock's wagons. Something on top of the butte caught my eye. I was in a treeless country, where you saw hardly a stick of timber as high as your head for scores of miles; therefore I was not a little surprised to see, sticking up on top of this butte, a pole of some size and eight or ten feet high. It stood at an angle of about forty-five degrees, and it seemed to me there was something dangling from its upper end.

"'It's a signal of some sort!' I said to myself.

"I had heard of Indians setting traps for their enemies. In a conspicuous spot they would place some object that was bound to stir curiosity; and when the white man, or an enemy Indian, came to see what it was, they sprang on him out of ambush. This looked to me to be the bait for that kind of trap.

"Whatever was hanging from the peak of the pole, swung occasionally, or was moved. When its broad side was toward me, it looked surprisingly like a rifle target, with the bull's-eye in the center; but when the narrow side was toward me, I could hardly see it at all. From my distance, it seemed as if somebody hidden behind the rocks was alternately showing and removing a signal device.

"There were plenty of hostile Sioux about to make me wary, and I decided on a scheme. I picketed my horse in an open place, where he would be seen if anybody was looking. A white man's horse, saddle, and bridle, I felt sure, would be sufficient temptation for Indians, if Indians there were, to show themselves. I secreted myself among the rocks at the foot of the butte, and kept a sharp watch.

"Nothing happened. I had my pains and scare in vain. Finally, after a long wait, I climbed the butte; and this is what I found:

"It was the grave of an Indian warrior. His body was carefully covered with stones so that he might not be disturbed by

beasts of prey. Near him his friends had placed an abundance of food. Having no other timber, they had sacrificed one of their lodge poles to mark the site; and from the top of this, by thongs of skin, they had suspended the dead man's war drum.

"It was this drum I had seen swinging in the wind, now broad side and now narrow side to me. Made of hide stretched on a frame of willow, and painted, it had been beaten so often and hard that in the center the paint had worn away; this was what gave it, at a little distance, its resemblance to a target.

"Hungry though I was, I did not touch the food set out for that dead warrior's journey to the hunting grounds of the brave. But I did take away his drum; I have it to this day.

"I was a grave robber—that once! Many a time afterward, though, I made restitution. The Sioux, who were numerous in that part of the West, scaffolded their dead above ground, sometimes in rock-niches, often in trees. Many a time, while riding through the forest, I would find a Sioux skull blown from its resting place among the branches; and often I would climb the tree to put it back with the other bones."

ON THIS first expedition into the wilds, Huffman did not take a camera. A few months later he made a second expedition with a companion, and this time took a camera and got his first exposures of wild buffalo, alive and dead. They were supplemented by many more in the years immediately following.

"Indians too," he said, "were numerous in and around Fort Keogh in those days, and I photographed many of them: Spotted Eagle, for example; American Horse, Tall Bear, Snake Whistle, Sits Down Spotted, Mrs. Bad Gun, Two Moon, and a host of others. Once, I remember, I ventured a little too far.

"General Miles, whom I had met by this time, held prisoner, with numerous other hostiles in Spotted Eagle's village, Rain-in-the-Face, the Hunkpapa of Custer Battle fame, together with many of his people. They camped by themselves, under guard. I considered it a fine opportunity to make some interesting pictures, and was aided and abetted by a young Irishman who drove a delivery wagon and was on good terms with the sergeant of the guard at the Indians' camp; he had struck up an acquaintance, too, with Rain-in-the-Face. He and I had no difficulty getting into Chief 'Spot's' camp.

"Rain-in-the-Face, not unnaturally, was surly and angry at the white soldiers. However, he soon made up with us, and fell in with a plan I proposed. Putting him in the back of the delivery wagon, where he was fairly well hidden, we drove him to my studio at the fort!

"I kept him there for three hours and more, making exposures of him in different poses and in full regalia. When I had photographed him to my heart's content, we took him back to his lodge in the same manner as we had brought him.

"About this time the adjutant happened to observe that the Indians were greatly excited. Investigating, he discovered that they had become worried over the long absence of Rain-in-the-Face, and many of them feared he had been spirited off by white soldiers to be hung or sent away. In a few moments the adjutant learned the whole story, and rode hot-foot to the fort.

"I did not have to wait long for an orderly to come and tell me I was wanted at headquarters. When I went in the adjutant never said a word, but jerked his thumb over his shoulder. Down a corridor was the office of General Miles himself. I went in. The general did not look up, but it was plain to see he was hot around the collar.

"'Young man,' he said, 'if you ever take another prisoner of war out of camp without permission from the adjutant or myself, you will find yourself in very serious trouble.'

"I never repeated. But I had gained some fine pictures of Rain-in-the-Face!

"My contacts with Indians gave me a very high opinion of many of them. Two Moon, for instance, a chief of the northern Cheyennes, who fought against Custer, and whom I knew well, was as upstanding a man as I would want to know, red or white. Sentiment ran strong in their race, and some of their ways were beautiful. There was a woman: I visited and photographed her grave. I'll not tell where it is, for it's not a place I should like to see visited for the sake of idle curiosity.

"As a girl, this Indian woman had been beautiful and rode a horse as gracefully as any of her people; she had lovers galore, and later a husband or two, became the mother of six or more children, and as she grew older was kindly and generous to a fault, and well loved. She became very fat, far too fat to ride an Indian pony any more. The only things she asked for then were a light spring wagon, and a white woman's sewing machine, so that she might ride comfortably from lodge to lodge, to sew for her children and friends. It was work she loved, and she continued it almost to the day of her death.

"After she died, how do you suppose they buried her? I will tell you about her grave.

"They selected a spot on the crest of a ridge of hills, on each side of which is a river valley. Along this divide, when alive, she used to drive on her errands of service, and in death they placed her, at her request, in a sitting posture, in that wagon box, protected by a tin covering; so she could, so they believed, look far out over the two valleys and feast her eyes on familiar scenes, secure against the invasion of wolves; and to make her more happy and contented, they left with her the things she used and loved in life, chief among them her sewing machine.

"FORT KEOGH was abandoned as a military post after a few years; but I kept on making pictures in Miles City, and carried my camera to many places, often under difficult circumstances.

"My early pictures, apart from routine portraits of soldiers and others, were mostly of wild animals, the hunt, and the lives men led. Scenery alone did not interest me much, although I made a good many early pictures in Yellowstone Park. The coming of the cattle brought big changes in the country, and introduced new picturesque elements.

"I ranched for a while myself, running the HL brand on the Rosebud, and made many pictures of round-ups, breaking wild horses for the *remuda*, calf-branding, and of the other activities that made old-time cow-ranching the picturesque industry it was. The eighties were the golden era of the cowman in Montana, and at that time dozens of ranches were scattered up and down the Little Missouri, the Powder, the Big Horn, the Yellowstone, and a score of tributaries of these streams.

"Miles City then was a typical cow town, and the Stockman's Association of Montana held many of its meetings there. It was during one of these meetings that I met Theodore Roosevelt for the first time. He owned the Maltese Cross herd, and came to the meeting as a delegate for the ranchers along the Little Missouri. He had heard about my pictures and visited my shop.

"I HAVE often encountered rattlesnakes, of course. There was one curious experience, the explanation of which I leave to you:

"I was coming down the Yellowstone on an expedition with a pack train of half a dozen horses, together with a man named George Washington Kelly. One evening we picked a place for a camp site where the river once, long before, had cut away the banks in a big sweep to the south, then had taken the opposite direction, and cut away the banks in a new sweep to the north, deepening its channel all the time. The banks of the river were so steep that there was no way to get the animals down to the water to drink. It even looked doubtful whether we could get water for ourselves.

"Taking a bucket, I managed to climb down to the water's edge, filled the bucket, and started back up. It was a hand-over-hand job. The cut bank consisted of loose earth, and I could lift myself only by grabbing onto roots; I had to be mighty careful they were green, too. A rotten root could have dumped me into the Yellowstone.

"I was nearly up, and just ready to reach my hand over the top, when something warned me not to. I don't know how or why it happened: there was no sound, no odor; I couldn't see. But I felt perfectly certain that on top of the bank was a rattler.

"Sometimes when you are riding a horse in a big country, he will sense something away off behind him, maybe as much as a mile away. He will keep turning his head, and you may have to let him stand stock-still and look until he is satisfied. You may not see a thing.

"What tells him there is something behind him? I don't know. Nobody does. The Almighty has fixed it, and that's the way it is.

"So with that rattlesnake. I was so certain it was lying right where I was going to put my hand that I climbed all the way down again and made my way between the current and the bank for several dozen feet until I found another place I could climb. I went to the spot where I first tried to climb out. There, sure enough, coiled and ready for business, was a big diamond-backed rattler. I killed him.

"Curiously, the diamondback is not a snake you would expect to find in just such a place. He prefers dry, sandy hillsides, maybe near a little clump of cottonwoods, and not close to water.

"In a wild (*Continued on page 72*)

The Upstart

A love story in which a young man finally shows some sense

By Margaret Culkin Banning

ILLUSTRATED BY NORMAN PRICE

PINE Street, namesake of a tree long since sacrificed to the steady invasion of small peaked frame houses, narrowed to its end under the flickering acetylene light on the corner.

It was a street of small home owners, Pine Street. The census taker knew it well, the assessor knew it, the politicians all figured on it with respect; but it was a street that was never photographed for Chamber of Commerce booklets to show the beauty of the city. Such parties and courtships and weddings as took place in the front parlors never found their way into social columns.

Yet out of one of the little wooden houses on this winter night, just as the dusk thickened into blackness, came a celebrity.

It was the McLeans' house, the third one from the corner, the gray one with the yellow trim, that harbored him. He was a young man, hardly more than a boy, splendidly built and borne, with the swing of an athlete in his walk.

The corner light wavered over his face, more boyish even than his body, throwing out of the shadows the happy, interested eyes and humorous mouth. And as he walked he whistled, a kind of running accompaniment to his quick step and eager thoughts.

He curved out on the ice an hour later, to the same tune, and the thousands in the grand-stand of the great amphitheatre shouted their delight, drowning the swinging music of the band for a long minute.

"Andy McLean," they shouted. "Andy! Andy! How's Andy to-night?"

A girl in a short white fur coat and white flannel dress, sitting in the section reserved for those who had season tickets for the hockey games, leaned over the knees of the man next to her and spoke to another girl.

"That's the one!" she said. "Isn't he absolutely the easiest thing to look at you ever saw? I'm simply mad to meet him. And watch him skate, my dear. He's simply the most graceful thing—"

"He's a crackerjack hockey player," said the man between the girls. "Andy's all right. He used to be in high school with me the year before I went to Taft. Nice fellow too. Comes from the South End though, Marge. Rough-neck, of course."

"I wouldn't care if he was a convict!" said Marge. "He's like music to my ears."

Andrew was used to the noisy, shouting demonstrations, and ignored them. He and the other members of the team circled around easily, getting used to the ice, passing the puck swiftly from one to the other, their vivid orange sweaters a gorgeous dash of color against the milk-white ice.

Down the length of the rink the other team, sweatered in blue, maneuvered likewise.

Andy liked this moment of music and preparation as much as savage little Sinclair, the goal tender, looking like a beetle in his great knee protectors, hated it.

"What's the idea of the wait? Do you think we're giving a style show?" asked Sinclair irritably. "And where's that darling referee we've got to feast our eyes on? Putting on his rouge?"

Sinclair was twenty-seven, the oldest man on the team, and crabbed a little. He disliked all referees as a general thing, and this present one in particular. This one, sent by the amateur league, was an Eastern college man, and they made rather a point of that in his publicity. He wore a heavy white sweater, elaborately initialed in front, and gay wool stockings and knickerbockers.

The hockey team, except for the uniformity of their sweaters and the fact that they all wore numbers, were a nondescript lot in dress and manner. Boys from about town, working all day in this or that shop, or factory, or office, they had skill in skating and love of the game in common—and that was all.

SINCLAIR gave the referee a final glance of contempt, and went to his place at the goal, hunched in front of its six-foot entrance with his hockey stick poised and his eyes watchful.

The referee skated to a central place, blew his whistle, dropped the puck. The curved sticks scrambled for it, and the game was on.

The audience sat braced and intent. It was partly the chill of the air that made them all feel so alert, so vitally part of the game and the exercise. Andy McLean, lithe and handsome, represented what hundreds of men felt tugging in them as they watched, what hundreds of women looked for hopelessly in the men they knew—beauty and skill and control.

Andy caught the puck with his stick and guided it down the full length of the rink with incredible swiftness—the rest all after him—shot it to Wayne, who passed it to Olson. Back to Andy. And, driving viciously, Andy hit it past the Cleveland goal keeper into the goal.

A wave of joy rose like an avalanche beating over the heads of the players, the shrill whistle of the referee was heard, followed by a noisy bell, and the first third was over.

The girl in the white fur coat sprang from her seat and beat her hands together.

"I get so excited I can't bear it!" she cried. "That McLean man is wonderful! I simply must meet him, Dick. Can't you bring him around, if you know him?"

"Do," pressed the other girl. "Bring him around, Dicky. I like them when they're rough and don't know any parlor tricks. Do you suppose he dances the way he skates, Marge? We could get him for the Junior party."

"You girls make me sick!" said Dick. "You wouldn't look at him if he couldn't skate. He works in some hardware store down-town."

"It's all right with me. He gives me more kick than I've had in years. You *must* bring him, Dick. I think we ought to do something for the hockey players who represent the town. Father was saying to-night that it's giving the city national publicity, and is very good for it," Marge ended virtuously.

Dick gave a kind of snort, and bought three bags of popcorn.

"Stifle your wails," he suggested, "in this," and began on his own.

ANDY McLEAN, leading the local team, skated on for the second third, grinning that joyous, boyish grin which had made him popular everywhere since he was a little boy.

The girl in the short, white fur coat stood up as he passed her and leaned forward to catch his eye, waving at him. Andy's hand went up in a salute. He swept past, and then, as if the memory of the girl tingled, he turned around and sought her out with his eyes. Dicky Blair nodded, and Andy grinned again. She must be Blair's girl, or his sister.

He forgot all about it shortly. The second third didn't go so well, and the referee made an adverse decision, which left Sinclair spitting *sotto voce* insults and the score two to one in favor of Cleveland. The Cleveland team warmed up and the game grew rougher. Once a player, flung on the ice, lay there for two minutes, while the people watched breathlessly, as people always have watched for casualty from the sides of an arena. Then the man got up and skated slowly to the side lines; someone replaced him, and the game went on.

Six minutes to play. No further score, and the defense of the visiting team grew vicious. Andy, Olson, and Wayne played their interchange in vain. The others were on to it now. Then, suddenly, with one of his unexpected moves, Andy swung one way, then another, and with lightning eye and accurate stroke landed another goal. The grand-stands went mad.

UNIVERSITY OF CALIFORNIA

"Another!" they shouted. "Another! Andy McLean, that's the boy! Give us another, Andy! Another!"

Three minutes to play. Andy obeyed. He gave them another, while they shook the grand-stands with applause; then, as the referee's whistle blew for the last time, he skated quietly to the players' entrance and disappeared with Sinclair.

"That," said Sinclair, "will give little Gracie, our referee, something to worry about all night. He will not be able to see how, in the best collegiate circles, it can be considered proper to make goals so swiftly!"

McLean turned around to look again at the referee. That white-sweatered gentleman was standing by the grand-stand talking to a girl—the same girl in the fur coat who had waved at him.

"Look at Gracie," mocked Sinclair. "He's talking to one of his girl friends."

"Oh, cut it out," said Andy good-naturedly. "What's on your mind anyway? He's not so bad."

"He's so darned high-hat," mourned Sinclair. "I just forget he isn't the puck now and then, and my stick gets itchy."

"You'd better look out. You'll land in jail, and then what'll we do for a goal?" Andy said warningly.

The members of the hockey team got out of their skating sweaters and into their regular clothes. The manager and the coach gave them a few words of praise and abuse, but not too much, for the discipline possible in college athletic groups did not hold in this one.

ANDY and Sinclair went out together, refusing offers for rides home. Their hearts were warm with success as they talked of the next game, and the reported strength of the team which they were to meet. In the vast crowd pouring out of the doors of the amphitheatre they lost their identity as heroes quickly enough. It seemed strange to Andy that all these people came out to see him play hockey, that these were the same people who called his name so familiarly from the grand-stands.

To him it had been a natural enough progress, from tumbling around with the little boys on the corner skating rink, to being captain of the school hockey team; then, when he went to work, a member of the team made up from the employees of Sanford-Low's big hardware establishment. They had played at first on open ice and got better at the game, until they began to get challenges from other local teams and from outside the city.

A sudden wake-up of a sporting editor to a new thing to interest people in, a few editorials, popular favor spreading, spreading, and there had risen the big closed rink, the commercially valuable game, and the city team. Kelley, the manager, had followed every move, a little ahead of the game all the time, anticipating the next jump.

Andy saw a lighted car pass with the white-coated girl within it, and turned toward her was the profile of the collegiate referee. He looked after her, not calling Sinclair's attention to that gentleman again, and the memory of the girl stayed with him as they rode on the back end of a street car down-town. People in the car recognized them. Some of them were content with stares and nudges, and some called "Great game, boys! Great game!" and such easy encomiums.

"They make me sick," said Sinclair. "They wouldn't be so chummy if we'd been licked. All the exercise any of them takes is getting up in the morning, and that's wearing most of them out. Then they come down and pay a dollar to tell us how to win the game, and go home all tired out."

"Come on," said Andy. "What's eating you to-night? Let's go to the Bon Ton. You need food."

They dropped off the street car when they reached the down-town district and stood on the street corner, watching people, girls mostly, following a bright hat or an extra short skirt with tolerant, half-interested eyes. They liked to watch the girls. It was a corner pursuit that Sinclair was used to and that Andy had done his share of, decently enough.

There were lots of nice girls that you met only that way, girls who went to the dances at the movie houses, girls who were all right. Each young man had had his share of small experiences, and had found nothing in them greatly disturbing or alarming. They philosophized about women as they stood there, and, having eased their minds without saying anything that differed in the least from the things men have been saying about women for generations, they went up to the Bon Ton Lunch for a little supper.

"OYSTER stew—that's the stuff when you're doing this training," said Sinclair.

The waiter brought them oyster stew, creamy and savory with paprika, and the boys bent over it hungrily. Hockey, girls, faded out of their minds with the sight and smell of food. It was only when they were reasonably satisfied that they began to look around them and wish they were smoking.

"Look at that girl," said Sinclair. "She took a tip from us."

Andy looked and saw a girl alone at a table, also absorbed in eating a bowlful of the oyster stew for which the Bon Ton had a reputation.

"Pretty?" asked Sinclair, who was a little out of range.

"Kind of," said Andy.

The girl, quickly conscious of their

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

scrutiny, turned to look at them, and they saw that Andy was right. She was very pretty in a pert and competent way, blue-eyed, dressed in a tight little jersey frock that was the color of those eyes, and a soft blue felt hat, pulled down over her ears to the margin of her bob. She could take care of herself, that girl. Her costume, her face, proved it. City skill in both of them.

Sinclair's face changed as he met her eyes.

"Say, I know her!" he said. "That's Mary Callahan. She works in the telephone office."

They moved loungingly over to Mary Callahan's side and Andy was presented.

"I certainly feel important," said Mary, "talking to boys who get the write-ups in the papers you do."

They grinned, and without wasting her soup Mary held them with her smile.

"Did you win to-night?" she asked.

"Andy won," said Sinclair.

Andy swallowed his embarrassment. He didn't mind the noise from the grandstand, but there was something oddly disconcerting in facing this single personal enthusiasm. Mary Callahan's eyes were even deeper blue when she was eager. They shone with a splendid, unweighed praise.

"We certainly are proud of you boys," she said. "I tell you it gives the town something to think about. I hear them talking hockey in the hotel all the time."

"Working in the Greysolon Hotel?"

"Switchboard operator," said Mary. "I'm just getting off for to-night and I was hungry, so I thought I'd eat first before I go home. It's kind of a job getting a meal at home this time of night. The kids eat everything but the tablecloth."

She said it without a hint of complaint, rather with amusement, as she finished the last drop of oyster stew and buttered an extra cracker to use up the last of her butter. Then she stood up. The blue jersey dress just covered her knees, and she was slim and yet round.

"Going my way?" she asked easily.

Andy was, at least. It appeared that they did not live far from each other, and that in itself was interesting. Sinclair swung off by himself for his hillside rooming-house, and Andy and Mary took the same street car.

A NICE girl, Mary Callahan. She knew exactly what her adjustments to living had to be, and made them. Her mind was firm and steady, like her fingers, and good to look at, like her face. She knew many things about men, and she was tolerant or pert or sharp or friendly, as a situation might demand. With Andy she was friendly.

That was the way he started. But there was almost immediately a strange tang to his friendliness. During that twenty minutes on the street car, as they talked of hockey and Sinclair and the hotel where Mary worked, the consciousness of her never left Andy for a minute. The touch of her hair upon her cheek, the curve of her lips—he wondered restlessly what was getting into him, bothered by the curious exhilaration that seemed to be mounting.

But he was unwilling to let the source of it go. He insisted on going home with Mary Callahan, walking the three blocks from the street car. The snow had begun to fall softly, and it seemed to caress them both as they went slowly down the narrow cement sidewalks past dark little houses and shops. They were talking now less of things and more of thoughts, working into that state of confidence which is the gentle touch of one soul on another.

"What I want to do," said Andy, "is to get an interest in the business. A nice hardware business, you know, is the soundest thing on earth. People have got to have hardware, no matter what comes or goes. In the winter—in the summer—and there you are."

She nodded sagely at his ambition.

"I suppose there's a lot of things open to a fellow like you, so well known as you are. It's different with a girl."

Andy tucked her hand under his coat sleeve. That suggestion of difference seemed pathetic to him and very sweet.

They reached (*Continued on page 103*)

The girl in the white coat beat her hands together. "I get so excited I can't bear it!" she cried. "That McLean man is wonderful! I simply must meet him"

Just A Minister To The Poor

By Mary B. Mullett

IF YOU ever find yourself in Albany, New York, and want to gain someone's attention and interest, try mentioning the name of Creighton R. Storey. The result, if your experience duplicates mine, will astonish you.

For example: I dropped in at the Albany Chamber of Commerce, to ask where Catalpa Drive was located. The gentleman in charge never had heard of the street, and seemed to think I must have the wrong address. So I picked up a telephone directory and showed it to him in black and white.

As he read it, he read also the name of the "party" living at that address. Instantly his face lighted up with enthusiasm; and if the keys of the city had been lying around handy, I'm sure he would have presented them to me with a speech of welcome.

"Oh!" he exclaimed; "is it *Doctor Storey* you want to see? Well, just let me tell you, there's not a finer man in this whole city than he is! Do you know him? . . . You don't? . . . Well now, why didn't you *say* you wanted to find Doctor Storey? Everybody in this town knows *him*. Yes, and loves him, too."

That is a fair sample of the responses that came whenever I mentioned this apparently magic name.

Albany is a big and busy city; the capital of the great Empire State. It is full of important political personages, of aristocratic old families, of business leaders. But the man who bears this name is not in politics, not a member of a distinguished family, not a business leader. He is a clergyman.

And he isn't at the head of a rich and fashionable congregation, either. His parish is probably the poorest in the whole city. His people cannot even pay his salary, small as it is.

The larger his church grows, the poorer it is; for most of its members are drawn from the humblest district in town; recruited from the byways, not the highways, of society.

Among them are the poor, the ignorant, the aliens; strangers in a strange land, needing help and guidance and understanding. They get it from this man, their counselor and their friend. And this friendship goes out, not only to the members of his own church but also to all who are in need of it, no matter to what sect or creed they belong.

He himself is poor in this world's goods. Twice he has had to make a deliberate choice. On the one hand, a prosperous church and a good salary—but on condition that he give up this other work! And twice he has refused.

His wife said to me: "I have learned to stretch a dollar as far as it will go. But there are limits beyond which it *can't* be stretched—and we often reach those limits."

Yet the work which Doctor Storey is doing in Albany costs a good deal of money. If I were to tell you where that money comes from, the list of names would read like the Albany Social Register and the Business Directory combined. For, back of this man, who has chosen to devote his life to the poor, stand the worth and the wealth of the city's "best people." His influence among the poor is extraordinary. But his influence among the rich is even more remarkable.

Everyone in Albany calls him "Doctor" Storey. But the degree was not conferred on him by any college or theological seminary. It was conferred by the people among whom he has lived for almost twenty-five years; an outward sign of the respect and affection they have for him.

SIXTY-THREE years ago, Creighton Storey was born in County Galway, Ireland, on the farm which his mother had inherited from her father. His parents were Methodists; but as there were no public schools, the Storey boys were educated in those conducted by the Church of Ireland, which corresponds to the Church of England and to our Protestant Episcopal church. They were confirmed in this church.

"I was the youngest of five brothers," said Doctor Storey, when I had persuaded him to tell me something about his life; "and I was the only one," he added, "that gave my parents any trouble. A wild, harum-scarum lad I was, in spite of my love for my dear and wonderful mother.

"Both my parents were deeply religious. But my father's religion was a stern and rigid creed. My mother's was tender and beautiful; all goodness and kindness and mercy. On the estate there were some little cabins—the sort that were only too common in Ireland then—which she had inherited with the farm itself. The rents were only a sixpence a week. But the tenants were so poor that it was hard for them to spare even a sixpence.

"My father used to make the rounds every Saturday to collect the rent. And it was always ready for him!" laughed Doctor Storey. "For my mother would send me, on Friday afternoon, to *distribute* the sixpences which my father *collected* on Saturday! He never knew why the rents were always so promptly paid.

"MY MOTHER was a Poe, a distant connection of the family of Edgar Allan Poe. When I was a child she taught me 'The Raven' and others of his poems; and even now, when I am tired, or perhaps a bit disheartened, there is something in their haunting melody that lifts me out of my mood of depression.

"She loved good reading and had us children memorize many beautiful poems, as well as passages from the Bible and from other books; so that, even before we were grown up, our minds were stored with good reading.

"I was her messenger, to distribute not only the weekly sixpences but also gifts of tea and soup and bread to the poor. Being a sociable lad, I liked to sit with the old women and listen to their tales of banshees and of fairies—'the little people,' as they call them.

"Sitting in those humble cabins, I unconsciously began to understand the bitterness of poverty, and to wonder at the cheer and the courage with which it so often is met.

"I had other friends too; and from some of them I learned things that were not good for me. Drinking was common, and I did my share. It was the custom; a bad custom for anyone, let alone a boy in his teens, as I was. My father raised horses. I rode them—and was almost killed by them two or three times. I fell violently in love too; which is no crime, to be sure, though it sometimes causes as great a commotion. (*Continued on page 198*)

This is One of a Series You Cannot Afford to Miss

THE accompanying article is the second of the "Just Folks" series, in which Mary B. Mullett is relating for you the stories of ordinary men and women who are living triumphant but unheralded lives. Each article is a unit, and can be read independently of the others; but you should read every one, for they contain extraordinary glimpses of life. As you read of these men and women, your faith in humanity will be renewed. The "Just Folks" article next month is about a boy of fifteen who lost both legs, and then both parents; but who has contrived to establish and maintain a home for his five younger brothers and sisters and for himself. He is seeing to it that "his family" is obtaining good schooling, and that it has wholesome home life. This is a story of amazing fortitude and cheerfulness, and of some mighty wise neighbors. THE EDITOR.

Creighton R. Storey

IN ALBANY, NEW YORK, where he is the rector of Trinity Episcopal Church, people call him "Doctor" Storey, not because he has received an official degree of D.D., but because his fellow citizens are glad thus to honor him. For twenty-five years he has lived in Albany, deliberately choosing the poorest parish to be found there. He has become a link between the poor and the rich, the ignorant and the educated, the aliens and the old American stock. He is the "common denominator" among all creeds and all classes, even among all political parties, for he is the chaplain of the State Assembly. He is also the chaplain of the almshouse and of the jail, and the Jews chose him to be the chaplain of their Masonic lodge. His idea of religion is that it should be to the human soul what air itself is to the human body; as beneficent, as simply and as freely available.

Adolph Zukor

PRESIDENT of the Famous Players-Lasky Corporation, which controls the Paramount programs, Adolph Zukor sooner or later touches the lives of nearly everybody in the civilized world. Every week sixty million Americans go to the movies, and American-made films can be seen all over the world. In 1888 Mr. Zukor came alone to this country from Hungary. His first job was tying springs to the framework of haircloth couches. After working nine hours a day at this he went to night school to learn English. He became a fur merchant and manufacturer, and did not enter the moving picture industry until 1912, when he founded the Famous Players Film Company. Mr. Zukor is shown here with his four grandchildren. He is fifty-four years old.

The Biggest Three Hours In Adolph Zukor's Life

He had staked all on a film which he hoped to sell to the big distributors; but they kept him waiting so long that he decided to get on without them!—In the fourteen years since Zukor cooled his heels in their anteroom, he has become a dominant figure in the motion picture industry

By Allan Harding

A GREAT ocean steamer was slowly making its way up New York Harbor—and crowded together on its lower deck were scores of men, women, and children; their faces a study in mingled hope and fear, for they were about to begin a new life in a strange country.

Among them was a sixteen-year-old lad, who looked in silent astonishment at the sky line of the city he was approaching. I feel pretty sure about his silence, for to-day, almost thirty-eight years later, he is a man who never wastes words.

The New York of 1889 was far from being the towering mass it is now. But even then it was big enough to amaze this immigrant boy; especially as it was only the second city he ever had seen.

On the way from his home village in Hungary, he stopped in Berlin and walked through its streets, lined with monotonous rows of buildings. But he never had imagined anything like this New York, which rose out of the water like some incredible dream-city.

He had come to this country alone, knowing neither its language nor its customs. Yet, as he himself has told me, he never for one instant has wished himself back at home.

"I landed," he said, "at Castle Garden, as all aliens did in those days. And the moment I stepped ashore I knew I wanted to stay. There was freedom in the air! And as I walked up Broadway, with its hurrying crowds, I felt the contagion of all that energy, activity, and ambition. I never have had a moment of regret that I came, nor of doubt that I was wise in coming."

For a man usually so chary of words, this was a rather remarkable excursion into speech. But when he really has something to say, Adolph Zukor can say it clearly and effectively.

An odd name: Adolph Zukor. Possibly it means nothing to you. Yet it ought to mean a great deal; for the man who bears it wields an influence which is felt by millions.

Endless pages have been written about the power of "the movies." As president of the Famous Players-Lasky Corporation, Adolph Zukor is one of the men who direct that huge power. Physically small of stature though he is, he nevertheless is a giant in the motion picture world.

I wonder if you realize how impressive a statement that is. In an amazingly short time the "picture business" has become the fourth largest in the country! We have between fifteen and twenty thousand motion picture theatres.

Every week, about *sixty million* Americans go to the movies! Between seven hundred and eighteen hundred feature films are produced annually in the United States alone; an average of two new ones for every day in the year.

The influence of the men behind this great industry reaches all over the world. American-made pictures are sent to every civilized country. Of the films shown in Great Britain, for instance, four out of every five have been made in the United States.

It takes an army of three hundred thousand people to produce and to distribute this enormous output. The Famous Players-Lasky Corporation turns out a larger number of pictures than any other producing company. And at the head of Famous Players-Lasky is the former immigrant lad, Adolph Zukor.

SINCE he possesses this tremendous influence over us—for we all go to the movies more or less, and most of us go more rather than less—his life and his ideas are of decided interest.

I had a chance to say this to him—and did say it—when we met recently, by appointment, in his office. At that time, it looked down on one of Fifth Avenue's busiest corners. But his company has erected a towering building in Times Square, a few blocks away, and his office will soon be in that building.

From incoming steamers, other immigrant lads will look, with mingled hope and fear, at New York's amazing sky line. I wish they could know that in one of those soaring towers will be sitting a man who was once, like themselves, about to begin a new life in this new country. If that could be, I think the light on its shining peak would kindle a flame of courage in their hearts.

When I told Mr. Zukor that I thought the people whose lives he influences so constantly ought to know something about his own life, he at first responded merely with an interested smile. He is temperamentally as noncommittal as the typical Scotchman. In fact, with his brown eyes, (*Continued on page 171*)

"Check Your Troubles Here"

ONE dark, rainy afternoon, I stopped before a movie theatre on lower Third Avenue, New York City. "'Mated'—A Romance of Western Life and Adventure. Admission 10 cents.". . . It was a gloomy day. Smileless people with impassive faces passed up and down. Now and then one turned into the theatre: a lonely spinster; a young girl whose appearance suggested that she had lost a needed job; a shivering man with coat collar turned up, the sort that asks you for a dime to get a bit of food; a worried-looking motherly woman, who made you think of troublesome children and a crowded tenement. Not one but seemed to be carrying some almost visible burden of anxiety, or sorrow, or deprivation.

As I watched, I devised another glowing sign over the theatre entrance:

"CHECK YOUR TROUBLES HERE"

An hour of forgetfulness, of anodyne from pain; a swift flight from stern reality! Who knew what healing, what restitution of hope that hour of illusion would bring to those human hearts?

THE EDITOR.

"Miss Bennett's Baby"

A Story

By Priscilla Hovey

ILLUSTRATED BY JOSEPH SIMONT

"GOOD MORNING, Miss Lane!" Miss Bennett's voice was brisk, crisp, and cool. The day might be languid and mellow with summer sunshine, dank with a dreary November drizzle, cold and crunchy with snow, feverish with the first pulsings of spring, but Miss Bennett's good morning was the same.

And Miss Bennett's walk never varied. When she came down the corridors of Hathorn, her cap a stiff little soldier on her gray-gold pug, her blue eyes darting from left to right from behind nervously blinking lashes, her small pointed nose wiggling in a manner not unlike that of a rabbit, the skirt of her glossily starched uniform swishing from side to side, probationers made certain they were doing only those things that ought to be done and even the head nurses, internes, and doctors looked their professional best.

Miss Bennett, you see, was the general supervisor of Hathorn, and had been that for fifteen years.

"It may be," Miss Lane, the night supervisor, returned the greeting, "but it was far from a good *night*. Twenty babies in this place," she continued wrathfully, "and yet there are people who talk about race suicide! So far as I can see, the only person in danger of committing suicide is the night nurse of a maternity hospital. I've been simply flying all night long." By way of emphasis, Miss Lane jerked a lock of brown hair which had fallen from its appointed place beneath her cap, and twined it over her ear.

"There's only one on the 'gold coast'," she went on, referring to the third floor of Hathorn, where there were private rooms, private baths, and private nurses. "The Alexander baby. He's the governor's son, you know, and she's some heiress or other. You'd thought from the fuss that the child was the Prince of Wales, or, rather, the Princess. Two specialists, three nurses, and the telephone lines buzzing with relatives and reporters! Probably the governor'll be in to-day, so you want to keep your eyes open. They've named it Patricia."

Miss Bennett's eyes, however, were on the records. "What's this?" she asked sharply. "You lost a mother?"

"In the free ward," said Miss Lane, passing her hand wearily across her forehead. "I had it on my mind to tell you the first thing. The poor child was about dead when the ambulance brought her."

"Child?"

"Well, she couldn't have been more than seventeen. The police found her in the station and sent her here. She lived only until the baby was born. Plain case of neglect and malnutrition. Strange, though; the baby is perfect. It's a little small, but has a beautiful head."

"No name?" frowned Miss Bennett.

The night supervisor shook her head. "She wouldn't tell the police, and she had nothing on her clothes to help identify her. I've got the baby listed as Baby X. What does the hospital do in a case like that? With the baby, I mean. It's a nice little girl."

"It keeps her while the police investigate. Then, if no relatives are found, it transfers her to a foundling home." Miss Bennett's tone was matter-of-fact.

Miss Lane's face clouded. "Honestly," she exclaimed, "it doesn't seem right for two of the little things to come into this terrible world at the same time, one to have everything, the other nothing; one to live in a beautiful home, the other in an asylum. Honestly, Miss Bennett—"

But Miss Bennett disliked sentimentality. "Where is the child?" she asked tersely.

"In the nursery. Come along and see it." And the impulsive Miss Lane walked ahead, with little Miss Bennett mincing disapprovingly in the rear. She would have to report the affair to Doctor Futrelle, the superintendent, and communicate with the police, so she might as well see the waif.

NOW, there was a tradition at Hathorn, handed down from training class to training class and from head nurse to head nurse, that Miss Bennett had never been known to hold a baby. What she had done when she herself had been in training was a question discussed at great length by the probationers. She *must* have had to hold a baby when she bathed it, they declared, unless she tied it to a pole and ducked it in.

Miss Bennett had trained, however, some thirty years ago, and no one could testify as to whether she had used a pole or not. But all who had served under and with her since she had come to Hathorn could solemnly swear that she had never touched a baby. When asked to view one, as she often was, she would cross her stiffly starched arms primly, blink her eyes furiously, wiggle her nose, and say, "Yes, indeed, a very nice baby!" It was the thing at class reunions for some clever member to imitate Miss Bennett.

Miss Lane knew the tradition, yet she swung open the door of the free ward nursery, permitting Miss Bennett to enter first, and looked down the row of tiny white canvas beds until her eye fell on the nineteenth. On this was a card bearing the imprint of a tiny foot, also: "BABY X—DOCTOR HOWORTH."

"Isn't she a darling?" cooed Miss Lane at the diminutive occupant, who looked like a warm pink petal blown from a rose into the haven of the white bed.

Then Miss Bennett made her time-honored speech. Folding her thin arms, blinking her eyes, wiggling her nose with a little sniff, she said: "Yes, indeed, a very nice baby."

"I should say it is!" retorted Miss Lane angrily. With a sudden motion she picked up Baby X—which was of course not the thing to do—and thrust her on the crossed arms of the general supervisor, who had either to drop the baby or unfold her arms. Naturally, a dropped baby wouldn't look well in the records of Hathorn.

"Look at that head," exclaimed Miss Lane, not observing the slow red which had crept into Miss Bennett's thin cheeks as she stood reluctantly holding the nameless waif. "Did you ever see a more perfect one, I ask you! And the ears, close to the head. That little mouth, and the nose. And I do believe, Miss Bennett, she's going to have light curly hair! Look!"

Miss Bennett peered frowningly at the child in her arms. There was indeed on that warm, fragile little head a few silk-like golden threads which showed a spiral tendency.

"Put her back where she belongs," she said curtly. "I'm expecting a call at the desk."

She turned her back and swish-swished out of the nursery.

"Old stiff!" muttered Miss Lane. "Her uniform isn't the only thing about her that's starched!"

IT PROVED to be a troubled day for Miss Bennett, the day of the advent of Baby X into Hathorn. The matter was discussed with Doctor Futrelle, the police, the Welfare Association, and the city public burial department. It was late in the forenoon when she was at leisure to fulfill her routine duties.

Then, too, the work was deplorably behind schedule in all the wards, for the reason that the governor and his wife, and people whom the hospital didn't know, but were busily conjecturing about, had arrived to see the first Alexander grandchild.

Trips to the gold coast were being taken for any or no reason, Miss Bennett discovered. Promptly she quelled all further excursions.

"I'll bet Bennett would dare run the governor out by his coat tails," remarked Miss Collins, head nurse of the semi-private ward, after the supervisor had tersely reminded the diet nurse that the patients must have their trays at twelve

Miss Bennett instantly stiffened, and arched her eyebrows, as she did at probationers when they broke thermometers or made beds with wrinkles in them

o'clock, even if the President put in his appearance.

It was early in the afternoon when Miss Bennett herself arrived on the gold coast. As she passed the door of the Alexander suite, she caught a breath-taking glimpse of flowers, in tiny cradles, in bowls, in vases. There were orchids lifting their fragile aristocratic heads, roses just beginning to uncurl their perfumed petals, lilies-of-the-valley snuggling in cool green leaves, cheery bobbing jonquils, and quiet velvet-faced pansies. The governor had been and gone; the father of Mrs. Alexander—the Hollister Snowden, you know—had come and departed; but the two grandmothers, and several other adoring relatives, were still clustered about the crib.

Miss Bennett was not of those sour, unreasonable people who envy youth its beauty, and wealth its luxuries. Nevertheless, she involuntarily thought of a shrouded form, that of a child—Miss Lane had been right, the girl couldn't have been over seventeen—which was now lying in a certain grim room in the basement of the hospital waiting as its only claimant the city public burial department!

Approaching was a figure whom she blinkingly recognized to be Miss Parks, a former head nurse, now a special.

"Came on this morning," announced Miss Parks cheerily, returning Miss Bennett's courteous but reserved greeting. "Day nurse for the Alexander baby. How's that for luck!"

WHEN Miss Parks had been a head nurse, she had not talked so flippantly to Miss Bennett; but now that she was a special and only incidentally under the authority of the supervisor, she indulged in long-desired liberties of speech.

"After she leaves the hospital," continued Miss Parks, referring to young Mrs. Alexander, "she'll probably go to the mountains or seashore, and Parksy will go along too. The baby's a dear, though," she added, dropping her tone of levity. "Come in and see her. She isn't in the nursery, you know. She is in the little room next to her mother's."

Now, Miss Bennett had been on her way to the linen room and was about to inform Miss Parks so, but she had a curious desire to view the famous baby. Lest she might be suspected of having any interest in the matter, however, she said shortly, "I was just going in there myself," and stepped scowlingly in the lead of Miss Parks.

The little white canvas bed presented much the same view as those in the free ward. There was a card on the bed, even as there had been for Baby X. There was the imprint of a tiny foot. There was a difference in the names of the physicians, to be sure, for while Doctor Howorth, a hard-working young interne, had been responsible for the arrival of Baby X, Doctor Larking and Doctor Rolfe, two famous baby specialists, had brought Baby Alexander safely into the world.

"Isn't she a darling!" cooed Miss Parks, taking the little nub in the blankets and holding it tenderly in her arms.

Miss Bennett crossed her own thin arms, blinked her eyelashes, wiggled her nose, but, instead of making her usual speech, said with a suddenness that startled her, "We had a very nice baby in the free ward last night."

"Miss Bennett's Baby"

A Story

By Priscilla Hovey

ILLUSTRATED BY JOSEPH SIMONT

"GOOD MORNING, Miss Lane!" Miss Bennett's voice was brisk, crisp, and cool. The day might be languid and mellow with summer sunshine, dank with a dreary November drizzle, cold and crunchy with snow, feverish with the first pulsings of spring, but Miss Bennett's good morning was the same.

And Miss Bennett's walk never varied. When she came down the corridors of Hathorn, her cap a stiff little soldier on her gray-gold pug, her blue eyes darting from left to right from behind nervously blinking lashes, her small pointed nose wiggling in a manner not unlike that of a rabbit, the skirt of her glossily starched uniform swishing from side to side, probationers made certain they were doing only those things that ought to be done and even the head nurses, internes, and doctors looked their professional best.

Miss Bennett, you see, was the general supervisor of Hathorn, and had been that for fifteen years.

"It may be," Miss Lane, the night supervisor, returned the greeting, "but it was far from a good *night*. Twenty babies in this place," she continued wrathfully, "and yet there are people who talk about race suicide! So far as I can see, the only person in danger of committing suicide is the night nurse of a maternity hospital. I've been simply flying all night long." By way of emphasis, Miss Lane jerked a lock of brown hair which had fallen from its appointed place beneath her cap, and twined it over her ear.

"There's only one on the 'gold coast'," she went on, referring to the third floor of Hathorn, where there were private rooms, private baths, and private nurses. "The Alexander baby. He's the governor's son, you know, and she's some heiress or other. You'd thought from the fuss that the child was the Prince of Wales, or, rather, the Princess. Two specialists, three nurses, and the telephone lines buzzing with relatives and reporters! Probably the governor'll be in to-day, so you want to keep your eyes open. They've named it Patricia."

Miss Bennett's eyes, however, were on the records. "What's this?" she asked sharply. "You lost a mother?"

"In the free ward," said Miss Lane, passing her hand wearily across her forehead. "I had it on my mind to tell you the first thing. The poor child was about dead when the ambulance brought her."

"Child?"

"Well, she couldn't have been more than seventeen. The police found her in the station and sent her here. She lived only until the baby was born. Plain case of neglect and malnutrition. Strange, though; the baby is perfect. It's a little small, but has a beautiful head."

"No name?" frowned Miss Bennett.

The night supervisor shook her head. "She wouldn't tell the police, and she had nothing on her clothes to help identify her. I've got the baby listed as Baby X. What does the hospital do in a case like that? With the baby, I mean. It's a nice little girl."

"It keeps her while the police investigate. Then, if no relatives are found, it transfers her to a foundling home." Miss Bennett's tone was matter-of-fact.

Miss Lane's face clouded. "Honestly," she exclaimed, "it doesn't seem right for two of the little things to come into this terrible world at the same time, one to have everything, the other nothing; one to live in a beautiful home, the other in an asylum. Honestly, Miss Bennett—"

But Miss Bennett disliked sentimentality. "Where is the child?" she asked tersely.

"In the nursery. Come along and see it." And the impulsive Miss Lane walked ahead, with little Miss Bennett mincing disapprovingly in the rear. She would have to report the affair to Doctor Futrelle, the superintendent, and communicate with the police, so she might as well see the waif.

NOW, there was a tradition at Hathorn, handed down from training class to training class and from head nurse to head nurse, that Miss Bennett had never been known to hold a baby. What she had done when she herself had been in training was a question discussed at great length by the probationers. She *must* have had to hold a baby when she bathed it, they declared, unless she tied it to a pole and ducked it in.

Miss Bennett had trained, however, some thirty years ago, and no one could testify as to whether she had used a pole or not. But all who had served under and with her since she had come to Hathorn could solemnly swear that she had never touched a baby. When asked to view one, as she often was, she would cross her stiffly starched arms primly, blink her eyes furiously, wiggle her nose, and say, "Yes, indeed, a very nice baby!" It was the thing at class reunions for some clever member to imitate Miss Bennett.

Miss Lane knew the tradition, yet she swung open the door of the free ward nursery, permitting Miss Bennett to enter first, and looked down the row of tiny white canvas beds until her eye fell on the nineteenth. On this was a card bearing the imprint of a tiny foot, also: "BABY X—DOCTOR HOWORTH."

"Isn't she a darling?" cooed Miss Lane at the diminutive occupant, who looked like a warm pink petal blown from a rose into the haven of the white bed.

Then Miss Bennett made her time-honored speech. Folding her thin arms, blinking her eyes, wiggling her nose with a little sniff, she said: "Yes, indeed, a very nice baby."

"I should say it is!" retorted Miss Lane angrily. With a sudden motion she picked up Baby X—which was of course not the thing to do—and thrust her on the crossed arms of the general supervisor, who had either to drop the baby or unfold her arms. Naturally, a dropped baby wouldn't look well in the records of Hathorn.

"Look at that head," exclaimed Miss Lane, not observing the slow red which had crept into Miss Bennett's thin cheeks as she stood reluctantly holding the nameless waif. "Did you ever see a more perfect one, I ask you! And the ears, close to the head. That little mouth, and the nose. And I do believe, Miss Bennett, she's going to have light curly hair! Look!"

Miss Bennett peered frowningly at the child in her arms. There was indeed on that warm, fragile little head a few silk-like golden threads which showed a spiral tendency.

"Put her back where she belongs," she said curtly. "I'm expecting a call at the desk."

She turned her back and swish-swished out of the nursery.

"Old stiff!" muttered Miss Lane. "Her uniform isn't the only thing about her that's starched!"

IT PROVED to be a troubled day for Miss Bennett, the day of the advent of Baby X into Hathorn. The matter was discussed with Doctor Futrelle, the police, the Welfare Association, and the city public burial department. It was late in the forenoon when she was at leisure to fulfill her routine duties.

Then, too, the work was deplorably behind schedule in all the wards, for the reason that the governor and his wife, and people whom the hospital didn't know, but were busily conjecturing about, had arrived to see the first Alexander grandchild.

Trips to the gold coast were being taken for any or no reason, Miss Bennett discovered. Promptly she quelled all further excursions.

"I'll bet Bennett would dare run the governor out by his coat tails," remarked Miss Collins, head nurse of the semi-private ward, after the supervisor had tersely reminded the diet nurse that the patients must have their trays at twelve

Miss Bennett instantly stiffened, and arched her eyebrows, as she did at probationers when they broke thermometers or made beds with wrinkles in them

o'clock, even if the President put in his appearance.

It was early in the afternoon when Miss Bennett herself arrived on the gold coast. As she passed the door of the Alexander suite, she caught a breath-taking glimpse of flowers, in tiny cradles, in bowls, in vases. There were orchids lifting their fragile aristocratic heads, roses just beginning to uncurl their perfumed petals, lilies-of-the-valley snuggling in cool green leaves, cheery bobbing jonquils, and quiet velvet-faced pansies. The governor had been and gone; the father of Mrs. Alexander—the Hollister Snowden, you know—had come and departed; but the two grandmothers, and several other adoring relatives, were still clustered about the crib.

Miss Bennett was not of those sour, unreasonable people who envy youth its beauty, and wealth its luxuries. Nevertheless, she involuntarily thought of a shrouded form, that of a child—Miss Lane had been right, the girl couldn't have been over seventeen—which was now lying in a certain grim room in the basement of the hospital waiting as its only claimant the city public burial department!

Approaching was a figure whom she blinkingly recognized to be Miss Parks, a former head nurse, now a special.

"Came on this morning," announced Miss Parks cheerily, returning Miss Bennett's courteous but reserved greeting. "Day nurse for the Alexander baby. How's that for luck!"

WHEN Miss Parks had been a head nurse, she had not talked so flippantly to Miss Bennett; but now that she was a special and only incidentally under the authority of the supervisor, she indulged in long-desired liberties of speech.

"After she leaves the hospital," continued Miss Parks, referring to young Mrs. Alexander, "she'll probably go to the mountains or seashore, and Parksy will go along too. The baby's a dear, though," she added, dropping her tone of levity. "Come in and see her. She isn't in the nursery, you know. She is in the little room next to her mother's."

Now, Miss Bennett had been on her way to the linen room and was about to inform Miss Parks so, but she had a curious desire to view the famous baby. Lest she might be suspected of having any interest in the matter, however, she said shortly, "I was just going in there myself," and stepped scowlingly in the lead of Miss Parks.

The little white canvas bed presented much the same view as those in the free ward. There was a card on the bed, even as there had been for Baby X. There was the imprint of a tiny foot. There was a difference in the names of the physicians, to be sure, for while Doctor Howorth, a hard-working young interne, had been responsible for the arrival of Baby X, Doctor Larking and Doctor Rolfe, two famous baby specialists, had brought Baby Alexander safely into the world.

"Isn't she a darling!" cooed Miss Parks, taking the little nub in the blankets and holding it tenderly in her arms.

Miss Bennett crossed her own thin arms, blinked her eyelashes, wiggled her nose, but, instead of making her usual speech, said with a suddenness that startled her, "We had a very nice baby in the free ward last night."

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"She has a good head. See?" continued Miss Parks critically, quite oblivious to the fact that Miss Bennett was not proceeding true to form. But then, Miss Parks had been away from Hathorn and had doubtless forgotten.

"This baby had a perfect head," countered Miss Bennett, "and very prettily shaped ears."

Miss Parks, now aware that something was amiss, held the ignored heiress more closely to her.

"I'm afraid she is going to have straight hair," concluded Miss Bennett, designating Baby Patricia with a nod of her cap.

"What do you expect on the head of a day-old infant?" demanded Miss Parks hotly. "A set of Mary Pickford curls? My land!" And as it was time for little Patricia to visit her mother, she placed the baby over her shoulder, and somewhat haughtily made her exit.

"That Bennett woman gets crabbier every time I see her," she confided to Mrs. Alexander's day nurse. "I should think the hospital would pension her before long."

There were others who bore grievances against Miss Bennett in the days that followed, especially those connected with the free ward.

"Will you tell me why she's picking on us lately?" pleaded Miss Harcourt, the head nurse. "No matter where I turn, she's poking her nose into something. Ever since she found a probationer giving that Baby X a bottle that wasn't warm enough, she hasn't let us alone. She seems to make that poor little thing an excuse for complaint. She wasn't satisfied with its gain in weight, so she gave orders to have its formula changed. Imagine! I'd like to know what's got into her."

SOMETHING had indeed got into Miss Bennett, something she at first refused to recognize. She was merely doing her duty to see that Baby X was receiving a proper start in life, she told herself. In pursuit of that duty she journeyed from the free ward nursery to the gold coast nursery and compared records. Baby Alexander, after her first customary loss in weight, had gained two ounces. Humph! Baby X had gained but one ounce. Still, the new formula hadn't had opportunity to show results yet. Four days later, Baby Alexander had gained two and one-half ounces and Baby X three. Miss Bennett's thin lips curved in a smile, and an utterly dumfounded nurse heard her humming as she swished stiff skirts down the corridors.

She had a habit, almost demoralizing to the probationers, of entering the free ward nursery when the twenty babies were being bathed—not all at once, of course. She lingered until it was the turn of Baby X, and saw with a queer pang how plump the little body was and how pink and white the skin. The hair, too. Miss Lane had been right. It was going to curl!

Miss Bennett faced herself and the facts one night in her room, a week and a half after the arrival of the nameless baby. She didn't look so awe-inspiring when she had removed the starched uniform and the stiff white cap. Wrapped in a soft kimono she looked very small, tired, and lonely.

"You're thinking of keeping her," she addressed herself in the mirror, as she brushed the thinning strands of gray-gold hair. "And it's absolutely out of the question. Ridiculous! You couldn't keep her here in the nurses' home."

Yet why not? She had three rooms, and she certainly didn't need them all herself. There would be no one to care for the baby during the day when she was on duty. That was the trouble. Oh, it was clearly out of the question. The child would be well taken care of at the Foundling Home. She could see her there, keep in touch with her, and maybe, later . . .

Miss Bennett sat down, frowning. That wasn't a bit what she wanted—maybe later. She wanted— She looked about her at the three rooms that for fifteen years had been her home. The little room she used for a living-room would make a splendid nursery. It had two windows, and sun all the morning. She pictured it with white paper, and chintz curtains with bunnies and little girls on them. She saw a white crib in the corner.

Then she checked herself and flushed. What would the hospital think—Bennett and a baby! She was aware what the hospital thought of her now. It thought she was a hopeless old maid, a heartless old maid, one who cared for nothing but the red tape of her profession. And she had made the hospital think that.

Miss Bennett made her time-honored speech. . . . "Yes, indeed, a very nice baby"

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

As Miss Bennett passed the door of the Alexander suite she caught a breath-taking glimpse of flowers, in tiny cradles, in bowls, in vases, and saw a group of adoring relatives clustered about the crib of the Alexander baby

Miss Bennett, you see, had a complex. The psychologists would probably have a long and fearsome name for it. Miss Bennett didn't even know she had it; but she knew she loved babies, had always loved them from the time she had commenced training, a shy, self-conscious girl of eighteen. She loved the plump ones with curly hair, and even the thin ones with red faces and crooked heads. Yet she had never given anybody a glimpse of her secret.

Difficult to understand? Not at all. Suppose you longed for some Wedgwood china; just a few delicate pieces to touch and caress and keep spotlessly clean. And suppose someone who cared only casually held for your inspection a vase, a vase so exquisite that your heart raced on seeing it, and said, "Isn't that a nice bit of Wedgwood?" And you, because you didn't want that person to see the yearning leap into your eyes and suffuse your face, crossed your arms very stiffly—not even offering to touch the precious vase—and said sniffily, "Yes, indeed, a very nice piece of Wedgwood!"

That's the way it had been with Miss Bennett and babies.

IT WAS rather uncanny that the case of Miss Lee, a probationer who had just recovered from an operation for appendicitis and was unable to do both her theoretical and practical work, should have come up just then.

"I'm sure I could keep up with the class in just one or the other," the girl told Miss Bennett sadly; "but I can't in both. I've lost so much, you see. I won't want to go home, though," she added with a catch in her voice. "Going home isn't anything to be ashamed of; but you know how it is if you start to do a thing and then don't finish. People think you weren't smart enough. But I guess I'll have to go," she admitted sorrowfully, "because I haven't any money, and I'm not fitted to get an office position."

Miss Bennett's thin, blue-veined hand gripped her desk, and she spoke quickly:

"Would you consider a position that would be, er, supplemental in a way to your hospital experience? For instance, one in which you would take care of a baby? Your practical work has been very satisfactory and would be entirely adequate. You would also be able to continue your studies in your leisure time. The remuneration, although small, would enable you to stay here until you felt strong enough to complete your training." She paused, rather breathless.

The girl looked up eagerly. A pretty little thing, thought Miss Bennett, pale, dark, and lonely, too.

"Oh, Miss Bennett," she exclaimed, forgetting to be awed by the supervisor, "that would be wonderful!"

"Remember, I haven't promised you anything," scowled Miss Bennett sternly. "I will, however, look into the matter for you."

The next day, Miss Parks sent out a hushed invitation to several of the head nurses and specials to view the wardrobe of Miss Patricia Alexander.

"Mrs. Alexander told me I might show some of the things to my friends," said Miss Parks. "She's awfully sweet, Mrs. Alexander is. Her mother brought them all from Paris. Dresses, bonnets, little shoes—everything! You never saw anything so gorgeous in your life. I want you to see the dress she's going to wear the day she leaves the hospital. My dear, it must have cost a hundred!"

Miss Bennett was not invited, but her keen, wiggling nose caught wind of the meeting. Silence fell on the group of nurses gathered in the rest-room when she entered. Were they going to receive a reprimand? But no.

"I came to look for a moment," said Miss Bennett, almost cordially.

And look she did, while the nurses touched, fingered, smoothed, stroked, and exclaimed. Miss Bennett minced here and there, her hands tightly clasped behind her. When she came to the dress that Baby Patricia was to wear the day she left Hathorn, she looked steadfastly, pursing her lips. Then she stood erect. "Very nice, indeed," she said stiffly. "Very nice, indeed."

"Very nice, indeed," mimicked Miss Carter, head nurse of the gold coast, after the supervisor had departed. "You'd think she was looking at a display of bandages, wouldn't you, for all the interest she took!"

But it was only Miss Bennett, who had looked and not touched, who knew that there were eight flounces of hand-crocheted lace on Baby Patricia's going-away dress, and sixteen tiny rows of tucks at the neck; that the little pink silk jacket had set-in sleeves and a hand-made silk cord caught with a gold clasp; that the carriage bootees were of white eiderdown lined with pink silk, and were made to resemble bunnies.

THAT afternoon she was off duty, and the hospital would indeed have been astounded if it could have followed her on her visits to the baby departments of the leading stores of the city. At four-thirty she had finished, and somewhat dazedly went to a nearby tea-room. She felt weak and tremulous, sorely in need of the stimulation of hot tea and toasted muffins. She dared not think of what she had done. She had spent one hundred and fifty dollars—for what? With fingers that shook she consulted her list. For bands, shirts, gertrudes, dresses, jackets, socks, bonnets, and a crib!

What would she (*Continued on page 98*)

Six Things Women Look For When Buying A House

Value is one of them; and it is the only one of the six that the average husband considers of prime importance, says Frank L. McGuire, who has sold 12,000 dwellings in eight years—Straight tips that will help you when you buy or sell a house

By Magner White

IF YOU have not yet had the thrill of buying a house, you are probably looking forward to the experience. You plan to own one *some* day. Everybody does!

The man who lives in a rented cottage is ambitious to buy, while the one who already owns a handsome house would like to own a handsomer one. Ideas and conditions change as time goes on; children grow up and get married. In short, what was ideal a few years ago is likely to be inappropriate to-day.

Because practically everybody shares this universal interest in home-owning, you will be interested in what Frank L. McGuire, of Portland, Oregon, home-seller extraordinary, has to say about buying and selling homes.

In the past eight years, Mr. McGuire has sold nearly $35,000,000 worth of dwellings. During this period, he has handled the sales of homes to more than 12,000 families. And through his financing department he has helped more than three thousand families make the first payment on their homes.

The little one-room office in which he started alone has grown to a suite of twenty-four rooms, which occupies practically the whole second floor of a large building. One of the McGuire features most popular with prospective house buyers is the "photograph gallery." This is composed of row upon row of pictures of houses, arranged on the walls of seven or eight of the largest rooms in the suite. These photographs show almost anything, from $500 houseboats to $30,000 houses.

It was raining the proverbial pitchforks the day I called on Mr. McGuire. "Nobody," I thought, "would ever come out on a day like this to buy a house." But McGuire's office was crowded!

"Weather affects the buying of homes just as it affects the buying of other commodities," he explained, when I finally got through the crowd and into his office. "A change in weather," he continued, "nearly always affects home buying favorably. As soon as we knew this rainy spell was coming our way, we added six or eight salesman to our force to take care of the rush."

It was a rush all right.

"When a rainstorm follows a long spell of sunshiny weather," Mr. McGuire went on, "people want to get out of old houses into better ones, or out of tents into houses. But when a long rainy spell is followed by several days of sunshine and warmth, there's a movement in another direction: Hundreds of people want to get out of apartment houses, and out of the city into suburban homes.

"As a matter of fact, nearly everybody is a prospect for a home all the time. The change in weather simply brings a lot of them to make definite decisions. How many people do you know who consider themselves settled for life? Inquire a little, and you'll be surprised at what you learn.

"Even the man who has just built a house is, to some extent, a prospect for another house. If he could trade his house for one he thinks he'd like better, he would do it in a minute.

"ALL women have their 'dream homes,' especially young married women. But if a woman can't get the home of her dreams, she will take something else. Anything to have a roof of her own over her head. I remember one young wife who had two babies. Her husband sent her to us to look for a home. Many men do that—and it's an odd thing to do, when you come to think of it. The man who works regular hours every day will somehow find opportunities two or three times a year to get away to buy a suit of clothes. But when it comes to buying a house, which usually happens not more than two or three times in a lifetime, he sends his wife to do the preliminary scouting.

"We took this young wife around to see several houses, and finally she selected one. The husband was sent for. He looked the house over—and didn't like it. That was to be expected.

"Every human being has what we call his 'resistance number;' that is, the number of times he has to be shown houses before he is ready to buy. The wife had seen enough houses to satisfy her sense of comparison, and she had made her selection. The husband had seen but one house. As he had had no chance to compare it with others, he was dissatisfied.

"Now, the wife had been so thoroughly pleased with her choice that we thought it would be only a matter of a few days at most before she would bring her husband around to her view; so our salesman advised them to talk it over.

"The husband was shown around. Eventually, he had to admit that his wife had made a good choice. But he objected to the price and terms. In the end, he bought a house that didn't begin to compare with the one his wife had selected. It wasn't as large, or as modern, and it was rather inconveniently located.

"I felt sorry for the wife. I knew that she had built her hopes on the other house. While we were signing the papers to close the deal, I noticed that she seemed about to cry. It happened that I got a chance to speak to her alone—we were all passing back and forth through the different offices.

"I thought I would console her, and I said, 'I'm sorry we weren't able to get that other house for you; but I wouldn't take it so hard. You and your husband are both young, and maybe sometime—'

"She looked at me and started to smile, blinked her eyes; and then the tears did come! 'I'm not crying because I didn't get that *other* house,' she said; 'I'm crying because, after all these years, we've finally got a home of our own, and I'm so happy!'

"Sometimes I think there must be millions of husbands who don't really know how home-hungry their wives are. Time and again, I've seen women take houses that didn't suit them, just because they were so eager to get into homes of their own. We've actually sold houses to several men whose wives came to us and urged us to try to get their husbands interested in buying a home."

"YOU spoke of 'resistance numbers' a moment ago," I reminded Mr. McGuire. "What is the average 'resistance number'?"

"Usually, we figure that if we show a prospect six or seven houses, he is either ready to buy or he has decided he doesn't want to buy, after all. People seem to want a certain definite combination of factors, the combination varying with each individual; and they don't buy until as many as possible of these requirements are met.

"For instance, a woman, the average woman, will usually look for the following six things:

"ENVIRONMENT: As she drives up to her prospective home, she has a weather eye out for the type of neighbors she will have. She observes a woman hanging up clothes in the back yard, across the way,

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

or next door, and wonders if she'll like that woman as a neighbor. She notices the children playing in the yards and streets, and she sizes them up as potential playmates of her own children.

"CLEANLINESS: The very first things a woman looks at when she steps inside a house are the floors and walls. Dirt and grease that could be removed for five dollars will often damage a house five hundred dollars' worth in the eyes of the woman considering the place for a home.

"CONVENIENCE IN ARRANGEMENT: In the first place, the closer the bathroom is to the kitchen, the better the average woman prospect is pleased. A bathroom situated off in a corner of a house, so that it can be reached only by going through one or two bedrooms, nearly always raises an objection. Then comes the kitchen; here, the ideal arrangement is one that saves as many steps as possible. Third, comes the location of the bedrooms. Women with small children generally want two bedrooms adjoining, so that one may be used by the children.

"CLOSET ROOM—and plenty of it: I sometimes wonder that so many houses are built without adequate closet space. I don't think the woman ever lived who complained that her house had too many closets in it. Plenty of closets of any kind are desirable; but closets which have windows or electric lights in them are the joy and delight of the house salesman, for few women can resist such conveniences.

"ADAPTABILITY: This means the house must fit the family. It also must fit the furniture. Windows or doors so placed that the housekeeper's furniture can't be put into the rooms to good advantage, or placed in such a way as to prevent occasional rearrangement of the pieces, will often hold up a sale when every other thing about a place is satisfactory. And if furniture is to be bought for the new home, the woman is equally concerned about the arrangement of the house, for she wants to know that it isn't going to cost more than she can afford to fit the place up properly.

"VALUE: Deep down underneath their emotional natures, all women are bargainers. They'll buy a house bargain, if they're in the buying mood, just as quickly as they'll buy a dress bargain. The department store advertises a $5 garment for $4.98; we advertise a $5,000 house for $4,990. But it is only accurate to say that women think first of all the other considerations before they come to the bargaining part.

"A man has an entirely different slant; his considerations usually run in this order:

"ACCESSIBILITY: How far is it to town, to his office, store, shop, or place of employment? In other words, how much 'gas' is he going to have to burn every day. And, in case the flivver should break down, how far is it to a street car, or other transportation? And, for the convenience of the family, how far is it to a school and a neighborhood store? Also, in many, many cases, having in mind Saturday afternoon recreation, how far is it to the nearest golf links?

"VALUE: A man will smile at the woman with her $4.98 bargain, but when it comes to fifty or a hundred times that amount—ah, that's different! He's more of a bargainer than she is. He's very much concerned over whether he's getting his money's worth or not, and that brings us to our next point:

"CONSTRUCTION, and condition of repair: He will rap on the walls to see if they are solid; go up-stairs and spring his weight on the boards, trying to make the floors sag; climb up in the attic to see how solid the framework looks; go outside and scratch the paint with his penknife to see how old it is; check over the plumbing in the bathroom. And then, seven times out of ten, he'll head for the basement—if there is one—and have a look at the furnace. He wants to know if the grate has been burned out. A burnt-out grate can be replaced for a few dollars; but he'll just have a look anyway, thank you. And maybe, if the grate is burned out, he won't buy the house!

"UPKEEP REQUIREMENTS, or possibilities: One man will be happy because a place has a large lawn. Keeping it up will give him a chance for the outdoor exercise which he craves. But another will have only the place with a 'two-by-four' lawn; he doesn't want to spend any time keeping it up. Those who have a garden or a flower plot in mind are interested in the condition of the soil.

"A RETREAT (for himself): Whether he is entirely aware of the feeling or not, when a man looks over a place he usually has somewhere in the depths of his mind the idea of some nook or corner of the house that will be his—and his alone. One type of man will look for a room that will do for a den, a place into which he can retire and shut the door and be undisturbed. Another type will look for some spot where he can put in an amateur workshop, a place where he can tinker with things, or make things. In some men, this deep hankering for a retreat finds expression in an elaborately arranged and equipped garage; one with cabinets, an air pump, storage tanks and cans, a pit, and so on.

"ENHANCEMENT POSSIBILITIES: Many and many a man, when he considers a house, starts building air-castle additions all over it. If the lot is large, he considers how another house might look on the place, one he could rent, and thereby increase his income. If the house has one story, he may consider how another would look; or he may play with the idea of adding more rooms, or a sleeping porch. A house seldom suits a man in every particular, as is; he (*Continued on page 137*)

Don't Use Your Waste Basket As A Safe Deposit Vault!

Diamonds, necklaces, table silver, envelopes full of money, garments, and other valuables are forever getting mixed in with the family's rubbish, says Alfred A. Taylor, New York's Street Cleaning Commissioner—Stories of amazing finds in bundles of waste paper and in garbage cans

By Susie Sexton

ONE morning in May the office of Alfred A. Taylor, in the Municipal Building, New York City, received a telephone call from a man in Brooklyn. It was just after spring housecleaning time. Five thousand dollars in greenbacks, the man said, had disappeared from his home on Columbia Heights. Burglars, of course, might be responsible. But somehow he had an idea that those bills had been thrown away by mistake. His wife was such a thorough housekeeper!

The money was a serious loss. Unless it was found, the mortgage on the man's house would be foreclosed. He wondered if Mr. Taylor, who is Commissioner of Street Cleaning for New York City, would aid in the search.

Commissioner Taylor sent out the alarm to his thousands of subordinates, but he did not have much hope that the money would be recovered. If it had been carried away on any of the city's rubbish carts it was, by this time, in ashes at the bottom of a municipal incinerator—or it had been dumped out at sea.

After several days, the commissioner's fears apparently were confirmed. Not a trace of the money could be found.

Several months later, however, a Brooklyn street cleaner decided to paint a queer old-fashioned bureau which he had salvaged from one of the water-front dumps. As a preliminary, he went through all the drawers. When he pulled out a small upper one on the right-hand side, he discovered a large manila envelope neatly bound with rubber bands.

It contained five thousand dollars in bills!

The street cleaner told the story to the main office. An investigation was started. Commissioner Taylor suddenly remembered the man in Brooklyn. Getting in touch with him by telephone he inquired if his wife had thrown out an ancient bureau that spring. Yes, she had. Could he identify it? Certainly.

After a hurried trip across Brooklyn Bridge, the man was again in possession of his five thousand dollars. And the street cleaner who had found it for him would not take a reward. City workers are not allowed to accept money in such cases.

SINCE November, 1921, Commissioner Taylor has been chief executive of the largest and busiest street cleaning organization in the United States. Before that, he was general superintendent.

One of the most interesting features of his work is the annual recovery of thousands of dollars' worth of money, jewelry, insurance papers, real estate deeds, heirlooms, silverware, and furs, which got into the garbage can or the waste paper basket through somebody's carelessness.

In 1925, for instance, city officials in the Municipal Building returned to their owners at least one hundred articles of great value, after they had been heedlessly thrown out, and carried away by the street cleaners to one of the dumping grounds.

So valuable, indeed, is the treasure lost or thrown away in the garbage, ashes, waste-paper baskets, and snowbanks that men known as "trimmers" pay the city $122,000 a year for the privilege of reclaiming salable material from the dumps in three boroughs. In Manhattan alone "pickings" are valued at $48,054.86 annually; in Brooklyn at $48,000 and in the Bronx at $26,050.61.

Since the number of articles lost and found increases in proportion to the volume of business handled, it is only necessary to glance at the records of the street-cleaning department to get an idea of the "trimmer's" chances of success in making a living.

IN THE three boroughs just mentioned, 13,364,189 cubic yards of ashes, garbage, and street sweepings were carried away last year. This was far more than enough rubbish to fill the Gatun locks of the Panama Canal. It was 4,853,300 tons.

The total amount of ashes collected was 5,930,918.50 cubic yards. If the ashes were piled in one place for a year, the pile would be higher than the Woolworth Building. Garbage collected annually equals 1,812,253 cubic yards, and rubbish 5,621,017 cubic yards. Seventeen hundred miles of streets are cleaned daily.

During a very stormy winter, such as that of 1922-23, the snow removed has equaled 12,120,328 cubic yards. Eight thousand men, including officers, do the work of the department. There are ten thousand men in the emergency snow force.

The cost of this work during the season of 1922-23 was $20,300,855. This included the disposal of the winter's snow accumulation. The cost per capita was about one cent per day for each person living in the city.

Forty local dumping points, more than

Keeping the streets clean in New York's congested tenement districts is one of the toughest problems Commissioner Taylor has. The street you see here was thoroughly cleaned one hour before the photograph was made. The refuse accumulated more quickly than usual because there was in progress a Jewish holiday, during which it is the custom to throw away all rubbish

two thirds of which are on the water front, receive the city's waste. Some of the rubbish is carried out to sea and dumped; part is burned in the city incinerators.

By far the greater part of a trimmer's winnings is turned out of waste-paper baskets in the residential and semi-residential districts, Commissioner Taylor told me.

"Most people are more careless about throwing away valuables in the summer than they are in the winter," he said. "The heat makes them nervous and often irritable. A heavy blizzard or a bad thunder storm often has the same effect. At such a time, folks may lose all recollection of where they have put valuable property. Usually the street cleaner gets it.

"Each family in the city averaging four or five members throws at least five barrels of rubbish into the waste basket during the course of a week. After the paper has been sorted it goes to Riker's Island. Later, it is shipped to one of the large paper mills in the South, or in New England.

"City officials, mill owners, and sorters—everyone, in fact, who may handle the material after it leaves the basket in the living-room—are daily receiving inquiries about all sorts of things that have been thrown away by mistake," went on the commissioner.

© UNDERWOOD & UNDERWOOD, N. Y.

Cleaning the snow off Broadway. Within thirty minutes after the first flakes begin to fall in New York City—if the storm threatens to be severe—four hundred motor-driven plows and thousands of men are on the job. It sometimes costs as much as $1,500,000 to rid the city of an exceptionally heavy snowfall

"YOU would hardly expect a hard-headed business man, for instance, to conceal his money for two or three days in a rubbish container. Yet at least one of them did this very thing.

"When Inspector Charles Snyder took charge of what was then the city's largest incinerator, at Fifty-sixth Street and Twelfth Avenue, several years ago, he had a strange experience. This plant is one of the finest of its kind in the world. It handles four hundred and forty-eight tons of garbage and rubbish every twenty-four hours.

"The refuse is brought to the plant in sixty huge motor trucks. They feed six fires, each capable of receiving fifty tons. Each burns day and night. In addition, an immense concrete pit receives one thousand square yards of waste paper.

"One morning, shortly after the plant was opened, a well-known butcher called the inspector on the 'phone. An hour before, a rubbish container in which three hundred and fifty dollars in bills were hidden had been carried away from his shop. During the past week, he said, bandits had been terrorizing his neighborhood. As a protective measure he had put his money in an old paper bag and slipped it in with the rubbish until he could find time to go to the bank.

"While the butcher was out of the store, the collector had called for the rubbish.

"Inspector Snyder asked the butcher if he knew the number of the truck which had called at his store that day.

"No; he didn't. But he thought he could remember the driver. This was not encouraging, however, as that particular collector might have gone out by this time on another trip.

"The inspector told the butcher to come down to the office. There was a chance the money might be recovered. In the meantime, inquiries by telephone had revealed the number of the truck which had made the collection, and the spot where the rubbish had been dumped. When the butcher arrived, part of the refuse had been placed in the furnace. This was bad news. But the man would not be discouraged. So the remaining pile of rubbish was raked over carefully while he looked on.

"Pretty soon he became excited. Plunging into the papers himself he pulled out a printed scrap. It was one of his bill heads. The men kept on looking, and after a twenty-minutes search, they raked out a dirty old paper bag all crumpled up into a ball. It contained three hundred and fifty dollars in bills, tied around with a dirty piece of string!

"A funny thing happened down at the Jackson Street station on the lower East Side. A young woman rushed in one day very much excited. She had been sitting at the front door of her dwelling, she said, knitting a silk sweater. It was about half finished. The silk had been expensive. A friend came along, and stopped to tell her a good story. So interested did she become that she rolled up the sweater, stuck the needles into it, and laid the bundle aside on top of the ash can. A little later she was called into the house, and she forgot all about the sweater.

"While she was inside, the ash man came along. He dumped the sweater into his cart along with the other contents of the can, and drove away.

"When the young woman came out to resume her knitting, she found that all her patient work had been lost. She threw a shawl over her head and ran down to the city dump. In this neighborhood the dump is directly on the river front, and the rubbish is transferred almost immediately to the scows. When the inspector heard the girl's story he promptly gave orders to an Italian trimmer to look for the bundle of silk pierced with two knitting needles. Eventually it turned up, dusty with ashes. But the woman did not seem to mind that a bit. She tucked the work under her arm. And the last the inspector saw of her she was walking down the street, knitting as she went.

"ONE of the most valuable things we ever had reported as lost in rubbish was, so far as I know, never recovered," said Mr. Taylor. "This was a platinum ring set with a diamond worth twenty-three thousand dollars. The owner—a wealthy woman who lived on Fifth Avenue—sent the ring and her handsome pearl necklace to the jeweler's to be cleaned. Ten days later, she received a package from the jeweler's, removed the pearls and, failing to notice the ring, threw the wrappings away.

"The next day she learned through the jeweler that the boy who had delivered the parcel had obtained a receipt for both pieces. Immediately she began with her butler a search of the basement, but she found only empty rubbish cans. The collectors had already made their rounds. The woman informed us of her loss, and we did everything in our power to help her find the ring, even to the extent of keeping fifteen men busy (*Continued on page 167*)

Heroes Of The Dark

One touch of danger makes all miners kin, says Chief Parker of the United States Mine Safety Service—Thrilling stories of rescues underground, where no call for help is ever ignored—The causes of disasters, and how the mines are now guarding against them

By William S. Dutton

AS LONG as anyone in those Western mining camps had known him he had looked just the same—snowy-haired, tall, straight as a West Point colonel. He had read a great deal, knew Capetown and Sydney. He spoke like an educated man—though somehow he had never risen above a foreman. Who he was, what was his nationality or his past, nobody knew—nor asked. Old Jim, as he was known, kept his past to himself.

He was foreman of the Alta mine, which was one of the famous Comstock Lode group, in the boom days of the Virginia City gold and silver district in Nevada. It was forty-odd years ago when boiling water from subterranean hot springs burst suddenly through the rock walls of the Alta, hundreds of feet down, and flooded the mine.

Untold tons of hot water deluged the Alta workings. The shaft, seventeen hundred feet deep vertically from the surface, and every level and drift of the mine were filled with that steaming torrent of destruction!

Fortunately, the flood burst as the shifts were changing. At first it was believed that every man of the several hundred endangered had been warned in time to beat the water to the top. Then Old Jim, making his check as foreman, added grim tragedy to the disaster: eight miners were trapped in that boiling flood.

Old Jim was pale as he made his announcement and called the names of the eight. And a deeper hush fell when he pronounced the name of the eight's leader. For within the week that miner, whom I'll call Ben Rush, and Old Jim had fought a pitched battle. Rush was the foreman's bitterest enemy!

It seemed inconceivable that Rush and his companions could be alive under that water, yet, due to a single circumstance, there was a bare thread of hope. They had been assigned to work in a drift off one of the upper levels. This drift might roughly be described as an underground corridor, about six hundred feet in length, with a slightly rising grade as one walked from the shaft toward its face.

Hope for the missing eight was based on the fact that the drift was inclined. Hold a glass tube, closed at one end, horizontally in water and it will fill completely; but *tilt up* the closed end of the tube, and it will fill only partly, leaving a pocket of air at the highest portion.

Old Jim and the mine superintendent, studying the mine map, reasoned that the eight, trapped by the water, had retreated to the back of the drift, until they had gained temporary safety in the air pocket. They had been with the oncoming shift, so each had a full meal in his dinner pail. How long this limited food supply would last, and how long the men could endure the intense heat and steadily fouling air of the pocket, was the question—provided they lived at all. The mine pumps were useless. An emergency

call was sent to the railroad shops at Virginia City, twenty-odd miles away, for iron tanks that could be employed as huge bailing buckets. No such tanks were available. Working day and night the railroad shopmen made them, and they were rushed on flat cars to the Alta. Forthwith began the fight to lower the water level in the shaft, with the bail tanks hitched to a steam hoist, working alternately.

By the third day the water had been lowered until several feet of the entry into the drift was above it. The water, too, had ceased rising. A rowboat was let down. Two men volunteered to man it and make a preliminary exploration of the drift as far as they could go. An hour, two hours passed. The daylight darkened to dusk, and the dusk into night, but no signal came up from the two. Reluctantly, at length, bailing was resumed. Neither of the men ever came back.

When the water had been lowered until it was about thigh deep in the entry, the superintendent again called for volunteers. This time he asked for an exploring crew of six men to *wade* up the length of the drift, in an effort to see if the missing miners actually were there. The men, he explained, were to be linked together by a rope, not tied about their waists but merely passed from hand to hand; and they were to wear caps of ice cakes to help them endure the torture of the hot water and the heat.

The orders governing the procedure of this party were most rigid and explicit. First, no member of the exploring crew, under *any* circumstances, was to remove his ice cap. Second, no attempt was to be made to aid in any manner, or to rescue the imprisoned eight beyond assuring them that rescue was near. Third, in the event that any one of the party faltered or was overcome, his comrades were to make no effort to save him: the faltering man was to *let go of the line* so as not to endanger the others!

"These are drastic orders," said the superintendent; "but I want no man to volunteer who won't give me his oath to obey them implicitly. Some of you may come back. None of you may come back. Each man who goes must act for himself and, if necessary, sacrifice himself for the party."

Every miner who heard knew that as yet it was impossible to effect a rescue, and that information of the lost men was the most to be expected of the expedition. Also, every man knew the physical and mental agony that the expedition would entail. To volunteer was equivalent to offering one's self for certain torture.

But, at once, a dozen and more miners stepped forward. From them the superintendent chose six. These were without families or dependents. With one exception they were young, with all the daring and hardihood of youth. That exception was silver-topped Old Jim, the foreman. By virtue of his job and his intimate knowledge of the mine he demanded the right to go, and won it!

There was grim, breathless silence as the six were lowered by ropes down the shaft to the entry. Ice caps were in place; the guide rope was strung as a link between them; and in the most difficult position of all, the lead, was Old Jim. The others, with a comrade behind and in front, could steady themselves by the rope if they slipped on the uneven rock floor of the drift. Nobody was ahead to steady Old Jim—on his way to find his bitterest enemy, Ben Rush!

They suffered intensely, at the outset, from the ice caps. The ice froze into their heads. They had to fight back by sheer will the impulse to tear the caps from their heads, if but for a moment of relief. But shortly they were thanking heaven for that ice and the cool water that melted down over their hot bodies. The superintendent had understood what he was doing. The heat of the water and air was terrific.

At the end of the drift, they came upon the lost men huddled against the breast of the workings, and at once a feeble shout went up. Old Jim halted while water still separated his party from the eight miners. They were naked. Their food and drinking water were gone. Several of them were almost crazy, and all were near exhaustion. And from the parched, burning throat of each came the choked, quavering appeal, "Ice! Give us ice!"

It was no easy message Old Jim had to deliver. The men had been praying for rescue, hoping against hope. Now, with a rescue crew seemingly at hand, separated

by only a few feet of water, it wasn't a rescue crew at all. Ben Rush and his men had to endure that living hell longer, to watch Jim and his companions turn their backs.

"Don't fear, boys, we'll be back," Old Jim assured. "As soon as a way can be made we'll get you out."

AND then Rush, who had kept in the background, staggered to the fore of the others. "Jim, for the sake of God," he begged, "don't go without giving me a piece of that ice!"

"Ben, I can't do it," said Old Jim huskily. "That's orders."

"Just a piece—one small piece!" pleaded Rush. "You'll never miss it. Orders or no orders, Jim, I'd do as much for you!"

"I gave my oath," Old Jim repeated. "I can't break it. I've no choice, since the orders aren't mine." He turned away to go.

"Jim, just a little?" cried the other, down on his knees in agony. "Just a taste! I'm asking you as miner to miner!"

Suddenly Old Jim wrenched the ice cap from his head, wheeled around to face Rush, and swung it over the gulf. "Divide it up," he said in a hoarse voice; and, to his own men, "Let's get out of here!"

The others wouldn't let him take the lead on the return trip, but placed him second in line, over his protest. They would have given him of their ice, but he refused it. "No," he said; "I'll go as I am."

They hadn't gone far, in that water and heat, until Old Jim stumbled. He staggered a few steps, gasped something they didn't comprehend, then let go of the line as he went down. Nothing was said by the others. They simply picked him up and somehow brought him out, unconscious. When he revived he was in his own bunk, and Ben Rush and his men also had been taken out alive, thanks to him!

Dorsey J. Parker, chief engineer of the Mine Safety Service of the U. S. Bureau of Mines, tapped his desk thoughtfully for some minutes after he had told me that tale of Old Jim. It had been passed on to him by an associate who had known the foreman and had obtained the narrative first-hand.

"I'm not sure," said Mr. Parker suddenly, "that I should have told you that."

"Why?" I demanded, surprised.

"Because," he replied, "Old Jim and his men broke orders, not once, but twice that day. The most important factor in mine rescue work is implicit obedience to orders, in spite of everything. Jim knew that, as he showed when he let go of the line and went down. However, this story illustrates something that is true in every mine calamity. In time of danger, miners forget all disputes and enmities. It is a rare happening, indeed, underground, to have a call for help ignored, regardless of who makes it, or to whom it is made. Old Jim, by aiding Ben Rush, preserved a tradition of the industry."

A graduate of the Alabama Polytechnic Institute and later a student at Harvard, Mr. Parker began his mining career as a mule driver and coal digger in the mines of his native state, Alabama. He became assistant mining engineer, chief engineer, assistant general superintendent and general superintendent of various mines in the South, joining the staff of the United States Bureau of Mines as a field engineer in 1914. Two years later he was placed at the head of the Mine Safety Service. In this position he has become known in virtually every mining district of the country, and has personally been engaged at more than forty major mine explosions and fires. Under his supervision, thousands of miners in America have been trained in rescue and recovery work underground.

MORE than a million men in the United States are employed in mining. This big army, which produces our fuel, our minerals and our ores, is engaged in a task fraught with hazards. Death lurks in the rocks overhead. It sneaks through the air in the form of poison gas. It is kindled in remote, inaccessible caverns in the guise of mankind's dreaded enemy, fire. It strikes suddenly, in the dark, by flood, and by explosions which sweep a mine at the speed of two thousand feet a second. Ever present is that most terrifying of all dangers, burial alive!

To write in detail of all the heroic stories of mine rescues, would fill enough books to make a library. Therefore, when I sat down with Mr. Parker in his office at Pittsburgh, which is Mine Safety Service headquarters, I sought only typical tales of mine heroism. Every disaster underground produces its heroes. The Cherry mine disaster, in Bureau County, Illinois, on November 13th, 1909, brought them out by the dozens.

This calamity, in which, it was estimated, a total of three hundred lives were lost, was second in the size of its death roll only to that at Monongah, West Virginia, in December, 1907, where 361 were killed. Incidentally, that one month of 1907 is probably the blackest in all American mining history. During it, occurred five major disasters, in which were lost 661 mining men.

THE Cherry disaster, as records of the official investigation show, resulted from a very small thing: A car conveying six bales of hay for the mine mules was driven past the flame of an open kerosene torch in a passage in the second vein. The torch probably was brushed by the bales, and oil spilled onto the hay.

The small blaze thus started was fanned by the air current into a terrible conflagration, which filled the mine with deadly smoke and gas.

Alexander Norberg, third vein foreman, was one of the outstanding heroes of this fire. The third vein was the lowest worked part of the mine. Norberg had two hundred men under him there, widely scattered, when the alarm of fire reached him from the second vein, one hundred and sixty feet higher up.

Unable to stop the blaze with what water was available, second-vein men pushed the car with its burning cargo to the air shaft, with the intention of lowering it by the cage (mine elevator), to the third vein, where there was hose and water. They got the car half onto the cage, when the heat and smoke drove them back from it. The cage was then lifted slowly from above, at a signal. The car of hay tumbled off and plunged down to the third vein, showering fire and sparks as it went. There Norberg's men, with hose, extinguished the fire in the hay.

However, timbers in the passage through which the hay had been moved were burning, giving off volumes of smoke and an

intense heat. The air shaft between the third and second veins was ablaze, and from it smoke poured into the mine workings. Norberg, gaining the second vein with a section of hose, tried to attach it to a water line, but found the coupling too large. The nozzle of the hose accidentally struck him on the temple, and he was knocked unconscious for five minutes.

Revived, his first thought was of his men in the third vein. Escape from there was cut off by the usual channels. The air shaft was impassable, because of flames. In the hoisting shaft, the main cage ran only as far down as the second vein. But there was an emergency cage, which could be lowered to the third vein after it was attached to the main cage by chains.

Going to the surface, Norberg asked for volunteers who would go down with him on the main cage, attach the emergency cage and let it down to the men trapped below. Soon he had organized a small party, including some townspeople. They were lowered into the mine. The hoisting engineer on the surface lifted the cage up and down in answer to signals as Norberg hitched on the emergency cage. Then the engineer lowered again until the emergency cage rested at the third level.

Just at this juncture fire attacked a wooden portion of the suction air-fan in the air shaft, which was drawing smoke from the mine in a way to keep the hoisting shaft clear; and the fan was soon rendered useless. Smoke and flame "backed up" into the hoisting shaft where Norberg's party was making its heroic effort. Upon frantic rope signals, the hoisting engineer started to raise the cage, but before he had proceeded far a second signal came by the pneumatic system to "lower." This was obeyed. Suddenly the signals ceased. After a pause, the engineer raised the cage hurriedly once more, alarmed at the moments of silence from below. Norberg and his men came to the top—dead!

"Reports indicate that a chance incident caused that tragedy," explained Mr. Parker. "Norberg was trying to reach the third vein when the fire came up the shaft at him. He couldn't reach the pneumatic signal system. So three men climbed to the top of the cage and frantically jerked on the rope to attract attention above. The cage rose, in response. But as it did, another miner, seeking escape from the mine, came to the shaft and rang for the cage to be lowered. He knew nothing, of course, of Norberg's predicament. The engineer, thinking it was Norberg's signal, lowered at once. In consequence, Norberg and his party were plunged helpless into the danger from which a moment before they were escaping.

"There were countless acts of heroism at that fire," Mr. Parker went on. "Two young foreigners, one a mule driver, were among the first to discover the fire. Sending a warning into the lower vein, they obtained buckets, and tried to quench the blaze with water carried through smoke from the stables. It was largely through their efforts that the burning car was finally dumped down the shaft.

"While doing this, a miner who had joined them was overcome. The mule driver, unaided, carried him to the surface. Then, manning the cage with several others, he went up and down the shaft dragging onto the cage every miner he could find.

"The cage operator and his boy assistant remembered that powder and dynamite were stored in a small magazine in the path of the fire. Together they managed to load the explosives onto a car, push the car onto the cage, and, though the cager was overcome by the smoke, they got the dangerous stuff to the surface. To make sure that the detonating caps would not cause an explosion, the cager carried them in his hands.

"The fire was discovered early Saturday afternoon. Late in the day it was so out of control that the hoisting shaft had to be sealed, and all hope was abandoned for men still in the mine. Yet the bare possibility still existed that some few might be alive behind barricades. To reach them the fire had to be controlled.

"Sunday afternoon a hole was broken through the shaft seal. R. Y. Williams, a mining engineer of the United States Geological Survey, and a volunteer helper strapped themselves into a bucket so small that each man could rest but one foot in it. Donning oxygen-breathing apparatus, with electric lamps, and an automobile horn for signal purposes, they had themselves let down the shaft. The smoke was so dense they couldn't see a foot from them. It's Mighty Hard To Be Honest In My Town

MY FATHER was a martinet. Accuracy in every statement was his aim. Honesty was his religion. He trained me from the days of my infancy to search carefully, painstakingly, for the truth, and then declare it, regardless of consequences. Had he been less diligent in his instructions to me, or had I been a less apt pupil, I might not now be so generally misunderstood, even mistrusted, by my neighbors.

Their attitude puzzles me. Sometimes, it causes me to doubt the wisdom of my father's teaching and of my attempted adherence to his principles. Perhaps it would have been better if he had taught me expediency instead of such grim honesty. I wish it were possible for me to find out from you who read this piece whether I have done right, or whether I have been foolish. But that is impossible. Still, I shall set down my own experiences, partly to clarify my thoughts (there is nothing like writing a thing down to get it in the proper perspective), and partly because I believe my story will help others to face the problems of citizenship frankly, and decide upon the best course to follow.

I am what the local newspapers refer to as a "well-known citizen," "prominent merchant," "esteemed resident," and all that sort of thing. But if I am any of these it is because I was born into a position of prominence, and not because I have achieved it by any efforts, ability, or popularity of my own.

I love my town and my neighbors as much as anyone who lives in this splendid community of twenty thousand souls; but no one in town would believe me if I made that statement publicly. Perhaps you say I am making it publicly now, which is true, except that I shall not sign my name! Not a bit of it. My neighbors would make it hot for me if I were honest enough to do that! They would say, as they have so often said before, that I was knocking the town, impeding progress, hurting business, and a lot more along the same line.

This misunderstanding between my fellow townsmen and me has come about through my habit of telling the truth, which, as you probably have learned, is not always an expedient thing to do. In certain fields absolute honesty is demanded, and my neighbors would be the first to condemn dishonesty in those fields. I doubt if there is a town in the United States where bad checks are so rare as with us, where debts are paid more promptly, where the social ethics are higher, or where a man's word is more his bond.

It is in none of these ways that my neighbors object to my truth-telling propensities, and it is well for me that this is the case. Were it not, my unpopularity would have forced my business to the wall long ago. Once my business did come close to the wall. I shall tell that story first, so that you will not misjudge my town; and after telling it, I shall give you the story of the antagonism between me and those who live near me.

A good many years ago—it was during the panic of 1907—I was in a bad way financially. There was nothing to it, my creditors said, but bankruptcy proceedings. They hoped to get twenty to thirty cents on the dollar.

"All right," I said, "if you want to put me into bankruptcy you have the right to do it, and I haven't any power whatever to stop you. But I'll tell you this: whether I am put into bankruptcy or not, I'm going to pay every debt I owe, one hundred cents on the dollar. What's more, I'll pay interest on all of my debts that run more than three months."

"Are you *threatening* to pay us in full even if you don't have to and are under no obligations to pay?" asked one of the creditors.

"Exactly!" I replied.

"If that's his attitude, I think we should give him more time," said this creditor, addressing the others. They agreed.

I PAID out, dollar for dollar, with interest added on some of the debts. It took hard work and time, but I did it; and as a result my credit has been all that any man could want ever since. What is equally as important, the people of my town, hearing of the incident, decided that my store was a good place to trade. They still trade with me; but they do not like me personally. Strangely enough, they dislike me for the same reason they trade with me; namely, that I try to be truthful in everything! Let me illustrate:

Not so long ago a certain hospital had been decided upon by the Government of my state. My town was considered as a possible location for this hospital, which was to be an institution of considerable size with a large pay roll. Immediately, committees were formed, and all patriotic citizens bestirred themselves to see that we got that hospital. One of the committees called upon me and urged that I do everything possible to have the institution located in our town. It happened that the governor was a friend of mine, so my neighbors were eager to obtain my assistance—coöperation, they called it.

I want my town to grow. When new people come to town, I stand a chance of getting their trade. But this hospital question was not commercial, and I had no moral right, as I saw the case, to consider my private financial interests when they might be in conflict with the interests of the patients for whom that hospital was designed.

I had given the matter careful thought before the committee came to see me, and I had reached some disconcerting conclusions: My town is not easy of access. Its climate is not so good as that of some other places within the state, and the scenery is not so attractive as the scenery in several more favored spots. Obviously—to me—the hospital should be located in one of the three other places under consideration. How could I urge that the hospital be located here where I live, when the patients it was to serve would fare better elsewhere? The answer is that I could not, and did not.

BUT do you think the committee members granted me the right to consider the matter impersonally? Do you think they would admit that civic pride should take a back seat when the welfare of sick persons is at stake? No, sir, they would grant me no such right, and they would admit no such thing! Very positively, even nastily, they told me I was a knocker, that I lived off the town but would not help the town grow.

Nothing of what they said of me is true. I grant they may have seen the question in a light I could not see it in. Perhaps they actually believed the sick persons would fare better with us than anywhere else. I am willing to give them the right to see it that way. But why will they not reciprocate by giving me the right to arrive at my conclusions? Those of us who are in the minority are not necessarily wrong; anyway, the majority should be tolerant toward us; but it often is not. That's one of the aspects of this whole personal problem of mine that puzzles me.

To an outsider, the conversation that took place that day in my store would have been funny. And I'll confess it was a little funny to me. For instance, when I was so boneheaded as to say our climate and our scenery were surpassed by the climate and scenery of other places, the committee chairman was a sight worth seeing. He jumped up from his chair, his face became red, and I expected the steam to pop off as it does from a locomotive when the pressure becomes too great. He wouldn't wait for me to explain my position.

"Our climate is the best in the world," he exploded. "And there isn't a prettier place anywhere than this!" He went on at a great rate, and the others joined in the hue and cry. I don't know how they could make such extravagant statements. None of them had traveled very widely, none of them had made an exhaustive study of comparative climates, so how could they stand there and assert so positively that our climate is the best, and our scenery the finest in all the world? The answer, I suppose, is that they had civic pride, and in a contest between civic pride and literal facts, the facts sometimes come out second best. Are people ever right in closing their eyes to literal truth? And am I wrong in seeing things as they are—or trying to? That's what I should

like to know. I have noticed that men with great civic pride—boosters, they are appropriately called—rarely tell the literal truth about population figures, scenery, climate, and city water supplies.

Which reminds me of another painful and puzzling experience:

A SLIGHT epidemic of typhoid fever once broke out in my town. A chemist who came to find what the trouble might be reported that our water supply was contaminated. I went with him before the city council and advocated that something be done at once. Again, there was a storm.

"Our water is the purest in the world!" shouted the mayor. "It comes to us straight from the mountains, straight from God's own wells. Yet you have the temerity to stand there and agree with this outsider, this 'expert,' who cares nothing for the town's reputation!"

"Your Honor," I replied, "I care so much for this town that I want it to have pure water. To me, it seems nothing short of criminal, nothing short of social murder to close your eyes to facts when human lives are at stake. Don't brag about the water supply—purify it!"

The mayor was a local livery stable man. He knew nothing about chemistry, nothing about water supplies. But he did know the kind of stuff people like to hear, and he proceeded to make me the goat for an outburst of "patriotic" oratory.

I often think that one of the chief evils of this fair land of ours is speeches. Generally, they consist of extravagant praise of our glories, and so are a sort of pleasant dope that dulls our ability to see urgent present needs. Certainly the address the mayor aimed at me had no practical sense in it, and when he paused for breath I told him so.

A fist fight probably would have ensued but for a mild-mannered councilman, who arose and made a long-winded talk about nothing. Our anger cooled off under the monotonous voice of the man, and so finally we got back to the real discussion of the evening.

The consulting chemist explained the source of the contamination, and showed how the trouble could be corrected. (This happened in the days before the country was blessed with almost universally pure water, thanks to the work of chemists.) But the mayor would not back down completely, so no action was taken that night. That is, none except to ask the local newspapers to say nothing about the contaminated water. "It will hurt the town," the commissioners explained.

The result of this policy of delay and secrecy (the mayor, I am sure, would have called it a policy of *protecting* the town), was some more typhoid. Eventually, something had to be done and, rather secretly, it was done.

"Let's purify the water," the decision was; "but let's deny that it needs purifying!"

I do not know whether any deaths resulted from the failure of the city government to act promptly, and, if any did occur, I do not know who will be held accountable in the final day of judgment. No one, probably, for human nature can scarcely be condemned for being what it is. Which again brings up my puzzle: Should I be like other human beings, or as I am?

"PATRIOTISM," my father used to say, "is one of the truly great forces in the world. But it should be *intelligent* patriotism, and scrupulously honest. Always remember that!"

I have always remembered it, and that's why I have got into so much hot water. Perhaps the trouble has been with my faulty (*Continued on page 76*)

If You Ask Me:

The place to win back your self-respect is where you lost it

THE story is told of two brothers who were caught stealing sheep and were convicted before a magistrate. He sentenced them to be branded on the forehead with the letters "ST," which stood for "Sheep Thief."

One of the brothers, repentant and unable to bear his shame, ran away to a far country where none had knowledge of his sin, and there tried to forget. He was not permitted to forget, for the people who saw the letters were filled with curiosity, and asked questions.

These questions drove him from land to land and kept his heart full of bitterness, so that he died in the prime of life and was buried in an unremembered grave.

The other brother repented also; but he did not go away. "I cannot run away from the fact that I stole a sheep," said he; "and here I will remain until I win back the respect of my neighbors and myself."

Years passed, as years will, and this one of the brothers labored and paid his bills and did good deeds in the land of his birth.

One day a stranger passed through the community, and when he saw the brand on the old man's forehead he said to a native, "Will you tell me, please, what those letters signify?"

The native scratched his head and pondered. "It all happened a great while ago," said he, "and I have forgotten the particulars, but I think the letters are an abbreviation of 'Saint'."

What a tragic figure is that other brother, with bitterness in his heart, who wandered over the earth to escape the eyes of men! But wherever he went, the eyes of the curious followed him, for he was an oddity. . . .

There are things from which a man can run away with honor and profit. If he is unjustly condemned because those about him are ignorant and full of the foolish prejudices that are the progeny of ignorance, he can move to another community, and there, among his own kind, find the measure of happiness to which he may be entitled. He has lost nothing except his reputation; his self-respect is intact.

But if he has, for any reason, and under whatsoever stress of temptation, done anything to sacrifice his reputation and his self-respect as well, running away will serve only to make bad matters worse. In one small world there is no place to hide from a nagging conscience.

If he goes to a distant land and there establishes himself as a man of honor, two ghosts will haunt him to his grave: first, the fear that some old acquaintance will appear and reveal the story of his past; second, the knowledge that he acted the craven, and is yet despised by those from whom he ran.

Does any beaten man fully regain his self-respect until he has in turn defeated whatever or whoever beat him? I doubt it. And if ever he cringes before a community's scorn, he will not again hold up his head until he has wrested from that community a deserved respect.

The business of "coming back" is not as difficult as it seems, for memories are short and to-day's opinions are based on the impressions received to-day.

Good sportsmanship seems to be absorbed from the atmosphere of America. If a man can make good to-day, there are few to recall his untriumphant yesterdays. A busy land has no time to rake over dead ashes.

Any man can live down his past if he doesn't live down on a level with his past.

Robt Quillen.

Mellville took hold of the counter to steady himself. "Where did you get the reversible automobile rug?" he gasped

Boys Will Be Boisterous

The story of two sentimental sailors and a pair of sophisticated flappers

By Robert Bachmann

ILLUSTRATED BY TONY SARG

SOME say the modern navy began with the construction of armored men-of-war, some say it began more recently, with the introduction of electrically propelled ships. But those who really know will tell you it began when Moe (Battleship) Fishbein, the famous navy tailor of Sands Street, Brooklyn, installed steel clothes lockers in the back of his store, and rented them out for five dollars a month to the "suit-case" sailors who wished to dodge regulations and wear civilian clothes ashore.

Now, when Mellville Jeffers, seaman second class and bow man of the captain's gig, strolled along Riverside Drive on a Sunday afternoon all trimmed out in a sports model made of gray tweeds—plaited coat, knickers, and golf cap to match—that part of the U. S. S. "Ohio's" ill-fated crew still tailored by Uncle Sam had to scramble for cover in the wilds of New Jersey's Palisade Park, or dissolve from view 'mid the hot-dog stands of Coney Island.

"Every time I look at that goof he gives me a bad day. His head's so empty he could take a shampoo with a vacuum cleaner!" said Boathook Thompson, seaman first class and stern man of the same gig, who was one of those old-timers not yet converted to the newer attire.

"He's no sailor, he's a coat hanger. That guy's life is one long heat between his heart and his stomach. Always sounding off about love and romance and all that kind of alfalfa. I never knew they had so many kinds of love till I hear this Mellville get wholesale on the subject. There may be some argument about the all-American half-back, but if they was picking the all-American sheiks, this Mellville lad would be the captain of the team. His rating badge in the navy ought to be a spot of talcum powder on each sleeve!"

The direct cause for this outburst of Boathook's was an entertainment which the U. S. S. "Ohio" one pay day decided to give for their friends ashore. At a meeting held by the chief petty officers, part of the crew, headed by Shorty Davis, a manager

of boxers and wrestlers, and Michelangelo Silvo—better known as Mike—the melancholy ship's barber, wanted to arrange a smoker with boxing and wrestling bouts.

Another section was in favor of a theatrical show, to be held in the sail loft, which stood right on the dock near where the "Ohio" was tied up. The remainder, including Mellville, voted to give a dance on the ship—not the ordinary sort of ship's dance, but a really formal affair, socially correct, with a hired orchestra, dance cards, floral decorations, and buffet supper served by a caterer.

Boathook had lined up at once with the boxing and wrestling faction, against Mellville and the "hoofers," as he called them.

"We got too many hip wobblers, with gliding feet and stand-still heads, on the ship now," he argued, "so why encourage any more of them? Besides, I'm seagoing. I don't want any hairpins around me. That's why I shipped in the navy!"

The following Sunday afternoon, Boathook was leaning against the port rail near the gangway, watching the usual stream of visitors flow aboard. Mellville Jeffers sat on a bitt near him. The matter of the entertainment was resting peacefully undisturbed until the coming week, awaiting the vote of the crew.

"Looking for someone, Boathook?" asked Jeffers casually, as he moved a trifle closer to his crew mate. The latter favored him with a look of disgust.

"I'm no gangway sharpshooter, and you know it. This bucket-o'-war could tie up along the South Pole without breaking my heart. All certain ones of this crew think of is skirts, queens, and bimbos, when, by rights, they ought to be plugging the Blue Jackets' Manual. If you could learn seamanship in a dance hall, this ship would be manned by a crew of admirals."

"Somebody's got to volunteer to show visitors around, ain't they?" queried Mellville. "Lotta nice folks come to the Navy Yard all the way from Ohio and other Far-Western states, just to see life in the U. S. Navy. A feller's got to be patriotic, ain't he? . . . Hello, what's all the excitement about?"

AT THIS moment there was a general craning and twisting of necks in the direction of the gangway. A more prolonged and detailed scrutiny disclosed the cause of this mass movement to be two very noticeable girls, most attractively clad in rather short blue silk dresses, with hats to match.

Though these hats were of commanding size they did not quite suffice to hide the tangle of light bronze curls which seemed to struggle beneath each brim for the right to make an appearance. One was rather tall, the other quite short; but both of them were so exquisite as to cause an immediate disregard of such an obvious thing as size.

"Polish your periscope, Boathook. Look at the two dear little patriots coming aboard to see the navy!"

"*You* don't need any periscope, you bet. You can lamp them beyond the horizon with the naked eye," came back Boathook, sitting down on top of the bitt Mellville had just vacated in favor of a standing view.

"Somebody certainly shook the peach tree down in Delaware," said Mellville. "Say, I'm dying to tell them all I know about this man-o'-war!"

"They won't miss any early trains listening to *that*. You don't stay on the ship long enough to remember her name."

"If I crash that crowd, and herd those two beautiful maidens away, will you help me steer them around on a sightseeing trip?" ventured Mellville.

Boathook refused. "Cutie curls and a baby stare mean nothing to me."

"Aw, be a good sport for once," pleaded Mellville. "Come to my rescue this time, and I'll take your duty any day this week you want to go ashore."

THIS sacrifice on Mellville's part was so astounding that Boathook could hardly refuse to yield.

"On one condition," he stipulated.

"What's that, throw in a month's pay?"

"More yet. Don't begin dribbling about love till I'm safely out of signal distance!"

A show of anger caused Mellville's eyes to snap open.

"You're on, providing you go port and starboard with me on the love dribble."

"What do you mean—port and starboard? Do you think I'll take a dive for one of these fluffs?"

Mellville looked Boathook right in the eye. "Sure, you would, you celluloid collar. One warm look from either one, and you'd burn up to a white ash. One shake of those curls and you'll dislocate both arms reaching for a life belt. That's why you duck them—you're scared of them!"

"Well, if it ain't little Valentino himself trying to teach an old shipmate how to handle an oar! Now, that's certainly nice and salty of you, old-timer. I'm gunshy of a brace of bimbos, am I? I got a yellow streak around the heart, have I? That's one right out of the funny paper, it certainly is. Suppose, then, you lose no time, and go over and get these two eye lotions, and I'll do my best not to get groggy, and remain on my feet till we show them over the gangway!"

"Allow me to present to you," said Mellville, a few minutes later, "my old friend and shipmate, Boathook Thompson. This is Miss Dot and Myrtle Hoffman," he explained further. "Boathook is the ship's grouch. He's so salty that soap won't lather on his face."

"It may be hard on the hoofers," grunted Boathook in return, "but the 'Oh-ten' happens to be a battleship, and not a beauty parlor."

"The 'Oh-ten'? I thought this was the U. S. S. 'Ohio'?" asked Dot.

"Well, you see," replied Boathook, attempting to explain, "all ships in the navy get nicknames. The U. S. S. 'Arkansas' is the 'Old Ark'; the U. S. S. 'Missouri,' the U. S. S. 'Misery'; the U. S. S. 'Oregon,' the Irish battlewagon 'O'Regon,' and like that. We are the 'Oh-ten' because when we went to England the limejuicers lamped the name 'OHIO' for a week, and finally asked us when the other nine 'OH'S' was coming."

Myrtle stopped short, and put her hands on her hips. "Say, sailor, do you think you are taking a pair of landlubbers out for a stroll?"

"Pardon me," apologized Boathook, confused; "but I didn't mean to string you. That's a true story, ain't it, Jeffers?"

"All I know," said Mellville, "is what I see in the papers." He started off at a brisk pace.

"When Mellville walks fast we are getting close to the galley," remarked Boathook.

"Almost there," admitted Mellville. "The galley, I might explain, is the ship's kitchen."

"It's the busiest part of the ship when the bean rag's hoisted," said Boathook.

"Bean rag?" asked Dot.

"Sure, the meal pennant—"

Myrtle came to a halt again. "Well, call me a comic strip; but are you cracking collegiate again?"

"Let him alone, Myrtle," interposed Dot. "Don't be funny out of the act. Don't mind her, Mr. Boathook; girls will be girls."

"And boys will be boisterous," shot back Myrtle. "But let that go. Show us the rest of the tour, Mr. Cook. I see where you and me are going to get along just as nice and pleasant as a taxi driver and a traffic cop!"

Before long, under Mellville's speedy guidance, everything had been inspected, and he lost no time proposing to go ashore.

"I'll be glad to take you girls home," he suggested, then looked defiantly at Boathook. "I guess you don't want to follow this through?"

"Don't I? Well, I'll stick with you till the finish. This is chicken gravy for me. Girls may be girls, but I ain't even had a flutter yet."

THE next morning in the barber shop Boathook took occasion to register several minor complaints to his friend Mike.

"I'll tell you how it was," he said. "I was going forty knots an hour until this Mellville ducks into Fishbein's, and comes out a few minutes later with his ice-cream suit on; and after that I was about as necessary as a phonograph in a deaf mute college. I began to see why he had rushed the party ashore. The little blond short ration had been kinda friendly up to that time; but now she froze up like an uncovered radiator.

"I couldn't blame her. There was Mellville, all varnished and striped around like a brand-new taxicab. And the language he released! For the first time since I was shipmate with him I discovered he was a college boy back from Indiana somewheres. He was one of those better kind of men from the Middle-West that a guy from Brooklyn has no more chanst with than a chunk of rock salt in a livery stable."

"It listens to me like you ought to begin taking soundings on yourself, Boathook, or you'll be sending out distress signals," cautioned Mike. "If I was you I'd steer clear and give those two dames a wide channel. They're too good-looking for a gob."

"Don't worry about me. The janes with ornamental maps leave me cold," replied Boathook. "Anyhow, I know these two wouldn't even waste a serious look at a guy like me. But they sure did treat us right last night. They have a lot of good ideas about things like books and life and all. I like a female with common sense who ain't narrow-minded. We went up to their apartment, in a big hotel up-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Well, boys, we just got back to the old town—had an awful time swimming over here from the station"

town that had a drum major standing in front with more gold stripes on his sleeve than the admiral, and what that little one stewed on the chafing dish ought to be made regulation for the ship's cook!"

Mike looked at the deck with a gloomy expression about his eyes. "Say, Boathook, on the level, you ain't by any chanst falling for one of these fluffs, are you?"

Boathook leaned back quite far and emitted a few gurgles of supposedly uncontrollable mirth. "Well, well, if that ain't good! That strikes me as about the wisest crack you ever made. Me slip to the deck for a bimbo! The one man on this old tub who's harder to nick than armor plate!"

"I only wanted to make sure," Mike continued, "on account this being the week when we have to vote on that entertainment proposition; and it begins to look like a big night for the hoofers unless a few more like you and me with hard-boiled hearts can swing it in favor of a boxing and wrestling smoker."

"I see," said Boathook, clearing his throat. "Well, those dancing dervishes will have no cinch. They can't tell us where to get off. An' then again maybe for the sake of good feeling all around and a shipmate spirit, we *ought* to have a dance on account of so many fellows having a mother and sister in this town."

"Females are out of place on a ship," declared Mike emphatically; "and all the world knows sailors have flat feet."

"You certainly can put things in a way that anybody can see them," replied Boathook weakly. "But there's some little argument between Mellville and me, him thinking I'm shy and running away from those girls, and afraid to go out with them. That reminds me—what's the latest thing in civilian clothes now?"

"Civilian clothes? There ain't no difference any more. College boys are wearing pants just as big around as ours. I always knew that if we waited long enough these salt-water bottoms would be all the rage. That's what they call Oxford bags, and they're the nobbiest thing you can hang on yourself, unless it's a coonskin coat."

Boathook's eyes widened. "A coonskin coat? Holy halyards! That's an idea, Mike. Those words dropped from your mouth like a string of pearls. I've got the pants now. How could I ever raise enough jack to buy a coonskin coat?"

THE matter of the ball, as expected, aroused some lively controversy and a consequent clash of factions. What swung the votes eventually so that the dance partisans managed to have their program adopted was not quite clear, unless it was a speech that Boathook made, which he had promised Mike would take the wind out of the hoofers' sails.

"Friends and shipmates," he began, "the idea in me making a speech about this here entertainment is on account of realizing what it means to a lot of fellows who have mothers and sisters and wives and I might say sweethearts, at home, and what it means to them all.

"All you birds what wants to see a lot of bouts staged, I would say to them I don't blame you, and I'm in favor of it. Boxing being the manly art of self-defense, why not go to the Half Moon Athletic Club or the Seventh Regiment Armory any Saturday night, and get both eyes good and full of the very best of that kind of manly amusement?

"What is the influence of a good woman on a man's life and, I might say, a sailor's life too? And if we adopt this dance, in spite of my protest, I would say let's all try and bring only the purest and fairest of the fair sex on the ship, for what influence is finer than the influence of a good and pure and refined woman who ain't always talking about bobbed hair or face powder and stuff like that, but who reads good books, and realizes how serious life is and how we all have to work out its problems and all?

"I thank you all very kindly for hearing my few words, and in conclusion I ought to say that I don't think this dance will go through; but if it does go through, why, we owe it to the captain of the ship and to ourselves and the good old 'Ohio' to make it the finest ship's dance ever pulled off in the U. S. Navy. I thank you!"

MELLVILLE JEFFERS was highly pleased with the way things had turned out; but he was, nevertheless, a little bewildered by Boathook's sudden change of attitude.

"What's up?" he demanded. "Since when have you become a tango tar?"

"Here's the idea, Mel," Boathook began impressively: "You know how it is with sailors. There's not enough social life. That's the trouble with the navy. I'd like to see them start a reading club right now on this old packet, and read a lot of worth-while books, so when a guy goes ashore he can hold some kind of a serious conversation with a girl, without asking her did she ever see Jack Dempsey fight, or will the Pirates cop the pennant again next season."

"I forgot to tell you that I made another date with the girls next Tuesday night," announced Mellville, as though it had just occurred to him. "I don't know yet where to take two swell girls like that; but we'll find a place."

"I need money worse than a cat needs claws," said Boathook through clenched teeth. "But make your date; I'll stick till they sound taps."

Very shortly after this conversation, Boathook strolled into Moe (Battleship) Fishbein's emporium of fine clothing, suits, coats, and underwear. It was his second visit. He stated his desires quickly to Moe, who had come forward from the rear of the store to greet him.

"Got any of those coonskin coats in yet?"

The famous Sands Street tailor stopped in the middle of his store and replied energetically with both hands.

"I should eggsplain it to you vons more

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that a coonskin coat I ain't got it," he said, slapping both thighs and turning the palms of his fat hands upward. "And vat a gob should want it mit a coonskin coat iss cross-word puzzles to a feller like me, who spends twenty years of a hard lifetime selling goods to seagoing sailors."

"Well, I got to have one," insisted Boathook, looking around aimlessly, as though waiting for Moe to produce one by magic. Suddenly his eyes snapped.

"Say, Moe! What's that on the floor back there?" He pointed to a hairy mat stretched out across the back of Fishbein's store.

"That's a skin—brought it to me out West from China by Sapinsky, boatswunmate's loafer on the 'Cincinnati' on the Asiatic station, for a pea-coat he still owes it."

"What is it?"

"How should I know? A seal skin it might be, or a sheep—I don't know—for what it cost me on customary duties it could easily be a vermin."

"Say, Moe, look here, bend it into a coat for me, will you? I don't care what it costs—I'll make you an allotment. I got to have a coonskin coat. How are the chances?"

MOE shrugged his shoulders and walked back for another look at his souvenir, to see if any hidden value could possibly be concealed therein which might have escaped his first casual examination. But there was nothing about it he had not previously noticed—it was just plain mountain goat, black bear, or gray dog, depending upon the charity of the beholder.

"Twenty-two dollars for the pea-coat Sapinsky owes me yet. I'll make it up for you at forty dollars complete"—he looked at Boathook and saw an expression of despair mold his features—"with plush insides," he added slyly, "and guaranteed to fit."

"Pull out the old tape," said Boathook, "and take my draft. Lay it sort of loose around the beam; that's all the rage now."

WHEN, on Tuesday, Boathook and Mellville left the ship to call on the Hoffman sisters, Mellville stopped in Moe Fishbein's to change his clothes, as he had done before. But this time Boathook did not wait for him outside.

"What, you got a locker?" said Mellville, surprised as Boathook followed him in.

"You bet! Had to have a cage for the old bearskin," returned Boathook; and in a few minutes he stood before Mellville—coonskin coat, navy Oxford bags, gray felt hat with Prince of Wales turn-down, and a pair of white canvas spats bearing the unmistakable marks of the sailmaker's mate's needle. Mellville took hold of the counter to steady himself.

"Where did you get the reversible automobile rug?" he gasped. But Boathook did not hear him. "Where's my cane?" he called out to Moe, who stood by beaming with gleeful satisfaction as he saw all the various component parts of this new 1926 model assembled for the first time.

When they arrived at the apartment, Mellville insisted on Boathook's going in first. They were taken up to one of the top floors, and with suppressed excitement rang the bell.

"Well, for the love of lipstick, look at Boathook!" exclaimed Myrtle after the door had swung back. "Somebody left the zoo gates open!"

"Come in, boys, and sit down," said Dot cheerfully. "Oh, my word! Boathook—where did you get that arctic scenery?"

"A perfect picture from kicks to Kelly," resumed Myrtle. "I love the Prince of Wales awning and the canvas slip covers for the feet. Sit down, but don't take off your coat; I want to park my eyes on it for a while!"

It was a cruel moment for Boathook, who would have suffered keenly had not Dot come to his rescue.

"You look more like you belong on Broadway than on a battleship," she said, admiringly.

"Well, just because a fellow's working for Uncle Sam it don't say he can forget his old university days, and dress like he didn't care what fashion decrees."

"Oh, were you ever a college student? What university did you go to—Harvard or Yale?" asked Dot enthusiastically. Boathook shot a glance at Mellville.

"Neither one of those. I went to the Peerless Business University, of Dubuque, Iowa; but I didn't quite finish the course."

"I never heard of it," said Mellville.

"WHAT year were you in when you stopped?" asked Dot.

"It didn't go by years. The course was thirty days straight-away to get a diploma. Three more days and I'd had one. But I never could forget my dear old Alma Mater. I guess no old grad ever does. I still remember the college yells and the songs. It was an easy, care-free life."

"We thought we would like to take you two girls out (*Continued on page 179*)

"Allow me to present to you," said Mellville; "my old friend and shipmate, Boathook Thompson"

Gene Hewitt, Head Porter, Wouldn't Trade Jobs With A King

"All I wanted was to become head porter for a great hotel in Michigan," he says, "and that's what I am now—It's a fine job, because it gives me a chance to lend a hand to so many folks"—The story of lost packages and luggage that Gene has found, and of other remarkable services he has rendered

By Sherman Gwinn

IT WAS nearing noon, on a day several years ago, when a man of distinguished bearing hurriedly made his way through the crowded, busy lobby of the Hotel Statler, in Detroit, to the desk of an assistant manager.

"I'm Mr. So-and-so," he explained, and mentioned a name which the hotel man instantly recognized as that of a scientist of wide repute. "I'm expected to speak before a most important meeting in Detroit at seven o'clock to-night," he continued. "The portfolio which contains all the material for my lecture has been lost!"

"You mean it's been stolen?" ejaculated the manager.

"I don't say so," said the scientist nervously. "I hope not. The data is of great value, but only a scientific man would realize its worth. This morning I left Cleveland by train. The portfolio was to have been delivered to me at the station by a messenger; but, though I waited until the last possible moment, the messenger didn't arrive. I concluded that surely the portfolio would be dispatched after me by the next train; but that train has been in an hour and my portfolio isn't here. I've made every possible inquiry, both by telegraph and telephone. I've been unable to locate the portfolio anywhere!"

"And you must have it by seven o'clock to-night?" the manager asked.

"That's imperative. If I don't recover it my lecture will have to be canceled. At Cleveland, I decided that additional blueprints were necessary to clarify my text. That they might be made and be ready for to-night I left the portfolio with a firm of engineers, receiving their positive assurance that it and the prints would be delivered to me at the Cleveland station.

"I've telephoned there as well as to the hotel at which I stopped, and to the offices of the engineers. The engineers insist they sent the portfolio to the station; the station officials declare it's not there. It isn't at the hotel. Nobody admits seeing it."

SPENCER & WYCKOFF, DETROIT

Gene Hewitt, one of the most popular hotel employees in the United States, is head porter at the Hotel Statler, in Detroit. For thirty years Hewitt has been gathering information that is useful to guests, and to-day he can answer readily any question a traveler is likely to put to him. "Ask Gene—he can tell you," is a familiar phrase about the lobby of his hotel. Hewitt has had opportunities to become a hotel executive, but he prefers the post he now holds. Before going to the Statler, he worked at several other hotels in Detroit, in Saginaw, and in Toledo

A moment the assistant manager was silent. "There's just one man," he said suddenly, "who might be able to find your portfolio in time. That's 'Gene' Hewitt, our head porter. If he can't get it for you, nobody can."

A QUIET-MANNERED, soft-spoken, silver-haired little man in his forties, few would take Eugene Hewitt for a hotel porter. He looks more like—well, he reminded me of an old-fashioned country physician I knew as a boy, who would drive twenty miles in the dead of night through a snowstorm, to administer to a suffering patient. Or you might take Hewitt for a kindly disposed college professor, one who would give up his evenings at home in order to tutor a backward student.

I might explain, before continuing the story of the scientist's dilemma, that Gene Hewitt is one of the most widely known hotel porters in the United States. During a hotel service of thirty years he has handled more than two million pieces of baggage, with a loss of less than six pieces. He has solved more knotty problems, and helped more distraught folks out of difficulties than has many a fair-sized police department. He has thousands of friends scattered in every part of the country. If he wished, he to-day might be a big hotel manager at four or five times the salary he makes—he has rejected several such offers. He told me he would rather be what he *is* than anything else in the world! But to go on with my story:

AFTER three hours of plugging over the long-distance telephone to Cleveland, Gene—few know him by any other name—located the missing portfolio. Sure enough, it *had* been sent to the station, but too late for the scientist's train, and the messenger had left it there. At a loss what to do with it, the station employees had sent it to the scientist's hotel, and the hotel had returned it to the engineers.

"By this time it was past three o'clock in the afternoon. The last mail train for Detroit due to arrive in advance of the hour set for the lecture already had left Cleveland. The portfolio was still one hundred and thirty miles away—too far for anyone to go from Detroit to the other city and back within the time limit,

UNIVERSITY OF CALIFORNIA

either by railroad or by fast automobile!

"I'll simply have to cancel the lecture," concluded the scientist. "There's nothing else to do."

"I've promised you the portfolio, and I'll get it," Gene assured him quietly. "Now, just let me do your worrying, and don't think of calling off the lecture."

At half past six—thirty minutes to the good—Gene himself placed the portfolio in the scientist's hands. His charge for the service was less than a dollar!

"Gene, tell me this," I inquired, "how were you able to locate the portfolio in Cleveland by telephone, though the owner himself had been unable to do so? And by what kind of magic did you get it to Detroit, once you did locate it?"

"The 'magic'," explained Gene, smiling broadly, "was a friend. The biggest reward I get from my work is the friends it has made me. Well, I called up one of those friends in Cleveland, told him the situation, and he made the next train with the portfolio.

"I was able to locate the portfolio when the owner himself couldn't, because I tried harder. He made three calls, and each time got the wrong man, somebody who knew nothing about what he sought. I kept on calling until I had reached somebody who *did* know. Altogether, I made perhaps a dozen calls."

"And all of those 'phone calls, your own time in making them, and the cost of bringing your friend from Cleveland and sending him back—all that cost you so little?"

"MY FEE," said Gene, "was the fixed charge that I make for a service, no matter what that service may be. I have twenty-two people in my organization, and we're called on to do all sorts of things: handle baggage, of course; buy theatre tickets and tickets for baseball and football games; make reservations on trains; plan journeys; find lost articles; in fact, we try to do everything within reason that folks ask us to do. The fee for this isn't large, and sometimes the service costs us many times the amount of it. But in the long run it all comes back with interest—in friends."

There aren't any fabulous profits in Gene Hewitt's job; nor are the tips as numerous and as big as some folks think. I had been told by a Detroit man that Hewitt was making $50,000 a year. Whereupon I asked Gene point-blank what he does make, and the figure he named was less than a tenth of $50,000.

"I'm content with that," he added quietly. "Maybe I could make more. Maybe I could run a big hotel. But I don't *want* to do that. I'm the happiest man in the world now, right where I am!"

"Why?"

"Because I've reached the goal for which I aimed!

"I didn't set out to be a governor, or a millionaire, or a big business leader when I started in the hotel business. I only wanted to become head porter of the biggest hotel in the state. This hotel was the biggest, I believe, when I first got the job.

"But that isn't all," Gene hastened on, eager to make me understand. "I know folks in every town in Michigan, and they know me and call me by my name. When I need help in my work they're glad to give it to me; and sometimes I'm able to help them. That's what my job is—helping folks—and I'm at it from morning till night. Why, at the end of the day, when I go home and think of having done something for somebody, say some little thing like finding that portfolio you were asking about, you couldn't *buy* what I get out of it for a million!"

"ASK Gene! He can tell you!"

Twenty-five and more years ago, guests stopping at the old Hotel Cadillac, in Detroit, began to use that expression. This was in the days of the horse and buggy, when Detroit was little more than a big town, growing up to cityhood. The boom days of its gigantic motor industries were then just in the dawning. The Russell House, gone long since, and the Cadillac were "the" hotels. And it was at the Cadillac, under the title of first assistant porter, that Gene, the question answerer, held forth.

In those days, if a traveler was in doubt about routes and hazy on time tables, he usually had to leg it over to the ticket office to get his information.

"What time's the next train for Kalamazoo?" a drummer would demand of a busy hotel clerk.

"Couldn't tell you, sir," the clerk would shrug. "Better find out at the station. But, wait a minute now—ask Gene, that little chap over in the baggage-room; he'll know."

If Gene didn't know he wasn't long in finding out. Nothing was too much trouble for him to find out.

GENE had come down to Detroit from the lumber woods of St. Clair County. His father was a farmer in summer, a lumberman in winter. There were nine children in the Hewitt family, of which Gene was third eldest. He was eighteen when an accident in the woods caused him to be laid up two months in a Detroit hospital.

"What kind of an accident?" I asked Gene.

"I was driving a team," he said, "and while the team rested I picked up an ax and went in to help the swampers. I slipped and cut my leg."

"Were team drivers expected to help the swampers?"

"Why, no," Gene admitted; "but—well, you see, the swampers were behind with their work, and while I sat there by the bobsled doing nothing I thought I might as well give 'em a hand."

Giving folks "a hand," I began to discover, has been the specialty about which Gene Hewitt has molded his life.

It was spring when they let him out of the hospital, an afternoon in June. The city was all new to him, and though he still limped a little he began to stroll around the streets, wondering, and taking in the sights. He was only a slip of a boy, not more than five feet tall, weighing only about one hundred pounds, and shaggy about the neck for lack of a hair-cut. He wore a lumberman's checkered mackinaw that was several times too big for him, a pair of clumsy felt-topped woods boots, and a cracked and battered old hat. Such was the figure he cut when, after hours of exploring, he paused in the street to stare open-mouthed through the doors of the Hotel Cadillac.

Evening was coming on, Gene recalled for me. Within the (*Continued on page 82*)

What to Do if You Lose Your Baggage

"IF YOU ever lose your baggage while traveling," says Gene Hewitt, "the first thing to do is to notify every person who might run across it in the line of duty. Describe the baggage, because if it has been lost the chances are that the tags have dropped off it. Then give the address to which the baggage should be sent when it is found. Most transportation companies have 'lost and found' departments, and it's a good plan to keep in touch with these. If nothing happens after your first inquiries, try again. Don't conclude that you never will see your baggage again, for the harder you try the more likely you are to find it.

"The railroads handle baggage for so many millions of passengers that just a little slip somewhere may lose a trunk. But as soon as that trunk turns up at the wrong place, everybody gets busy and tries to start it back to the right place. Then, if the owner has notified everyone possible to be on the lookout for his trunk, it won't be long before those who are looking for it cross trails with those who are trying to find its owner."

"Nevada"

A romance of the West

By Zane Grey

ILLUSTRATED BY STOCKTON MULFORD

Synopsis of the Three Preceding Instalments.

BEN IDE and his sister, Hettie, had sold their fertile ranch in California, on the shores of Tule Lake, and journeyed overland to the newer country of Arizona, taking with them their mother; Ina, Ben's wife, and their little boy; Ina's brother, Marvie Blaine—and a long train of men, wagons, and horses. There were three reasons for this move: Their mother's health, Ben's longing for a return to pioneer living, and the hope in his heart and in Hettie's that in a frontier country they might find the man they both loved.

Six years before he had come to them, a stranger, known to them only as "Nevada." For two years he had helped Ben in his wild-horse hunting; he had shared in the capture of the great stallion California Red; he had fallen in love with Hettie. And then he had recognized in Less Setter a scoundrel he had known in years past, and had seen through Setter's schemes to ruin the Ide family. He met Setter and his two accomplices in the road, killed them all in open fight, and escaped, with no word of farewell to Ben and Hettie.

By his deed he saved the ranch for them, and made possible Ben's reconciliation with his father and his marriage to Ina Blaine. This, Ben and Hettie knew. What they did not know was that their "Nevada" was the notorious gunman Jim Lacy, and that he had learned from them for the first time the beauty of friendship and the glory of love. They had made a new man of him—and yet to save them he had had to renounce his new self and become again Jim Lacy.

Jim went back to Lineville, where he had known Setter, resolved never to let Hettie know who he was, but to live up to her ideal of him. And again fate intervened. He had arranged to go to Arizona with Cash Burridge—who had determined to turn from cattle "rustling" to honest cattle raising and had bought a ranch there—and then once more Jim Lacy was called upon to kill his man and become a fugitive from the law. He came into the "Gold Mine" (Lineville's gambling hell) one night, to find a girl dying on the floor, where Link Cawthorne in a drunken rage had thrown her. Jim Lacy did the only thing his code allowed. And for four years no one knew his whereabouts.

Meanwhile, Ben Ide and Hettie had bought a ranch and cattle in Arizona from a man named Cash Burridge, only to find from Tom Day, a neighbor, that Burridge had cheated in the count of cattle; that he had passed on liens on the stock; and that the whole country was so infested with rustlers that not even Judge Franklidge, the boss rancher of the country, knew who were the honest ranchmen and who the thieves.

However, Ben stuck to his guns, built his ranch-houses, and hired a man named Dillon as foreman. When Ben Ide's cattle and his own began almost at once to be the chief targets for the rustlers, Judge Franklidge called Day and a trusted cowboy, "Texas Jack," into consultation. Texas Jack volunteered to go single-handed into the Mongollons, to pose as a rustler, in order to get information to break up their gangs. And when Franklidge and Day remonstrated, he confessed to them that he was the notorious Jim Lacy. So, once more, to save those he loved, Nevada made his sacrifice. He shaved off the beard that had disguised him, bought a new outfit, and rode into town—Jim Lacy once more!

He heard much gossip in the saloons, and learned that old Elam Hatt and his son Cedar were under suspicion. Then, on the street he ran into Rose, the only daughter of old Elam. He gained her confidence, found that she feared Cedar Hatt and Clan Dillon—and loved Marvie Blaine. Jim promised to help her. That night he saw her at a dance with Marvie—and he saw Hettie Ide! Hettie was lovelier than ever, and from a dark corner Jim heard Clan Dillon make love to her. Hettie repulsed his advances with scorn, and when Dillon tried to hold her by force she broke away from him and ran. Whereupon Jim stepped out of the shadow, knocked Dillon down, and got away before a crowd gathered.

IT WAS eleven o'clock when Jim Lacy entered the Ace High Saloon, at that period one of the noted gambling-hells of the Southwest. He bolted into the barroom, like a man who was pursued. He was, indeed, though not by any visible thing.

"Cowboy, what you runnin' from?" queried a tall man. He happened to be standing nearest to the door, his back to the bar. A brass shield, with letters printed upon it, stood out prominently on his vest.

Jim espied that, almost in the instant that he recognized this individual.

"Howdy, Macklin," he said, nonchalantly. "I was just runnin' from a sheriff."

"Wal, you run right into another," growled Macklin, surprised and annoyed. "Who air you?"

"I'm foreman of the Coffee Pot Outfit," drawled Jim.

"What's your handle, smarty? It jest happens there ain't any Coffee Pot Outfit at this particular time. . . . I've a notion to clap you into the jug. You kinda look pale 'round the gills. What have you been up to, an' who air you?"

"None of your business," returned Jim, with an abrupt change of tone and manner. "But if you hang around, I reckon somebody'll tell you."

"Hyar, you come right along with—"

"*Lookout, Mack!*" interrupted someone behind Jim. A glass went crashing on the floor, and the rasp of heavy boots followed. Then a man strode in front of the sheriff, facing Jim. "Excuse me, stranger, but I believe I know you. If I'm wrong say so."

"Howdy, Cash," returned Jim, extending his hand.

Cash Burridge looked a full ten years older than when Jim had last seen him. Drink and hard life and evil passions had broken the man.

"Jumpin' steers!" he ejaculated, grasping Jim's hand in both his. "If it ain't you!"

"Shore is, Cash. Just got in, an' lookin' for trouble."

"No! *Who?*" queried Burridge, with a sudden check to his almost boisterous welcome. He had bent forward and lowered his voice.

"Wal, nobody in particular, Cash. I just feel mean."

"I'm a son-of-a-gun! It's you—changed a lot. Most in disposition—if it's true. You're *lookin'* for trouble!"

HERE the sheriff interposed by placing an ungentle hand on Burridge's shoulder and turning him somewhat.

"Friend of yours, hey? Thet's no guarantee to keep him out of jail."

"Thunder!" exploded Burridge. "I'm tryin' to keep *you* out of the boneyard. My lord! If I told you who this man is you'd sweat blood!"

Macklin's jaw dropped and he swayed back against the bar, dominated by Burridge's fierce sincerity. Then Burridge drew Jim aside.

"It's you—really *you*, Jim?" he whispered huskily.

"Shore, Cash. Cain't you see?"

"But we heard you were dead."

"That was terrible exaggerated, Cash."

"Dropped from the sky! Jim Lacy, just down from heaven, huh? Well, I'm darned! . . . An' I never was so glad to see a man in my life! Where you been, Jim, since you left Lineville? Lord, I'll never forget that night you shot Link Cawthorne's eye out!"

"Wal, Cash, never mind where I've been."

"Sure, that doesn't matter, only I always had my idea, an' I was curious. I had a hunch you went to New Mexico, an' got mixed up in that Lincoln County War. *Some* of those hombres got out of that fight alive. I know one of them did. Close pard of Billy the Kid."

"Who?" queried Jim.

"I'm not givin' any man away, Jim. Sure wouldn't have said as much as that to anyone else. When'd you drift in?"

"To-day."

"You'll be recognized here."

"Who's goin' to recognize me, Cash?"

"You remember Ace Black? He's the gambler we knowed at the Gold Mine back in Lineville."

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

"Shore, I remember Black."

"He's up-stairs playin' faro. Reckon Black will know you; but he'd never give you away. Hardy Rue, though. He will. He never cottoned to you. Always had a hunch you killed Less Setter. Rue has dogged me all these years. An' I'm layin' it to him that I'm down on my luck now."

"Wal! What come of your ranchin' deal heah, Cash?"

"JIM, you had me figured. I couldn't stand prosperity," returned Burridge heavily. "But I swear I went straight till I got in need of money. I'd made poor deals. I could steal cattle an' make money, but not by tradin' or ranchin'. I began to borrow. Then I had a chance to sell out to Ben Ide, a Californian. I did him dirt, an' I've lived to be sorry. There's a man, Jim! . . . Well, when I was flush again, I began to drink an' buck the tiger."

"An' now you're aboot broke. Who got all that money, Cash?"

"Aw, everybody. Brennan some; but then I don't begrudge it to him. Hardy Rue beat me out of most of it. I fell in love with a Spanish girl here. She an' Rue double-crossed me. Got my pile!"

"Wal, why didn't you kill him?"

"I couldn' try an even break with Rue. An' I never had a chance to shoot him in the back."

"Is Rue heah now?" asked Jim.

"Reckon he's with that black-eyed hussy. It's a little early for him to drop in. Lord, it'll tickle me to have him see you with me. Rue was afraid of you, Jim. An' you need to watch him!"

"Where do you hang out, Cash?"

"Hello, Marvie. Come and walk with me," she said brightly. "Aw, I want to die," replied Marvie

"I've been most here in town," replied Burridge. "But I've a cabin down in the brakes."

"Are you acquainted down there?"

"Sure am, Jim. Know everybody except the newcomers. An' I'm givin' you a hunch there's some hard customers driftin' in. It's a rough country, an' big as all outdoors. I've sure learned to love Arizona."

"Wal, Cash, when you was rich an' high-handed I didn't have much use for you," said Jim, with a smile. "But now you're broke an' down on your luck, I reckon I'll chip in with you."

"Jim Lacy! You always was a queer one," returned Burridge feelingly. "Reckon I know you've got somethin' up your sleeve; an' whatever it is, I'm sure with you!"

"All right, Cash. Suppose you tote me 'round to look 'em over."

HETTIE IDE had attended the dance at Winthrop as a guest of Alice Franklidge, an unmarried girl of nineteen, daughter of the judge's second wife. They left the dance before midnight, to be driven out to the Franklidge house by Alice's escort. The night was cold and clear, with myriads of blinking stars overhead. Hettie removed her hat to let the cool wind blow her hair.

"Did you enjoy your first dance in Arizona?" asked the young rancher.

"Yes, indeed I did, Mr. Van Horn—in spite of a—a rather unpleasant incident," replied Hettie.

"Sure, we're awful glad. Sorry, too, somethin' annoyed you. But, honest, the dances now are Sunday-school affairs to what they once was. Isn't that so, Alice?"

"It is. I used to be afraid to go," replied the girl. "Fights were common. One for each dance! They're really nice now. Dad and some of the town men have seen to that. . . . Hettie, it mortifies me that you were annoyed by Clan Dillon. I know it was he. You danced with him—then came back to us all flushed and nervous."

"Yes, it was Mr. Dillon. He—he insulted me."

"I'm not surprised," returned Alice thoughtfully. "Dillon is a handsome, fascinating man. Very agreeable, winning. But I always thought him a little common and bold."

"Who was the pretty girl Marvie paid so much attention to?" asked Hettie.

"I didn't notice her. But I saw he was having a grand time."

"He had her with him just before we left," went on Hettie. "She hung back as Marvie came up to me. I think she was afraid to meet us. I thought her very pretty. Big dark eyes. Red lips. Curly brown hair."

"That was Rose Hatt," replied Van Horn.

"Rose Hatt? She couldn't belong to that notorious Hatt family we hear about?" asked Alice.

"There's only one family of Hatts, Alice, an' Rose is the only girl," said the young rancher. "I'd seen her before. Charley Moss danced with her. Pretty kid. An' she seemed modest an' quiet. Young Blaine sure acted smitten with her."

"Hettie, love affairs in Arizona go like fire in the dry desert grass," said Alice, with a little laugh. "*You* want to watch out, doesn't she, Frank?"

"Sure won't do her any good to watch out," returned Van Horn gayly. "One of our Arizona lads is goin' to get her."

Soon they arrived at the Franklidge home, which stood on a bench of high ground among stately pine trees. The girls went in to find Judge Franklidge beside an open fireplace. He greeted Hettie warmly.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Did you meet your brother?" he asked, as he placed a chair for Hettie.

"No. Did he come in, after all?"

"Yes. He was here for an hour," replied the judge. "Came in to talk over a cattle deal. I advised him not to buy more stock just now."

"Was Ina with Ben?" asked Hettie.

"Sure was, and she looked powerful handsome. I wanted them to stay here overnight. But Ben said he'd rather go to the hotel, so he could be in town early. Left word if he didn't see you at the dance that you were to meet him to-morrow at noon sharp. At Brydon's."

"Goodness! I'm glad we got away from the dance before Ben arrived," exclaimed Hettie, with a rather unmirthful laugh.

"Well now, you don't say?" queried the judge, lowering his head to gaze at her over his glasses.

"Thunder!" exploded Burridge. "I'm tryin' to keep *you* out of the boneyard. If I told you who this man is you'd sweat blood!"

"I'M AFRAID it's going to be embarrassing for me when I see Ben. I'll have to tell him that I—I have discharged Dillon."

"Dillon! Clan Dillon? Did you fire *him?*" asked the judge, sitting up abruptly. "What for, lass?"

"I had reason enough, though I'm afraid Ben may not see it that way. He swears by Dillon. Well, Mr. Dillon has made it rather hard for me out at the ranch. He waylays me whenever I go outdoors. At first he didn't do me the honor to offer marriage. But finally he got that far along, and despite my refusal he kept at it. I did not know he was to be at the dance to-night, or I wouldn't have gone. But I danced with him, and walked with him, on the terrace. . . . And—well, to make it short, he insulted me."

"You don't mean he dared to lay a hand on you?" demanded the old rancher.

"Both hands, and arms too," laughed Hettie, though she blushed as she admitted it. "In fact, he was a ruffian. I imagine Dillon has had his way with certain kinds of women. I think he expected me to squeal, or beg—then flop into his arms. But I'm strong, and I broke away from him. And then I discharged him."

"You did right, lass; but how is Ben going to take that?" queried Franklidge seriously. "He thinks a heap of this Dillon. Only to-night he was bragging about Dillon's recovery of a bunch of cattle that'd just been rustled off into the brakes. . . . Still, come to squint at the offense, Ben can't overlook it."

"You don't know my brother very well yet," returned Hettie, shaking her head. "If he had *seen* Dillon insult me he'd have horsewhipped him. But Ben scouts my statements. He's tired of hearing about these lovelorn cowboys who annoy me. He thinks I'm—well, a little too sensitive. I declare I don't know *how* he will take this Dillon affair."

"I'll tell you, lass," replied the judge. "He'll not uphold you. Dillon will get to him first and soften his offense. And Ben will keep him on."

"That would be dreadful," said Hettie. "I'll actually be afraid of Dillon."

"Well, the only solution to your problem, Hettie Ide, is to fall in love with some fine Arizona lad," declared Judge Franklidge, with both kindly conviction and teasing good humor.

"Well," returned Hettie, "I'd take your advice, Judge Franklidge—if it weren't for an insurmountable obstacle. . . . I can't fall in love with a fine Arizona lad, because I'm already in love with a fine—*Nevada* lad!"

As the beloved name sounded on her lips, Hettie felt the swift blood rise to tighten and heat her face.

The judge laughed heartily, but Alice, intuitively grasping the import beneath Hettie's rather flippant speech, crossed over to her and put an arm around her.

"Dad is as bad as Ben, dear. Come, it's late. Let's go to bed," she said.

"WELL, Hettie," added the judge, in the same mirthful vein, "if I were forty years younger I'd contest this mysterious Nevadian's rights. Where is the confounded lucky jackass?"

Hettie looked back from the doorway, through which Alice was leading her.

"I do not know," she replied sadly.

When the door closed she heard the judge burst out: "Did you hear that, Van? It explains a lot. . . . Well, dog-gone me for a thick-headed fool! And I'll gamble Ben Ide is the same!"

One of the Franklidge stable hands drove Hettie into town the next morning, so that she had (*Continued on page 206*)

Do These If You Can

By Myron M. Stearns

Puzzle 1: If you find the right letter and start there with your pencil, by spelling out the first line of a well-known nursery rhyme and drawing a straight line from letter to letter, you can make a picture that will illustrate the rhyme

ONE of the features of the New York Sunday "World" is a four-page section devoted to puzzles, tricks, and unusual games. It is called "Red Magic." The late Harry Houdini, the famous magician, was its editor, and among the contributors are such names as that of Sam Loyd, the puzzle man.

For as long as you can remember, you probably have seen an occasional "puzzle page" or "puzzle department" of a column or two; but for any newspaper to print a whole four-page puzzle section each Sunday is something that, so far as I know, had not been attempted before the "World" broke the ice.

F. Gregory Hartswick is the leader of the "Three Musketeers" who have actual charge of getting out "Red Magic." Houdini, of course, because of his many engagements in all parts of the country, could not directly supervise this work. The other day, I found Hartswick at a desk littered with puzzle correspondence and contributions, in a typical newspaper cubbyhole on an upper floor. At an adjoining desk sat Prosper Buranelli, the little Texan who furnishes so many brilliant ideas for the puzzle section. From an adjoining room came Margaret Petherbridge, the Brooklyn girl who showed her two associates that carefulness and accuracy are a necessary part of puzzle training.

"Puzzles," Hartswick told me, "fall into classes, some of which are almost universally popular, while others appeal only to particular groups of people. For instance, the 'Monkey Puzzle' (which appears on this page) is one of the jumping counter class of puzzles that we often give a good deal of space to. They have the advantage of being equally easy —or equally difficult —for everybody, irrespective of puzzle experience. In some of the other classes, as I can show you a little later, experience or familiarity helps quite a lot."

In the puzzle of "The Jumping Monkeys," four monkeys—two white ones and two dark ones—are shown sitting on stools. Our problem is to reverse their positions in seven moves: to bring the white monkeys from stools 1 and 3 to stools 6 and 8 by moving one monkey at a time along the lines indicated on the illustration. While you are making these moves, no two monkeys can occupy the same stool at the same time. Any continuous jump counts as one move. For example, if there were no monkey on stool 3 in the present picture, the monkey on stool 8 could go along the line to stool 4, and from there to stool 3 and (if he wished) down to stool 7, and the whole operation would count as only one move. If you use nickels and pennies for the monkeys, you can have a lot of fun working out this problem. It is easy to solve it in an unlimited number of moves; but you may have some difficulty doing it in *only seven moves.*

ARE the directions clear? A monkey cannot go to any stool that is already occupied; but as long as the stool at the other end of the line he starts on is empty, he can go to it, and from there to any other empty stool that may be reached on a single line, and so on—as long as he goes only to empty stools—counting each

Puzzle 2: Rearrange the letters to form a sentence which the picture will illustrate

The Jumping Monkeys

Puzzle 3: In the drawing above, four monkeys—two white and two dark—are shown sitting on stools. The problem is to reverse their positions in seven moves: to bring the white monkeys from stools 1 and 3 to stools 6 and 8 by moving one monkey at a time along the lines leading from one stool to another as indicated on the puzzle. While you are making these moves, no two monkeys can occupy the same stool at the same time. A monkey cannot go to a stool that is already occupied; but as long as the stool at the other end of the line upon which he starts is empty, he can go to it and from there on to any other empty stool that may be reached on a line, and so on, as long as he goes only to empty stools, counting each continuous journey as a single move. Nickels and pennies may be used for the monkeys. It is easy to solve this problem in an unlimited number of moves, but not so easy in seven moves.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

continuous journey as a single move. Of course the *first* move has to be only along one line, as the position of the other monkeys makes a further continuation of the first journey impossible.

"IF YOU can do that," suggested Hartswick, "try a harder one. 'The Jumping Grasshopper' is one of the best that's ever been published. It's famous. It can be solved in forty-four moves, but unless you're lucky, or a regular shark, you can spend hours, or even days, on it."

The directions are printed below the puzzle (number 5 in our picture layout).

"What kinds of people," I asked, "work at puzzles?"

"So far as we can make it out," Hartswick told me, "*all* kinds. It seems to be a question of spare time, mostly; and, beyond that, getting started at it.

"Let's say a dry-goods clerk is commuting. On the way home, he finishes reading what he wants of the paper before he reaches his station, and so he turns to a puzzle page, and idly starts to work out one of the puzzles. That's all that is necessary in a lot of cases. After that—he's found a new recreation, a new way of passing spare time pleasantly. He may go on and put in more and more time on puzzles until he becomes a dyed-in-the-wool fan. Many people do.

"But if it ever reaches a point where he puts in *too* much time at it—as a few people, regular puzzle-addicts, do—he usually cuts it out entirely. It's easy to 'swear off' on puzzles, once you realize they're taking too much of your time or getting too big a hold on you. Only occasionally will you find a man or woman who simply *has* to keep on until the answer is worked out."

"What kinds of puzzles are most likely to get people started?" I asked.

Hartswick thought a moment.

"Pictures puzzles," he decided. "Our 'What's Wrong With This Picture?' series seems to get almost everybody. Some papers buy the right to reprint just that one feature, and let all the rest go. The furnace-room picture [number 4 in our layout] is a sample.

"Another easy form of picture-puzzle that lures a good many people into puzzledom is the 'follow the dots' puzzle. [Puzzle number one in our layout is an example of this kind.]

"The football field puzzle [number 6 in our layout] is a sample of still another class—dividing a field up into a given number of compartments, with only a limited number of straight lines.

"BUT once people get started on puzzles and puzzle-making," Hartswick went on, "we find that they like what I call 'language puzzles' best of all—puzzles that are built around the use of words or letters. Everybody who can read understands words and letters. Folks like to have definitions given that they can feel

What is Wrong in This Picture?

Puzzle 4: The artist made fifteen errors, such as leaving a hoop off the barrel. Can you find the others?

The Jumping Grasshopper

Puzzle 5: The numbers in the circles represent counters. If you cut out of paper small disks and number them from 1 to 12 you will have all the equipment necessary. Place your numbered counters on the circles with corresponding numbers. You will note that they are in regular order, reading clockwise around the circle. Now, here is your task: to get the numbers so arranged that they will read in regular order around the circle in the reverse direction, with the vacant circle in the same position as it is at the start. You can move any number to a vacant circle next to it, or you can jump any number over another to a vacant circle, as you jump in checkers, except that the number jumped over is not removed. Your first move, of course, is either 1 or 12 to the vacant circle. You can move in either direction at will, as long as a single move or a jump is possible. The puzzle can be solved in forty-four moves.

Puzzle 6: Eleven boys were playing football on a vacant lot, as shown in the diagram above. Take a ruler, and with four straight lines divide the whole field so that each boy is in a separate compartment

Puzzles 7 and 8: In the two "letter squares" above are hidden the names of flowers and poets—at the left 24 poets, at the right 20 flowers. Starting at any letter, you can go to any adjoining letter, forward or back, up or down, or diagonally in any direction until you have spelled out your word. You are allowed to use the same letters several times over

around for and fit out of their own knowledge. They like to work out stunts from familiar letters. We get a much greater response to language puzzles than to anything else we print."

To illustrate, look at the "Square of Flowers." (It is number 8 in our layout.)

You can't go wrong on these "Letter Squares." Whether or not you get the entire number of words, you get *some* of them, so your work is rewarded in proportion to your skill and patience. The best way to work them is to think of one kind of flower after another, and find out if that particular word is buried in the square.

The "Square of Poets" (number 7) is a little harder than the flowers, because the names are not quite so well known.

"WORD jumping," says Hartswick, "always finds favor." The process is to substitute for the first word a second that has just one letter different, as "Make" to "Fake." That is one jump. Or you can change "Make" to "Dome" in four jumps:

MAKE FAKE FAME
DAME DOME

Try these:

WORD JUMPING

Change ride to walk in five jumps.
Change kill to save in five jumps.
Change salt to wine in four jumps.
Change bird to hawk in four jumps.
Change rich to poor in eight jumps.
Change stay to part in seven jumps.
Change slow to fast in eight jumps.
Change whale to shark in three jumps.

"Hidden words"—also in the easy puzzle class—find plenty of devotees. Here are some good examples:

HIDDEN RIVERS

In each of the following sentences a river lies, unconcealed:

Abel, be a good boy.
Remo, Hawkeye and Potash were Indians.
So, derrick means a lifter, like a crane.
What did you do? Oh, I osculated.
Vol gave me a book.
And opposite Nan is Dave.
Yes, miss, our iceman calls regularly.
This pile? Nay, that one.

The answers to the "Word Jumping" and "Hidden Rivers" puzzles will be found at the end of this article. (Nos. 17 and 18.)

"Geography for Puzzlers" (number 10 in our layout) gives a list of hidden countries that you're familiar with. After solving the "Hidden Rivers" puzzle the "Concealed Countries" will leap out at you from their hiding places.

"IN FACT, all our hidden-word puzzles are easy," Hartswick pointed out. "They have to be. For we've found out that people will not stick long to puzzles on which they can make no progress—puzzles where the solution comes suddenly, if it comes at all. People want to be rewarded for industry. They want to see progress. So we divide all puzzles into two general divisions: those that can be worked out gradually, bit by bit, and those that 'come suddenly.' We call the former 'Construction Puzzles.' And we know that the others have to be kept simple, or will be, relatively, unpopular. To illustrate, take the anagram [number 2 in our layout]. We print few of them, because, even though they are an old form and had quite a vogue twenty years ago, they belong to the 'sudden solution' type of puzzles. They are not so successful as the construction classes. Once in a while a good one attracts a fair amount of attention; but the average of popularity is low. The one given in this article, which is used with an illustration to help it along, is one of the best.

"On the other hand, the enigma, one of the oldest forms of language puzzle there is, belongs to the 'construction-puzzle' class; and so, although it is less attractive to begin with, it is always popular."

Sam Loyd's Lollipop Puzzle

Puzzle 9: Widow Brown, who runs a candy shop, keeps her stock of lollipops in jars of three sizes, and arranges the full jars upon three shelves every morning, in such a manner as to have the same number of lollipops upon each of the shelves. Now, when the jars are filled to capacity and arranged as shown in our sketch, with the same number of lollipops on each shelf, who can tell how many lollipops are contained in the entire display if the smallest size jar holds five lollipops?

Geography for Puzzlers—Concealed Countries

Puzzle 10: Do you remember way back when you used to be able to take a yardstick and point out on the map any country named? Those were the days. Since then the map has been changed, but for the most part the boundaries are the same. See what you can do now. The only difference is that the countries are hidden.

Open your geography, Thomas. I am teacher.
On the map there is a wasp. Ain't it funny?
While we were looking for the books, we dented the cupboard.
I wish we were rich. I learned all about traveling to-day.
Although we had to leave the lager, many of us were glad when the boat left.
Have you read it? A Lytton of England wrote it.
Some say there are tears in diamonds.
They are odd, but are rich in a way. Very learned, you know.

Word Square Construction

BUILD a square construction of words answering the following definitions:

UPPER LEFT

Used in making toilet powders
Abbreviation for a state
A city in Peru
Former title for a monarch

UPPER RIGHT

A ray of light
A lake in North America
Incorrect form of "is not"
To apportion

CENTER

To stray, travel without a destination
Masculine name
On the top—above
Used for cleaning floors

LOWER LEFT

To stay the flow of
Part of an automobile
Name for Ireland
Bill of fare

LOWER RIGHT

A mineral
A song tune
A prevaricator
Sharp

Puzzles 11 and 12: At the right and left are two "word square" puzzles. The diagram above can be used for puzzles 11 and 12. In a word square each dot represents a letter, and each line of dots a word. The word must read both ways: across and down. That is, if the first word were "lame" it should not only be the first word across, it should also be the first word down. At bottom of page is Puzzle 13, a more difficult five-letter interlocking word square with nine squares

Word Square Construction

BUILD a square construction of words answering the following definitions:

UPPER LEFT

A sunken fence
Resort in New Jersey
A crowd
Small insects

UPPER RIGHT

A pair
Under the roof
Affirm
Lake

CENTER

Appear
Hence
Urges on
The greatest part

LOWER LEFT

A fruit
Molten rock
Pertaining to grapes
An ancient weapon

LOWER RIGHT

Shade of a color
Unobstructed
Destitution
Completes

To solve an enigma, write out the numbers of the letters in order first:
1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, and so on for the total number. Then look over the definitions. You may find an easy one like:

My fifth, eleventh, and first form the name of a small insect, famous for its industry.

What else could it possibly be other than "ant" or "bee"? Putting the letters of "ant" down under the right numbers, we get:

1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15
T A N

Look for another easy definition, and put the letters down in like manner. Before you know it the enigma is taking shape under your eyes.

Here is a sample for you to work out:

SHAKESPEAREAN ENIGMA

I am a popular quotation composed of 28 letters.

My 17, 13, 19, 28, 7, 1 is the title of a famous play.
My 24, 9, 27, 3, 4 is an instrument for boring.
My 5, 12, 10, 15 is a dull soft sound or impact.
My 16, 2, 20, 8, 22, 25 is to boil.
My 6, 18, 21 is for the head.
My 26, 23, 14, 11 is an outlet.

(See answer at end of article, No. 19.)

Word Square Construction

Build a square construction of words answering the definitions given below:

Puzzle 13

Or this one, which is a little bit harder:

ENIGMATIC PROVERB

I am a well-known proverb, containing twenty-nine letters.
My 8, 3, 14, 15 is something performed.
My 18, 21, 4, 2 is top of the house.
My 27, 1, 12, 19 is domesticated.
My 5, 17, 11, 20, 22, 13 is a cowboy's rope.
My 16, 28, 6, 26 is a period of time.
My 9, 25, 7, 29 is end of arm.
My 23, 10, 24 is small bite.

Except for definition four, which uses a frequently seen, but not generally accepted, spelling, this puzzle presents no stumbling block. The answer to this puzzle is given at end of article (No. 20).

"A still better sample of 'construction puzzle'," Hartswick told me later, "is found in 'Word Squares'."

First I had (*Continued on page 70*)

EXTREME UPPER LEFT

Unit of measure
To banish
Giant of mythology
To make proud
Renovate

UPPER LEFT

Wearing apparel

INTERESTING PEOPLE

Sarah Harrison Has Taken 4,000 Traveling Men to Church

ONE Sunday evening in October, seven years ago, a woman was having dinner with some friends in a hotel in Danville, Virginia. After dinner, her hostess asked her if she wouldn't play and sing a few songs. As the little group passed through the lobby into the hotel parlor, she noticed the usual number of transients and salesmen fighting the loneliness and monotony of a Sunday in a strange town.

The woman glanced at the men, and the thought came to her, "How they must hate their Sundays here!" And she wondered if something couldn't be done about it.

In the parlor, she played and sang not so much to her friends as to those men out there in the lobby. And one by one they came straggling in and quietly seated themselves about the room.

After a while she stopped playing. Almost immediately, one of them said, "Won't you please play some more?"

Miss Harrison spent the next hour playing favorite after favorite, as first one man, and then another, called out his choice. Presently, feeling somewhat at ease with her audience of strangers, she dared ask them a question, "Don't you men ever go to church on Sundays?"

The expression on their faces said, "Lady, you ought to know better than to ask us that!" Finally, one of the men spoke up:

"Being in a different town each Sunday, we don't have much incentive to go to church. Besides, I have been traveling over the country for eight years, and no one has ever yet asked me to go to church with him."

This reply gave Miss Harrison an idea. She made up her mind that, after this, the Sunday sojourners in the hotels of Danville should always get an invitation to go to church. And the more she thought about it, the bigger the possibilities seemed, and the more enthusiastic she became.

How Sarah Harrison organized the "Pass It On Club" and came to be known to an army of traveling men from all over the country is the story of a unique human service. For in the seven years since she organized the club, Miss Harrison has taken to church with her over four thousand men and women who have "made" Danville, and she has turned their usually dull and lonely week-ends into periods of spiritual benefit and wholesome entertainment and pleasure. She has made them feel at home, away from home.

She and her co-workers not only take strangers to church but they also minister to the transient sick and disconsolate. Picnics, outings, and social gatherings are planned for them, and libraries of good books and magazines have been placed in all the hotels of Danville.

"When I had formulated plans to put my idea into effect," Miss Harrison said, "I went to several of my friends and asked them for their advice and help.

PHOTOGRAPH BY DURFORD

Seven years ago, Miss Sarah Harrison, of Danville, Virginia, invited a group of traveling men who were spending Sunday in a local hotel to go to church with her. After the service, she took the men to her home for a social hour. Since then, Miss Harrison and her friends have made Sunday in Danville a memorable experience for more than 4,000 strangers

"Many of those I consulted said that my plan was very fine, but that it wouldn't work out. 'Those men don't want to go to church. They will laugh you out of the hotel when you ask them,' they told me.

"I had faith in both the men and in my method of attack. But I must admit that my courage nearly failed me when I walked into the hotel lobby the next Sunday night.

But somehow, almost before I knew what had happened, every man in the lobby—there were eleven in all—was in one of the cars I had commandeered, and we were off to church.

"Later, one man told me that up to that date he had been to church only three times in five years, and those three times to funerals. One Sunday afternoon two years afterward, my 'phone rang and the same man said, 'Hello, Miss Harrison, this is John Jones, one of your charter members. Are we having church again to-night? Well, I just wanted to let you know I am here with several other good prospects, and rearin' to go.' He gave me his word that he had been to church eighty-six times in those two years, which isn't a bad record compared with the one he had made the five preceding years.

"Well, when we filed into the church that night, all eyes were upon us; but I didn't mind the neighbors thinking I was a little crazy. If ever my soul was thrilled it was when those men joined in singing the first hymn. Some of them had not seen a hymn book in years.

"After church, I invited the men to my home, where I had asked several of my friends to join us in a social hour. I had already prepared some refreshments, and we used every effort to make those men feel at home. And they did, too. Why, they were just like a bunch of boys at a party! They were not at all the same men I had seen lounging around the hotel lobby earlier in the evening, bored with just sitting, smoking—cursing the schedule or fate that had dumped them here for a whole day. Whether they knew it or not, they had really *wanted* to go to church, and now that they had gone, their spirits seemed to have risen, and they felt good over it.

"Then I told them my plans. I made them understand that I wanted them to feel at home in Danville. And I added that on every Sunday evening there would be cars to take them to church, and that there would be a social hour afterward.

"The men were most enthusiastic. So we named the club, drew up a few by-laws and with the names of those eleven men on the roll, the 'Pass It On Club' began to function."

Miss Harrison handed me the club register. In it there were pages and pages of names, over four thousand of them,

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

and the range of towns and cities looked like a geography test. Every state in the Union and twenty-seven foreign countries had one or more representatives. In her scrapbooks were hundreds of appreciative letters, cards, and telegrams, from these men and from their wives, mothers, and sweethearts, and even from their firms.

Only those who have tried it can understand what it means to be ill and stranded in a strange town. Sarah Harrison has been an angel of mercy to many stranded by illness in Danville. She has placed libraries of over four hundred books in the hotels of Danville, and every Sunday morning she takes a new supply of magazines to each one of them. These books and magazines are at all times available to the guests of the hotels.

There are no dues to be paid to the "Pass It On Club," no initiation fees, and no rules or regulations. Miss Harrison bears most of the expenses. Quite frequently she receives contributions from the members and from organizations and citizens of Danville to help in her work, and whenever an emergency arises where financial assistance is necessary the members and the people of Danville have been most generous.

Every year the club holds a reunion, and all the churches combine in one big union service in honor of the event. On the Saturday evening preceding, a banquet is given in one of the hotels, and after the Sunday service an informal reception is held in Miss Harrison's home. These reunions are always well attended, considering the widely spread membership of the club.

Last year, fifty-six members came to Danville for the celebration, the majority of them having traveled scores of miles and some of them hundreds of miles to attend. HAROLD WILLIAMSON

Frank Allen Has Been a Policeman for Sixty Years!

SERGEANT FRANK B. ALLEN, an eighty-seven-year-old police officer of Rochester, New York, has served on the force for sixty years, and enjoyed every minute of it. And though he has just been placed on the retired list he is in the very best of health, taking a lively interest in police matters, and in the doings of the Grand Army of the Republic, of which he is a member.

Sergeant Allen is the only survivor of the thirty men who, on April 23d, 1865, were sworn into service as patrolmen, and who were the entire effective force of the newly organized Metropolitan Police Department of the City of Rochester, N. Y. Most of them were retired thirty to forty years ago. All save the old sergeant are dead.

After twenty years of duty as night roundsman, Patrolman Allen was made a sergeant, and for the past forty years he has been in charge of the patrol wagon service. He refused time and again to go on the pension list, even though he was entitled to retirement with half pay over forty years ago. It was not until he had rounded out his sixtieth year of service that he consented to go off duty and accept a pension.

A week after being honorably discharged from his regiment in the Union army at the close of the Civil War, in many of the events of which the young man of twenty-seven was an actor, Private Allen changed his army uniform of blue to the blue of the city police department. On April 23d, 1925, he added his twelfth service stripe—one for every five years—to the sleeve of his coat.

The occasion was made a festive one by city officials, and the mayor was the first in the long line of those who visited Sergeant Allen's pleasant little home to offer greetings and congratulations. Two patrol automobiles filled with flowers drove to the door. The veteran sergeant had had a fall a few days before, otherwise he would have observed his last day of service by remaining on duty. The new stripe was presented by Mayor Van Zandt, who remarked that it was an honor seldom before won by any policeman in the world.

"It was a nice little speech," said Sergeant Allen later; "but what attracted my attention more was the crowd gathering around the house. Passers-by had seen the two patrol wagons drive up, and they thought the house was being raided!"

His love of fun, even when the joke is on him, has done more than anything else to keep the old officer young and happy. For his good nature and ability to see the humorous side of life has always made him a favorite in the department. Yet he is a most conscientious officer, and not once in the entire sixty years of his service has he been "on the carpet," the vernacular for being called before the commissioner on charges. Perhaps his ideas of the duties of a policeman may account for this unique record.

PHOTOGRAPH BY ROCHESTER KODAK EXCHANGE, ROCHESTER, N. Y.

Sergeant Frank B. Allen, of Rochester, New York, is eighty-seven years old, and has just retired from the police force after sixty years of service. He was entitled to his pension forty years ago, but liked his job too well to quit

"A policeman is not employed to make trouble for people," explained Sergeant Allen, "and the best policeman is not the one who makes the most arrests, but usually the one who makes the fewest. A policeman is really a peace officer. I could never understand why so many people seem to fear a policeman. His duty is to protect the property and lives of the public. I have never permitted an arrest to be made, if it could be avoided. It is far better to take an intoxicated youth to his home than to the station. Nothing is gained by adding to the shame of a man or woman. I always feel sorry for anyone in trouble, and try to help him out of it."

There was a slight note of sorrow in the sergeant's voice when, reflecting on his long service, he said:

"It does make a fellow feel kind of lonesome when he sees his old friends and associates passing away. Wallace MacArthur died a year ago, and now I am the only one of the old guard left. But I am glad to have so many good friends, and especially so many young friends. Association with young men and reading the newspapers and periodicals keeps a man young. It's funny to me why so many old men want to talk only of the past. I like the pleasant memories of the past; but the future is far more interesting. I get lots of pleasure in thinking what Rochester will be like when its population passes the million mark, and of all the changes that must take place in the meantime, particularly in police work. Sixty years ago we used to trundle drunken men to jail in handcarts or wheelbarrows. I don't doubt at all that the police auto will some day be succeeded by winged patrol craft flying through the air."

As to the formula for keeping young, this question brought a smile and a quick reply: "Know how to make a joke, and take one. Don't worry about things you can't help; keep busy; love your work, and have regular habits."

To his fellow police officers, the sergeant gives this advice:

"Keep your eyes and ears open, and know enough to keep your mouth shut."

That Sergeant Allen loves his work is proved by his own words:

"If I had my life to live all over again I would be a policeman. I learned a lot during the sixty years I wore the uniform, and if I could now have the benefit of my long experience, and start all over again,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

I believe I would make a much better officer.

"Our force has grown from a handful of men to the strength of a regiment. When I began duty here in Rochester, there were no telephones, no patrol wagons, no Bertillon finger-print system, and mighty small pay. We had one day off a month and worked twelve hours a day. Up to about thirty years ago there was only one horse-drawn ambulance to serve the four hospitals, and it was kept in a barn up back of the Asbury Church, on East Avenue. When there was a call for an ambulance, we of the patrol wagon service went after it with a single horse, and no one seemed annoyed at the delay. How it all has changed!

"In police work to-day there is an opportunity for service, and the pay is sufficient to attract men of intelligence. While policemen have their books of rules, a good head and a kind heart are just as important as knowing the rules and regulations. The life of a policeman, which is in the open most of the time, is healthful, particularly if regular habits are observed, with plenty of exercise and a proper amount of rest, and meals at regular hours. I have always enjoyed good health, and these are the only laws of health I know."

Sergeant Allen is the only man in the Rochester police department who wears a beard.

"There's no rule in the department, as many think, against wearing whiskers," he said. "When the force was organized sixty years ago, nearly every man wore a full beard. I had my burnsides then, and I have worn them ever since."

HARRY A. CHASE

This Girl Steeplejack Fears Nothing but June Bugs

SWINGING on a scaffolding, one hundred and seventy-five feet above the street level, painting a giant stack, brings no fear to Ethel Hawkins, expert steeplejack of Indianapolis, Indiana. "But if a silly June bug should come clicking along, why, that would be a different story," chuckled this interesting and unusual young woman, as she sat embroidering in the attractive chintz-hung living-room of her little home. "I am not afraid of anything—bandits or burglars, or even bats—but bugs give me the 'willies'! I'd rather paint a dozen two-hundred-foot towers than have one of those horrible insects in my room, whether it touches me or not.

"I have been a 'steeplejack' since I married in my teens. My husband was in the business, and I was just crazy to help him. He finally let me start on the easier jobs. My brother, Remus Hall, with whom I now live, was a steeplejack and a splendid one, too, for thirty years, so I came by my profession naturally.

"Then my husband died suddenly, and I had to support myself. Well, painting stacks was all I knew; so I just stepped right into his job, taking his place with the company he worked for. I have been at it ever since, and I am now in business for myself. Height holds no fears whatsoever for me. It never did, and I hope it never will.

"The highest job I have done so far was on a one-hundred-and-seventy-five-foot stack for a printing company. Most of the jobs I've done are only about a hundred feet.

"This has been a busy year for me. I haven't had time to get my housecleaning done. But I'm going to pitch into it to-morrow, for I am not going to work at my business for about a week."

"Doesn't working every day get on your nerves after several months of it?" I asked, thinking of how dizzy I felt when climbing a six-foot ladder to hang curtains.

"Oh, mercy, no!" smiled Ethel Hawkins, reaching for more pink floss to finish the French basket she was working on, "the more work, the better I like it! That's another thing that makes my business so pleasant. There's always a demand for it. It's good steady work and good pay. It's the kind, too, that you can forget as soon as the whistle blows. I come home, clean up, get out my sewing or crocheting, and enjoy myself, with not a thing to worry about. I just love to sew or do any kind of handiwork. I crocheted that bedspread there; and I do my own housework—cooking and all—for my brother and myself. I enjoy it, too."

Dangling a hundred feet from the ground is an everyday experience for Ethel Hawkins, of Indianapolis, Indiana. Her husband was a steeplejack, and when he died she stepped right up into his job

"Do you play golf or tennis?" I asked her, observing her tanned and muscular arms.

"No, indeed," she said, with a twinkle in her eye; "I get all the outdoor exercise I need during my working hours. My job's not as easy as it looks to onlookers. Wielding that brush takes a lot of physical exertion. However, my recreation takes the form of this kind of thing"—holding up her embroidery—"or tinkering around the house, making curtains, or cooking. I like music too. My brother and I enjoy the electric piano, and sing with it sometimes."

Employers of Ethel Hawkins state that she is most efficient and painstaking with her work. One business head who has a number of branch houses said that he employs the young woman to do all the steeplejack jobs on all his plants, because she is so careful and thorough with her work.

The superintendent of the Indianapolis Chamber of Commerce tells a story on himself that concerns his meeting with her.

"One morning as I was at my desk, a very youthful, unusually pretty, and smartly dressed girl came in to see me, saying that a business friend of mine had sent her.

"Thinking she had come to ask for a contribution to some charity, I said, 'And what can I do for you?'

"'I am a steeplejack. I want the job of painting the Chamber of Commerce air shaft!' quietly answered the slim girl, in a soft voice.

"I gasped like a fish, for my friend had never mentioned to me the fact that the steeplejack who had done his work for several years was a woman. Well, she got the job, and she did a good piece of work, too."

The superintendent said there was considerable excitement among the employees of the building when they saw this pretty girl dangling in such a perilous position. There was even some talk of staging a daring rescue, but the businesslike manner in which Ethel Hawkins plied her brush soon put a stop to any such romantic idea.

She finished her entire job before dark that night, which, the superintendent told me, would have been record time even for a man.

How many "well-fed" people are slowly starving?

Without knowing it, many neglect Nature's simple ways to abundant golden health and rosy beauty!

NOT FOR lack of sufficient food, but through failure to eat enough of those foods which Nature intends them to eat!

Vegetables, for example. Only too often people fail to eat enough of them. In vegetables are stored the mineral salts so essential to proper growth and renewal of the bodily tissues, bones, teeth, muscles.

DO YOU realize that well-made soup containing vegetables is one of the richest scources of these all-important nutrient elements? As vegetables are usually cooked and served, they have lost much of their most valuable food content. This is due to the fact that the water in which they are boiled is almost always thrown away. Yet while the vegetables are being cooked, that water absorbs a large portion of their mineral salts. In soup, however, these mineral salts remain to enrich and invigorate.

What a bountiful supply of rich vegetable goodness there is in every plateful of Campbell's Vegetable Soup.

Baby lima beans—dainty and enticing. Sweet little peas—the pride of the garden. Country Gentleman corn from the finest fields. Tomatoes—red-ripe and luscious with all their appetizing flavor. White and sweet potatoes—the best that grow. Snow-white celery. Chantenay carrots—the pick of the world. Selected turnips and cabbage. Okra, sweet red peppers, parsley fresh every day from our own farms, a touch of onion and leek to make the flavor even more tempting. In all there are fifteen different vegetables—and don't forget that you receive the full benefit of the mineral salts stored in them by nature to give you health and vigor.

And in addition to all these, Campbell's Vegetable Soup contains invigorating broth of choice beef, pearl barley, alphabet macaroni, herbs and seasoning—blended by our famous French chefs into as delicious a soup as you can place on your table. Thirty-two ingredients, all told!

HERE is an ideal luncheon or supper dish. It has the real nourishment you need at the midday or evening meal. It tastes so good and is so invigorating that you always welcome it, even when you do not feel like eating a heavy meal. At dinnertime it makes a real part of the longer meal. And let the children eat Campbell's Vegetable Soup often—it's so wholesome. 12 cents a can, at your grocer's.

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

Do These if You Can

(*Continued from page 65*)

Juggling the Digits

Puzzle 14: We see in this illustration how the even digits can be arranged to total 5, and the odd digits arranged to total 6; The problem now requires the regrouping of the nine figures, the odd figures in one group and the even in another, the totals of the two groups to be alike. It can be done without employing improper fractions. This is a digital study calling for patience and ingenuity. Can you do it?

to learn what a word square is. It was not hard. For example:

```
• • • •
• • • •
• • • •
• • • •
```

Each dot represents a letter, each line of dots represents a word. And the words of the square must read alike both ways, across and down. Like this:

LAME ALAN MAID ENDS

So the first definition might be "crippled." The second, "a man's name," and so on.

I tried it out with a simple one, consisting of five squares of four-letter words, the corners of which interlocked (number 11, left, in our picture layout):

Running through the definitions, I came to "Name for Ireland" in the lower left-hand square. That was easy. A four-letter name for Ireland? "Erin," obviously. So I put it down, both ways:

```
  E
  R
ERIN
  N
```

After that it was like sliding down a greased incline.

Then I tried one that was harder (number 12, at the right, in our layout):

That showed me how important the definitions are. The two lower squares and the center came out quite readily, although one of the words called for a little poetic license, and I decided that three of the other definitions were—well, at least, "rather tricky." But the upper two squares took a longer time, with one unfamiliar word, and a few tricky definitions thrown in for good measure. If you can do it, I claim you're good.

Then, beginning to feel proud of myself, I tried the five-letter sockdolager, with nine square (number 13 in our layout).

It wasn't really as hard as it seemed, although it took some time to work out. The one spot I stumbled over was where the five letters really made two words instead of one, although the definitions were all right enough.

"You'd be surprised," Hartswick told me, "to know what difficult word squares real puzzle-fiends will work out. There's one school superintendent, for instance, who's mentioned in almost every issue of the National Puzzle League journal, 'The Enigma,' as having worked out every puzzle they printed in the previous issue.

"THE puzzle bug is certainly deep-rooted in some people, particularly those who have been solving puzzles for years. They have their favorite kinds, sometimes particular varieties, that they learned to prefer ten or twenty or thirty years ago. You should see the stickers they print in 'The Enigma.' Why, you have to work out their word squares and acrostics and all the rest with a dictionary in one hand and a slide-rule in the other!"

"What about mathematical puzzles?" I asked. "You print a good many mathematical puzzles. I know, for I've seen them."

"Sure thing," he answered. "Some people like them better than anything else. If you happen to be slanted that way, try the 'Lollipop Puzzle' [number 9 in our layout] or the two mathematical puzzles [numbers 14 and 15]. All three are by Sam Loyd, our mathematical puzzle 'shark.'

"'Juggling the Digits' [number 14 in our layout] is perhaps the most difficult of the three. In fact, if you're not a good mathematician as well as a puzzle fiend you may find yourself stumped."

"How do you *know* all this about the popularity of different kinds and classes of puzzles?" I asked. "Is it just your own theory—guesswork?"

"Not at all. We have a definite barometer—contributions. We can tell the popularity of any particular brand of problem by the replies it brings in. We get letters from all over the country direct to the 'World,' and indirectly through the other papers that get the puzzle material syndicated to them.

"Here's one from Oakland, California, from a hospital: 'Please publish code or cryptograms or any word-puzzle, for they are amusement and pleasure to shut-ins.' Here's one from Toronto, Canada; a protest against the use of words that are too hard. And here, next to it, is a New York letter that says: 'Being close to seventy years of age, I am already fagged with the fifteen hours spent on puzzles during the last few days.' And here's a telegram from one of a party on tour with Alma Gluck. Here's one from a navy man whose ship has just returned to port; he worked his puzzles out on the open sea. Here is another protest on word-definitions that are too hard. Here is a letter from Booth Tarkington, and here is another from the governor of the Panama Canal Zone. Here is one asking why the puzzle section can't be printed on better paper, so that the puzzles won't

The Multiplication Problem

Puzzle 15: Can you substitute figures for the letters on the blackboard so that when the first two are multiplied the result will be as shown? In other words, find a number which when multiplied by itself gives a four-figure result of which the last three figures are the same

Puzzle 16: The problem above is to install gas, water, and electricity in each of the three houses, by bringing a line in from the water main, the electricity main, and the gas main to each house without crossing any of the lines

A Good Cold Weather Starter

Now More Dependable than Ever

Probably no single feature of Dodge Brothers Motor Car has been more widely talked about and commended than the power and promptness of the starter.

The *new* two-unit starting and lighting system now advances Dodge Brothers leadership in this important respect still further.

There are now no moving starter parts when the car is in motion—no starter chain—no noise—no wear. The new starter is even more DEPENDABLE than the old, and far simpler and more compact in construction.

Many other major improvements have been added during the past twelve months, all vitally affecting performance and increasing value far beyond the apparent measure of current Dodge Brothers prices.

wear out so fast at the edges while being carried around in a pocket!

"A man writes in from White Bear, Minnesota, to say, 'These cryptograms are the cat's whiskers—but are your typographical errors accidental or put in just to make them harder?' But, except for just a line or two of praise or blame or comment, the run of the letters carry nothing except new puzzles. The enigma-addict contributes enigmas, the word-square fan constructs a word square, and occasionally one of the real old-time puzzle-fiends will come through with an arithmetical or geometrical problem.

"So you see, while we know which kinds of puzzles are best liked, we learn very little about any individual puzzle that we've published, good or bad. One letter will refer to one puzzle of a class, and another to another. But no single puzzle stands out, except one:

"Here's a letter from Spokane, Washington, that tells it as well as I can:

Will you please advise me whether or not the plumbing problem can be worked? The problem [number 16 in our layout] is to install gas, water, and electricity in each of three houses, by bringing a line in from the water main, the electricity main, and the gas main to each house, without crossing any of the lines. *I want to know if it can be done!*

"About once every three months we have to print that puzzle over again, and say whether or not it can be worked. But, so far as I know, that's the only puzzle we've ever had anything to do with that stands out as being anything except one of a particular class."

Answers to Puzzles

No. 1.—Begin at "T" and spell out "There was an old woman who lived in a shoe." The connecting lines will draw a shoe and complete the picture.

Anagram

No. 2.—Winter has come.

The Jumping Monkeys

No. 3.—Move as follows (moves in parentheses count as single moves): 1-5 (3-7, 7-1), (8-4, 4-3, 3-7), (6-2, 2-8, 8-4, 4-3), (5-6, 6-2, 2-8), (1-5, 5-6), 7-1.

What is Wrong?

No. 4.—Hoop off top of barrel; no handle on pail; wrong sort of hands on meter; no place on oil-can to pour in oil; grate handle with round hole; keyhole-sawblade reversed; one grate turned upside down; poker not on nail; only one hinge on furnace door; padlock staple on coal bin too low; no petcock on gas jet; cellar window hinges should be at the top; handle on fork turned wrongly; no handle on sprinkler; guard on coal hod should be in front.

The Jumping Grasshopper

No. 5.—Make the following moves:
Move 12, 1, 3, 2, 12, 11, 1, 3, 2, 5, 7, 9, 10, 8, 6, 4, 5, 7, 9, 10, 8, 6, 4, 5, 7, 9, 10, 8, 6, 4, 5, 7, 9, 10, 8, 6, 4, 3, 2, 12, 11, 2, 1, 2. You will then have reversed the pieces in 44 moves.

Football Field Puzzle

No. 6

Poet Word Square

No. 7.—Burns, Browning, Bryant, Carlyle, Cowper, Dryden, Emerson, Field, Hood, Hunt, Jonson, Longfellow, Lowell, Milton, Moore, Noyes, Poe, Pope, Rogers, Saxe, Scott, Shelley, Spencer, Tennyson.

Flower Word Square

No. 8.—Aster, bluebell, carnation, cosmos, daisy, dandelion, geranium, hemlock, iris, lilac, lily, magnolia, marigold, pansy, peony, poppy, primrose, rose, tulip, violet.

The Lollipop Square

No. 9.—Eliminating six of the smallest size jars from the top and bottom shelves, and comparing the remaining jars, we learn that two of the largest size were equal to four of the medium size. Substituting large for medium size on the middle shelf, we have three smallest and two and one half of the largest, which we know to be equal in contents to the two largest and six smallest on the top shelf. This comparison reveals the fact that three of the smallest are equal to one half a large jar, or a whole medium jar. Since the smallest size holds five lollipops, then the medium would hold fifteen and the largest size thirty. Three of the largest, seven of the medium and fifteen of the smallest size which were displayed on the shelves, therefore, would have a capacity of 270 lollipops.

Geography for Puzzlers

No. 13

Juggling the Digits

No. 14.—To juggle the odd digits and the even digits into two sums which will produce like results, we make the following arrangement:

Odd digits: 79
$5\frac{1}{3}$
$84\frac{1}{3}$

Even digits, $84\frac{2}{3}$, which of course equals $84\frac{1}{3}$.

The Multiplication Problem

No. 15.—Put 3 for A, 8 for B, 1 for C and 4 for D, and you get 38 times 38 equals 1,444.

House Service Lines Problem

No. 16.—It cannot be done. A "tricky" solution is offered by bringing one line *under* one of the houses—the other eight can be run in without crossing any lines. But this **is**, of course, merely an evasion; working the problem in a single plane—as is supposedly the case in giving it on a sheet of paper—it cannot be done.

Word Jumping

No. 17.—Ride, tide, tile, tale, talk, walk.
Kill, rill, rile, rive, rave, save.
Salt, sale, sane, wane, wine.
Bird, bard, hard, hark, hawk.
Rich, rice, race, pace, pale, pole, poll, pool, poor.
Stay, slay, flay, flat, feat, peat, pert, part.
Slow, flow, flaw, flat, feat, peat, pest, past, fast.
Whale, shale, share, shark.

Hidden Rivers

No. 18.—Elbe, Mohawk, Oder, Ohio, Volga, Po, Missouri, Lena.

Shakespearean Enigma

No. 19.—Tell the truth and shame the devil.

Enigmatic Proverb

No. 20.—A fool and his money are soon parted.

He Captured the Vanishing West Before It Vanished

(*Continued from page 29*)

country such as ours was, plenty of bad men were mixed in with the good. Some were bluffers, but some were the real thing.

"Henry Wormwood, better known as Hank, was, I think, about the first town marshal Miles City ever had. His hair was sandy, and he wore it long. You would think, to look at him, he was an affected dandy; and never in your life would you make a worse mistake.

"I knew Hank Wormwood as I knew Elbert Hubbard, long-haired men both, and I learned that a man can wear his hair long and be a real man, and *all* man.

"One night Hank came in and said there was a bunch of soldiers on leave from the fort in Strader's saloon. One of them, it seemed, was getting tough drunk, and telling what he thought of the town marshal, and swearing that 'no red-headed,

Accept 10 Days' Proof

Let us prove that the claims millions of men make for this unique shaving cream are justified

GENTLEMEN — Pullman car arguments never have yet proved a point.

That's why we make no claims for Palmolive Shaving Cream other than the fact that millions of men, once wedded to rival preparations, have shifted to this new creation.

Hence — that it is worth a trial. So we send 10-day tubes for that purpose. Will you accept one as a courtesy to us?

60 years of soap study stand behind Palmolive Shaving Cream. 130 formulas were developed and discarded before we found the right one. All our experience as the makers of Palmolive Soap, the world's leading toilet soap, are embodied in this creation.

5 new factors

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

long-haired son of a gun' could do anything to *him*.

"'I've got to go and get him,' Hank said.

"'Better not, Hank. He's got a lot of friends. If he don't get you, likely they will.'

"'No,' Hank said, 'he's got to go back to the fort and interview the adjutant, and I reckon I'll take him.'

"Strader's Saloon and gambling hall was a lively place when Hank stepped inside, but it went quiet quick. There must have been twenty-five soldiers present. Hank was 'fixed,' of course; that is, armed. He wore his six-shooter in a holster under his left arm, and he could fan it fast when he had to. But he was careful as he went in to keep his hands well away from the gun, and not make any suspicious moves. He walked straight up to the soldier who had done the talking, acted friendly, and looked him straight in the eye.

"'What's this I hear?' Hank said. 'You wouldn't do anything to hurt me, would you?'

"The soldier *could* have done it, as far as it was a question of beef and muscle. He was not as tall as Hank, but far more powerful. But while Hank was only moderately strong, he had a pair of long hands with exceptionally long, slender, sensitive fingers, and he also had the tremendous advantage of knowing what he was going to do; the soldier, on the other hand, was left guessing.

"Suddenly, Hank's hands shot out. He caught the soldier around the neck, his two hands making a complete circle, and quick as a flash he lifted the soldier off the floor.

"It was a grip like a hangman's noose. The soldier was choked. His tongue popped out of his mouth. He couldn't get any wind. His face went purple. Holding him against the wall for a moment with one hand, Hank reached down with the other and took away his gun; then set him down.

"Hank, with his man covered, coolly surveyed the rest of the soldiers.

"'I'm goin' to take this boy back to the fort,' he said. 'I advise you fellows not to interfere.'

"He walked out with his man, and not a soldier made a move to stop him.

"THERE were far worse kinds of men than the mere braggarts and loud-mouthed toughs, and they also had to be dealt with. One day I was standing in front of the old Bella Union Theatre, in Miles City, talking to Tom Irvine, the sheriff. X. Biedler, United States marshal, and a famous manhunter of vigilante days, came along.

"'Don't turn around and look,' he cautioned us; 'but when you get a chance, notice the two fellows sitting in front of Chinnick's shack. I've got to get those men; and I don't know how I'm going to do it. They'd spot my limpy leg a mile off!'

"These two, it seemed, had been traced as the bandits who had held up a paymaster's train not long before, killing one of the guards. Other crimes besides were chalked up against them. They sat in full view, but their position was highly strategic.

"John Chinnick's shack, from where we stood, was not more than two and a half or three city blocks, but the ground all around it was open and unobstructed. Any man who undertook to cross that open patch was under their eyes and, if they didn't like his looks, it was as certain as daylight he would soon be full of lead. X. Biedler had a lame leg, and was known by sight from one end of Montana to the other, and then some. He had absolutely no chance of getting near the two desperadoes where they were then and taking them alive.

"Chinnick, in front of whose shack they were resting, was himself a product of the country and the times. Known as a business man and trader, he had various irons in the fire. But his word was as good as his bond. If John Chinnick promised to do a thing, he would do it. When his time came to pass over, he died with his boots on.

"'*I* can't go and get those men for you, X.,' Tom Irvine, the sheriff, said to Biedler. 'They know me as well as they know you, and would shoot me just as quick. Don't take any notice; but there's a man across the street who can get 'em for you, if anybody can.'

"'Who is he?'

"'Lem Wilson.'

"Lem Wilson that day was wearing high-water overalls, an old shirt and hat, and a pair of farmer-style corn-huskers' boots. He looked like a farmer's half-baked son. But Lem was older and smarter than he looked just then.

"'HE IS one of the 'Dobe Walls boys,' Tom Irvine explained.

"That of itself was a convincing recommendation. In the famous 'Dobe Walls fight, a handful of men armed with buffalo guns and surrounded by hundreds of Indians had picked off every enemy who approached within five hundred yards; and every night some of them slipped out and cut off the heads of the dead and stuck them on poles, which they displayed around the walls. They were rescued on the verge of starvation; but not a man thought of surrender. I doubt if Lem Wilson knew the meaning of fear.

"'But how,' asked Biedler, 'are we going to get word to Wilson? If those two men see us talking to him, or anything makes them suspicious, they'll shoot him too.'

"This difficulty was overcome by getting word sent in a very roundabout way through Fred Schmalsle, another 'Dobe Walls veteran. Lem fastened two six-shooters inside the tops of his ragged old overalls in such a way that to all appearances he was unarmed. He then walked straight up to Chinnick's shack, and what followed was very simple. It usually was, when the man going after something or somebody he wanted knew exactly what he meant to do.

"'What do *you* want?' the outlaws asked.

"'I'm goin' to see Chinnick,' Lem replied.

"He walked right past them. A minute later, being at their backs, he gave a command, and their hands shot into the air fast. Ragged Lem Wilson and Fred Schmalsle marched them in front of their guns to X. Biedler. They were taken to the scene of their crime, tried, hung, and forgotten within a few days.

"I pack a little lead myself, and always will, but not enough to talk about; only enough for experience! I never felt much afraid of a man laboring under intense excitement. Once I was shot at by a man standing not more than eight feet away. I felt sure at the moment that my time hadn't come, for my assailant trembled so violently that his gun wabbled in his hand. The bullet never even touched me.

"Another time, a man who was after me followed me down Main Street. I knew he was behind me; and when he got too close for comfort I suddenly stepped off the sidewalk into the street, where there was room for action if we had to have it. I turned and looked him straight in the eye. At the time I was not 'fixed;' but for some reason he believed I had a gun. Perhaps that notion saved my life.

"'You are not going to do anything,' I said. I felt perfectly cool. 'The right blood isn't in you,' I added; 'you don't dare.'

"He was white, and trembling like a leaf. Probably it wasn't what he expected. If I had dodged into a doorway, there might have been a different ending. As it was, he holstered his gun, and never interfered with me again.

"SOMETIMES men unexpectedly turned out to be heroes. Jim Pym seemed to us in Miles City very unassertive, quiet and ordinary. To show you the kind he was, I once saw another man pull a gun on him in front of my shop. He took the gun out of the fellow's hand, tossed it away, knocked his assailant down, kicked him, and told him to leave town and not show his face in it again. The fellow left.

"Jim and Mrs. Jim, as we knew her, lived in a little log shack near Bill Reece's dance hall. Jim was mighty good to her. One day, a younger man was visiting with her at Jim's house, or at the dance hall. Unexpectedly, Jim came on the scene.

"What was the younger man to expect, caught like that, from a man like Jim Pym? Certainly he looked for no mercy; doubtless he felt he would be killed like a rat. So he pulled his own gun without a word, and shot Jim dead.

"Well, we laid out Jim for burial. And under his shirt, next to his heart, we found—what do you suppose? A Congressional medal awarded James Pym for exceptional gallantry on the field of battle!

"Not a man of us had ever heard Jim breathe a word of it. He was just old Jim Pym. And the medal was worn inside his shirt, where no man would see it.

"Later, General Edward S. Godfrey, now the last surviving officer from the general engagement in which Custer and his entire command were killed, told me, as we talked together, standing on Reno's Hill, June 26th, 1916, what he knew of Jim Pym. The throats of the wounded, he said, felt as if they were filled with dry cotton, from the thirst. They lay helpless, suffering, under fire. Jim Pym crawled down to the river time after time and got water and brought it back to them. He saved many a life that day.

"And Jim was to wear the medal they gave him, *under* his shirt, unwilling to be known for the things he had done. And he was to die by a dastardly bullet, in plain view of those whom he had served faithfully and long. Oh, the West did breed men!"

The Sampler
–a favored Valentine token

Do you want her to know who sent the Valentine? You don't — *and you do,* especially if it's Whitman's Sampler. There's an air of unusualness about this famous box of sweets that you'll be proud to have her associate with your name. How she will enjoy the delicious chocolates and confections, the selections of the most critical candy tastes in America! Give the Sampler and you give a thrill.

A glance at the mysteriously written address. An air of suspense as the package is opened. Then a real thrill of pleasure when she finds it's a box of

Whitman's Chocolates

Suit the Valentine to the individual taste. Each of the celebrated Whitman packages has its own "personality" and its own admirers. The Sampler, A Fussy Package, Salmagundi, Cloisonné, Bonnybrook Milk Chocolates, The Heart Box. Selection is easy from these beautiful boxes, with their special Valentine bands and the charming variety of their assortments. Every box sent direct from us to our agents in your neighborhood.

Super-moist Bubbles

why they make shaving easier, quicker

YOUR razor does its work at the base of your beard, not at the surface. In order to soak whiskers soft and pliable right where the cutting is done, your lather must hold an abundance of water in contact with the bottom of each hair.

For science asserts it is the water which the lather holds that really softens whiskers.

Colgate chemists have created a super-moist lather. This lather goes deep down to the bottom of each whisker. If you look at the lather pictures on the right, you will see proof. Note the amazing smallness of the Colgate bubbles. See how compact they are—how closely they nestle to the base of each hair. That's the reason this modern cream gives shaving comfort hitherto unknown.

ORDINARY LATHER
This lather-picture (greatly magnified) of ordinary shaving cream shows how large air-filled bubbles fail to get down to the base of the beard; and how they hold air, instead of water, against the whiskers.

COLGATE LATHER
This lather-picture of Colgate's Rapid Shave Cream shows how the tiny moisture-laden bubbles penetrate deep down to the bottom of every hair, holding water, not air, against the base of the beard and softening it right where the razor works.

How Colgate Lather Works

The moment Colgate lather forms on your beard, two things happen:

(1) The soap in the lather breaks up the oil film that covers each hair, and floats it away.

(2) With the oil film gone, millions of tiny water-saturated bubbles bring and hold an abundance of water down to the base of the beard right where the razor does its work.

A week's better shaves Free

Because your beard is properly softened at its base, your razor works easily and quickly. Every hair is cut close and clean. And your face remains cool and comfortable throughout the day.

We ask you to prove these claims for yourself at our expense. Just clip this coupon. We will send you a generous trial size tube free.

SOFTENS THE BEARD AT THE BASE

It's Mighty Hard to Be Honest in My Town

(*Continued from page 51*)

application of the principles he taught me. Perhaps I am boneheaded. I'm sure I don't know what the trouble is. Yet, it does seem to me that my course was the only right one in the case of the hospital and the water supply. I wish I could know positively.

And here's another case:

My town is a college town. The college has for some years put out a winning football team. Pride in this team long ago outgrew all reasonable bounds. I was graduated from that college, and I like it as much as I should. But the mere fact that I attended a certain school does not, as I see it, make that school the very best one in the whole wide world. Yet I am expected to reason along that line. If I remember the law of syllogisms taught me in college, your major premise must be right, or the syllogism falls. But here is the syllogism they ask me to make and live by:

Any college I attended is the best in the world.
I attended Blank college.
Therefore, Blank college is the best in the world.

Absurd? Absolutely. Anyone will admit it is absurd if you put it to him in this fashion; that is, he will admit it abstractly. But don't try to live up to your own common sense about colleges! Take that bit of advice from me, and save yourself a lot of trouble.

HERE is what happened last year: The best football team in the history of this school was to be broken up by the graduation of six varsity men. Other players must be had. To get them, the alumni who run the athletics combed the state, and obtained names of the twenty or thirty best high-school players to be found. Then they asked other alumni to visit these high-school boys and urge each one to attend Blank college. They came to me. Why, I do not know.

"Here's a list of names," they said. "Three of these boys are sons of your friends. Two others, we believe, are related to you. So you are just the man to get these five to attend old Blank next year! We just must have them, especially Brown and Jones. They are the best little half-backs in the state, and you can get them. You have influence with their families."

"Maybe I could get them," I replied; "but I'll not promise to try. Blank may not be the best school for those boys to attend, and, frankly, I could not, for the sake of our football team, or out of loyalty to a school, deprive a boy of the kind of education he should have.

"I know two of these boys very well. One of them has a genius for mechanics. The other has always wanted to take over his father's farm. Blank college hasn't any mechanical courses, nor any agricultural courses. Do you think I would be

Celebrating the Most Significant Record in Motor Car History

1927 marks the third milestone in the history of Chrysler—today, more than ever, an outstanding success in the motor industry.

In 1924—its first appearance at a national automobile show—Chrysler exhibited in *27th place.*

During the year that followed 32,000 Chryslers were built and shipped. This achievement was a first-year production record for a quarter century of automobile manufacture.

A discerning public, appreciative of a new measure of performance, beauty and comfort, paid more than fifty million dollars for this new Chrysler—winning *18th place* for Chrysler at the 1925 National Shows, where rankings are determined by the sales volume of the preceding year.

Then followed another even more sensational year. In 1925, the public purchased 137,526 sixes and fours of Chrysler manufacture, which placed Chrysler in *9th place* a year ago.

Today Chrysler is in 4th place!

In three years, public preference has enabled Chrysler to overtake and pass in volume of sales 23 other manufacturers.

This stupendous honor, gained only three years after its debut, comes as the result of the production and sales in 1926 of *170,414* Chrysler cars—"50", "60", "70" and Imperial "80".

The fifty million dollar sales record of Chrysler's first year has grown into a staggering volume of $249,194,940 paid for Chrysler Products in the past twelve months.

An impressive indorsement of Chrysler quality, Chrysler value, Chrysler *leadership.*

In response to such a public tribute, the Chrysler Corporation can only express its deep and sincere appreciation.

In return for the confidence proclaimed by this record-breaking public preference, Chrysler pledges itself—with its increased and more modern facilities—to an even stricter maintenance of the high integrity of its public service and to a protection of the good will reposed in its unique engineering and manufacturing plan of Standardized Quality.

Aqua Velva
PROTECTS
your face—
keeps your
SKIN
like velvet

Here's *After-shaving Comfort* *on the coldest day*

THESE winter mornings are hard on the freshly shaven face. Once you leave the warmth of the house, you hit icy winds on your way to work. Your skin needs special protection.

Try This. After shaving tomorrow, slap on a few drops of Aqua Velva, the new scientific after shaving liquid—keeps the skin as Williams Shaving Cream leaves it—gives all day face comfort.

5 After-Shaving Comforts

1. It tingles delightfully when applied.
2. It gives first aid to little cuts.
3. It delights with its man-style fragrance.
4. It safeguards against wind and cold.
5. It conserves the needed natural moisture of the skin, leaving it flexible and comfortable. Aqua Velva keeps it as soft and smooth as Williams Shaving Cream leaves it.

And the coupon below makes it easy for you to test Aqua Velva.

The large 5-ounce bottle of Aqua Velva cost 50c (60c in Canada). By mail, postpaid, on receipt of price if your dealer is out of it.

Williams Aqua Velva

FREE OFFER—CLIP AND MAIL COUPON

The J. B. Williams Co., Dept. 12, Glastonbury, Conn.

Amer. 2-27

doing right if I persuaded those boys—as I probably could do—to come here? Would it be a decent thing to do, a Christian thing? Gentlemen, you are asking me, for the sake of a football team, to do what might result in the partial loss of four years out of the lives of these boys; and I won't do it!"

My fellow alumni left the store in deep disgust. They could find no words to express their opinion of such a dour, crabbed, disloyal man. I heard nothing more from them directly, but apparently they got in their work: I was not reëlected a trustee of Blank this spring! I don't care particularly, for the job was not important. The trustees never did anything much but meet, hear some dry reports, adopt them, and come away.

I do not want to bore you with an endless repetition of my adventures in living up to my opinions. Reading this as you do, abstractly, and not as applying to your town, you will know what I am talking about, and probably say I am right. Would you say the same thing about a fellow townsman such as I am? I wonder!

NOT long ago, a very sensational evangelist was making arrangements for a meeting in my town. His outrunners came before him and began to pump up enthusiasm and make physical arrangements for a meeting in my town. They wanted, first of all, a field in which they could put up a big tent; and I owned a field which they said was well located. "Right on the car line, and on a paved road," they told me. "Near at hand, too. We are sure, Brother, that you will let us have the field free, for the work of our Master. It's a glorious opportunity we are offering you. God gave you that field for this occasion."

I thought they would sing a hymn and offer a prayer before they finished, but they did not. In fact, they left with anger showing on their faces, for they didn't get my field.

I am a Christian, or try to be one; I believe in churches and give liberally to them. I have no objection to evangelistic meetings. But I did object to this particular evangelist. His personal reputation was not good. And there were other vacant fields where he could pitch his tent and pass his hat. Possibly I did wrong in denying the use of my field; but I acted as I thought best. But do you think all of my neighbors granted me the right to act the way I did? Not much!

The point of the story about the evangelist—and about all the others I have told—is this: I have a right to my opinion, and a right to act upon it, as long as I do not hurt anyone else. I am sure of that; but there are a lot of folks who would deny me that right.

Secretly, a great many men in my town agreed with what I did when the evangelist's men came to me; but only a few had the courage to say so openly. A neighbor who lives on the same street came over one evening and told me he thought this particular evangelist a fake (he has since been publicly discredited), and gloried in my spunk in turning his agents down. But when the meeting got under way, this same neighbor accepted an invitation to sit on the platform with the evangelist, and thus publicly endorse the meeting.

BEAUTY THAT SPARKLES

CLEAN

Teeth kept dazzlingly white by this dual-action dentifrice that washes and polishes them clean.

BEAUTIFUL teeth are *clean.* Every smile should show clean teeth. Here is the simple way to dental cleanness.

Modern mouth hygiene demands a dentifrice with a dual cleansing action. Colgate's formula is based on this. As you brush, Colgate's expands into a plentiful foam. First, this foam loosens imbedded food particles and polishes all tooth surfaces. Then it thoroughly washes teeth, gums, tongue—sweeping away all impurities. Thus the dual-action of Colgate's brings unequalled cleanness, removes the causes of decay.

IF CLEAN—WHY WORRY?

A normal healthy mouth needs no drug-filled dentifrice. Visit your dentist at least twice a year. Brush your teeth with Colgate's at least twice a day. Then you need never worry over mental dental ills.

There have been many other such incidents. There was the popular subscription for stock in a new hotel, when no new hotel was needed; the effort to make the town a summer resort, though it has not the attractions necessary for one; the movement for a skyscraper on Main Street, where all other buildings are from two to four stories; the plan to have all use electric signs, and then the plans to have these signs removed, because they were unsightly, and the booster trips here and yonder over the land.

In such enterprises I have taken no part. My rôle is that of an onlooker, and sometimes that of an obstructionist. But I never try to obstruct anything that is actually for the promotion of human happiness. My efforts are altruistic, rather than boosteristic.

The wordy combats with my neighbors have caused me a good bit of worry; but I have had some fun out of them. Once I attended a community meeting, the object of which was to boost the town's population. A long resolution was read. It had a dozen "whereases" and a final "now, therefore." The purport of the resolution was to urge people living in the country around about to move into town and establish their homes. It was adopted unanimously, of course, as all resolutions of that nature are. "Unanimously" means a few weak "ayes" when the motion is put, and a hearty statement from the chairman to the effect that the motion is adopted.

Well, at the meeting I am talking about, the usual procedure was gone through with, and then I arose to speak.

"Mr. Chairman, Ladies and Gentlemen," I began, "the discussion that has just taken place interested me very much. The united front you displayed was indeed impressive. But, Mr. Chairman, Ladies and Gentlemen, I think we should go further. I have here in my hand another resolution which I want you to consider, and which I hope you will adopt."

I then proceeded to read a resolution I had scribbled hastily. It was an endorsement of a "back to the farm" movement. It had half a dozen or so "whereases," and the customary "now, therefore" at the end of it. The evils of farm desertion were stressed; the danger of draining the country in the interest of the towns and cities was cited. I put the motion as fervently as I could, and seconded it myself. The vote was taken, and the resolution adopted.

I had a lot of fun out of that. The meeting had adopted two resolutions which contradicted each other, and no one seemed to realize what had happened. It is generally that way with such meetings. Read enough "whereases" and "now, therefores," and your motion will pass.

ANOTHER story, and then I'm through: At one of the recent political campaigns in my state, a local man was running for the office of governor. A great sentiment was worked up for him in this, his home town. On all hands, men urged us to present a "united front" in support of the "home boy." Again, I got into trouble. It happens that I did not regard this candidate as the best man in the race, and it happens that our state was particularly in need of an able governor.

When a man is chosen governor, he is

put in that high office as the servant of the entire state, not of one locality. Why, then, should local pride be a big factor? The relative ability of the candidates is the thing to consider; their post-office addresses are the least important thing about them. What should I do in this case—vote for the local man, whom I regarded as rather poor gubernatorial timber, or vote for the best man, regardless of local feeling?

Well, you know which I did. And you also know the effect my action had upon my popularity with some of my fellow citizens. Was I right in voting for the best man, as I saw it?

As I said at the outset, I put down these stories to clarify my own thinking, and to help you, if possible, decide upon your course of action in meeting local issues. I have no way of knowing whether you have derived either pleasure or benefit from these experiences of mine. But I have derived both pleasure and benefit—the pleasure that comes from parading my views in public, and the benefit that comes from getting something off my chest!

BECAUSE our Puritan forebears rather inclined to the idea that anything pleasant was sinful, a great many people to-day get all tangled up with their consciences and ruin their health, their happiness, and their dispositions. Next month, in "Are You Overworking Your Conscience?" Dr. William S. Sadler tells about some remarkable cases of over-conscientiousness that he has met in his medical career. Don't take life with too deadly seriousness is his advice. Conscience needs educating and bringing up to date, as well as other things.

Gene Hewitt, Head Porter, Wouldn't Trade Jobs With a King

(*Continued from page 57*)

hotel lobby what seemed like a million lights blinked and glowed amid such splendor as he had never dreamed of. An orchestra played softly from some unseen retreat. Beautiful women and finely dressed men moved about, and among them were servants in uniform. Gene thought that would be a fine place to work.

In his mackinaw and woods boots, Gene clumped right in past the startled door man. He smiled as he told me about it.

"I didn't get very far in the front," Gene said. "The door man collared me, and told me if I was looking for a job I'd better get myself around to the rear door.

"The hotel had as head porter a man named Pete, who, up to that time, was the biggest man I'd ever seen.

"'What do you want?' he shouted at sight of me.

"'Work!' I told him.

"He looked down at the size of me, then roared with laughter. 'Work!' he said. 'What in blazes can *you do?*'

"Broke"—but Worth $79,100.00

©1927 M. L. I. Co.

DAD earns $50 a week. He has just paid the rent, the grocery bill and the milk bill. He says he is "broke but happy". He has his wife, his children and his comfortable little home. He feels far from rich, but in reality he and his family are worth a small fortune.

Because they have good health, this typical American family represents $79,100 of the nation's wealth.

As a useful American, Dad, at 30, can figure himself as actually worth $31,000 today—for that is the present value of his future earnings less his personal expenses. Dad is one of thousands who are earning $50 a week—an average Dad. If Dad is frequently sick or if he dies young, he will be worth less than $31,000. With better-than-average health and longer life, he should be worth a great deal more. His family will be better protected, better nourished and given a greater chance for future success if Dad keeps well.

Mother's contribution to the family wealth—her time and energy, love and devotion—can never be measured in money. But at a very conservative estimate, the money value of her services must be at least half that of Dad's—$15,500.

That rosy-cheeked, four-months-old baby boy is worth $9,500 this minute, while big Brother, seven, and little Sister, five, are worth $16,000 and $7,100 each as future productive citizens.

But their fortunes are locked up in their own bodies. They will reach the full measure of their wealth only by keeping healthy and fit for their daily work—otherwise their fortunes will shrink.

Let Dad—every dad from coast to coast—learn how to use the great discoveries of modern medical science to prevent disease and prolong the lives of his children, his wife and himself.

And if he thinks that he is "broke", let him find out what he really is worth in dollars and cents to himself, to his family, and to his country.

Contrasted with the total material wealth of the country in 1922—railroads, buildings, land, mines, etc.—which amounted to 321 billion dollars, the economic value of the lives of the entire population was 1500 billions. More than six billion dollars were lost last year because of needless deaths.

With these tremendous values in mind the importance of health and welfare work becomes apparent.

Seventeen years ago the Metropolitan Life Insurance Company instituted a health and nursing service for policyholders. More than 20 millions of dollars were expended in this campaign. During this period, the mortality rate of policyholders declined more than 30 per cent and the accumulated saving which can be ascribed to welfare work, has totalled the amazing sum of 43 millions of dollars.

The Metropolitan will gladly mail, free, its booklet, "The Value of Human Life at all Ages". It tells what you are worth, also the potential worth of each member of your family.

HALEY FISKE, *President.*

UNIVERSITY OF CALIFORNIA

The Whole World Is the Campus of This Famous School

In the past thirty-five years, nearly three million men and women have enrolled with the International Correspondence Schools in the United States and Canada.

That, in itself, is an amazing record of service and a tribute to the instruction rendered by these Scranton schools over a long period of years. Yet it is by no means a complete story of the far-flung activities of this institution.

Almost as important as the work of the I. C. S. in this country is a branch of its educational service to which you may never have given a thought—the training of thousands upon thousands of men and women of other nations and in practically every nook and corner of this wide world.

The following list shows just a few of the foreign countries served by the I. C. S. and the number of students enrolled in each:

United Kingdom (England, Scotland, Wales, Ireland)	200,000
Australia	40,000
South Africa	22,500
New Zealand	16,000
India	7,500
Straits Settlements	4,000
Egypt	2,000
Burma	1,000
Philippines	15,000
China	4,000
Spain	8,500
Hawaii	1,100
France	700
Argentine and Chile	24,000
Brazil	3,100
Colombia	1,800
Cuba	7,200
Mexico	11,000
Panama	3,000
Peru	1,100
Porto Rico	2,400

Branch offices are maintained by the I. C. S. in many of these foreign capitals (*as in leading cities in this country*) and they have proved of great help to ambitious students. More than two hundred and fifty people are employed in the London office of the I. C. S. alone.

When you read over such imposing figures as these, you begin to realize something of the tremendous size and influence of the International Correspondence Schools and the part they are playing in the educational programs of many nations.

Truly it has been said that "the sun never sets on the I. C. S. student."

"'Anything,' I said. 'Whatever you've got.'

"At that Pete went into another spasm. 'Say, d'yuh think this is a nursery?'

"But Pete did need help, and finally he agreed to give me a trial. My pay was to be eighteen dollars a month, with room and board. The next morning I started in, sweeping up the baggage-room and alley.

"Business was good, and plenty of salesmen were registered at the hotel. Pete had to supply these salesmen with boys to carry their sample cases around town. About nine o'clock, after his last carrier boy had been assigned, a dry-goods salesman came in for a boy. He had eight or ten heavy cases.

"Pete looked at the cases, sized me up disgustedly, and then turned to the salesman.

"'You'll have to take this kid,' he grumbled. 'He's dumb, but he's the best I can give yuh until to-morrow.'

"I FOUND a pushcart and piled the cases onto it, and we started out. Whenever the salesman came to a customer I had to unload, tote the cases inside—usually up long flights of stairs—and when he had finished carry the whole lot out to the cart again. I had been in the hospital for two months and my leg was still sore. After a while I thought my back was broken, and that my arms were coming loose from my body.

"'How you coming, kid?' the salesman would ask me.

"'Fine,' I'd say. 'This is *easy*.'

"I tried to do what he wanted before he had a chance to ask me. By night I was half dead, but I didn't let the salesman know that.

"At the hotel Pete was waiting for us. 'Sorry I had to get yuh that lunkhead,' he apologized, jerking his thumb at me. 'To-morrow I'll give yuh a good boy.'

"And then I got my first big thrill: 'I'll keep the lunkhead,' said the salesman. 'He's the best boy I've ever had.'

"He was in Detroit three or four days, and each morning before starting out he asked for me. After that, Pete put me on as a regular carrier. I'd get up at five-thirty, sweep up the place, and at nine start out with samples.

"It was only a week or two before I discovered that traveling salesmen were always asking questions about trains. So I got time tables and studied them. In spare time I talked with the men at the ticket offices. From older salesmen I picked up bits of knowledge that I could pass along to younger men. I tried to serve these men so well that whenever they came to the hotel they would ask for *me*.

"One night, after I had been working about a year, I lay in bed in my little upstairs room and checked up. I found that I knew dozens and dozens of men, not only their names and what they did for a living, but also their habits. I knew who smoked cigars, and the brands they smoked; and who smoked cigarettes, or a pipe, and those who didn't smoke at all. I had it all down in my mind, ready to be put to use whenever these men asked for Gene. They did ask for me, sometimes two and three at a time, when I could only go out with one.

"'Why, just dozens of people ask for me, and remember me!' I said to myself. 'And all because I've helped them!'

Supremely happy because yours is *The smiling* MOUTH of YOUTH

MOST IMPORTANT are the six little glands in your mouth.

As long as they are active, vigorously supplying the natural fluids that prevent decay, your white teeth stay sound, your gums remain hard and healthy-pink.

But this protection of the mouth glands is all too easily lost.

For the exercise that keeps them active, youthful, is not given by our modern diet. The soft foods we eat need too little chewing. Soon the mouth glands cease producing their natural fluids. Then decay begins.

Especially to correct this — to renew the vigor of the mouth glands as well as to polish the teeth — Pebeco was prepared. As you brush your teeth with Pebeco you can taste an important salty ingredient. You can feel its soft crystals dissolve.

This important substance in Pebeco restores for you each day the healthy, smiling Mouth of Youth. A tingling after-feeling tells you that the tiny mouth glands are refreshed, revived.

Made only by Pebeco, Inc. A Division of Lehn & Fink Products Company. Sole distributors Lehn & Fink, Inc., Bloomfield, N. J.

Where the six tiny mouth glands must be reached

With most of us, the important little mouth glands are slowing up from our very earliest years. Too soon soft foods deprive the teeth and gums of their protection. The numbers show where the mouth glands are, three on each side. They should be working day and night, producing the fluids that neutralize the acids of decay. Pebeco restores these fluids to cleanse and purify, even where the toothbrush cannot reach.

All the Loveliness and Charm of joyous Youth are Yours

How thrilling to be popular, admired—even envied—for your gaily flashing smiles, your piquant, adorable mouth!

"I like the sharp clean tang of Pebeco," writes one enthusiast, "because I love to feel happily confident that my teeth show shining white, my whole mouth pure and wholesome. I feel so free to laugh when I have used Pebeco each day."

Free Offer: *Send coupon today for generous tube*

A car for every purse and purpose

THIS YEAR the General Motors line is an imposing Automobile Show in itself.

Here is every style of body. Every type of design—four cylinder, six cylinder, eight cylinder. Every improvement. Every price, from the Chevrolet touring car at $510 to the Cadillac with special coach work at $9,000. *A car for every purse and purpose.*

Every one of the models now on display is different and distinguished. Yet two unifying characteristics bind them all together:

1 EVERY CLOSED BODY is by Fisher. The quality of all body workmanship is Fisher quality, whether you pay $500 or $9,000. And because Fisher is owned by General Motors, and its plants are a part of the General Motors plants, you know that every resource and artistic skill has been utilized to make the body and the chassis a perfect quality unit.

2 EVERY MODEL has shared in the advantages of General Motors research, purchasing standards and Proving Ground tests; and in the economies of volume production made possible by world-wide sales. Dollar for dollar you will buy more value in the car you select because of General Motors quality and the public's purchase of 1,200,000 General Motors cars last year.

THE GENERAL MOTORS line is a direct result of the record-breaking patronage accorded by the public in 1926. The economies which this great volume afforded have been passed on to the car purchaser in even better quality. With great pride we invite you to inspect the new General Motors cars and to make one or more of them your own.

"At the thought of it I felt as if I owned the whole world. And right then, that night, I decided to myself that some day I was going to be head porter in the biggest hotel in the state!"

IT WAS when Gene Hewitt said this, with an earnestness that the words themselves can't even suggest, that I began to get an insight into the bigness that can be put into a humble job. I began to realize his joy in his work.

Gene had said something about his friends. You will notice, as this story goes on, how his first step upward toward his goal, and every succeeding step upward, came through the friends he made.

The Hotel Vincent, at Saginaw, asked Gene to come to it as head porter. Some of his friends had suggested him for the job.

From Saginaw he went to the St. Charles, at Toledo; and from Toledo back to the Russell House, in Detroit. After the Russell House was torn down, the old Cadillac insisted that he become its head porter. Then the Statler was built, the biggest hotel in Michigan. Before it was completed, friends had told E. M. Statler about Gene, and one day, without announcing who he was, the big hotel owner called on Gene for a service which, while exacting, was such as any guest might request. The way in which Gene performed it won him his place in the Statler organization.

Every promotion that Gene Hewitt has had has been *offered* him without solicitation! He's never had to *hunt* for a better job! I asked him why, and before answering he pondered several minutes. Finally he said slowly:

"I think it's because of one thing; that is, it's due to this one thing more than any other. I've never met a man and done anything for anybody without thinking at the time, 'Some day I'm going to meet this man again; when I do meet him I want him to think well of me.'

"Here in the hotel I meet many people in a day. Some are traveling men who come through regularly; others are strangers who never before have been in Detroit, and who maybe will never be here again. But I never take a chance on anybody. I treat them all alike.

"Not long ago a man I had never seen before stopped at the window and asked me to get two tickets for a certain theatre at which a famous actress was going to play. As he had asked for the tickets early, I was able to get him two of the best seats in the house.

"Later on, another man, a prominent citizen quite well known to me, asked me to get him four seats for the same show. By that time the house was almost sold out, and the best I could get were two seats adjoining the first man's pair, and two seats farther back.

"'I tell you what you do, Gene,' he said: 'Switch that fellow's seats to me, and give him the two I have in the back of the house.'

"'No, sir; I can't do that,' I told him. 'He's paid for those seats, and they belong to him.'

"'But he'll never know the difference,' this man argued, 'and there's ten dollars in it for you if you make the change.'

"'No, he won't know the difference,' I admitted; 'but *you* will! If I did such a

The Instrument that Astounded the Critics

Now for the first time music *electrically* reproduced—
Joint Achievement of Radio Corporation of America, General Electric Company, Westinghouse Electric & Manufacturing Company and The Brunswick-Balke-Collender Company

From the stage of a New York concert hall the Panatrope reproduced the pianist Godowsky's rendering of Liszt's Liebestraum; a noted violinist's playing of Schubert's *Ave Maria;* a selection by the Metropolitan Opera House Orchestra; an aria by the noted soprano, Florence Easton. In each instance, so realistic was the rendition, so completely lifelike in both richness of tone and volume, that the audience marveled. They had never before heard music reproduced *electrically!*

MUSIC *electrically* reproduced is so real it startles . . . fascinates one! Other reproduced music suffers by comparison.

When the Brunswick Panatrope was first demonstrated in New York City a little more than a year ago, critics were frankly amazed. The newspapers reported the event in front-page space. Its electrical principle, all agreed, was the one to which all future reproducing musical instruments must come.

Compare any reproducing musical instrument you have ever heard, no matter how impressive that instrument may seem, and the Panatrope will excel it in every way.

This invention puts not only all recorded music, but radio, at your command. The Panatrope serves as loud speaker for your present radio with astonishing results. Other models combine in one beautiful cabinet the Panatrope and Radiola Super-heterodyne. These instruments operate entirely from the light socket. Certainly no musical instrument offers greater possibilities for home entertainment than the Panatrope.

Hear the Brunswick Panatrope at any Brunswick dealer's. Buy no musical instrument or radio until you do.

"Light-Ray" electrical recording (musical photography)—exclusively Brunswick—is a remarkable development whereby the entire range of musical sound is recorded *naturally;* Brunswick records by this new method make your phonograph sound like a different instrument. And on the Panatrope the results surpass belief. New records out every Thursday.

The Brunswick PANATROPE

The art of smiling charmingly is the art of caring properly for one's teeth. That is why Pepsodent, urged by dental authorities, is also universally placed by experts, these days, near the top of the list of modern beauty aids.

To Make Smiles Really Count

Keep the Teeth Free of Film

Send coupon for 10-day tube

MOST persons' teeth and gums are imperiled, say many authorities, by a film that forms on teeth.

Ordinary brushing having failed to combat it effectively, a new way in tooth cleansing is being advised. A way that differs in formula and effect from previous methods. These are embodied in the special film-removing dentifrice Pepsodent.

Now an effective film combatant

By running your tongue across your teeth, you will feel a film; a slippery sort of coating. Ordinary brushing does not remove it.

Film absorbs discolorations from food, smoking, etc. That is why, according to leading dental opinion, teeth look dingy and "off color."

Film clings to teeth, gets into crevices and stays. It invites and breeds the germs of decay. And that is why it is judged so grave a danger to the teeth by authorities.

Film is the basis of tartar. And tartar, with germs, is the chief cause of pyorrhea. That is why regular film removal is urged as probably first in correct gum protection.

Most dental authorities urgently advise thorough film removal at least twice each day. That is every morning and every night.

For that purpose, obtain Pepsodent, the special film-removing dentifrice which leading dental authorities favor. Different from any other tooth paste.

Pepsodent curdles the film, then removes it; then polishes the teeth in gentle safety to enamel. It combats the acids of decay and scientifically firms the gums. It multiplies the alkalinity of the saliva. And meets, thus, in all ways, the exactments of modern dental science.

On dental advice, people are adopting this new way of tooth cleansing. Obtain Pepsodent, the quality dentifrice, at drug stores. Two months' supply at a moderate price—or send coupon for 10-day tube. Use twice every day. See your dentist twice each year. Make both a habit.

FREE—10-DAY TUBE

PEPSODENT

The Quality Dentifrice—Removes Film from Teeth

thing you'd be justified in thinking I'd do the same with *you* at some other time. Just put yourself in the other fellow's place.'

"Well, that gave him a new viewpoint, and he kept the tickets I had got him. Since then he has shown greatly increased confidence in me.

"I've always tried to play square with folks, no matter whether I know them or not, no matter who they are.

"You can never tell what a man will develop into. Years ago a certain man used to come to my window—to have me look after his baggage, or to get him a lower berth, or to post him on train times. He was just a plain traveling man, 'drummers' we called them then; and he didn't make any too much money. Lots of times I could have let some bigger man in ahead of him, or not been as attentive to him as I should, or switched him from a lower to an upper berth to please somebody more prominent. But I never did. He got the same treatment I'd give the President of the United States.

"That man isn't a salesman any more, but the owner of the business. Folks fall all over themselves to please him, because he's rich and well known. Every now and then he comes through Detroit, over the old route he used to travel twenty-five and thirty years ago, just to renew old acquaintances and revive old times. And one of the first places he stops at is at my window!"

"WHAT was the hardest service," I questioned, "you were ever asked to perform?"

"It all depends on what you call hard," responded Gene. "Finding that portfolio for the lecturer and getting it back to Detroit might look hard at first glance; but in the end, as you know, it was easy. I just kept on trying—and got it. That's the whole secret of doing things in my line.

"Some months ago two girls came to me just about in tears. They had started out from Cleveland on a vacation trip, and were carrying their belongings in a leather suit case. At Detroit, where they changed boats, one of them happened to open the suit case. It contained a man's shirts, underwear, and socks; a shaving outfit and collars. It wasn't their suit case at all.

"At once they abandoned the trip, to find the right suit case, and somebody sent them to me. Their tickets had been bought for the complete trip, and were limited; yet they couldn't go on without the lost clothes—and they had been saving up for the vacation for months. They were frantic.

"I looked up some time tables, and found that the boat they should have taken from Detroit would reach Port Huron at a certain hour. They could remain in Detroit for the night, and still catch up with the boat by taking a trolley in the morning.

"I told them this. 'Now, don't worry,' I said. 'I'll have the suit case for you by morning, and you can go on with your trip as if nothing had happened.'

"Then I opened the man's suit case and looked through it. There wasn't a name in it, an address, or a single mark of identification; but there *was* the number of the cabin the owner had occupied on the Cleveland boat the night before. Also,

E. J. Dryden

FRANKLY—are you in earnest in wishing to increase your income, but doubtful as to the aid you could get from home-study business training?

E. J Dryden, of Laredo, Texas, was doubtful, too. But he determined to try, and to measure his results by the good old sign of the dollar!

He was earning $150 a month when he started with LaSalle. His course in Higher Accountancy was completed in eighteen months. His salary-increase paid for the training **plus $1.00 an hour for every hour spent in study.**

After his first lesson in Business Management, dealing with Selling, he tried out his newly acquired knowledge. **In six weeks he made $750 in commissions working after hours.**

He has since followed thru with Commercial Spanish, and is now completing his fourth course—in American Law and Procedure. For two years past his earnings have been better than $11,000 a year.

Again we ask—are you in earnest in your desire to increase your salary?

Send for Free Book About Your Own Field

You are faced with a problem—and the only way you can solve it is to get the facts.

A special 64-page booklet describes the opportunities in your field of business and outlines a definite plan that will enable you to realize them.

The coupon will bring this booklet to you free—and with it your copy of "Ten Years' Promotion in One," all without obligation.

Dreaming—wishing—you've had enough of that! Send for those booklets NOW.

LAREDO TEXAS

LaSalle Extension University,
Chicago, Illinois.
Gentlemen:

My schooling stopped when I was fourteen; and when I first enrolled with LaSalle for training in Higher Accountancy I was earning only $150 a month.

Yet that training enabled me to make certain suggestions to the firm I worked for which resulted in a trip to Washington with all expenses paid and a commission of $2,126. That alone paid for the training seventeen times over!

Since then I have followed thru with two other LaSalle courses; I am now on my fourth. And for two years past my earnings have been in excess of $11,000 a year.

I used to think you were too extravagant in your claims for LaSalle training. Now I honestly believe you are too conservative. Why don't you tell the full truth about what LaSalle can do and is doing to lift men out of the low-pay class and put them in command of the really important places in the business world?

Sincerely yours,

E J Dryden

TRADE **YALE** MARK

To you the *name*

Yale says *Safety* but to intruders it says *Stay Out!*

There is only one maker of Yale Locks and Keys. The mark Yale means the name of the maker.

The Yale & Towne Mfg. Co.
Stamford, Conn., U. S. A.
Canadian Branch at St. Catharines, Ont.

YALE MARKED IS YALE MADE

by the shirts and other things, I decided the owner must be an elderly man.

"With this information, I notified every port at which the Cleveland boat had stopped, every office of the steamship company at which the man might make inquiry, and all the railroad offices where he might go to take a train. I covered every inch of the ground, after which all I could do was wait.

"Late that evening a little bent and wrinkled old gentleman stormed into the hotel carrying a patent leather suit case. He was looking for me, and was as mad as a whole nest of hornets.

"'Here I open this suit case,' he said, 'and find it filled up with a lot of women's trash! Dash the women, anyway! Can't they let a man travel in peace? Now I want my clothes, and want 'em quick!'

"'What makes you think I have them?' I asked.

"'Because,' he shouted, 'at every place I asked about my suit case they told me to go to 'Gene, at the Hotel Statler.' You're Gene, ain't you, eh?'

"I gave him his suit case, and he grabbed it up and started for the door in a hurry.

"Some men are always in trouble with their baggage," added Gene, "and this sputtery old chap was one of that kind. He had left the boat at a little town, in a great big hurry, as usual, and had picked up the first suit case that looked like his own. Then, of course, when he discovered his mistake, he blamed the girls.

"WE ARE asked every day, mostly by men, to find lost suit cases and articles that have been mislaid, and it's very, very seldom that we don't find them. Folks don't want your suit case any more than you want theirs. They're usually only too glad to get matters set right.

"However," he continued, "finding lost baggage is only a small part of our work. We get all kinds of requests, and some of them are mighty odd ones too. I think one of the toughest requests that's ever been made to me was to get something that wasn't lost at all. We knew right where this thing was, but it took real work until we got it."

Gene's eyes were twinkling.

"There was to be a society 'coming out' party here at the hotel that evening, and there had been some mighty elaborate preparations. Days had been spent in getting ready, several hundred people had been invited, and of course the young lady who was to make her début had ordered a specially-made gown. This gown was to have been delivered to her suite of rooms in the hotel during the afternoon. But when she arrived at six to dress, the gown wasn't there.

"The hotel parcel-room had heard nothing of it, nor had the room clerk, nor anybody else. She rang up the modiste who had designed the gown, but the shop was closed for the night. She called up the modiste herself at her home, only to be told by a servant that his mistress was in New York. The servant knew nothing about the business.

"Well, at this point you can imagine the excitement. It was almost seven o'clock and the party was to be at nine. The girl's mother begged me to help them.

"'What's the latest possible minute you can give me?' I asked her.

"I WAS SO TROUBLED WITH INDIGESTION AND HEARTBURN that I could not sleep. My brother-in-law was eating Fleischmann's Yeast for indigestion and made me try it. I ate it regularly, three times a day. After a short time the whole condition was relieved. I no longer have any indigestion and I am now perfectly well."
MILDRED M. WILLIAMS, Fort Lauderdale, Fla.

"I WAS MUCH TROUBLED WITH CONSTIPATION after returning from the World War. As a result, headaches and dizziness also besieged me. I learned of the wonderful benefits being obtained from Fleischmann's Yeast and began taking it regularly. Now my digestion is perfect and my constipation has entirely disappeared."
ARTHUR E. PRAY, New York City

THIS FAMOUS FOOD tones up the entire system—aids digestion—clears the skin—banishes constipation.

Theirs, the greatest wealth

Victims of stubborn present-day ills—they gained new health, new ambition—*by eating one simple food*

NOT a "cure-all," not a medicine—Fleischmann's Yeast is simply a remarkable fresh food.

The millions of tiny active yeast plants in every cake invigorate the whole system. They aid digestion—clear the skin—banish the poisons of constipation. Where cathartics give only temporary relief, yeast strengthens the intestinal muscles and makes them healthy and active, daily releasing new stores of energy.

Eat two or three cakes regularly every day, one before each meal: on crackers, in fruit juices, water or milk—or just plain, in small pieces. *For constipation dissolve one cake in hot water (not scalding) before meals and at bedtime. Dangerous habit-forming cathartics will gradually become unnecessary.* All grocers have Fleischmann's Yeast. Buy several cakes at a time—they will keep fresh in a cool dry place for two or three days.

And let us send you a free copy of our latest booklet on Yeast for Health. Health Research Dept. J-37, The Fleischmann Company, 701 Washington Street, New York.

"FOR TWO YEARS I WAS NEVER FREE FROM BOILS, pimples and blackheads. They broke out on my face, on my neck and on my back. Finally, a doctor prescribed Fleischmann's Yeast, and I started in to take it at once. My face became clearer, my pimples disappeared and I have never had a boil since."
EUGENE BLACKMER, JR., Denver, Colo.

"'Not a minute later than nine,' she said. 'If the gown isn't here by then, the whole affair will be ruined.'

"'Very well,' I promised, 'I'll have the gown for you at nine.'

"I learned that the gown had been delivered to the hotel during the afternoon, that the boy had found no one in the room to which he had been directed, and had returned the gown to the shop.

"'Then it's still in the shop?' I inquired.

"'Yes,' said my informant; 'but I don't know how you're going to get it. There are only two keys. Madam has one and the head fitter has the other. I've no idea where the head fitter lives, and she has no telephone.'

"I searched the directory. Next, I called every person I could find connected with Madam or her shop, and at last I found a cousin of Madam's who knew the head fitter's address. This enabled me to get one of her household to a telephone, and I explained the situation.

"'I'm awfully sorry,' came the reply, 'but Miss Blank has gone to the theatre, and she left no word as to what theatre it is.'

"I called all the principal theatres, but not one of them would page Miss Blank.

"'We'll let you go through the audience and look for her,' they said; 'but it's against our rules to page anybody.'

"'But I haven't the time to look for her in person,' I pleaded, 'and it's extremely important that I reach her at once.'

"'Well, that's the rule,' they said, 'and we couldn't break it for anyone.'

"As a last resort I again called Madam's cousin, told her of my failure to find the head fitter, and added:

"I'm going to wait until eight forty-five for a key. If I haven't got one by then, I'm going to break into the store. I'll pay for whatever damage I do, but, damage or no damage, I'm going to get that gown.'

"I got a policeman, explained things, and we hopped into a taxi and went to the shop. I picked a likely looking window in the rear. The officer agreed to witness all that happened, and to stay on guard in case I did have to break in.

"About seventeen minutes to nine another machine dashed up and a woman got out and ran toward me. It was Madam's cousin and she had a key. The gown was delivered on time."

"Would you actually have broken into the store?" I asked Gene.

"I certainly would have," he replied; "and Madam would have thanked me for doing it, too. The young lady who wanted that gown was one of her very best customers."

"ASK Gene!"

The Statler in Detroit has almost a thousand employees, and they know that expression just as well as the most honored guests. There is probably not a department in the hotel to which Gene, at some time, has not "lent a hand."

"I'd rather help one of the girl workers here," he told me, "than a millionaire."

He didn't tell me this story which I am going to tell you, but it happened just the same.

One of the young fellows working in the Statler restaurant, an ex-soldier, died suddenly of influenza, and left a wife and child. To keep herself and her little boy the widow opened a small rooming-house

Add the new Balkite Combination *to your radio set now*

with your "A" battery it supplies all radio power automatically from the light socket

Now you can operate your radio set from the light socket. Merely by adding the new Balkite Combination Radio Power Unit. Once connected to your "A" battery and set and plugged into the light socket, it *supplies automatic power to both circuits.* You need not even turn it off and on, for it is controlled by the filament switch already on your set and is entirely automatic in operation. It will give you a constant quality of reception that cannot be secured in any other way.

Balkite Combination can be installed in a few minutes, either near the set or in a remote location. Like all Balkite Radio Power Units it has no tubes, nothing to replace or renew, is a permanent piece of equipment, and is built to conform with the standards of the Underwriters' Laboratories. It is noiseless in operation. It will serve any set now using either 4 or 6-volt "A" batteries and requiring up to 30 milliamperes at 135 volts of "B" current—any set of 8 tubes or less, including power tubes.

Add Balkite Combination now and know the pleasure of owning a receiver always ready to operate at full power not only this season but for years to come. Price $59.50. [In Canada $83.] Ask your dealer. *Fansteel Products Company, Inc., North Chicago, Illinois.*

Three New Balkite "B"s
Including Balkite "B"-X for sets of 8 tubes or less

Eliminates "B" batteries and supplies "B" current from the light socket. Three new models. Balkite "B"-W at $27.50 for sets of 5 tubes or less requiring 67 to 90 volts. Balkite "B"-X (illustrated) for sets of 8 tubes or less; capacity 30 milliamperes at 135 volts—$42. Balkite "B"-Y for any radio set; capacity 40 milliamperes at 150 volts—$69. (In Canada: "B"-W $39; "B"-X $59.50; "B"-Y $96.)

The New Balkite Charger

MODEL J. Has two rates. A low trickle charge rate and a high rate for rapid charging. Can thus be used either as a trickle or as a high rate charger. Noiseless. Rates: with 6-volt battery, 2.5 and .5 amperes; with 4-volt battery, .8 and .2 ampere. Price $19.50. (West of Rockies $20. In Canada $27.50.)

Balkite Trickle Charger, $10

MODEL K. With 6-volt "A" batteries can be left on continuous charge thus automatically keeping the battery at full power. With 4-volt batteries can be used as an intermittent charger. Or as a trickle charger if a resistance is added. Rate .5 ampere. Price $10. (West of Rockies $10.50. In Canada $15).

All Balkite Units operate from 110-120 volt, 50-60 cycle AC. The Balkite Charger is also made in 25-40 cycle models.

The greatest concerts in radio • **Walter Damrosch and the New York Symphony**

Every other Saturday night a symphony concert. On intervening Saturdays one of Mr. Damrosch's famous piano lecture recitals. Over Stations WEAF, WEEI, WGR, WFI, WCAE, WSAI, WTAM, WWJ, WGN, WCCO, KSD, WDAF, WOC.

This game of penny ante *can break a man*

PENNY ANTE! That's the kind of game millions of men in this country play every day. They can lose only a little bit at a time, in such a game. But they play *every day*.

Some "trivial" abuse of themselves, *every day*. It breaks them years before their time. The average man in America starts on the down hill road at the age of 31!

He plays a kind of penny ante—with his health. He knows better than to gamble with typhoid, or small pox. But heart disease, and other "degenerative" diseases which come from *small daily abuses*, are on the increase. Penny ante!

One of the widespread practices is the use of artificial stimulants—of caffein at mealtime. Caffein acts on the heart—a little. It excites the nerves—a little. It disturbs sleep—a little or quite a lot.

It is so unwise—so needless. You can have all the benefits of a hot drink—the social qualities, the invigorating warmth, the fine flavor—without a trace of any stimulant. Try Postum!

It is made of roasted wheat and bran. It is as wholesome as the grain itself. Its flavor is liked better than that of any other mealtime drink in millions of homes.

The best way to judge is to make a test—a thirty-day test that will show the *results*. Make Postum your mealtime drink during this period. Note the effects. *Then* decide.

Carrie Blanchard, famous food demonstrator, will help you start the test.

Carrie Blanchard's Offer

"Let me send you one week's supply of Postum, free, and my personal directions for preparing it, as a start on the 30-day test.

"Or if you would rather begin the test today, get Postum at your grocer's. It costs much less than most other mealtime drinks—only one-half cent a cup.

"Please indicate on the coupon whether you prefer Instant Postum, made instantly in the cup, or Postum Cereal the kind you boil."

MAIL THIS COUPON NOW!

Postum is one of the Postum Cereal Company products, which include also Grape-Nuts, Post Toasties (Double-thick Corn Flakes), Post's Bran Flakes, Post's Bran Chocolate, Jell-O and Swans Down Cake Flour. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

into which she put all her savings. She was getting along nicely, when one day some neighbors carried in the little boy from the street. An automobile had struck him. He was blinded; both legs were broken. As weeks passed it developed that the accident had rendered him insane.

The mother went into debt to help her boy. In all she spent more than three thousand dollars trying to get him well. This money had to be paid somehow, and friends suggested that she get a lawyer and sue the man responsible for the accident. She went to several lawyers. The most they would promise her was five thousand dollars in damages—and they wanted fifty and sixty per cent of that.

Gene Hewitt heard of the woman's trouble. He went to her, got her story. Personally he could not help her, but he knew of a man who could. That man was one of the biggest lawyers in Detroit.

"I know him," said Gene, "and I'm going to ask him to take your case. He's always been my friend, and I'm sure he'll be your friend now."

The lawyer did take the case. In three weeks the widow received ten thousand five hundred dollars damages for her boy. And the lawyer's fee—well, that was less than one per cent.

The Job I'd Like Best of All

Prize Contest Announcement

DID you ever look at another man and say to yourself, "If I had his job, I'd be perfectly satisfied?" Probably you have said precisely that! Well, now—just for the fun of it—suppose all the jobs in the world were open to you, and you were absolutely free to choose any one of them, which one would you select? Remember, the limits of your imagination are the only limits to the choice you are making—you can be President, lawyer, steeplejack, deep-sea diver, designer of animal crackers, salesman, diplomat, farmer, organist on a calliope, dancing master, sailor, locomotive engineer—just anything that appeals to you! Of course, it is possible—as is the case with Gene Hewitt, about whom you have just read—that the job you now have is the one you like best of all; if so, tell why. In any event, tell what your actual job is; and then give your reason for the selection of your particular dream job. The contest is wide open to women and men alike.

For the best letter of not more than four hundred words, we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes February 20th. Winning letters will appear in the May, 1927, issue.

Address Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the editor of THE AMERICAN MAGAZINE.

Frigidaire keeps food fresh

regardless of every change in weather

WINTER weather is never a safe substitute for refrigeration. Outdoor temperatures change from day to day. Icy cold days, *too cold* for proper food preservation, are often followed by days so mild that foods of all kinds may spoil very rapidly.

With Frigidaire Electric Refrigeration in your home you will be protected against every change in weather. Day and night, and day after day, your foods will be kept at low, even temperatures—fresh, pure and wholesome, retaining all of their original flavor. You will enjoy the better, more convenient, more dependable, and more economical refrigeration that is now being enjoyed by more than 250,000 Frigidaire users.

New low prices have made the *value* of Frigidaire greater than ever before. Metal cabinet models are priced as low as $225—and mechanical units for installation in the standard makes of ice-boxes as low as $170. (All prices f.o.b. Dayton.) The General Motors deferred payment plan affords the most convenient and economical way to buy.

Visit the nearest Frigidaire Sales Office and see Frigidaire in actual operation. Or mail the coupon below for a copy of the Frigidaire Catalog.

Super Six

speed, power and safety

A Principle Long Held in Check
Now Released to Full Capacity in the
New Hudson Super-Six

With the released Super-Six principle, performance takes on a new meaning. You have control of any speed you demand, with a smoothness and alertness never experienced.

You need never be passed by any other car. And you will never feel the slightest effort is exerted by the motor in traveling as you wish, whether it is for a short, swift spurt or a sustained all-day run.

Safety is of paramount importance in such a car. Hudson has positive 4-wheel brake control. The quickness and ease with which you can bring it to a dead stop from any rate of speed is almost beyond belief.

This new Hudson has a low center of gravity. It rounds curves safely. It does not shimmy. At all speeds and on every road it is the easiest driving and riding car we know.

You meet every hill as though it did not exist. For the released Super-Six principle gives to Hudson the most powerful automobile motor of its size ever produced.

The bodies are of such variety and beauty as will satisfy all demands for luxury and exclusiveness, as well as comfort and price advantage.

Also an Essex Super-Six

The Speedabout

Fastest Six in the World Per Dollar of Cost

The full revelation of the Super-Six principle is just as clear, dramatic and amazing in a smaller car—the Essex Super-Six. It towers above all light car standards of the past.

The Speedabout, fastest of all small cars for its price and size, and faster than most cars of any price and size, illustrates the capacity of the Super-Six principle, its engineering design and our own manufacturing resources. It is the smartest, sturdiest, safest, and most comfortable sport type ever attempted within hundreds of dollars of its price.

High speed by no means is of chief importance in a car intended for general use. But a car of high speed requires stamina, continuous reliability, safety and roadability. And so when such ability is demonstrated, superiority in those qualities which count most is likewise proved.

Therefore the standard of dollar cost as revealed by speed is a true revelation of value.

A flash... a cry!

One woman writes: "Foolishly I tried to rouse a fire with kerosene and turpentine. The explosion burnt my face and hands terribly. Fortunately I had Unguentine in the house . . . Now not a scar remains."

Quick, Unguentine!

Stop the pain · · · prevent infection and unsightly scars

GREAT or small, burns are part of the hazard of everyday life. Neglected, improperly cared for, they mean days of discomfort—often infection—scars that disfigure for life.

Today such risks are needless. At once—in your own home—apply the surgical dressing relied on by physicians and hospitals the country over. Unguentine! Magically the pain vanishes—healthy healing begins. New healthy skin forms quickly. And almost invariably *no scar remains!*

Keep a tube of Unguentine in your medicine chest. Spread it on the wound thick. In severe cases, spread liberally on gauze and apply, bandaging lightly. For all burns and cuts. Unguentine is made only by The Norwich Pharmacal Company, Norwich, N. Y. At your druggist's. 50 cents.

A mother's experience: "When he was four my little son set fire to some curtains. He was frightfully burned. I applied Unguentine—his pain was eased. The burns healed wonderfully."

No needless scars— thanks to Unguentine

So many boys and girls are branded by burns for life. Often needlessly. Unguentine prevents infection; the wound heals quickly, smoothly.

Unguentine · · FREE—a generous tube

—A trusted name on pharmaceutical preparations

"Miss Bennett's Baby"

(*Continued from page 41*)

do with all of it! It was ridiculous to think of keeping Baby X. Absolutely out of the question. Were not the police still investigating? In all probability they would discover the child's relatives. And if they didn't, the Foundling Home stood ready to receive the waif. She would give the articles away for Christmas presents. Still, a crib was a cumbersome gift. At any rate, she had requested the stores not to deliver her purchases until she notified them. Doubtless she could cancel the entire sale. She sighed with relief. That was just what she would do!

A few days later, when the police announced as their sole discovery that the girl-mother was known as Mary Rose, and formally closed their investigation, Miss Bennett marched triumphantly up and down the corridors in double-quick time, and completely forgot to cancel the sale of the crib and its accessories. She had dreaded relatives so!

That night she lay awake, unable to sleep. Names surged to her lips, names wrote themselves before her eyes. Patricia Bennett. No, no. That was too copy-cat. Besides, she didn't altogether like Patricia. Anne Bennett, Ruth Bennett. Too short. Bennett needed something lilting, to soften its harshness. Nancy Bennett. Sally Bennett. Nancy and Sally were very fashionable now, but somehow they didn't belong with Bennett. Phyllis. Lois. No, no.

THEN it came to her, so suddenly that she sat upright in bed, a thin braid of gray-gold hair hanging over each thin shoulder. Why, of course, Barbara Bennett! Why hadn't she thought of it at once? She whispered it. She said it aloud, softly and gently. Barbara Bennett. It was just meant for Baby X with the curly hair—the little pink petal. It sang itself. It was sweet, gracious, dignified.

Miss Bennett rose, wrapped a faded gray kimono about her and paced the floor in her excitement. Should there be a middle name? Barbara was really enough; yet wasn't there an obligation to the child of seventeen with the sunken cheeks and the purple closed eyelids? Barbara Rose Bennett, then. She said it reverently. It was the perfect name!

Before she went to sleep, however, she told herself that the whole idea was ridiculous, absolutely out of the question. Baby X had been at Hathorn two weeks and a day now. Soon the civic machinery would creakingly set itself in motion and transfer her to the Foundling Home. It was better for her to go there, more fitting from the common-sense viewpoint. Then, too, what would the hospital think!

The civic machinery groaningly started the very next day, but not until it had received a vigorous prod from Doctor Futrelle, the superintendent, who on a visit to the free ward nursery noticed the presence of the waif. Two weeks and two days. Humph! The hospital couldn't keep it forever. Strange, Miss Bennett hadn't

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

kept him in touch with the case. He went to the supervisor's office and found Miss Conkling, her assistant, at the desk. Miss Bennett had gone for luncheon, said Miss Conkling.

Well, well, no matter. And Doctor Futrelle, scowling importantly, called up this authority and that authority, until he received the definite assurance that a representative from the Foundling Home would call for Baby X the following day.

Miss Conkling meant to tell Miss Bennett of what had occurred, but a letter from a young interne in a far-away hospital, which she had not yet had time to read, made her forget. After all, the transferring of a nameless baby to an asylum wasn't of great import.

Miss Bennett sighed with relief that night. She ought, of course, to remind Doctor Futrelle that Hathorn was harboring Baby X longer than necessary, but she might as well wait a few days. And in the meantime, the dresses, the bonnets, and the crib waited to be sent, and little Miss Lee waited for her position.

THE next day went down as history at Hathorn, although it was a day that commenced mildly enough. To be sure, there had been an influx of new babies in the night, and Miss Lane vented her wrath on Miss Bennett in the morning. "The free ward's 'most full," she remarked. "When is that Baby X going? About time, isn't it? We need the room."

"I—I should think so," faltered Miss Bennett. . . . She certainly must notify Doctor Futrelle. Two or three days would probably elapse before the baby was actually moved, and in that time she would definitely decide what to do.

She was nervous as she went about her duties that morning. She paid a visit to the free ward nursery, a visit which had no other object than that of viewing the occupant of the nineteenth bed. Baby X was growing now, growing and wiggling. She weighed a whole ounce more than Patricia Alexander. Her skin was a faint pink, like that on early budding apple blossoms, and her eyes—when she deigned to open them—were a bright, warm blue. She was far prettier than Patricia Alexander.

The supervisor made recurring visits to the free ward nursery to still the troubled warning that spoke to her, and when she went to lunch she rebuked herself for her folly. There was plenty of time. She would notify Doctor Futrelle that afternoon. Doctor Futrelle would notify the authorities. Authorities, as she well knew, were always notably slow about acting.

So successfully did she conquer her fear that, when she returned and found Miss Conkling not at the desk, she thought of nothing unusual. When ten minutes had passed, and Miss Conkling was still absent, she frowned and walked briskly down the corridor. She had no special need of her assistant, but she desired to know her whereabouts.

"Have you seen Miss Conkling?" she inquired of Doctor Howorth.

"She was in the free ward a moment ago," replied the interne.

On Miss Bennett tip-tapped and swish-swished. The missing nurse wasn't at the head nurses' desk; she wasn't in the sterilizing-room. She might be in the nursery. Quickly she opened the door.

"Does your favorite smoke go sour sometimes?"

Great After Smoking

"You smoke pretty steadily, Bill, don't you?"

"Yes, what makes you ask?"

"Well, because you always seem to enjoy it so thoroughly. But with me my pet smoke goes sour sometimes when I smoke that way."

"The answer is easy," the other man said. "Just eat a few Life Savers in between and see how much better each new smoke tastes!"

* * *

More and more smokers are doing the same thing. We wondered if you knew this about Life Savers, these little candy mints with the hole; how they freshen your mouth between smokes, soothe your nerves and make the next smoke so much better.

It's a fact; Life Savers easily double your smoke enjoyment. Their wonderful aromatic flavors freshen your mouth like a good drink of water when you're really thirsty—and steady your nerves for work or play. Once you try them this way between smokes you'll always have a package handy. Five cents a package everywhere.

Old Pipe-Smoker Switches Back to Favorite Tobacco

Evidently, one way to appreciate a certain tobacco is to try another kind.

At least, that has been the experience of one veteran pipe-smoker. By switching temporarily to other tobacco he finally came back to his old-time favorite with a new appreciation and a vow never to change again.

Read this "signed confession":

Peoria, Ill.
Aug. 26, 1926

Messrs. Larus & Bro. Co.,
Richmond, Va.

Dear Sirs:

Just a confession and an appreciation.

A number of years ago I was a user of your Edgeworth smoking tobacco. But like some others, perhaps, I was led by alluring advertisements to change.

A few days ago I went into a drug store to get some tobacco, and on the case was the familiar can of Edgeworth. I bought it and since then I have enjoyed old-time comfort.

So my confession is that I made a mistake in changing to other brands, and my appreciation is such that Edgeworth will be my Smoke Pal while life lasts, which may not be long, for I have passed my "three score years and ten."

Very truly yours,
(signed) E. P. Fishburn

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3-N S. 21st Street, Richmond, Va.

We'll be grateful for the name and address of your tobacco dealer, too, if you care to add them.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Edgeworth Ready-Rubbed for the same price you would pay the jobber.

[*On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 256 meters.*]

Then she stared, with panic at her heart, for there, beside the nineteenth bed, was a large, capable-looking woman in a severe gray uniform. Across her knees was the wailing Baby X, being brusquely assisted into a coarse gray wrap. Standing near the window, observing her nails with a critical eye, was Miss Conkling.

MISS BENNETT forgot the hospital, forgot she was the stern and mighty supervisor, forgot years and yards of routine. She saw only Barbara Rose Bennett, in casual, careless hands.

"What is the meaning of this?" she demanded, and her voice quavered angrily.

"Oh, I forgot to tell you." Miss Conkling flushed guiltily. "Futrelle breezed around yesterday," she added slangily, "and called up everybody in the city. Wanted to get the child out. The Foundling Home sent Miss Jacques over this noon."

"She's not going," announced Miss Bennett. And to the consternation of the placid Miss Jacques, who was continuing the process of buttoning Baby X into the gray hood, the supervisor took the crying infant into her own arms, held it against her thin shoulder, and cooed soothingly, "There, there, darling! Don't cry!"

Miss Conkling stared agape. Bennett holding a baby!

Then they all gathered. A probationer, peeking into the nursery, realized that something unusual was happening, and scurried away to summon witnesses. Miss Harcourt entered. Doctor Howorth came. Lastly, Doctor Futrelle made his appearance. And all stared at little Miss Bennett holding the nameless baby in her arms. The fire of possession blazed in her blue eyes; her cheeks were glowing, and her cap—that stiff little soldier—was tipped to one side of the gray-gold pug. Miss Harcourt afterward remarked that it did her soul good to see Miss Bennett's cap on crooked.

As is always the way, they all talked at once, especially Miss Jacques and Doctor Futrelle. Miss Bennett remained tight-lipped, except to repeat at intervals, "She is not going."

"We can't keep the child forever!" announced Doctor Futrelle, in exasperation. For the life of him, he couldn't understand what the fuss was all about!

"You're not going to keep her forever!" retorted Miss Bennett icily. "She is leaving to-morrow, but not for the Foundling Home."

"Where?" Miss Jacques and Doctor Futrelle demanded in chorus.

Suddenly the stiffness and the starch seemed to leave little Miss Bennett. She must tell them! Would they laugh?

"With me," she replied in almost a whisper, an appealing whisper; while the longing she had always suppressed leaped into her eyes and flooded her face.

Then she instantly stiffened, and arched her eyebrows, as she did at probationers when they broke thermometers or made beds with wrinkles in them. "Is there any reason why I shouldn't have a baby; that is, adopt one if I see fit?" she challenged them. "Her name is Barbara Rose Bennett, or it will be when the necessary papers are passed. She will live with me. And now," she looked at the group sternly, "I think you had better return to your duties. The routine of the hospital has been disturbed long enough!"

After they had silently filed out of the nursery, she took off the gray hood—Miss Jacques had forgotten it—and tucked Baby X into bed. "To-morrow, sweetheart," she promised, "you'll be in your own little crib!"

THE next day at three o'clock Patricia Alexander left Hathorn. She wore the dress with the eight flounces of lace and the sixteen rows of tucks, also a pink silk bunting tied with pink ribbons. A goodly retinue accompanied her: Miss Parks, her day nurse, held her, and Miss Curtis, her night nurse, walked at her side. Then came her mother, with a third nurse. The sleek limousine of the Hollister Snowdens waited for them at the hospital entrance.

An imposing departure, surely, but few saw it; for in the free ward nursery, at approximately the same time, Barbara Rose Bennett was preparing to go. All the nurses who could safely leave their posts were present. They stood in a semicircle while Miss Bennett skillfully held the baby on her knees, took off the hygienic but plain hospital garments, and put on the silk and wool band, the shirt, the gertrude, a dress with eight flounces of lace and sixteen rows of tucks, and a pink silk bunting.

"Gorgeous! Heavenly! Beautiful!" exclaimed the nurses.

When Barbara Rose was dressed, Miss Bennett gave her into the arms of little Miss Lee, who stood flushed and self-conscious near by.

"Now I think we're ready," she announced briskly, wrapping a cape about her own shoulders. "And I also think," she added sternly, "that you had better return immediately to your duties. I don't like to see the routine of the hospital demoralized in this fashion!"

But they didn't go, not one of them. They stood at the window and watched the trio to the end of the journey. It was a short journey, merely across the green courtyard to Hathorn Hall, the nurses' home.

The audience watched until the doors of Hathorn Hall had opened and closed on the three. Then Miss Lane, who had cut her day's sleep short so that she might attend the occasion, wiped her eyes, blew her nose, and remarked, "It isn't a bit sad, really. It's just glorious. Only it makes me feel—"

"I know it," replied somebody else, searching for a handkerchief. "But who ever would have thought of Bennett and a baby!"

IF YOU were asked to name the ten greatest thinkers whose thought, coming down through the centuries, has had an enduring influence on mankind, whom, out of the great roster of human genius would you name? Would you head your list with great historical figures, like Cæsar, Napoleon, or Lincoln? Or with men like Marcus Aurelius, Galileo, or Herbert Spencer? Make out your list, and your reasons for your choice, and then, next month, read Will Durant's article "The Ten Greatest Thinkers," and see how closely your selections and his tally.

Will you be as fit at forty?
not if ACIDOSIS *has its way*

Medical science now definitely traces most of the causes of invalidism and death after forty to acidosis, the most insidious foe of human health which civilization has to combat.

Acidosis is the scientific term for excess acid in the system. It is caused by lack of balance in the diet—too much of one kind of food and too little of another.

In the winter months when fresh vegetables and fruits are scarce acidosis makes its greatest headway. Uric acid is stored up in the body to torture the individual with rheumatism, Bright's disease, kidney trouble, high blood pressure or heart disease. The body must have an alkaline reserve to win its hard fight against acidosis and its kindred maladies.

One of the greatest natural sources of alkali is Florida grapefruit. In its sparkling healthful juice there is health and vigor. It is rich in vital minerals and vitamins and it is quickly converted into alkali by the processes of the body.

By setting up an adequate alkaline reserve in your body you not only offset the dangers of acidosis but you protect yourself against dangerous colds and influenza. The alkali also is a splendid whitener for the teeth. It firms the gums and aids in combatting pyorrhea.

To get the finest, most delicious grapefruit always ask for Seald-Sweet grapefruit. The best grapefruit comes from sunny Florida and the pick of the Florida crop is shipped north wrapped and stamped Seald-Sweet. Eat more of this luscious fruit for your health.

CHECK AND MAIL THIS COUPON TO
THE FLORIDA CITRUS EXCHANGE,
1102 CITRUS EXCHANGE BLDG., TAMPA, FLA.

The Upstart

(*Continued from page 33*)

her house. It was not as sturdy as the McLean house, not as neat. A shabby place—even the snow could not conceal that, try as it might.

"Well, here we are," said Mary, with a frankly regretful little laugh. "Thanks for taking me home."

She held out her hand, and he kept it within his own for a minute.

"Funny," he said, "how well we got to know each other to-night."

"I think it's like that with some people, don't you? If they're just meant to know each other, they sort of fit. And there's others that you know for years and never get any further with. Isn't that so?"

He was grave over her reflections, and the exhilaration of fitting with her danced in his blood. The snow fell around her, and her lifted face under the blue hat was mystical. All the rules and embarrassments which guarded Andy faded into nothing. He drew her close and kissed her gently.

For a moment she yielded to him, as if she were under the same spell that had touched him. Then she pulled away, all the harsher for that moment's yielding.

"That's not the sort of thing I go in for," she said sharply, "even with crack hockey players!"

Andy was abashed, and as the matter was quite beyond him in explanation, he tried to laugh it off.

"I didn't mean anything—"

But for some reason that made her angrier yet. She went into the house and closed the door, and left him standing there, awkward and disturbed. Then he pulled his hat on and went down the street. He tried to whistle the tune he had started the evening with, but it didn't sound right. Not right at all.

THE morning newspapers, tossed alike upon the snow-swept terraces of estates out north and the wooden porches on Pine Street, all carried pictures of Andy, and headlined his name across the top of the sports page. The game the night before had put Cosmopolis definitely in the running for the national championship, and the city was conscious of a new point of excellence. The chamber of commerce, at a board meeting that noon, talked of a plan for a winter jubilee, to center around the hockey games and combine with an Exposition of Industry.

Marjory Blair cut Andy's picture out and stuck it under the glass of her dressing table. As she looked at it, she liked to remember the way Andy McLean swept across the ice, the way he stood out from the others, the way he had turned to look at her last night. South end, north end, wherever he came from, Marge didn't care very much.

She was bored. Her eager body, her readiness for life appeared to be going to waste on her. She couldn't get anywhere, do anything on her treadmill of associations, which seemed to grow smaller instead of larger. Like most of the girls she knew, she had one abiding horror, and that was to be stuck, to turn into one of the fattish young matrons or the dull unmarried women who were the reason for afternoon parties. Marge avoided afternoon parties like the plague, unless they were guaranteed in advance as peppy.

Her mother had neurasthenia, and had long ago taken comfortable refuge in the fact that the young people of the day were beyond her, and would doubtless come out all right; her father had two foster children, golf and bridge, who needed all the time and attention which he could spare from business; Dicky was only a brother, with a brother's devout interest in everything except his sister.

So Marge played a lone hand. At first she held the cards—looks, money, brains, all the honors—in one hand, but lately she had been increasingly conscious that she never seemed to make a game. Somebody else always walked off with the winnings—husband, career, or some vivid excitement—and Marge was left to keep on playing.

When Andy met her, the night after the hockey game, she was skating with her brother at the big rink. There was skating with music there every night just after the hockey practice. She wore something warm and orange-colored, and she picked up the introduction to Andy with a swift flattery that took him off his feet. He stayed and skated with her, and found that she skated very well, though he had to slow up somewhat.

Andy hardly knew how it happened, but instead of dropping in at the hotel just to see if Mary Callahan was there, as he had intended to do, he found himself bound for the Blair house, with Dicky and Graves Clark, the detested referee, and half a dozen others of a gay skating party. Marge made it very easy for him. She kept him close to her, and he had a blurred sense of her still holding to him when he went home. He wondered once, rather definitely, what Mary Callahan would say to this. These people didn't shut the door in his face, the way she had.

THAT night, for the first time in his life, he saw the commonplaceness of Pine Street, flat and wooden under the trembling acetylene light. He thought of the place where the Blairs lived. All his life he had known about the difference, but it had never meant anything until now. It was just accepted as the way things were. But to-night, as he undressed in his dingy bedroom, hardly high enough for him, and listened to the family snores through the thin partition, Andy felt the stretch of discontent within him, and with it the first surge of vanity.

The Cosmopolis hockey team won the next two big games; the Eastern sporting papers wrote up the team; and the chamber of commerce fixed the date for the winter jubilee to coincide with the last games of the season. Sinclair called it all rot. He said they didn't need any jubilee. All they needed was good ice, and a team with its mind on the game. He looked at Andy as he said that last. Sinclair did not think highly of Andy's social ventures.

But Andy hardly noticed. His days were full and interesting. He was be-

I'll teach you in 24 hours

Music from a SAW!

JEROME LAMA read my ad only a year ago. Today he is a Star of NINE big radio stations. Photo taken in WRNY. Radio News Studio, N. Y.

Once a Machinist—Now a Stage Star!

A YEAR ago Jerome Lama was a machinist in New York. Tonight, in full dress suit, he will entertain thousands, to thunderous applause. Labor has changed to pleasure. Pleasure brings fame and fortune. Over Radio Stations WJZ, WOR, WNYC, WHN, WRNY, WOKO, WMCA, WEAM and WEBJ, millions have heard Mr. Lama.

Mysterious music is his secret. You could believe it is a violin, but it is a MUSICAL SAW. *Anyone can do it.* In 24 hours, you can play with unbelievable sweetness. Then quickly learn the latest jazz and song hits, operatic and classical music. Folks crowd around, curious and wondering, for it is a musical miracle.

5 DAYS' FREE TRIAL

To prove how quickly you can learn, I will send you for 5 days' trial, an exact duplicate of my Musical Saw, special tempered, that I made for Mr. Lama. No notes to read, no dreary practice, no musical knowledge needed. Just three short simple lessons reveal every secret of success.

Startling Popularity—Big Money

Thousands have already learned—mystifying and fascinating their friends, invited everywhere, achieving startling popularity, opening the way to professional success. Let me tell you about these delighted, money-making Saw Musicians whose music rivals the violin. Let me prove that you, too, can quickly play like a professional. Write me today. Play at the next party.

coming accustomed to the inside of the Blair house and the Blair car, and other cars and houses. Andy was having a vogue of his own. Marge had seen to that. If Andy was to be her find, it was necessary that he should be a find that other people coveted. It was also necessary that he covet her.

He hardly knew how it came about that he kissed her the first time. Things had been leading up to it for some time, the soft pressure of her body against his as they drove home in the car, the lift of her face as she said good night. Yet Andy felt a kind of resistance, as if the thing wasn't altogether right, a resistance that melted slowly down, until his lips touched hers.

"I'm sorry," he said at once. That seemed to be the right thing to say.

"Why?"

"You'll think I'm pretty fresh," he said awkwardly.

"I don't think anything of the sort," she said. "I think that if two people are drawn to each other, it's nobody's business but their own."

He fingered his cap nervously.

"Don't you, Andy?"

"Yes, of course."

"And I've been crazy about you from the first day I saw you playing hockey."

"Sure it's me and not the hockey?"

"Both of you," laughed Marge.

He knew where her seat was in the amphitheatre now, knew that the eyes of all her crowd were upon him. He was not quite as poised as he used to be, when he came on for the first time to the swing of the band. Cheering thousands—that was easy; but there in the center seats was the girl who was crazy about him, who told him so—and all her friends watched him. It made him self-conscious and faintly cocky.

They had a run of easy games with little teams, then a bad break with Minneapolis.

THE morning after that game he looked tired, and got two pieces of advice. His mother, pouring his breakfast coffee, gave him the first.

"You look tired, Andy," she said. "You don't want to neglect your business for that hockey."

"The hockey's pretty important just now, Mother."

"I know. We're awfully proud of you too, Andy. You know that. It's a nice, healthy game. But you've got a good job, and this hockey's all over in a few months. I'm always afraid one of those sticks will catch you the way they did that other poor lad, one night we saw the game."

"Don't you worry about me," said Andy.

The other advice differed rather widely. It came from Marge, who had insisted that Andy lunch with her at the Greysolon Hotel.

"You look tired," she said. "You ought to give up that fool job in the hardware shop. How can they expect you to play your best hockey when you work all day like that?"

Andy grinned. It struck him as comical.

"But that's my real job, Marge—the store."

"Why don't you get out of it?" she urged. "I'll talk to Father and get him to find you something. They're always talking about what hockey does for the town. Why don't they take care of the players? The town owes you something for the free publicity you give it."

"Oh, I like the store," said Andy. "You see, I want to get an interest in the business some day, and I think that I can."

Margery gave him a side look. The hardware store wasn't in her picture at all. She couldn't be running around with a shop clerk.

"Better let me talk to Father," she said.

They were very handsome as they walked out of the hotel together. Some people, mostly women, recognized Margery Blair, and many people recognized the hockey player, and Marge was conscious of the exciting combination that they made. She put her hand on Andy's arm, and the girl at the switchboard, who had just seen a hole in the air as Andy McLean's eyes had rested on her questioningly, felt miserable and angry and contemptuous all at once. She snapped at the next man who spoke gayly to her, although she knew he was the harmless sort who only wanted to be friendly.

THE hockey team went to Cleveland for three big return games. It was during the third game that Andy did his big stuff. He made the goal that gave Cosmopolis two out of three games, and a minute later was slashed on the head with a hockey stick, as his mother had feared.

It was spectacular, so much so that for a few days sporting pages all over the country focused on Andy, while he lay in a Cleveland hospital. He came back to Cosmopolis very much a hero. The news reels in the movies carried his pictures; every small boy in town knew him by sight, and a great many young women were jealous of Margery Blair. For Margery very obviously had him in tow.

He had given up his job in the hardware store when he came back from the Cleveland hospital, and gone into the bond business with some friends of Margery's father. Such a personable and popular young man had a very good chance selling bonds, and his hours were pretty much what he chose to make them. And Andy didn't work too hard. He, too, began to feel that the town owed him something, to swagger a bit in consciousness of celebrity.

"Left the store, I hear," said Sinclair.

"Yep," said Andy. "No money in it."

"Oh, write it on the ice! You got to have a million with those new playmates of yours, I suppose."

"Oh, dry up," said Andy.

"Sure. My conversation isn't what you're used to now, boy, since you've been hitting the high spots. By the way, Andy, what did you do to Mary Callahan?"

"To who?" asked Andy, the quick red spreading over his face.

"You heard me all right. Mary Callahan. My gosh, she's certainly out with a hatchet after you. You may be the town's idol, but you're not Mary's sweetie!"

"That's all right with me," agreed Andy; but he felt a little sick and hurt. Queer how the mention of her name brought back the picture of the sagging

Happy and Safe on Firestones

The automobile is universally accepted as a big factor in the social side of family life. So women, more and more, are concerned with every aid that contributes to its safety and comfort.

Recognizing this aroused interest, and the vital importance of tire equipment, Firestone has left nothing undone to add unusual safety features to Gum-Dipped Tires. Firestone engineers have developed a tread with broad, safe road contact, and of remarkable non-skid qualities. In deep snow or slush, on frozen ruts or oily boulevard, you can trust the tread to hold true and avoid danger of skid, slip or spin.

Your car, equipped with Gum-Dipped Tires, is easier to handle—responding more quickly to wheel and brake. Riding on Firestones you no longer dread the sudden stop, the impatient order to move on, the emergency turn in traffic. And all this means not only a safer ride but a far more enjoyable comfortable one, with confidence and peace of mind.

See your nearest Firestone Dealer. Let him explain the many advantages which these tires give.

Our national propensity to Colds

This common trouble can be traced, quite often, to the susceptibility induced by Auto-Intoxication.

OF all diseases to which the flesh is heir, colds are the most costly in lost time and in impaired health. And yet taken care of in time, a cold is not a trouble difficult to defeat.

A good rule with colds is to get at the source of the trouble, and get at it promptly. For unless a cold is quickly shaken off, it often develops into a more serious ailment.

Usually the real cause of a cold can be traced to stoppage of waste products in the intestines. When waste products are not promptly eliminated they start to ferment and to set up poisons which are spread through the body by the blood—producing a form of self-poisoning called Auto-Intoxication.

Auto-Intoxication weakens our bodily powers of resistance—it makes us easy prey for the germs of colds—it takes some part of health from nearly everyone.

* * *

Don't take a chance with colds. At the first sign of a "stuffed up," congested condition—correct the stoppage—clear out the intestines of poison-producing wastes.

For this, there is no better helper than Sal Hepatica. Sal Hepatica, a palatable, effervescent saline, attacks a cold at its source. It rids the system quickly of waste products, bathes away the intestinal poisons and aids in keeping the blood stream pure and in condition to destroy the germs of colds.

You may take Sal Hepatica on arising or, if you prefer, half an hour before any meal.

To learn more about self-poisoning and its relation to colds and to other common ills, send for our new booklet on Auto-Intoxication.

For booklet please address

little porch, the soft-falling snow, the rise of something sweet and fearful in him that had never come again. He walked away, and then turned.

"What's she got against me?" he asked abruptly.

"I don't know. But it's certainly enough, whatever it is."

"She hadn't told, anyway," thought Andy gloomily. He had a good many gloomy moments lately. Sometimes he wondered whether his head was all right since that Cleveland game. There was so little kick left in anything.

HOCKEY and a crowd screaming and yelling at you, driving you to win, pounding at you, scaring you into winning. Bonds—going around to offices and telling the men there some patter about them, and letting the talk drift back to hockey, if they were fans. Learning to be skillful about that was part of the game.

Seeing Marge, eating with her, driving with her, being with her in her home, which had seemed so like a palace at first, but now was less magic and impressive Marge herself, no longer strange and distant, but only an eager, possessive girl who had a sort of claim on him, who had taken him up, who had plans for him. She frightened him sometimes with her air of possession.

Yet he knew, and Marge knew, that he had never asked her to marry him. Not that—yet. Not even when she came to Cleveland, and he was sick there. He supposed vaguely that he would, in the end. She herself had hinted at it as entirely possible, but Andy had never felt it so. Maybe, when he was selling more bonds, and had made some money, and had a car of his own, the thing would be suddenly feasible.

The great Winter Jubilee had been planned to exactitude to meet the dates of the last three hockey games in Cosmopolis. There were to be three games with the leading team in the Eastern League, to decide the national championship. The chamber of commerce had put on its great exposition. The automobile show was in progress, everyone taking advantage of the visitors to the city and the excitement.

But the hockey team was the center of interest—and Andy McLean, star player, the center of the center. His picture was everywhere. To the whole city he was "our Andy," and there were letters written to the newspapers suggesting that some fitting civic celebration be made to honor him. Marge liked it. But Andy's mother, still making his coffee every morning an hour later than his father's breakfast, showed no undue pride.

"I'll be glad when it's over, Andy," she told him. "I'm always afraid that you'll get hurt again, and, after all, hockey's not a trade. And it takes so much of your time and your strength."

Andy laughed and kissed her, and went out to his work of four hours selling bonds, followed by hockey practice, lunch with Margery, and adulation.

Never had the auditorium been so packed. Orange sweaters and checkerboard green ones shot in among each other, fighting for the puck, hitting at it, missing it. The Eastern team had a fine skill that the Cosmopolis players had not known existed until that first night. They met it with strength and endurance, but they lost the first game, three to nothing. The second game they won by a single goal, and by the third night the whole attention of the city seemed to be focused on that great central rink where the championship was to be settled.

Sinclair was sore. He hated the extra pomp about the big game; he hated the fact that the objectionable referee, Graves Clark, was again to be in charge, and was evidently a favorite official with the Eastern team.

"Keep your mind on your game, Andy," he said, "and your eyes off your lady friends in the grand-stand. You've got to forget the crowd."

"Say, who do you think you're talking to!" answered Andy viciously.

"Oh, I know all right," Sinclair told him, his own nerves on edge with two nights of playing. "I'm talking to a bird who's all swelled up like a poisoned pup!"

Andy turned toward him angrily, but the signal for the game stopped them. They flung themselves into it; but it wasn't like the old game. The fun was gone, the comradeship. It was an ugly, deadly battle against the smooth, trained mechanism of the other team.

Afterward people said with amazement that McLean's game went all to pieces, and that was why the score was so overwhelming against the Cosmopolis team. Up in the grand-stand Margery Blair, white under her rouge, tried to sit as if she didn't care.

But at the last score she got up and said to her brother, "Let's get out of this, Dick. Awful flivver, isn't it?"

"Aren't you going to wait for Andy?"

"I'll see him to-morrow," said Margery. "Graves Clark is coming out later."

Dick Blair followed his sister silently. He told himself that it was clear enough why Marge didn't get married. Marge had a yellow streak.

THE girl at the switchboard in the big hotel looked up at the first man who came in from the game.

"Who won?" she asked.

"They gave your town an awful trimming, sister. Ten to nothing—McLean went all to pieces. Missed every chance he had. So did the goal keeper."

"What number did you say?" asked the girl. Her voice was very stiff and mechanical. "Booth number three, please."

When he had gone into booth number three she put her hand up to her face and drew a long, trembling breath.

The newspapers in the morning were very definite. They said that McLean and Sinclair had slaughtered the game between them, and the entire team had been hopelessly outclassed. Andy read it and made no comment. He put on his coat and went to his place in the bond office, where he refused to talk about the game. It was a long, hard day. Nearly every man he tried to see was out or busy.

Spring, with picnics and motor trips, with the rebirth of tennis and golf and the passing of all interest in hockey, came swiftly. The great skating rink was turned into a dance hall for the summer. Pine Street put its sleds in the basement and took out lawn mowers and porch swings. And up and down the business streets, in and out of offices, Andy Mc-

What more could a fellow ask?

A FRIENDLY pipe, mellowed with age and sweet as a nut. A tidy red tin of Prince Albert . . . good old Prince Albert. Give me these, and my good health, and you can have your cabin-cruiser and your winter vacation. I won't envy you for a minute.

But don't get me wrong. I'm not too easily pleased. As a matter of fact, I'm mighty particular about the kind of tobacco I choose for a constant companion. After playing the whole smoke-circuit, I've settled on P. A. as the one and only tobacco for *me*.

You'll begin to understand "why" the moment you open a tidy red tin of Prince Albert. The fragrance that rises to greet you promises a smoke such as you've never known. Then the big moment: you tuck a load in your old jimmy-pipe and light up! . . .

That's it. That's P. A. Cool as a bench by the river at night. Sweet as a baby's smile. Fragrant as a dew-wet garden. Mild as milk, yet with a full body that satisfies all the way down. If you don't know P. A., you can't know what you're missing.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

Our gums lead a lazy life!

IN these days of soft food and delicious cookery, it's not remarkable that dentists lay so much stress on the care of the gums.

For dentists know that these widespread gum disorders are in large measure due to the lack of natural roughage in our food—to the almost total absence of those coarse, fibrous elements that invigorate the gums and keep them in sound and sturdy health.

Gums then grow tender and weak. The blood does not circulate freely within their walls. They bleed easily under the brush, and "pink tooth brush" warns us to be on our guard against more serious troubles.

How Ipana and massage bring gums back to health

Dentists say the best corrective—and preventive, too—is massage of the gums. And thousands of dentists instruct their patients to massage their gums with Ipana Tooth Paste *after* the regular cleaning with Ipana and the brush.

For Ipana's content of ziratol, an antiseptic and hemostatic agent well-known to the profession, renders Ipana of definite aid in the toning and strengthening of weak, undernourished tissue.

Make Ipana your tooth paste for at least one month!

The coupon, of course, will bring you a ten-day trial, enough to acquaint you with Ipana's cleaning power and its delightful flavor. But the better plan is to start at once with a full-sized tube from the druggist. Use it faithfully for one month. That is a fairer test of Ipana's power to improve the health of your gums.

IPANA TOOTH PASTE

BRISTOL-MYERS CO., Dept. J-27
73 West Street, New York, N. Y.
Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

Lean sold bonds, or, more often, he tried to sell them.

There wasn't much money in the business these days. Everyone had an excuse—times were bad, business dull, an order had just been placed elsewhere. There was no particular reason why men should buy of Andy McLean now. He was no longer a hero, his celebrity was trimmed with failure. He didn't know too much about the bond business, and he wasn't a very good bond salesman. Not nearly as good salesman as he had been in the hardware store.

THERE came a day in June when Andy was worried. He had had an unprecedented run of bad luck, and the head of the office had intimated that it was time for him to do better.

"You see," said the head, "we took you on, Andy, at Mr. Blair's recommendation. That's all right; but we ought to have results by now. This is business, not hockey."

Andy went out, black at heart. How could he tell them that he hated selling bonds, and that was why he couldn't do it; that he hated selling them as much as he loved selling shining pieces of machinery and clever contrivances, the useful miscellany of hardware.

He lounged down the street, thinking over his prospects without hope. His suit had grown shiny, and he felt unimpressive and lonesome and a little hopeless. Then as he stopped to go into an office building he saw a familiar car at the curb, and within it Margery Blair.

He had seen her only once since the game. He had gone to see her, to explain just why it was such a failure, and she had said that she understood perfectly. Then she had gone away for the spring months, and he had not seen her since then. Once she had sent him a card from Florida.

Andy went up to the car.

"Hello, Marge," he said.

She was different—or was it merely her summer clothes?

"Hello. How are you?" she asked brightly, and seemed to look at him without really seeing him.

"It's great to see you back. I've missed you."

"Missed me?"

"Of course," he said stubbornly, unwilling to admit the fact of his snubbing.

A young man in clever, rather exaggerated, clothes came out of the office building and over to the car with an air of belonging. Andy recognized the ex-referee.

"How are you? What are you doing in this part of the world again?" Andy asked with forced cordiality.

"I'm here for the golf tournament," said the young man coldly.

Andy had not known there was a golf tournament. He stood there while the young man stepped past him and into the car. Andy's grin was the ghost of his former cheerful one.

"Hope I see you again," he said to Marge, half ironically.

She made no answer as the car started, being thoroughly finished with that winter episode. But through the window Andy caught the deliberated words of the man, echoed by the girl's silence:

"What a nerve that upstart has, hanging around—"

There was deathly sick feeling in the pit of Andy's stomach. If he'd only hit him first! If that car hadn't moved!

"Ice too soft for hockey, Andy?" asked someone behind him. He whirled savagely, and saw Sinclair.

"Saw you talking to little Gracie, the referee," said Sinclair. "Pretty new clothes he's got!"

Andy's tightened fists unclenched.

"Did you hear what the fool said?"

"No; but I can guess it would have been one of the last words of famous men if that car hadn't moved away."

SUDDENLY Andy laughed, a good, wide, cheerful laugh, the first of its kind in months.

"Say, Sinclair," he said, "do you know what I'm going to do? I'm going to stop selling these darn bonds. I'm going to sell things I know something about—in a hardware store."

"I knew you'd get your mind back," triumphed Sinclair. "Come and have lunch with me!"

They ate at the Bon Ton, sharing a steak in honor of the occasion. Then they lingered, talking of hockey and what they would do next winter. It was in the midst of their talk that Sinclair's shrewd eyes, diverted for a moment, stayed on a girl who had just come in.

"There's Mary Callahan," he said. "Remember the night you met her here? What did you ever do to get her so down on you? I always wondered."

Andy was red to his hair. He forgot Sinclair's eyes, forgot to be embarrassed, as he stood up and gazed at Mary Callahan. All he cared about was that in going out she should look at him. He wanted to see her again, to have her see him now.

Mary Callahan turned, as if disturbed by his glance. Her eyes rested on him again as if he were a hole in the air. Then they changed as she seemed to read his face, read the mistake and misery, and the acknowledgment of it. She hesitated.

"Hello. How's the hero?" she asked, coming over to where he stood—and in her voice was forgiveness.

He did not know what he said. He was looking into the depth of her eyes, conscious of the hair curling deftly on her cheek, and the sweet, firm mouth—and with it all came again that perfect sense of fitness, of completeness.

"Going my way?" asked Mary Callahan, as she had asked before.

Andy picked up his hat.

"I'm always going your way!" he said. And left Sinclair staring after them.

WHEN HARRY PIDGEON was a lad on an Iowa farm he read of glamorous far-off places. When he became a man, he sailed off in a homemade boat to see those places. For almost four years, alone in his thirty-four-foot yawl, he adventured. A truly amazing feat, which covered a distance of thirty-five thousand miles. "And the most dangerous thing that a man sailing alone has to face," says Harry Pidgeon, "is clear, calm weather, with a good breeze blowing!" Why such a strange statement should be true is explained next month in "This Iowa Farmer Sailed Around the World Alone."

When you face a problem outside your personal experience

—that's where the Alexander Hamilton Institute comes in

NO one lives long enough to meet *every* kind of business problem.

Your experience—whether you are president of a great corporation or assistant cashier in a small-town bank—is strictly limited by the number of hours you have lived. And no man can live more than twenty-four hours a day.

The difference between the president and the assistant cashier is this: the president *must* be able to solve immediately and correctly any problem, *whether he has met it before or not.*

Right there is one of the reasons why 38,803 presidents and business heads are subscribers to the Institute's Modern Business Course. In many of their private offices, you will find the twenty-four volumes of the Course within easy reach.

Few of these men have any intention of following the Course in detail. But they realize that one single paragraph in any chapter may have just the idea that will solve a puzzling problem or increase immediate profits. Wrote one of them recently:

"When I enrolled with you I had no idea of finishing the reading or solving all the problems or taking all the lectures. I merely said to myself: 'These people have gathered together some of the smartest brains in business and in university teaching. They offer me those smart brains as my staff of business advisors, at a price that is just nothing at all. I'll take their advisors and keep them here beside me; even if I only look to them for the answer to one problem a month, I shall be making money.' For in my business an idea doesn't have to be a very big idea to show a handsome profit."

What do *you* do when you face a problem that is outside your personal experience?

We invite you to send for a little booklet which will tell you what you *can* do. It gives all the details regarding the Alexander Hamilton Institute. You will find your questions answered in it. You will understand much more clearly, after you have read it, why over a quarter of a million men—60% of whom are executives—keep this oasis of information at their elbows as a constant source of advice for the solution of business problems and perplexities.

The coupon below is for your convenience, but if you prefer to write a letter, do so. In any event, it will cost you nothing and may mean a great deal to you in the months to come.

ALEXANDER HAMILTON INSTITUTE

AFTER SHAVING

Amazing Exhilaration—Like a Cold Shower!

The men are all talking about what a delight Listerine is after shaving.

It is impossible to describe its effect on you. All the thrill of a cold shower is there, with none of the trouble, and with a fraction of the time.

It starts you off with a bang and the whole world looks brighter. Just try it and see, and find for yourself why we are not taking a chance in risking our money to tell you.

Douse it on, full strength, after the hot water. It closes the pores and draws up the muscles.

You look younger—even *feel* younger. And you are left with a nice feeling of safety—because Listerine insures you against possible infection.—*Lambert Pharmacal Co., St. Louis, U. S. A.*

THEY STICK TO IT! The way we get new users for Listerine Tooth Paste is to get people to try it just once. After that they rarely switch. LARGE TUBE—25 CENTS

LISTERINE

—the safe antiseptic

My Reasons For Being Thankful

FIRST PRIZE

I Am Thankful to Be a Farmer's Wife

I AM thankful that I am a farmer's wife. We have passed through drouth, hail, and falling markets; but, in spite of it all, we are coming into our own. Although we are operating a large grain ranch, our chickens, as a side line, have been very successful this year. We are happy not only because of our financial success but also because we have won out against great odds.

I am happy that we have an ideal home for our three children. We live in an attractive valley surrounded by mountains. The soil is fertile, the air invigorating, and the scenery wonderfully beautiful. Our home is comfortable. As a family, we work and play together. My husband and I are partners. We check on a common checking account and I keep the books. It is *our* home.

I am thankful for the school advantages our children enjoy. Our little schoolhouse is only a quarter of a mile away, and every morning I watch our little ones trudging happily along to school. We always take care to select a good teacher. The present teacher is young, cheerful, and sympathetic. The schoolroom has comfortable seats, good blackboards, an excellent library, and a phonograph. I give thanks when I see my children developing into healthy, happy, independent workers.

Although we live some distance from a church, we manage to take our little ones to Sunday-school almost every Sunday.

I am thankful for the friends that we make each year. Various helpers are needed on our ranch, and we employ many strangers. Throughout the year we entertain college professors and hoboes alike, and the children are interested in all of them. Sometimes they seem to prefer the "floater" to the educated man who occupies an important position in the community! Right now a teamster is their favorite playmate.

I am thankful that here on the ranch I am learning each day to discover much good in everyone, and that I am believing more and more in the eternal goodness of God!

W. J. H.

SECOND PRIZE

I'm Glad My Parents Brought Me to America

I AM thankful that I had the privilege of coming to America and making it my home.

I am thankful for my parents, who made this possible. Not until I married did I realize what it must have meant to my father to leave his home and family for eighteen long months, to prepare the way, and to my mother, who left all her

She needs you so!

To you alone can she look for this special care

For your little girl you ask many special things—things that will mean her future health and happiness. She is so helpless and dependent; she needs so many kinds of care—which only her mother can understand and give.

It's not only big things that she needs. Some of the little common things of every day are vital to her development.

To one of these simple things, in particular, school authorities are asking mothers to give special attention today. *To the school day breakfast!*

School nutrition authorities have found by actual test that the kind of breakfast your children eat has a direct effect upon the kind of work they do in the morning.

They have found that the one proper basis of school day breakfasts is a *hot* cereal. Note what the U. S. Bureau of Education says about this:

"Eat a cooked cereal every morning. It makes you feel warm and gives you energy to work hard and play hard."

So important has the Breakfast Rule become in the school health program, that it is now displayed on the wall in thousands of school rooms:

"Every boy and girl needs a hot cereal breakfast."

Such a little thing—yet it means so much! So much that you want for your children—strong bodies, quick minds. And only *you*, their mother, can do this for them!

Tomorrow morning send them to school with a supply of physical and mental energy to last until noon. You can provide it in no surer way than with a steaming bowl of Cream of Wheat.

This famous food has been the stand-by of physicians for 30 years. They recommend it to mothers as an ideal cereal food.

They like it for its energy value. It supplies the life-giving energy young bodies and brains need—a full morning's supply of it.

Cream of Wheat is so easy to digest, too. It contains none of the indigestible parts of the wheat, so its rich store of energy is quickly and easily freed for use.

You alone can see that your children start off in the morning *fully prepared* for work—with the sustaining nourishment that a Cream of Wheat breakfast gives. If you need a new box of Cream of Wheat, your grocer will send it today.

Cream of Wheat Company, Minneapolis, Minn. In Canada made by Cream of Wheat Company, Winnipeg. English address, Fassett & Johnson, Ltd., 86 Clerkenwell Road, London, E. C. 1.

You pay no more for MAZDA lamps

It costs no more, in time, trouble or money, to have MAZDA Auto Lamps—and no one claims that there is anything better, at any price. As a matter of fact, every notable improvement in auto lamps that has been made—the concentrated filament, the depressible beam, the corrugated bulb, and so on—*every one* is a development of the Research Laboratories of the General Electric Company.

Look for "MAZDA" on the base

The mark "MAZDA" is not the name of a product, but the distinguishing mark of a *Research Service* which has been the means of improving incandescent lamps and reducing their cost since 1910.

NATIONAL MAZDA AUTO LAMPS

National MAZDA Auto Lamps

A GENERAL ELECTRIC PRODUCT

old associations, relatives, and friends, to set out for America, seeking a higher standard of living, and bigger and better opportunities for her three children.

I am thankful for the privilege of enjoying some of the many advantages America offers to her sons and daughters. For I have many fine friendships; I own my own home; drive my own car, and have a good position with plenty of possibilities; and all these things are far and away beyond the greatest aspirations and expectations of my days in Europe, where I went to work at the age of thirteen.

When I think of buddies who were killed in Flanders' Fields, I am thankful that I was able to return home sound of body and of limb.

I am thankful that it has been my privilege to marry an American girl.

Surely I should be thankful to God, from whom all blessings flow. C. G.

THIRD PRIZE

My Deafness Has Won Me Many Friends

SOME people might think I have little reason for being thankful, for, like the old lady in the story, "I'm deef and half blind; I've lost all my teeth and most of my hair; but, thank God, I have my faculties!"

If we stopped to consider, we'd all be most thankful for our "faculties," for how could we appreciate our other blessings without them?

It may seem hard to believe, yet it is a fact that I am thankful to be deaf! I have been deaf from little childhood; I am "ha'f blind," and have always been far from strong; but all my life I have been surrounded by understanding, sympathetic friends, who have done all in their power to make a rocky road smooth. My family are patient, and thoughtful of me always, though a deaf person must often be trying. The school for the deaf from which I was graduated has given me some of my best friends—the teachers who have followed me through the years with an affectionate interest; the deaf friends, who have accomplished great things in this hearing world, and who have been loyal friends these many years. My neighbors—how thankful I am for them! Their countless acts of thoughtfulness will never be forgotten. Even the children will repeat what other people are talking about, when I fail to understand, so that I shall not feel left out. It is hard to read lips when I am in a group of people all talking at once; but someone is sure to repeat to me the interesting bits of gossip and the jokes.

When I am traveling, I find friends everywhere who are willing to help me along. Any trolley conductor will take pains to come to my seat to warn me when we are approaching my street, if I tell him I am a stranger and deaf. Everyone is kind. I never meet with unpleasantness because of what some people call my "affliction." Instead, it has given me the best friends anyone could have, and has helped me to appreciate them truly; it has saved me from many irritations and much friction that hearing people have to endure. E. I. B.

42 Pictures of Davy Crockett Help Run the Dallas "News"

(*Continued from page 11*)

My election as a director and vice president in 1906 antedated my brother's death by just one month."

Promotion from office boy to mailing clerk was young George B. Dealey's first upward step in the business. It doubled his pay, added numerous responsibilities, and gave him authority of a department.

"My new position also put me on night work," said Mr. Dealey, "for the 'News' was a morning paper. The presses started before three A. M., and I had to get the papers for out-of-town subscribers into the early mails.

"Sometimes the mail wagon came before we were ready, and went on without us. Then my two helpers and I would have to wheel the papers to the depot in a handcart, running like fury to catch the train.

"Though we were the principal newspaper in the state, our equipment was primitive. The press was an old double-cylinder affair with a capacity of three thousand papers an hour—compared with our modern presses, which turn out more than two hundred thousand an hour. In those days, our paper stock came flat, in quires. To make it 'take the ink' we wet this paper in a water trough before feeding it to the press. First, we printed the two inside pages, then the sheet was turned over and we printed the two outside pages. After the sheets were printed they were put into another machine for folding. The machinery was driven by a small steam engine, and cord wood was the fuel.

"THERE were no linotype machines in the seventies, no mailing or addressing machines. All papers sent through the mail had to be addressed by hand. Illustrations were unknown, the only 'art' being a few stock woodcuts. Advertisements were simple notices, and ran month in and month out without change.

"About 1880 we put in our first web perfecting press, which printed from a roll of paper, and a couple of years later addressing machines were invented and were installed in the mailing-room.

"Henry Ward Beecher visited Galveston and lectured in the Auditorium. I had visions of being an orator, and wanted to go to college. I sent for catalogues of various institutions, and selected the University of Virginia. Our family fortunes had improved by now—my father had given up the unprofitable shoe shop and was proprietor of a tea, coffee, and spice store that was thriving. In addition to T. W. and myself, another brother, James Q., was working on the 'News.'

"But James Q. was the only one of us who went to college. He was determined to get an education, and finally did so. He is now head of the department of political and social science at Brown University, in Providence, Rhode Island, and author of several books."

What happened to George B. Dealey's

A husband makes a discovery!

"You should see what has happened at our house!"

"NEW draperies at the windows. New curtains. Mary and the children with more clothes than they ever had before—seems they have something new to show me every time I come home. And do you know why? A new Singer Electric! They tell me it's more fun and a lot easier to make things now than to go shopping about for them—and the cost is about half. Sure, we always had a sewing machine in the house, but this Singer Electric is something new—as quiet and smooth and swift as a straight eight. You can't imagine the difference. Why, the folks should have had one long ago. It has paid for itself already!"

Husbands and fathers everywhere are making this discovery of what a new Singer Electric means to a home. Happy interest in sewing, more clothes whenever they're wanted, money saved—the best investment a family ever made.

To wives and mothers! If you have not yet felt the thrill of sewing with a modern Singer, a surprising experience awaits you. And there is an easy way to learn for yourself what this new kind of sewing machine will do. The nearest Singer Shop will gladly send a machine to your home to use for a few days in doing your own sewing. You may have your choice of the widest variety of models—electric, treadle and hand machines—a type for every need. Any one of them may be yours on a convenient plan by which you will receive a generous allowance for your present machine, and your new Singer will pay for itself as you save.

An Opportunity—

More than 8,000 representatives now carry the message of Singer Service into the homes of America. In such a large organization there are always openings for ambitious men and women. The work is pleasant, and interesting, and rewards are in direct proportion to results. If you wish to be considered for employment either in your community or elsewhere, write Personnel Dept., Singer Sewing Machine Co., Singer Building, New York.

SINGER SEWING MACHINES

"Short Cuts to Home Sewing"

This interesting practical 48 page illustrated book shows you how to save time in a hundred ways on your sewing machine—how to do all the modish new details of trimming—no matter what make of machine you may have. The book is free. Phone or call at the nearest Singer Shop [see telephone directory] or send for a copy by mail, to the Singer Sewing Machine Company, Dept. 48-P, Singer Building, New York, N. Y.

There can be no compromise with safety

Don't risk a skid—

Be sure always to have WEED Chains in your car. Put them on when roads are slippery, or deep in snow, or muddy. It takes such a little time compared with a lay-up for repairs. It saves the car from skidding, or becoming stalled, just at the season when you need it most.

You can buy WEED Chains at garages, automobile accessory and hardware stores. Just tell the dealer the size and type of your tires—he has the size of WEED Chains to fit them correctly.

college prospects is interesting, though not unique. The Missouri Press Association visited Galveston in 1882, and Mr. Dealey was one of the committee to meet the delegates and entertain them. In the party was Miss Olivia Allen, of Lexington, Missouri, daughter of one of the visiting publishers. That chance meeting with Miss Allen settled his future: two years later they were married.

The year 1884 was eventful, not only for Dealey but also for the "News." Colonel Belo and his associates had long considered the project of establishing another newspaper in north Texas, where they might duplicate for that region what they had done with the Galveston "News" in south Texas. Young Dealey was relieved of his mailing-room duties, and sent out to visit the towns of north, northeast, and east Texas, to see what circulation might be expected. He traveled on this mission for about a year. And when it was finally decided to establish the new paper in Dallas, Colonel Belo sent him to that city to prepare for its coming. The first issue of the Dallas "Morning News" appeared on October 1st, 1885, with George B. Dealey as business manager.

Dallas at this time was a raw country town of about 20,000 population. The St. Louis papers had a larger circulation in its section of the state than did any local newspaper, and the task assigned young Dealey—he was only twenty-six years old—was to make the new "News" a "go," in competition with these outside metropolitan papers. He did so well that in ten years Colonel Belo had simplified his title to that of manager, and added greatly to his responsibilities.

This accomplishment took heavy toll of Dealey's versatility, energy, and time. Many a week, day in and day out, the young manager was on the job from early in the morning until late in the night. His salary, when he came to Dallas with his wife and first baby, was one hundred dollars a month. This was soon raised to one hundred and thirty-five dollars, and with this encouraging spurt in their fortunes the young couple decided to buy a home.

"My wife deserves all the credit for this," said Mr. Dealey. "The payments on the house amounted to sixty-five dollars a month, and that left only seventy dollars for living expenses. How she managed I don't know; but somehow we got enough to eat and to wear out of that abbreviated income.

"It was really the turning point for us—for it was the first time I had been pushed to save. I began to look ahead to the possibility of becoming a shareholder in the newspaper company. There was a lawyer in Dallas who had one share of stock, and I told him that if ever he wanted to sell, I'd like the chance to buy. A few years later he was willing to sell, and that one-hundred-dollar share was my first interest in the business."

THE period of the Spanish-American War was a strenuous one in the newspaper field, and its close found Mr. Dealey worn out from much overwork. He fell prey to a serious illness, but stuck to his desk, finally collapsed, and was sent away to recuperate—his first vacation in years. While on this absence he received a note from Colonel Belo thanking him for his

Beautify your skin intelligently

Science declares the value of soap

"YOU cannot be clean without a good soap. The ideal soap is one which aids the secretions, removing just enough to take away the dirt, and yet leaving enough of the oil to make the skin soft and flexible."

This quotation from a recent article by a prominent physician and health commissioner well describes the action of Resinol Soap, and it is the Resinol ingredients which make this result possible. Any soap will *clean* the skin, but Resinol Soap goes a step further—it soothes as it cleanses.

To an exquisitely pure, scientifically balanced, toilet soap, have been added the Resinol properties which to thousands of people are synonymous with clearness, softness and beauty of skin. In the lather of Resinol Soap these properties are carried deep into the pores. That is why skins bathed with this soap are thoroughly cleansed—yet seldom troubled with dryness, smarting, stinging and redness.

Buy a cake from your druggist or toilet goods dealer today. Its distinctive, refreshing fragrance, and rich color will reveal at once the presence of the Resinol ingredients, and a week's use will prove their beneficial effect.

RESINOL OINTMENT is a ready aid to Resinol Soap. In addition to being widely used for eczema, rashes, chafing, etc., thousands of women find it indispensable for clearing away blackheads, blotches and similar blemishes.

fidelity—and pinned to the note was a very substantial "thank-you" in the shape of a check for one thousand dollars.

Colonel Belo died in 1901, and his only son succeeded him as president of the company. In the early part of 1906 the young president was suddenly stricken with spinal meningitis and died. Within six weeks the veteran vice president of the company and the secretary-treasurer also died, and George B. Dealey was left with a tremendous load to carry. By right of experience and seniority he was next in line to head the corporation. But he had been a vice president less than two months, and, inasmuch as the property was largely owned and controlled by the Belo family, he hesitated to accept full responsibility.

In this emergency a brother-in-law of Colonel Belo's was called in to represent the family in directing the property, and Dealey was made vice president and general manager. The brother-in-law died in 1919, and then Mr. Dealey could no longer refuse the presidency. He had been with the institution forty-six years, and was so identified with it that "Dealey" and Dallas "News" were almost interchangeable terms.

When he formally assumed the office of president, in January, 1920, the employees gave him a surprise party, and presented him with a loving cup and other tokens of esteem. Telegrams, letters, and notes of congratulation came pouring in from all parts of the United States, from leaders in many walks of life—many of them former "cubs" who had served their apprenticeship on the "News."

"HOW do you manage to win and hold the loyalty of your employees?" I asked Mr. Dealey, knowing the comradeship and feeling of "belonging" that is ingrained in the "News" organization.

"I think," he replied thoughtfully, "it is because we judge by the efforts they make rather than by the results they attain. If a man does a good piece of work, he gets a word of praise from his chief. But, regardless of results, if he makes the right effort he is recognized. That policy extends all down the line, and is very personal. No employee can lie home seriously sick without the management knowing it and doing something about it. If a veteran employee needs a change of climate, he gets it, and doesn't have to worry about the wherewithal.

"One of the things that might surprise you is the reaction that this sort of policy gets from the other fellow. Most people are square, and instead of taking advantage they will meet you more than half way. On numerous occasions, I have simply had to make men take the rest that they had earned by their long, loyal service and that we were anxious and eager for them to have. One of our department heads became invalided some years ago. He refused to take his salary without working for it, and was too sick to be continued in his old post of responsibility. So we created a special position for him, and he held it until his death.

"Another factor that we depend on is the good judgment of our men. Policies are worked out in conference; they don't emanate arbitrarily from the president's office. When a new man comes to work on the paper he is not thrown into mid-stream, to sink or swim. A responsible executive sees him; there is a friendly chat, in which the head of the paper tells the newcomer its policies; he is made to feel his responsibility as a professional man and as a member of our staff."

A MAN who is now a prominent journalist in the North was recalling his first day on the Dallas "News." "I was told to see Mr. Dealey," he said; "when I entered his office I saw a gray-haired man with ruddy face and twinkling blue eyes look up alertly from a big desk. I told him my name, and he smiled and motioned me to a seat. He chatted as a friendly college dean might with a lonesome freshman. Finally he said that if at any time I needed money, he wanted to caution me against borrowing it from the outside. Any advances that I required I could obtain from the office cashier. He explained that he wanted all members of the staff to be free from the slightest suspicion of outside obligation."

I asked Mr. Dealey about this. "Yes, it is a rule with us," he answered. "Every member of the newspaper organization must be clear of debt to any outside interest, and untrammeled in every way."

That principle is applied consistently. The governor of the state offered an appointment on an important educational board to one of the "News" executives. It was promptly declined, though the paper is a strong exponent of the work represented by the board. Mr. Dealey has again and again been importuned to accept nominations for political office. On three different occasions, banks have sought to elect him to their boards of directors. He has always declined such offers.

He is a trustee of his church—the Westminster Presbyterian—has been president of the Dallas United Charities for eighteen years, is an officer or member of various societies for study, discussion, and civic improvement. But, apart from these non-political and non-commercial connections, he has allowed nothing to divide his allegiance to his newspapers or to influence his direction of their policies.

Many honors have come Mr. Dealey's way. Austin College, the University of Missouri, and Southern Methodist University, have each made him an LL. D. The scrapbooks that his secretary keeps are filled with personal mementos of the friendships and honors he has collected in the sixty-seven years of his life. But about these things he has little to say. His interest centers in the newspapers and the publishing house which have been his life.

SEVEN years ago, when he became president, the company's publications included the Galveston "News," the Dallas "Morning News," the Dallas "Evening Journal," the "Semi-Weekly Farm News," and an annual, "The Texas Almanac." In 1923 the directors decided to concentrate all the company's activities in Dallas, which had long been its headquarters. Accordingly, in that year the Galveston "News" was sold to local men of its city. Two years later, Mr. Dealey and his associates began negotiations with the two survivors of the Belo family, who held two thirds of the company's stock, with a view to reorganiza-

The high sweetness of the violins carries the theme; the deep drums beat the rhythm; a great symphony holds a million audiences in its spell.

RCA has made radio *not only* greater—*but* simpler

EVERY RCA Radiola shows this trend toward simplicity—combined always with new achievements in performance.

Consider the eight tube super-heterodyne, Radiola 28. It is the culmination of twenty-five years of radio development—a remarkable instrument of music and of radio. Yet it stands as a simple, charming piece of furniture, and captures the magic of distant music with the turn of a single control!

In the RCA Radiolas of today, single control has been tried and proved .... it is no experiment. With these same Radiolas, operation from the lighting socket has had many months of testing and perfecting. They have shown the remarkable musical possibilities of radio when hooked up with the power of the lighting circuit.

The new RADIOLAS *that are such remarkable* MUSICAL *achievements are at the same time the* SIMPLEST *of musical instruments.*

Radiola 28, eight tube super-heterodyne single controlled. With 8 Radiotrons $260
RCA Loudspeaker 100 . . . . . $35

And practically every new feature that is heralded in radio today was first developed by RCA engineers—or by their associates in the General Electric and Westinghouse laboratories. In RCA Radiolas, modern radio has had the "road test" of experience and there is nothing to compare with them in tone or in performance.

They have made the old type radio obsolete, and have brought a new conception of radio—and of music—to thousands of homes. Whatever price you plan to pay for radio, be sure to hear the RCA Radiolas. From the least expensive Radiola to the most remarkable "electrical" model, each represents the most advanced radio of today—and the most thoroughly tried and proved.

The "Mountie" isn't lonely any more

WHEN the supply ship steams south from the last outpost of northern civilization in September, not to return until the following July, loneliness will never again beset the lives of the Royal Canadian Mounted Police who patrol that vast, wild area.

Radio is now brightening the long winter nights with music, special programs, messages and greetings from their "home folks."

And in the receiving sets of the "Mounties" is the best equipment obtainable. The batteries they use *must* be dependable. They *must* serve until new supplies are brought in a year later.

tion. In the summer of 1926 the deal was consummated.

Thus it was that George B. Dealey, who was employed originally because he was the office boy's little brother, passed into financial—as well as executive—control of the property he has had so important a part in building and molding.

"There is just one more question," I said to Mr. Dealey, as I rose to go. "Do you find that the David Crockett picture really has an influence?"

"Oh, of course it has an influence," answered Mr. Dealey. "There is no magic in it. It is not a talisman. But it does call to mind the principle that Davy stood for. I have had many of the men speak of it as a useful reminder. Only the other day one of the departments got into a bad jam, and the men responsible for it were called on to thresh the problem out. I happened to be passing down the hall as the conference adjourned, and one of the men stopped me and said, 'Well, we're back on sound footing now. For a while it was rather delicate going; but there was old Davy looking down on us, and he straightened us out.' No one can come to work here without being confronted by that picture. Inevitably he asks 'Whose picture?' and 'Why?' When he is told, the impression is far more effective and lasting than it would be if I printed Davy's precept on poster sheets in jumbo type and plastered them all over the office walls."

The Heir at Law

(*Continued from page 14*)

"Did my brother ever consult you about a will?"

"He did not."

"Or in any manner about the distribution of his estate at death?"

The questions were volleyed at the lawyer.

And again Colonel Braxton answered with his formula:

"He did not."

Lurty relaxed, and for a moment his heavy body seemed to heap up in the chair as though devitalized. He was like one escaped out of a peril, and breathless from it. This was the thing he feared. This was the thing that alone concerned him. This was the reason for his message to the man before him. It was to make certain whether or not his brother's lawyer had any knowledge of a will! And now that he was certain, the pressure of fear lying on his back was lifted.

He was free!

He had hesitated before an irrevocable act, lest in this attorney's hands there might be collateral evidence. Counselor to doubtful enterprises, as the dead man had defined him, he was habituated to an excess of caution. He knew that when an irrevocable act was done, it could not be undone. But when one knew, indirections could be given up. One could go forward with a decisive unconcern.

He now spoke sharply and with decision:

"Then my brother's estate descends to me by operation of law, and I take it."

He got on his feet firmly, like a man ashore out of treacherous waters.

IN THE HEART OF EVERY WOMAN
Is the Desire to Beautify

HOW WOULD WHISTLER decorate *your* breakfast nook? A suggestion may be had from a color scheme he himself carried out: The ceiling he painted light blue, like the sky itself; the cabinet work and the furniture were of the light radiating color—yellow; the curtains white, but worked in yellow.

You can well imagine the beauty of it all, when in the morning the table was set for breakfast with dainty blue china—so simple and yet so joyous.

Today—the colorful room is the attractive room. There is still beauty and good taste in fine grained wood, and refining beauty in white, ivory and gray. But these only serve as a proper background for *color*—and it is *color* that is bringing a new cheerfulness into the home.

Lucas has satisfied this instinct for beauty—for color in the home—with a product that is fully as modern as the demand for it, and has called it—*Luco-lac*—a brushing lacquer.

Luco-Lac is equally beautiful for the odd piece of furniture or for an entire room. Also use it on woodwork, floors, toys, porch furniture, etc. A wide range of colors gives a choice of tints, as well as black, white and clear. Write today for lovely Color Card and helpful book—"The Way to *Luco-Lac*." Both sent free. Address our Dept. A-2, at Philadelphia, or your nearest branch.

What is LUCO-LAC?

Luco-Lac is a brushing lacquer which—

1. *Dries in half an hour* with a smooth satiny sheen.
2. Is unaffected by hot or cold liquids.
3. Actually improves with cleaning.

The "DO and DON'T" of Home Decoration

For those little painting jobs around the house that every home owner loves to do himself, there is a handy little *Lucas* book that simplifies the work and improves the results. Any of these books will be sent free. Address our Dept. A-2, Philadelphia, or your nearest branch.

Booklet J—"The Way to Luco-Lac"
Booklet L—"House Paints—Their Uses and Application"
Booklet C—"Treatment and Care of Floors"
Booklet U—"Treatment of Walls—with Paint and Color"
Booklet A—"Enameling Inside and Out"
Booklet S—"How to Paint Furniture and Other Household Articles"

90 Cold Driving Days to Come

Arvin Heat Repays You in 1

ARVIN HEAT! For as little as $1.75 for Fords and only $7.50 for the most expensive cars, you can have this cold weather driving comfort in your car—busy, friendly waves of Arvin warmth breezing up around you as you drive. At such a trifling cost there's no reason why anyone should drive a car without an Arvin Heater.

Winter has just begun. There are plenty of cold days ahead—bitter days that will make you dread driving an unheated car. And the comfort that Arvin will give you on just one of these days will more than repay you.

There's an Arvin for *every* car. All accessory dealers sell Arvins—under a direct from factory to user guarantee of satisfaction. Your dealer will tell you which Arvin Heater is best for your car. You or your garage man can install it. Get your Arvin today and you'll never have another cold drive.

They Sure Do Heat!

"And Marshall Lurty's daughter?" replied Colonel Braxton. "Shall she take nothing?"

There came an ugly sneer into the man's face.

"The law will give her nothing, and I will give her less!"

Colonel Braxton looked vaguely about the room.

"It is not the law that gives," he said. "The law permits one to take. It is the owner who gives."

"And am I not the one to take?" cried Mr. Caleb Lurty, in some heat.

"You are the heir, as the letter of the law reads," replied Colonel Braxton.

"And do I not take?"

"You take," replied the lawyer, "if your brother has not already given."

HE PAUSED; his eyes wandered about the room. His voice dropped to its leisurely drawl. He shifted his weight a little, like a man at ease.

"Mr. Caleb Lurty," he said, "it is a strange world. There is something behind it that is hard to fool. Human ingenuity moves with every sly precaution, and by some accident of chance, as it seems to us, the very subtilities of these precautions trip us.

"Observe, sir, if you please, what has happened here. This morning Marshall Lurty's daughter came to me, and against all right, against all justice, against all honor, I was forced to say that she was not her father's heir, and that the law distributing the estate would give her nothing. But I undertook to see you, in the hope that you might be moved by humane considerations outside the law, and so at least divide your brother's property with his daughter. As I was setting out, your message reached me, and it cheered me, Mr. Caleb Lurty, for I reflected that perhaps you also were considering such an act of justice." His eyes moved slowly from Caleb Lurty's face to his feet. "When I looked you over I realized that this hope was foolish!"

He went on. The big putty-colored man standing behind the walnut desk, neither moved nor spoke. His habit of caution held. He would hear, first, what this thing was that threatened.

"But what happened? . . . Look, sir, if you please, what happened."

The attorney's voice moved distinctly, although unhurried.

"When I entered this house, I was certain that your brother had died intestate. I had no knowledge of any existing will, and all my answers to your interrogations were precisely true. Marshall Lurty had never consulted me about the distribution of his estate, nor the form of any will, and no such testament had been lodged with me. And yet, Mr. Caleb Lurty," his voice went up sharp and decisive on the words, "I now have such a paper in my possession: Marshall Lurty's will, written by himself, and bequeathing his estate, real and personal, to his daughter!"

And putting his hand into the bosom of his coat, he drew out a folded paper.

And for once—for a single instant in his cautious life—the man by the desk was toppled off his balance.

"You got it out of that book!" he cried.

Then, as though he caught swiftly at

APPROVED BY 18 MONTHS OF PUBLIC USE
NO OTHER BATTERY IS LIKE IT

The Layerbilt patented construction revealed. Each layer is an electrical cell, making automatic contact with its neighbors, and filling all available space inside the battery case.

Eveready Layerbilt "B" Battery No. 486, the Heavy-Duty battery that should be specified for all loud-speaker sets.

Practical tests have shown this to be the most economical of "B" Batteries

In daily use in the home, Eveready Layerbilt "B" Battery No. 486 has fulfilled the promises made for it in laboratory tests. More than a year's study of the performance of this battery in the hands of the public has shown that it is the most satisfactory and most economical "B" battery ever developed. All loud-speaker sets require Heavy-Duty batteries—and the Layerbilt has proved itself absolutely the best of them all.

If you are now using the smaller, Light-Duty batteries, the Eveready Layerbilts will give you twice the service though they do not cost anything like twice as much. If you are already using Heavy-Duties, the Layerbilt, the longest lasting Heavy-Duty ever built, will run your set at least 25% longer, and again you will save money. Unless Eveready Layerbilts now are connected to your set, you spend more on "B" batteries than you should, and you can have no idea how good a "B" battery can be. The Layerbilt holds a surprise in store for you.

Eveready Layerbilt's unequaled service is due to its unique construction. All other dry cell "B" batteries are made of cylindrical cells, with many soldered connections, and a great deal of space is wasted between the cells. The Layerbilt is built up of layers of *flat* current-producing elements, that make connection with each other automatically, and that fill all available space inside the battery case. It is every inch a battery. In it you get more active materials than in any other battery and the Layerbilt construction makes those materials much more efficient current producers.

Those are the convincing reasons why the Eveready Layerbilt has proved itself the longest lasting, most economical and reliable "B" battery ever built.

Just remember this about "B" batteries—Heavy-Duty batteries are more economical than the smaller Light-Duty batteries on all loud-speaker sets, and the patented exclusive Eveready Layerbilt No. 486 is the most economical of all.

Healthy hair is thick, strong, free from dandruff

Your Hair—is it still vigorous, abundant?

THINNING HAIR needs special care to regain normal health. Dandruff will never leave you unless you definitely combat it. Unchecked, either of these ills leads all too soon to baldness!

Yet both can be prevented and can, in most cases, be overcome even when long established.

And the means of doing this is *very simple:*

EVERY MORNING moisten hair and scalp generously with Ed. Pinaud's Eau de Quinine. Then with the fingers pressed down firmly, move the scalp vigorously in every direction, working the tonic thoroughly into every inch of the scalp. Comb and brush your hair while still moist. It will lie smoothly just the way you want it.

The whole treatment takes less than three minutes and leaves your scalp tingling with new vigor! Within a few days the improved appearance of your hair will astonish you.

For Ed. Pinaud's Eau de Quinine does the two things needed to promote hair health—destroys dandruff infection and stimulates active circulation, which nourishes the hair at its very roots.

Make this care of your scalp as regular a part of your morning toilet as brushing your teeth.

Get Ed. Pinaud's Eau de Quinine *today*—at any drug or department store. Each bottle bears the signature of Ed. Pinaud. Pinaud Incorporated, 90 Fifth Ave., New York—sole distributors for Parfumerie Ed. Pinaud, Paris.

the words to get them back, he brought his hand up sharply over his open mouth. But the words were out. And Colonel Braxton repeated them in his even voice

"Out of that book," he said, indicating one on a shelf before him. "I got it out of that book while you were absent seeking your confirmatory picture. And I have it properly in my possession, for I am named in the closing line as executor."

Colonel Braxton went on, unhurried, like one in a leisurely explanation of some ordinary and trivial event, while the other stood, his hand clenched over his open mouth, his eyes and face fixed in desperate introspection.

"Mr. Caleb Lurty," he said, "I have had some experience with men who contemplate a criminal act, and their precautions. And during our conversation I understood precisely what you had in mind. Only the fool destroys an important paper in the moment that he finds it. A clever person, a cautious person, like yourself, takes no such chance. He conceals it, and sets about to discover what collateral evidences may lie about to indicate that such a paper exists. And so, when you found this will among your brother's papers, you concealed it in that book and sent for me, to discover what I knew, seeing that I was mentioned as the executor in it."

Colonel Braxton continued, while the man before him remained in an attitude of indecision.

"That was clever of you, for it might happen that I, as attorney for your brother, had some knowledge of this will, a copy of some notes, upon which a suit for the daughter could be founded, if the will did not turn up. And it would be a wise precaution to learn beforehand precisely what you would have to face in such a suit. It would determine your defense and the advisability of some sort of compromise. And so you concealed the will in that book, and sent for me, before you burned it.

"In your extremity of caution, Mr. Caleb Lurty, you were thinking of a great many things. But there was *one* thing you did not think of." The colonel paused a moment as if to lend emphasis to the words that followed. "You did not think how a volume on this wall, if displaced, would indicate that fact by the disturbed dust on the shelf. Well, I thought of that, and when I saw it, knowing what you had in mind, I deemed it advisable to see why that particular volume among all the others should have been disturbed."

AND now the big, wavering creature came to a decision, as though the submerged desperado in him rose, scattering its disguises. Caleb Lurty's hand moved toward the half-open drawer in the desk before him. He looked the lawyer steadily in the face.

"You think, sir, that it was my plan to burn this paper. Well, I have changed my plan. . . . You shall burn it for me."

His voice was cold, measured, and exact.

"You will find a box of matches on the table before you. Strike one and hold the paper in the flame."

He brought his hand up from behind the desk, the big pistol gripped in his fingers, and, extending his arm, he pointed the weapon at the lawyer.

Colonel Braxton did not change his

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

posture. His voice, when he spoke, maintained its leisurely drawl.

"Mr. Caleb Lurty," he said, "you have made one mistake that would get you in the penitentiary. . . . Will you make another that would get you hanged?

"If you could not conceal this folded paper, how are you going to conceal the body of a dead man? When you have shot, sir, what are you going to do after that? If I am a peril to you living, think what a menace I will be to you when I am dead? . . . Think about that, sir. What are you going to do with the body? When you have fired, Mr. Caleb Lurty, you will have a dead man on your hands."

For answer, the man took a watch out of his pocket and put it on top of the desk before him.

"I will give you three minutes by the watch," he replied.

The long heavy barrel of the pistol remained leveled at the lawyer, the hammer back, Lurty's big finger on the trigger. The hand holding the weapon now rested on the desk top beside the watch, as for ease and for a steady aim. The menace was determined and deadly beyond question.

Colonel Braxton put the folded paper into his pocket and faced the man stooping over the desk.

"Mr. Caleb Lurty," he said, "since you give me this time of grace, I will use it in some suggestions for your benefit. The Commonwealth of Virginia will presently try you for this murder; and I cannot see a theory of defense. You are known to be here on this day in this house, and so no *alibi* would hold; no animus against your person could be shown in me, and so no plea of self-defense would stick. And all the vagaries of insanity would go to pieces before the definite and directing motive that moved you to the act. It will be a desperate case, sir, in its every feature."

Colonel Braxton paused, as in some reflection.

"THERE are only two men in Virginia who could possibly save you from the gallows, who could by any chance get you off with imprisonment for life, and I fear that you could bring neither to your aid. One is Mr. Wellington Monroe, and the other is Judge Coleman Northcote. Mr. Wellington Monroe would not take the case of an assassin whom he believed was guilty. And you would find, I think, Judge Coleman Northcote on the other side, for he has a persisting notion that I have been of some service to him in certain critical periods of his life."

There was a slight pause, and then he went on:

"You might get old Fontain Dever. But his tears—and he depends on tears—would hardly move a judge or jury in a case like this. And you might get young Pennington Carlisle, if you paid him in four figures. He would pack the courthouse and bring in elements of drama. And he would get your case remembered for his brilliant speech. But, also, unfortunately, he would get you hanged!"

The lawyer seemed to consider the hard point.

"And yet," he said, "it will be a case to put the best one among us on his mettle. You will have made so many conspicuous blunders in it."

Next in line—yet never chosen

—perhaps it's *comedones**

FOR three years he had been next in line. They had given the Department Manager's job, with its high salary and prestige, to another. He never suspected that *comedones* kept him always "next in line."

It is a misfortune to suffer from comedones — the scientific name for blackheads. What's more, you may not even be conscious of them, though others notice them. Comedones often interfere with business success, for you can't be clean cut and attractive when they are present. Do *you* wonder why you don't get ahead? Perhaps it's *comedones*.

Pompeian Massage Cream helps you overcome *comedones*. It gets in where comedones form, rolls out all the dirt and oily secretions. It stimulates a healthy circulation, keeps the pores open, and gives you a clean, ruddy complexion.

Try this treatment

After you shave, spread Pompeian Massage Cream generously over your face — and *rub*. Continue to rub until the cream rolls out. Note how dark the cream looks. That's the dirt that was in your pores.

Don't let comedones form. Use Pompeian Massage Cream every day—especially when social or business engagements demand that you look your best. It means a healthy, wholesome skin. It means more joy in living.

Use at Home after Shaving

To get full pleasure and benefit, use Pompeian Massage Cream regularly at home after shaving. Your face will feel and look like a million dollars. 60c jars at all drug stores.

*WHAT ARE COMEDONES?
(*pronounced* kŏm'ē-dōnes)
Dictionary definition: A small plug or mass occluding the excretory duct of a sebaceous gland, occurring frequently upon the face, especially the nose. It is often called blackhead.

SEND FOR
10-DAY TRIAL TUBE

Human beings simply are this way— that's all—

MAYBE it isn't just laziness. Maybe it's simply human nature. But unless you are very unusual, you are like the majority of us.

You forget to change the oil in your car every 500 miles, as you should; you neglect to water your radiator and you forget to watch the inflation of your tires.

And how often you are tempted to wear a shirt the second day because the buttons are already in it.

Even when it comes to small daily tasks that have a very direct bearing on our own personal well-being, we are often inclined to be remiss.

Tooth brushing, for example. Despite the fact that after you have brushed your teeth, you feel wonderfully refreshed, tooth brushing is just another one of those irksome early morning jobs that have to be done.

Realizing the truth of this, the makers of Listerine set out deliberately to formulate a dentifrice that would furnish the *easiest, quickest way* to clean teeth. In short, a tooth paste efficient even in the hands of lazy people—for in tooth brushing, at least, the word *lazy* applies to so many of us.

Listerine Tooth Paste is really very *easy to use.* It works fast. With just a minimum of brushing your teeth feel clean—and actually *are* clean.

You have the job done almost before you know it.

This is on account of the way Listerine Tooth Paste is made! It contains a specially prepared cleansing ingredient—entirely harmless to enamel*—plus the antiseptic essential oils that have made Listerine famous.

And how fine your mouth feels after this kind of a brushing! Then, besides you *know* your teeth are really clean—and therefore safe from decay. *Lambert Pharmacal Co., St. Louis, U. S. A.*

P. S.—By the way, Listerine Tooth Paste is only 25 cents for the large tube.

**This specially prepared cleansing medium (according to tests based upon the scale of hardness scientists employ in studying mineral substances) is much softer than tooth enamel. Therefore, it cannot scratch or injure the enamel.*

At the same time it is harder than the tartar which accumulates and starts tooth decay.

$2,000 a year extra —with CORONA

WITH no special training as a writer, this man is making $2000 a year extra income in his spare time, writing articles and stories with Corona. Many people have this talent for writing. Few ever develop it.

Nearly all successful writers own Coronas. They tell us that Corona makes writing easy — that it actually helps them think more clearly, write more vividly. Corona can be carried anywhere, yet it will do the heaviest kind of work. Its amazing durability has been proved by the experience of nearly a million users.

Let Corona help you develop your earning capacity. Mail the coupon now. That's the first step. Our free instruction book for writers will show you just how to begin. The coupon will bring you this useful book without charge or obligation.

L C Smith & Corona Typewriters Inc

Sales offices in principal cities of the world

Established 1903

Also manufacturers of the L C Smith Typewriter, the ball-bearing office machine

You can own this latest model Corona

It's the finest Corona ever built — made by the world's pioneer manufacturers of portable typewriters.

A sturdy, dependable writing machine with full width (ten inch) carriage, twelve yard, two color, self-reversing ribbon, variable line spacer, everything you expect in an office machine. Yet it is compact, portable, easy to carry with you wherever you go.

Standard Keyboard

Corona has the four-row standard keyboard used in all offices and taught in business schools. If you are accustomed to using a large machine, you will be at home on Corona. If you have never used a typewriter before, you'll find that it is easy to learn with Corona.

Buy a Corona on easy terms

A small deposit puts Corona in your home and then you can pay on easy, monthly terms just like rent. Your Corona dealer will gladly accept a used typewriter, any standard make, as part payment. You need not wait another day. Just look up Corona in your phone book and the dealer will send you one for free examination.

This valuable book is free if you mail the coupon at once.

L C Smith & Corona Typewriters Inc
202 E. Washington St., Syracuse, N. Y.

Do you own a typewriter?..... What make?.....
Would you like to know its trade-in value?.....

The thick voice of the big creature behind the desk broke in:

"You have a minute longer."

Colonel Braxton made a courteous gesture of acknowledgment.

"And I will use it, if you please, to point out one of those blunders to you. You imagine, sir, that I came here alone, and therefore there would be no witness to your act. But if you take a step beyond your desk and look out through an opening in the trees, you will see, at the foot of the hill, within an easy stone's throw, a carriage with a negro driver, and a gentleman at leisure on the seat behind him reading a Richmond paper. That gentleman is Mr. Dabney Mason. He is no fearful person like myself! When he hears your shot, he will come up, and you will have him to kill. And after that, the negro driver will come up, and you must shoot him too, for you cannot permit an escaping witness to this affair. Thus, Mr. Caleb Lurty, once on the way, there will be no end to murder."

The trapped creature glanced sidewise at the window, for he feared some trick. He started like one awakened from a dream. And the primordial brute that had emerged to dominate his will, withdrew. He turned toward the window, leaving the automatic behind him.

Colonel Braxton gave the beaten man no further notice. He walked past him to the door. But there, as he went out, he paused and addressed a final word to him;

"You gave me three minutes, sir," he said; "I will do better. I will give you three hours—three hours to cross the border of Virginia."

There came an iron vigor into his voice:

"And I pledge you my word of honor, Mr. Caleb Lurty, that if I find you in this state to-morrow, I will promptly get you the three things that the acts of your abominable life have earned: a striped suit, a shaved head, and a seven-foot cell . . . all free, at no cost, sir, with my distinguished compliments!"

IN THE carriage on the road below, Colonel Braxton related the incidents of the adventure to Dabney Mason. That gentleman was not astonished at the recovery of the purloined will, for he was accustomed to these spectacular successes in the affairs of this eccentric lawyer. But the peril in which the man had stood disturbed him.

"My friend," he said, "why did you go alone into this danger?"

"Danger!" echoed Colonel Braxton. "Why, Dabney, I was never in any danger!"

"In no danger," cried the man, "the creature might have killed you."

"Now, Dabney," replied Colonel Braxton, as in a soft reproach, "you must credit me with some rudiments of common sense. . . . Whenever I see a deadly weapon accessible to fools or children, I unload it."

And opening his hand he disclosed the half-dozen cartridges that he had taken from Caleb Lurty's weapon, when, upon entering the room, he had paused for a moment beside the desk.

He balanced them thoughtfully in his hand, and then tossed them into the bushes by the roadside.

"You're Going to College, Son!"

"YOU'RE only knee-high to a grasshopper. You're four years from the kindergarten stage and thirteen from high school. But when you've passed THAT stage, Son, you're going to college! There's a Provident Mutual Policy in the strong box that SAYS so!"

The steadily increasing number of parents who choose to GUARANTEE a college education for their children through Provident Mutual Life Insurance, places the Provident Mutual Representative in a position to help YOU on this important subject.

"Seven Keys To Contentment" is a new book for your use. It makes it EASY to determine just what insurance protection you need. It covers life insurance for the protection of your wife and the education of your children, for the protection of you and yours during old age, for paying off a mortgage, for protecting a business in case of a partner's death, for preventing inheritance taxes from wiping out an estate.

You NEED this book. Mail the coupon and it will be sent to you without cost.

NOT so many years ago the use of a burial vault was confined largely to the rich.

Yet there was always in the human heart the desire for permanent and positive protection for its loved ones who had passed on.

And this desire has grown, until today, with the resources of a great industrial Nation, it has been gratified.

Now every family, regardless of its means, may provide absolute protection against the elements in the ground.

Such protection is found in the Clark Grave Vault, the highest standard of burial protection ever attained in practical, economical form.

This vault, being made of metal, is not porous. Keystone 12 gauge copper steel, or Armco Iron, highly rust-resisting, is used throughout.

And on the higher priced vaults is applied a plating of pure cadmium (by the Udylite Process, exclusive to this vault) which gives a measure of rust-resistance heretofore unknown.

Not in a quarter of a century has this vault failed. It has satisfied the great universal desire of the human heart in such a way that its use has increased nearly five hundred per cent in the past few years.

Your funeral director will recommend and supply the Clark Grave Vault.

Less than Clark complete protection is no protection at all!

THE CLARK GRAVE VAULT COMPANY, Columbus, Ohio

Western Office and Warehouse
Kansas City, Mo.

This trade-mark is on every genuine Clark Grave Vault. It is a means of identifying the vault instantly. Unless you see this mark, the vault is not a Clark.

Heroes of the Dark

(*Continued from page 49*)

They made three attempts before they were able to reach the second vein, which they found blocked up by a fall of roof. Though they blew their signal horn constantly, they received no response from within the mine.

"After Williams's exploit, others invaded the mine in the same manner and attacked the fire in the second vein with water hose and fire extinguishers. Falls of roof and the increased intensity of the fire upon receiving air prevented their making much headway. Then Williams and a companion again were lowered in a bucket, this time down the air shaft, which was kept sealed with canvas while they went below. This trip furnished facts about the interior on which was built a plan of attack that, with the assistance of Chicago firemen, proved successful. Indirectly, it made possible the rescue of twenty men.

"This rescue took place *six* days after the start of the fire. A party recovering bodies heard a noise and saw a shaded light. Going toward the light they came upon eight miners, who had saved themselves by building a barricade of rocks, coal, mud, and clothing. They had just broken through their barricade and were trying in their weakened state to reach the surface. They told of twelve other men still entombed behind the barricade and too weak to move without aid.

"THE mine was filled with the deadly afterdamp of the fire. It was impossible to descend into it and traverse a half-mile or more of passages littered with roof falls, abandoned mine cars, and dead mules, without the use of oxygen-breathing apparatus. This was available, but trained apparatus men in sufficient numbers were not. George S. Rice, another government mining engineer, undertook to train volunteers on the spot in the use of breathing apparatus. With these inexperienced helpers, Williams and Rice entered the mine.

"Because the use of the oxygen-breathing apparatus is limited to two hours, the party penetrated as far as they could without it. The air was bad, causing headaches; but there they established a base.

"The first men to reach the barricade from the base were unable to get through because of the smallness of the hole. This had to be enlarged to admit them and their equipment. They worked in an insufferably hot temperature until they were exhausted, but they were able to regain the base.

"A second party went out, and this time broke through the barricade. One by one, eleven entombed miners were brought out and raised to the surface.

"By this time, the rescuers were so exhausted that they could do no more. Yet one miner, utterly helpless, was still behind the barricade, somewhere in the workings. The task of finding this man was left to Williams. With one helper, he passed beyond the barricade to make the search, the most dangerous of the work yet performed.

"Time passed with no sign of the two. Becoming alarmed, Rice moved with fresh men up to the barricade. The air to this point had now been cleared sufficiently to act without helmets. Finally, Williams and his helper appeared at the hole, the unconscious man dragging between them. Just as they shoved their man through the barricade they collapsed. Rice, fortunately, was able to revive them with oxygen."

"WHAT was the most difficult rescue operation that *you* ever undertook?" I asked Mr. Parker.

"I was merely a participant in it," he answered, "and though I had something to do about its direction I in no sense did anything more heroic than the others engaged in the work. Some months ago fire broke out in the workings of a bituminous coal mine in Pennsylvania. After an unsuccessful fight of five hours to control it, the blaze had gained such headway that it was decided to seal up the burning portion of the mine and let the fire smother out for lack of oxygen. While men were engaged in building the sealing wall, gases and dust in the air ignited and there was an explosion. Twenty were killed, including the general manager of the mine, the superintendent, and foreman.

"An emergency call was sent to us in Pittsburgh. I rushed with our rescue car and crew to aid in the recovery of the bodies.

"It might be well to explain here that we have ten such rescue cars stationed at strategic points over the country. They are equipped with various sorts of rescue apparatus, emergency hospital facilities, and are manned by experienced men and a surgeon. At a call for aid, the nearest car is attached to a fast railroad train and hurried to the scene of trouble. Our sole mission is to give what help we can, in coöperation with mine officials and state mine inspectors. The latter usually are in charge at a disaster.

"At the mine in question, we found it impossible to enter the affected area, because of the poisonous gases. The bodies were too far distant in the mine to reach, even with oxygen-apparatus. How to recover them without further loss of life became a fine problem in mine engineering, for there was the constant menace of another explosion.

"We began by penetrating the gas-filled area as far as it was safe to go with the apparatus, and there building a sealing wall. This prevented further escape of the gases. Then we launched an operation that engaged between sixty and seventy men continuously for ten days, working in an atmosphere so charged with poison that a man without breathing apparatus couldn't have lived in it three minutes.

"It was the most trying and hazardous kind of work. As soon as the first sealing wall was built, the passage was partitioned down the center, but an open space left at the end next the seal. Fresh air was then forced by fans into the half of the passage to the right of the pa*rtition,*

Lest your cheery home fires turn and destroy

THE hearth fire and the lazily smoking chimney have been symbols of good cheer since men first built houses for their abode. Good cheer—until one forgets that the fire that cheers can also destroy.

National fire figures bear eloquent testimony to the fact that men do forget. Fire every year takes its greatest toll of homes. And unguarded hearth fires, soot-clogged or defective chimneys and flues, carelessly handled stoves and heating systems occasion the greatest loss.

Carelessness plays a tragic part in the yearly loss of life and property. Every North America Agent can help you guard against carelessness and its costly results by giving you expert advice on Fire Prevention.

Paint These Lovely Things Yourself

For Profit and Pleasure

Earn money at home, this fascinating new way, in spare time —through membership in Fireside Industries, the national guild of artistic home workers!

THIS is the most delightful work you could imagine; you will enjoy every minute you devote to it. Many people do it solely for the artistic pleasure they get in creating beautiful things. But it also *pays surprisingly well*, for there is an enormous demand for giftwares. Many of our members make $20 to $50 a week, and have built up profitable businesses from small beginnings. Think of decorating a French powder box, for example, requiring only an hour's work, and realizing a profit of $2.00. What other work could be so interesting, and pay so well?

No Special Ability Needed

The co-operative association of homeworkers known as Fireside Industries now has openings for new members. This is your opportunity. Find out how you can secure a membership. The work is easily learned, and a perfect joy to do.

You have only to follow the simple directions given by Gabriel Andre Petit, the Art Director, and you can easily learn the latest methods of decorating wooden toys, parchment lamp shades, novelty painted furniture, book-ends, greeting cards, batik and other lovely objects of art.

Through Mr. Petit's perfected system, the work becomes extremely simple, and you are furnished a complete outfit of materials, worth $10.00, without extra cost. You can start making money almost at once.

Money-Back Guarantee

What thousands of others are doing in Fireside Industries, you also can do. So sure are we of your success in this fascinating work that we guarantee to refund your money in full if, after completing your instruction, you are not entirely pleased. You take no risk whatever.

Beautiful Book FREE

The beautiful Book of Fireside Industries, illustrated in color, explains all about this new way to earn money at home. It will be sent you, absolutely FREE and without obligation. Just mail the coupon, or write, enclosing 2c stamp to help pay postage. But do this at once, while openings for new members are available.

FIRESIDE INDUSTRIES

Member National Home Study Council

Dept. 60-B, Adrian, Mich.

Fireside Industries, Dept. 60-B
Adrian, Michigan
Please send me, FREE, the book on Fireside Industries, which explains how I may earn money at home by decorating giftwares; also particulars of your money-back guarantee and special co-operative privileges. I enclose 2c stamp.

(Write in pencil—ink will blot)

and the foul air drawn out through the half to the left of the partition. This artificial circulation of the air cleared the passage up to the seal.

"This much gained, apparatus men went through the seal, which was closed behind them, and advanced a second stage of two hundred feet, and there erected a second sealing wall. The ventilation system I have described was extended, and the second stage cleared of gas. Over and over again, through the winding passages of the mine, the operation was repeated, advancing each time from two hundred to two hundred and fifty feet. Cross passages had to be closed off. The oxygen-breathing apparatus was worn continuously, and if you've ever worn a gas mask you've some idea of the discomfort of working in breathing apparatus. An advance of more than two miles was made in this fashion, day and night, until the bodies were reached.

"Additional to this hazard, there was the menace of explosions. In fact, one explosion did occur on the first day and knocked the entire party off its feet. Fortunately, nobody was hurt.

"YOU will readily understand from this," Mr. Parker added, "that rescue, recovery, and fire-fighting work in mines must be performed by trained men, intelligently directed, and perfectly organized. In view of the many dangers, it would be sheer foolhardiness, and result only in needless loss of life, to let men have their heads, unrestrained, at such a time. There is never any difficulty in getting volunteers for hazardous tasks. The big difficulty is in holding the men back for their own safety.

"Necessity, at times, forces mine officers to take risks themselves which they would not think of imposing upon their men. I don't uphold the practice, *as* a practice. The advisability of taking the risk can be determined only on the spot. Often, too, what would be dangerous for one man to do is not dangerous for another.

"An example of this comes to mind in connection with the foreman of a small cement mine. Virtually, all of the capital of the owners was tied up in it. One day, a most dangerous condition developed in the roof over a portion of the main workings. The foreman detected every indication of an impending fall of rock that would close that section of the mine.

"He ordered every miner from the threatened area and from the mine. Then, relying upon his experience to warn him in advance when the fall would take place, he started single-handed to remove all valuable mine property in the workings. He worked for hours in the endangered mine, loading property onto cars and sending it up to the surface. Within fifteen minutes after he came up the fall occurred!

"Slides and falls of roof are not nearly so spectacular as fires and explosions and floods. Yet to the mining man underground roof falls are his greatest hazard.

"Speaking of hazards," said Mr. Parker, "I have here the diary of a mine foreman covering a fight against a mine fire that was waged continuously for almost eight months. It is a remarkable document, in my opinion, for during that period the foreman and his men faced and conquered almost every hazard that lurks underground."

Mr. Parker tossed the diary over to me, and for an hour I sat and read the daily chronicle of that fight. It needed but little imagination to catch the thrill of those terrible encounters with underground dangers, and to read heroism untold between the lines of this plain, matter-of-fact document.

Let me boil the facts down for you.

THE mine was situated in the anthracite coal fields of Pennsylvania. Fire broke out in an abandoned and caved section, and spread with fearful rapidity. Within a few days the whole colliery had to be shut down.

Out of work, the men begged to be allowed to fight the fire, and preference was given to those with families to support.

From May 17th till the end of December from four to ninety men were working at the fire every hour of the twenty-four—and not *one* person lost his life.

Taking into consideration that the men had to battle against not only fire but also poisonous gas, cave-ins, coal slides, steam, explosions, hot water, and bursting pipe lines, owing to sulphuric acid eating into the pipes that were carrying water to quench the fire, I agreed with Mr. Parker that this was a remarkable record.

Time and again the men were trapped in the gangways by gas and cave-ins, or nearly roasted alive by the intense heat of the roaring inferno. Hot coal and rock had to be removed in a suffocating temperature. And once the pumps and electric lights were put out of commission by a violent storm, causing steam to boil through the passages.

"In the old days without modern equipment," continued Mr. Parker, "it would have been impossible to have conquered that fire without recourse to sealing or expensive flooding operations. Even today there are a number of such fires still burning in mines which had to be sealed up and abandoned. One mine in Nevada has been sealed and burning since 1895. A fire in a large copper mine in Michigan has been burning for more than thirty years, and another there for about fifteen years.

"It is virtually impossible perfectly to seal a large mine. Cracks and breaks in the surface, or porous rock strata will permit the fire to 'breathe in' oxygen, and so keep alive. Sandstone, for instance, is pervious to air, and so is coal.

"All types of mines are liable to fire. This risk is not confined to coal mines by any means. Mine passages, you know, are timbered. The mines contain mule stables, wooden structures of all kinds, empty explosive boxes, oil and grease, gasolene, oily waste, and miscellaneous material, such as newspapers, discarded clothing, hay, manure. When you consider that an average acre of coal land, for instance, will yield about five thousand tons from one bed, and that any fair-sized mine will produce that much coal in a single day, you will gain some conception of the vastness of many underground workings.

"The temperatures which men undergo in mine fire-fighting are almost unbelievable. A few years ago, in a Utah coal mine fire, men wearing breathing-apparatus were able to work a few minutes in a temperature of 190 degrees Fahrenheit, and for at least one minute in a temperature of 220 degrees.

WHAT I THINK OF PELMANISM - By Judge Ben B. Lindsey

PELMANISM is a big, vital, significant contribution to the mental life of America. I have the deep conviction that it is going to strike at the very roots of individual failure, for I see in it a new power, a *great* driving force.

I first heard of Pelmanism while in England on war work. Sooner or later almost every conversation touched on it, for the movement seemed to have the sweep of a religious conviction. Men and women of every class and circumstance were acclaiming it as a new departure in mental training that gave promise of ending that *preventable* inefficiency which acts as a brake on human progress. Even in France I did not escape the word, for thousands of officers and men were *Pelmanizing* in order to fit themselves for return to civil life.

When I learned that Pelmanism had been brought to America, by Americans for Americans, I was among the first to enroll. My reasons were two: first, because I have always felt that every mind needed regular, systematic and scientific exercise, and secondly, because I wanted to find out if Pelmanism was the thing that I could recommend to the hundreds who continually ask my advice in relation to their lives, problems and ambitions.

Failure is a sad word in any language, but it is peculiarly tragic here in America, where institutions and resources join to put success within the reach of every individual. In the twenty years that I have sat on the bench of the Juvenile Court of Denver, almost every variety of human failure has passed before me in melancholy procession. By *failure* I do not mean the merely criminal mistakes of the individual but the faults of training that keep a life from full development and complete expression.

It is to these needs and these lacks that Pelmanism comes as an answer. The "twelve little gray books" are a remarkable achievement. Not only do they contain the discoveries that science knows about the mind and its workings, but the treatment is so simple that the truths may be grasped by anyone of average education.

In plain words, what Pelmanism has done is to take psychology out of the college and put it into harness for the day's work. It lifts great, helpful truths out of the back water and plants them in the living stream.

As a matter of fact, Pelmanism ought to be the beginning of education instead of a remedy for its faults. First of all, it teaches the science of self-realization; it makes the student *discover* himself, it acquaints him with his sleeping powers and shows him how to develop them. The method is *exercise*, not of the haphazard sort, but a steady, increasing kind that brings each hidden power to full strength without strain or break.

JUDGE BEN B. LINDSEY

Judge Ben B. Lindsey is known throughout the whole civilized world for his work in the Juvenile Court of Denver. He says, "The human mind is *not* an automatic device. It will *not* 'take care of itself.' Will power, originality, decision, resourcefulness, imagination, initiative, courage—these things are not gifts but results. Every one of these qualities can be developed by effort, just as muscles can be developed by exercise."

The human mind is *not* an automatic device. It will *not* "take care of itself." Will power, originality, decision, resourcefulness, imagination, initiative, courage—these things are not gifts, but results. Every one of these qualities can be developed by effort just as muscles can be developed by exercise. I do not mean by this that the individual can add to the brains that God gave him, but he can learn to make use of the brains that he has instead of letting them fall into flabbiness through disuse.

Other methods and systems that I have examined, while realizing the value of mental exercise, have made the mistake of limiting their efforts to the development of some single sense. What Pelmanism does is to consider the mind as a whole and treat it as a whole. It goes for mental team play, training the mind as a unity.

Its big value, however, is the instructional note. Each lesson is accompanied by a work sheet that is really a progress sheet. The student goes forward under a teacher in the sense that he is followed through from first to last, helped, guided and encouraged at every turn by conscientious experts.

Pelmanism is no miracle. It calls for application. But I know of nothing that pays larger returns on an investment of one's spare time from day to day.

(*Signed*) BEN LINDSEY.

Note: As Judge Lindsey has pointed out, Pelmanism is neither an experiment nor a theory. For almost a quarter of a century it has been showing men and women how to lead happy, successful, well-rounded lives. 550,000 Pelmanists in every country on the globe are the guarantee of what Pelman training can do for *you*.

No matter what your own particular difficulties are—poor memory, mind wandering, indecision, timidity, nervousness or lack of personality—Pelmanism will show you the way to correct and overcome them. And on the positive side, it will uncover and develop qualities which you never dreamed existed in you. It will be of direct, tangible value to you in your business and social life. In the files at the Pelman Institute of America are hundreds of letters from successful Pelmanists telling how they doubled, trebled and even quadrupled their salaries, thanks to Pelman training.

"Scientific Mind Training" is the name of the absorbingly interesting booklet which tells about Pelmanism in detail. It is fascinating in itself with its wealth of original thought and clear observation. "Scientific Mind Training" makes an interesting addition to your library.

Your copy is waiting for you. It is absolutely free. Simply fill out the coupon and mail it today. It costs you nothing, it obligates you to nothing, but it is absolutely sure to show you the way to success and happiness. Don't put it off and then forget about it. Don't miss a big opportunity. CHOOSE A CANADIAN NATIONAL VACATION THIS YEAR

Sail through sheltered scenic seas to ALASKA

Land of Northern Lights, Colossal Glaciers, Flower-decked Fjords, Totem Poles, Romance, Mystery - - -

$90

FOR an absolutely different vacation come to Alaska. Visit this land of strange and fascinating beauty—of unrivalled scenic grandeur—of romance and of gold.

Cruise through sheltered seas, sentinelled by majestic mountains and glittering glaciers, past primitive Indian villages with towering totem poles. Wind through the Narrows and beautiful Lynn Canal. Visit en route, Prince Rupert, Ketchikan, Wrangell, Juneau and Skagway.

From Skagway go by rail to the Yukon—every mile of this historic trail has its story of romance and tragedy. Every minute of this glorious trip has its thrill.

Fare only $90 including meals and berth from Vancouver to Skagway and return—a ten day trip on palatial Canadian National steamers—all outside rooms.

For detailed information on Canadian National Alaska Tours fill in the coupon and mail to our nearest office, or call for the booklet listed.

"Barricading is the best defense of the trapped miner in case of fire. The impulse, of course, is to rush for the surface. Too often this leads the men into deadly gases, under which they soon succumb. In a mine fire at Butte, Montana, in 1917, one hundred and sixty-three men perished, but of this number only *two* actually burned.

"The mine produced copper, gold, and silver. Ironically, the fire gained its start because of work which was being done toward improving its fire-fighting facilities, which already were good. A heavy cable was being lowered down the shaft. It fell, and some of its armor plating was torn off. The hour was midnight. The men had already worked eighteen hours, so they decided to go home. Four men, however, went down to remove the cable. One of their lamps came in contact with the frayed, inflammable fabric at the break in the armor plating. In a few minutes the shaft was aflame, with the downcast air current filling the mine with smoke and gas.

"Within an hour, rescue men wearing breathing apparatus were going into the burning mine. The smoke was so saturated with steam that it was impossible for them to see through their goggles, so that they literally had to feel their way along, often on hands and knees. They had to climb around strings of loaded ore cars, maintaining their direction by feeling the track rails with their hands. Of one hundred and seventy-five apparatus men engaged, ninety of them were trained by our Mine Safety Section. They saved many behind barricades, brought out one hundred and fifty-five bodies, explored over *thirty miles* of drifts and cross-cuts and *fifteen* miles of stopes, raises, and manways in an atmosphere filled with carbon monoxide, tar-laden smoke and steam, all without the loss of a single man and with fewer than twenty prostrations.

"DURING recent years many mines have provided permanent safety chambers in their workings, to which men can go when danger threatens. Food and water are stored there, and provision made for air supply. Also, wood is being used less and less in mines; better fire-fighting equipment is being installed, and rock-dusting practiced to minimize the danger of dust explosions.

"Rock-dusting followed the discovery, in 1908, that the dust of bituminous coal when mixed with the air was in itself explosive. To counteract the explosiveness of the coal dust, rock dust, which is non-explosive, is now blown over the ribs, roof, and floor of a bituminous mine. Rocks are ground for this purpose, limestone, gypsum, anhydrite, and shales not injurious to the health of miners being commonly used."

"THINGS I Wish My Congregation Wouldn't Do" is one of those articles so intimate that they have to be published anonymously. Next month in this extremely revealing piece, a minister tells about some of the unintentional indignities and slights that he suffers at the hands of his congregation. Can a minister have a private life of his own? This particular minister doubts it.

From Packard's unrelenting precision gauges there is no appeal

The Restful Car

"The supreme combination of all that is fine in motor cars."

Precision · For nearly twenty years every Packard car was built by hand. This slow, costly process was the only way to insure the highest standards of precision manufacture then possible.

Today Packard precision requirements could never be attained by hand work. Wonderful machines which make motor parts with watch-like accuracy now permit Packard engineers to design to ever closer limits. Even the Packard connecting rod bearings—more than two inches in diameter—are diamond-bored to limits of one ten-thousandth of an inch.

And Packard realizes that extreme precision in manufacture means little if it cannot be easily long maintained in use. So Packard precision is protected by the chassis lubricator and other engineering improvements, found together only on Packard cars. Constant proper lubrication insures the practical result of fine design and fine workmanship—

Which is—first-class transportation throughout an unusually long life.

Six Things Women Look For When Buying a House

(*Continued from page 43*)

always wants to add his own touch to the structure.

"In my opinion, the most satisfactory time for a young couple to buy a home is when the husband is around the ages of twenty-five to thirty-three. That is the time in life to 'bet' on himself. The children are small, and the expense of bringing them up hasn't yet reached the maximum. The young husband's income should show a steady annual increase from then on for many years."

"What proportion of his income should a man spend in buying a house?" I asked Mr. McGuire.

"For the man whose income is $3,600 a year and under—and that covers the majority of men—twenty-five per cent, or a fourth of the income, can usually be safely paid each year toward a home. If you are paid weekly, a good way is to figure a week's wages per month on the house payments; for instance, a man earning $40 a week can pay $40 a month, we figure, on a house.

"The monthly payment can be taken as a basis for figuring what the house should cost; or, rather, what the buyer can afford to invest. Our rule is to multiply the monthly payment by a hundred: thus the man who can pay $40 a month, including interest on deferred payments, can afford to buy a house costing around $4,000, making a down payment of one tenth, or $400.

"In some states, custom calls for a higher down payment—often as much as one third—and the balance in two equal annual instalments.

"IN MY opinion, the most satisfactory way to buy a house, if you can't buy it outright, is under what's known as the 'contract for deed' system. This plan is widely used in the West and South. The buyer and seller sign an agreement: The buyer agrees to make payments at so much a month—sometimes it's quarterly—until the purchase price, including interest on deferred payments, is paid. The seller agrees that when the purchase price has been paid he will issue a clear deed to the buyer.

"The agreement papers are usually 'put in escrow.' This means they are put either into the hands of a bank or in the keeping of some title company. Sometimes they are simply left in charge of the real estate firm handling the deal. Whoever holds the papers also holds the deed which the seller has made out to the buyer. When the payments are completed, this person or persons passes the deed over to the new home owner. The 'escrow company,' or whatever bank or firm handles the papers, also receives the monthly payments and hands them over to the seller.

"While a deal is 'in escrow,' an owner can't sell his property to anyone else. And if the buyer fails to make his payments, the 'escrow company' gives the

Yellowstone Park

Vacation Book FREE!

FASCINATING pictures of the marvels of Yellowstone on every page of this book!

Whoever you are—Yellowstone will inspire you and thrill you. To people of all ages and all nations Yellowstone is a revelation of beauty and wonder.

It transcends imagination. It is a land of fantastic dreams, a gorgeous wilderness left as it was in the days when this world was new. Flowers, birds and wild animals are at home.

Yellowstone is a Wonderland, weird and beautiful, full of strange spectacles—gigantic geysers, "paint pots", strange rock formations, hot pools of brilliant color.

The way to go is Northern Pacific — then, "In Gardiner and Out Cody"—"Nature's Climax Comes Where it Should".

Send now for the book on Yellowstone. Enjoy its pictures and read its interesting descriptions. You will find maps, too, and all the useful information you may care to have about a trip through the Park. Just fill out the coupon while you think of it!—A. B. S.

All the great Southwest claims

WHERE the broadening Missouri River bends eastward through the richest plain in the world stands the most distinctly American metropolis—Kansas City. Spreading over the confluence of two rivers, extending its metropolitan area into one of the greatest agricultural districts of America, this extraordinary city has become the focal point for a natural region that embraces five states.

Originally a trading station for the fur-hunters of the Northwest, it became the eastern terminus of the Southwest trade and an outfitting point for the stream of immigrants to California. Today it is one of the most important railroad centers in the world—with all the wealth of the Southwest pouring into it, all the riches of the plains of Kansas, Missouri, Oklahoma, Arkansas contributing to its extraordinary beauty and prosperity. Some factors that make it great are:

LOCATION: A natural geographic and economic center for the oil fields of Oklahoma, Kansas, Texas, the tremendous agricultural resources of surrounding states and enormous quantities of livestock. An unusually beautiful countryside. The famous medicinal waters of Excelsior Springs.

POPULATION: Nearly half a million; 95% *native-born Americans*, singularly free from labor troubles. A united community, alert, happy, renowned for its public spirit. Builders of great art galleries, magnificent buildings, wonderful parks and boulevards.

TRADE: Serves 19,000,000 people! Ranks first in distribution of agricultural implements and seeds. Largest primary wheat market; second largest livestock and meat packing center. Third largest grain market and distributor of butter, eggs and poultry.

RESOURCES: Tremendous wealth of raw materials available from the West and Southwest. Vast beds of bituminous coal near at hand. Oil piped direct from the oil fields.

TRANSPORTATION: Twenty-six railroads center in Kansas City. A vast funnel of traffic from the South and West pours in. The Chicago, Milwaukee & St. Paul forms an outlet for this funnel with its direct line to Chicago, the Twin Cities and all points north and east.

To Westerners, Kansas City is one of the best-known and best-loved cities in the United States. It was the root from which colonization to the south and west drew sustenance and inspiration. And it is today not only the commercial and industrial metropolis of the Southwest, but a cultural center whose fame is world-wide. It has created for itself a striking individuality, and its destiny is limited only by the genius of the American people. As Paris rises on rolling hills above the Seine and draws to itself the riches of the great plains of France, so Kansas City, spreading over hills equally beautiful, draws to itself the riches of a plain even broader than France—a plain broken by the delightful Ozarks to the south, and rising in tremendous green and golden waves to the snow-tipped Rockies in the west. Kansas City similarly possesses the invaluable advantage of central position on a sea-girt continent. *It is exactly in the heart of the United States.*

SHORTEST AND MOST MODERN ROUTE TO THE PACIFIC AND FAR EAST

Kansas City as its own

MILWAUKEE ROAD

The railroad serves a vast region

It is an overnight run from Kansas City to Chicago over the Chicago, Milwaukee & St. Paul Railway. Splendid trains and the famous "Milwaukee" service make the trip between these dominating cities a pleasant interlude in business.

This railroad not only serves Kansas City, but with its lines across golden Iowa, it serves with equal facility the great gate to the west—Omaha. Its vast system, extending over 11,000 miles of track, operated by 60,000 employees, forms a network from Kansas City to the Twin Cities and Duluth, from Chicago and Milwaukee to Puget Sound and the Pacific. It links up all important centers northwest of the lower Mississippi Valley; its spur lines tap vast resources of raw materials.

Farm implements, machinery, tools, seeds, pure-bred stock, and people in an endless stream pour through this artery, bringing energy and life to new regions. Pulsing back comes the flow of raw materials upon which the great industrial centers are fed.

The rapidly swelling population of the United States is constantly demanding new outlets. Far-seeing industrial and commercial leaders are closely studying the trend of commerce towards Pacific outlets and the possibilities in the immensely rich hinterland. *The Chicago, Milwaukee & St. Paul is the shortest link with the Pacific Northwest —electrified for 660 miles!*

Milwaukee passenger cars are now being equipped with *roller bearings*—a revolutionary improvement first adopted by this road.

If you are going to the Coast, by all means go west on "The Milwaukee." You will see the most diversified scenery in America—a new empire bursting ripe with opportunities!

Locate Your Factory At The Center-St. Louis

—For Greater Profits

YOUR factory in St. Louis would be at the nation's center. You would be closer to your customers and nearer your raw material supply. This central location would eliminate the wasteful gap between raw materials and customers.

Manufacturers in St. Louis have solved the costly long-haul problem. They ***Ship from the Center —Not the Rim.*** In St. Louis you could ship in every direction—by short hauls—to the nation's markets.

St. Louis has more than 3,500 factories in 211 different lines of business. This diversity has given it a national reputation as the "best balanced" large city.

A fair and just Workmen's Compensation Law, enacted at a recent election, is also an additional incentive to consider St. Louis.

We will send, on request, our new booklet, "Why St. Louis Grows."

seller back his deed. Thus the system protects both buyer and seller.

"When a house is bought on contract, the title remains in the hands of the owner. All the buyer owns is the *right* to buy the property, and this right is considered exercised only when he makes his last payment. Before the payments are completed, the buyer can sell his right to someone else. On the other hand, while the owner can't sell the property itself, he can sell to another his *right* to *sell* the property. Or, to make it plainer, he can sell his contract with the buyer of the house.

"The main thing in buying a house is for all concerned to understand exactly what the terms and conditions are. If you are buying a house on contract, the contract should state exactly how much you are to pay monthly, whether you are to pay the current taxes or not, or what proportion of them you are to pay—and it's a pretty good thing to have it specified just *where* you are to make your monthly payments. If the owner should go away, and you couldn't find him to give him the money each month, or if he hadn't instructed you to put it in some bank, you might be technically breaking your contract, for failure to make the payments.

"When you buy a house, either get title insurance on it, or get an abstract of title. Title insurance is a guarantee on the part of a title or abstract company that the title on the property is clear. If it develops later that the title isn't clear, the title insurance company must make good any loss you may sustain.

"IF YOU get an 'abstract of title,' be sure that you make use of it. One of the most common of erroneous impressions is that 'having an abstract' on a piece of property is the ultimate in safety. It is, *provided you know how to use an abstract.*

"An abstract is a piece of paper, or perhaps a sheaf of papers, that gives in brief form just what the public records show concerning a piece of property. If the public records contain an error in description, for instance, the abstract will show that error; but you can't know the error is there unless you *have the abstract examined.* That's why it's wise to have a lawyer examine your abstract. The small fee he'll charge may save you hundreds of dollars in litigation. When you get title insurance, the title insurance company does the examining of the abstract or title.

"I suppose that at least a hundred times a year we hear some such remark as, 'I know that property's all right, because I got an abstract with it.' Nevertheless, we carefully examine and check every statement contained in every abstract that comes to us; and we find some queer situations.

"There was a piece of property that had been sold many times, each time with an abstract, of course; but none of the purchasers had gone to the trouble to have the abstract carefully checked to see *what was in it.* Here's the situation our attorney uncovered when he checked the document:

"On a piece of paper, he drew a diagram of the property, as it was described—so many feet this direction, so many that. He drew the diagram to scale; that is, in something like the proportions suggested by the figures. The property was supposed to be practically a whole section, or a mile square. The buyer intended subdividing it and selling it off in smaller tracts.

"However, instead of a square mile, our attorney got a tract of land on his diagram that was short ten acres, the 'missing land' running in a strip more than a hundred feet wide down one *whole side* of the section! After days of studying the puzzle, the error was found. Legally, nobody owned that land! The man who originally took up the section as a homestead had thought his description covered that tract, but it didn't.

"Our attorney immediately had the property surveyed, and an error that had been undiscovered for fifty years was revealed in the original government survey.

"Sometimes the slip of a typist when recording a land description will cause the county records to show the wrong piece of land as having been sold. We caught an error of this kind that had run several years, and although the property actually described hadn't changed hands in that time, the abstract showed it had been sold no less than four times. The owner was forced to go to court to get his title cleared, although he was entirely innocent of any error.

"IF YOU buy a piece of property, record the deed right away. This is so important that some states set a minimum time in which the deed must be filed to be legal. If a property is being bought on contract, the contract should be made a matter of record."

"Why is filing the deed so important?" I inquired.

"Because ownership of property is legally determined by what the official records show. Here, for instance, is one thing that could happen; in fact, has happened:

"You buy a piece of property, get a deed, but fail to file it. Suppose the person from whom you bought dies. His estate comes up for probate. The records show he owns the property you have bought, for, since you failed to file the deed, the property is still in his name. The court, therefore, divides the property according to law and parcels it out to the heirs, giving them title to the land you have bought and paid for!

"Unless the heirs are exceptionally generous, and unless you got in with your suit at the time the estate was being probated, you might find it mighty expensive ever to get a title to the land.

"Another reason a deed should be filed promptly is that, after a certain period of time, varying with the different states, a deed that is unrecorded 'outlaws;' that is, it becomes void.

"Don't think, either, that all that's necessary to convey a piece of land is to draw up a deed and file it. It must also be acknowledged; that is, you must make an affidavit before a notary public, or some other properly qualified public officer, that you executed the deed. And some states require one or more witnesses to the signing of the deed.

"You read almost every day about 'suits to quiet title.' These are cases where some irregularity has come up to

The Gulf Coast

Is Charming-Roses are Blooming —There Is Much to See and Do

THIS historic land of delightful winters and all-year charm beckons you to its sun-warmed shores, where snow and ice are never known, where majestic pines wave their lofty heads over semi-tropical vegetation of gorgeous verdure, where golf, motoring, hunting, fishing, boating and other out-door sports are at their finest and where splendid big hotels house you in every comfort and at moderate cost. The Gulf Coast is the Riviera of America, and teems with history, mystery and romance—a vacation paradise of unequalled charm.

Visit the Gulf Coast for pleasure and health—maybe you'll decide to stay in this land of great promise and immediate opportunity, for no other section of the rapidly growing South is building on sounder, more conservative lines—homes are being built on the Gulf Coast for winter occupancy or year round habitation, new businesses and industries are being started and old establishments are "spreading out."

Nearby to the big cities of New Orleans, Pensacola and Mobile the winter visitor finds splendid train service and excellent motor roads to all these points of world wide tourist interest. The Carnival or Mardi Gras (from Thursday, February 24th to Tuesday, March 1st—Carnival Day) is presided over by the Lord of Misrule who governs with regal splendor furnishing a never-to-be forgotten event and one nowhere to be seen save in these charming old world cities.

SPLENDID SERVICE TO THE GULF COAST

—*On Trains of Hotel Completeness.*

From the North and Central West by "The Pan-American" from Cincinnati and Louisville, from the East by the "Crescent Limited" from New York, Philadelphia, Baltimore and Washington—direct to the Gulf Coast. These two fine trains are all-steel and all-Pullman, with maid and valet service, shower baths, observation and club cars. Other trains with through service from the same cities, including direct sleeper from Boston.

Write to R. D. Pusey, General Passenger Agent—Room 600, Ninth and Broadway, Louisville, Ky., for descriptive booklet about the Gulf Coast as a place to visit, a place to live and a place to prosper.

keep the purported owner of property from claiming absolute title to the land.

"There is a way to clear a title quickly and cheaply; but it is a way that has its faults, and in some states it won't work at all. That is, to acquire what's known as a 'tax title.' In some states, when a taxpayer fails to pay his taxes and permits the neglect to continue beyond the period of grace, the State protects itself by laying claim to the land. The land is then put up at a 'tax sale,' and anyone who will pay the taxes and the interest and penalties standing against the land, will be given a 'tax title' to it.

"Technically, the land has reverted to public ownership and has been sold by the State Government. Some states back up their tax titles very strongly, and anyone holding one is considered as having a very strong claim to the land involved.

"IN BUYING a house, it's always good business to take into consideration the possibilities of selling again. Beware of houses that are 'out of style'—big houses with small, or long, narrow windows, houses in which the plumbing and electric wiring have been installed after the house was built.

"The hardest house of all to sell is the fine house in a poor district. Houses near or in sight of cemeteries do not find a ready market; neither do those that can't be reached except by way of a long flight of stairs.

"Another class of residential property difficult to sell is that in districts undergoing a change in character; for instance, those sections in which private residences are giving way to apartment houses, or to office or industrial buildings. Once the character of a district is definitely established, values pick up right away; but until this point is reached, both homeseekers and investors hesitate.

"More houses are bought during the last ten days of the month than during any other equal period of time. The reason for this is that most people pay their rent around the first, and they want to get moved before another month's rent is due.

"It's difficult to say just what time of day is best for showing a house. One thing is certain: Never show an empty house late in the afternoon just as the shadows start falling. An empty house at dusk is anything but inviting. On the other hand, if a house is occupied, and the people in it seem to be a happy family, there's no better time than evening to show the place. People want a home they can be happy in; in fact, that's the notion back of everything that enters into the selection of a house.

"It's easier to put through a sale when the contracting parties on both sides have babies. Usually, nothing will draw two young mothers together more quickly than the mutual topic of rearing children. However, I have known this common bond to fail to work.

"Not long ago, one of our salesmen took a young couple with a baby out to see a house owned by another couple with a baby. The owner's wife came to the door with her baby in her arms. For a moment the two mothers stood staring at each other.

"Finally, the prospective buyer's wife spoke. 'Has your child any disease?' she asked bluntly.

"'No! Has yours?' the other woman snapped.

"Needless to say, that sale didn't go through.

"More houses are bought in August than in any other month, because people with children like to get settled before school starts. Incidentally, a school or a church near by always adds to the value of property. I've noticed that even people who never attend church like to be in the vicinity of one.

"We get twice as many calls for property advertised as 'view property' as we do for property not so advertised. A place overlooking a valley, or a harbor, or a river in which there is considerable ship traffic, will always sell well. People also like to be where they can look down on the lights of a city at night.

"An interesting side line of our business is selling houseboats on the Willamette and Columbia rivers. These boats have from one to five rooms, and some of them are fitted up quite handsomely. They appeal principally to young couples who like water sports. The prices range from $500 to $2,500.

"Every now and then, you run across people living in queer habitations. Several years ago, a street car company in California sold off a lot of discarded street cars at $100 to $150 each. You'll find these old cars being used as dwellings all over southern California—in the hills, in cities, on farms, at the seashore, and even in the desert. They make substantial if somewhat cramped dwellings, and they appeal especially to people who like lots of windows.

"Another queer habitation you'll sometimes see out here on the Pacific Coast is a big tree hollowed out and made into a 'dwelling.' The rooms aren't large, of course, and there aren't many such 'houses,' but the existence of even a few shows that the American people have a variety of tastes when it comes to dwelling places.

"Every section of the United States has its own favorite type of residential architecture; but I believe that if a vote were taken you'd find the Colonial types leading in popularity. Such houses are rarely vacant. The most popular color choice is 'a white house with a green roof'—typically Colonial colors, by the way.

"THE public taste in houses is improving. Information on architecture, modern conveniences, decorations, and the like, is more accessible now than it has ever been; and people are taking advantage of the fact. Folks generally also seem to take more pride than they formerly did in the appearance of their houses and grounds.

"Size used to be the measure of a house's fitness. Everybody aspired to own a house as big as a castle. To-day, coziness and charm are at a premium. We pay more and more attention to the artistic arrangement of the lights, to hardwood floors, and to setting. Freakishly arranged windows, and porches and gables trimmed with fancy scroll work are no longer in demand. The truth is, curlicues have entirely passed out, and simple lines and beautiful proportions are coming more and more in style.

The Romany Road

THE carefree road that leads to the fulfillment of immortal longings... Adventure. Romance. Beauty. Escape for a little while from the dull sameness of succeeding days . . .

For thousands this summer the road will end somewhere among the painted peaks of the Rockies.

And for the largest group of all, it is significant, the road again will be the Burlington.

The Burlington has become the National Park Line, the nation's largest carrier of summer tourists to the Rockies, *for a reason.*

This railroad has always regarded this part of its work as a great and important public service.

For years it has co-operated with the National Park Service, with local transportation companies, with hotels and dude ranches, in opening up the playgrounds of the Rockies.

It has helped to make low cost vacations possible for millions. The railroad fare in summer is only slightly more than half-fare for the round trip to Rocky Mountain points.

In Yellowstone the cost of the 4½ day tour has increased only $2 in twenty years. Good accommodations may be had in Colorado today for as low as $17 a week.

The Burlington follows the Rockies for 1200 glorious miles. It links up three great Parks—Rocky Mountain National-Estes Park in Scenic Colorado, Yellowstone, and Glacier—giving thousands an opportunity to see two or three Parks for only a little more than the rail cost for seeing one. This complete service to the Rockies (see map) is matched by no other railroad.

Recently the Burlington introduced Burlington Escorted Tours, not only taking the tourist to the Parks, but looking after every travel detail at actual cost.

Year after year the Burlington is called upon to handle a sudden rush of tourist travel during the summer months. Unfailingly this railroad has been ready with the men, the equipment and the experience which enables it to care for this tremendous peak load with smoothness and efficiency.

Such a spirit—the spirit of doing all work well and with enthusiasm—has made the Chicago, Burlington & Quincy Railroad a successful railroad for 75 years. It has served the nation at work and at play with a constant competence that, quite naturally, has not failed of recognition.

The Good Samaritan of Wall Street

(*Continued from page 16*)

a lawyer who knew Dick's history, as well as my propensity for befriending down-and-outers—who sent Watson to my office. I shall never forget the way Dick introduced himself to me.

"'I'm a jailbird,' he told me, the first thing off the reel. 'Fifty years old and just finished my sixth term in the pen. I'll say I'm slow! It took me mighty near a lifetime to figure out that the straight folks are smarter than the crooks.

"'What most fellows that go wrong can't see is that the sweat from hard work comes a sight easier than the sweat from fear. Even if you get away with it for a long time, you're always dodging around, with that sick, uneasy feeling in the pit of your stomach. And, sooner or later, of course the bulls get you—they're bound to, because they got all the odds, including *right*, on their side.

"'I was a good burglar,' he added, with a touch of pride. 'Nobody can say that Dick Watson didn't do a neat job. But I've spent a third of my life on the inside, looking out. I ain't never had time to get married, and right now I'd swap all the thrills I ever got out of blowing up all the safes I ever touched off, for one day of owning a bought-on-time bungalow with a little back yard big enough to hold me, and a woman, and a child in the cool o' the evening—a woman and a child that trusted me and was glad to see me come home at night.

"'Well, I'm through now; but it's too late for some things. . . .

"'They tell me you're the friend of bums,' he went on quickly. 'I ain't rustling no help for myself, but I would sort of like to throw a rope to some of the other boys—in particular, the ones that are coming out after their first term. Many of the first-termers have learned their lesson. They want to go straight, but they don't know how. They think the whole world is down on 'em, and they're afraid to hold up their heads for fear somebody will recognize 'em and yell "Jailbird!" A man with a record for serving time has it tough landing a job. I guess that's right, but—well, it's hard, too.

"'Now, here's my proposition: I aim to spend the rest of my life helping fellows who've been in, to get a fresh start. I could go to a church and sign up, but I don't know church folks and church ways. I need a business partner. Will you go in with me?'"

THAT Dick Watson convinced the banker he was on the level, you already know. Let Mr. Baruc himself tell you how the partnership worked out. But first, perhaps, you would like to hear the rest of Dick Watson's personal story.

"After I had known Dick for a year or so," said Mr. Baruc, "he told me the history of his early life. Born in County Cork, Ireland, he came to this country with his parents when he was ten years old. Pretty soon after the family landed in New York, Dick's father got to be a city policeman. The boy was very proud of his dad's position.

"'But the old man's job kept him away from home a lot,' Dick explained to me. 'Half the time, he didn't know where I was, or what I was doing from supper to bedtime. Of course Mother had a hazy notion that I was playing around with the boys in the neighborhood, and, perhaps, getting into bad company; but she had her hands too full with the younger children to bother much about me.

"'Like most of the kids in my block—and all over the world—I was always on the lookout for excitement. For a while, a fire alarm, or a dog fight, was enough. Then, when I was twelve or thirteen, I began spending my evenings with a gang of older boys, who usually hung about the corner of Christie Street and Second Avenue. Trained by this outfit, I soon developed from a common rowdy into a sneak thief and pickpocket. But up to this time everything I did was simply for the thrill of it.

"'Then, too, I found that being able to pull a job made the older boys treat me with more respect, more like an equal. And, of course, the fact that I had beginner's luck and got away with my thieving made me believe that I was too smart ever to get caught. That's one way crookedness has of making a fool out of a man.'

"DICK had quit school when he finished the seventh grade," Mr. Baruc went on, "and he had gone to work for a fish merchant. At sixteen, egged on by his gang, he robbed his employer of three hundred dollars. Dick's father paid the money back, but Dick was sent up for three years. During his stay in prison he met many seasoned crooks, and came out with a thorough education in burglary and a renewed faith in his own cleverness. Shortly after his release, he joined a gang of pickpockets in the old Chelsea district, and became so proficient that, in a short time, he was made head of a school for pickpockets, on Houston Street.

"From then on, it was one job after another, until he decided that he was through. There was one interlude. This was just after the end of his second term in State prison, where he had spent four years for housebreaking. Dick was twenty-eight years old at the time. He got to wondering if the game was worth the candle, concluded that it was not, and decided to give the straight life a trial.

"He determined to move away from New York, where all his old associates lived, and make a clean start in a strange town. His choice fell on Boston. Here he got a job as janitor at Harvard University, and for a little over two years he lived a straight, useful life. Indeed, he became quite a favorite with some of the professors. During his second year at Harvard, several of his friends among the faculty, who had remarked his interest in reading and his occasional philosophical observations on life, got together and presented him with a complete set of the writings of Oliver Wendell Holmes.

"Dick prized this gift above all his earthly possessions; it was his badge of

Relief, texture, a true architectural feeling, characterize this new exclusive Armstrong floor creation—Embossed Handcraft Tile Linoleum. This new floor, design No. 6007, is permanently cemented in place over builders' deadening felt. The border is Armstrong's Plain Green Linoleum No. 21.

"Texture" in floor design

A NEW ARMSTRONG CREATION INSPIRED BY OLD WORLD HANDICRAFT

TO THE EYE, to the touch, the floor you see pictured above has a natural, realistic texture. Each tile unit is framed with a mortar-like interliner slightly pressed below the surface. In sunlight or lamplight, this textured surface catches the play of light and shadow. The whole effect is one of rich, unusual beauty—an inspiration to those who like to plan rooms pleasingly different.

In color treatment, too, this new type of Armstrong Floor is outstanding. There is no regular repeat of the color tones. To add further interest, heraldic emblems are inserted at random in true old-world fashion.

Yet, with all its effect of handcraft, sun-baked tile, this embossed floor possesses a comforting springiness, a quiet ease, so characteristic of all Armstrong's Linoleum. It is also an inherently clean floor kept spotless with regular waxing and polishing, plus dry-mopping as needed on cleaning days.

Embossed Inlaid No. 6026

Printed Tile design No. 7183

"And when firmly cemented in place over builders' deadening felt with no apparent seams, this Armstrong Floor," say architects, "should last for generations."

As you glance again at the colorful dining-room floor on this page, it may look expensive. Were you to walk on it, you would believe it expensive. Yet the actual cost of this newest note in linoleum is no more than $65 to $85 for a fairly large room, 12 x 15 feet. This figure includes the best felt-layer method of installation, a smooth, water-tight, long-lasting floor.

You can see these new Armstrong Embossed Tile Inlaid designs — and other equally attractive Armstrong patterns at good furniture, department, and linoleum stores near you. All are made of Armstrong's genuine cork linoleum, which can be quickly identified by the Circle A on the gray burlap back.

Skilled decorator will help you

"The Attractive Home — How to Plan Its Decoration," written by Hazel Dell Brown, Decorator, will give you a new impression of modern linoleum floors as well as many unusual hints on home decoration. This book also brings you a unique offer of Mrs. Brown's free, personal service. It will be sent anywhere in the United States on receipt of 10 cents to cover mailing costs (in Canada 20 cents). Address Armstrong Cork Company, Linoleum Division, 2674 Liberty Street, Lancaster, Pennsylvania.

Look for the CIRCLE A trade-mark on the burlap back

..although 4 out of 5 are victims of Pyorrhea

What a remarkable woman! She seems to have captured eternal youth with all its charm. While others seek refuge in the shadows, she welcomes sunlight, for she has nothing to hide. Her beauty blooms triumphant over time. . . . To her, the dangerous age of 40 means nothing more than another wonderful year to live. She is safeguarded against that sworn enemy of good health and beauty—Pyorrhea.

If allowed to pursue its course Pyorrhea's poison creeps through the system, ravaging health, leaving in its wake such diseases as rheumatism, neuritis, and anemia. It takes as its victims 4 out of 5 after 40 (thousands younger).

Don't Wait for Warning Signs

The warning signs of Pyorrhea are plain. First the gums bleed. Then, if neglected, they recede from the teeth which loosen in their sockets. But do not wait until this damage is done. Provide safe protection against this insidious enemy. Use Forhan's for the gums regularly, morning and night. And go to your dentist for a thorough examination at least twice a year.

Forhan's for the Gums prevents Pyorrhea or checks its course. It is prepared from the time-tested formula of R. J. Forhan, D. D. S., for fifteen years a Pyorrhea specialist. It keeps the gum tissue strong and protects the teeth from acids which cause decay.

See that you and your family use Forhan's, morning and night. This scientific dentifrice costs a few cents more than ordinary toothpastes. It is worth more, much more. It contains Forhan's Pyorrhea Liquid, used by dentists everywhere. It protects precious health. All druggists, 35c and 60c in tubes.

Forhan's

FOR THE GUMS

MORE THAN A TOOTH-PASTE

..IT CHECKS PYORRHEA

No embarrassing give-away

Forhan's New Antiseptic has no lasting tell-tale odor of its own. It keeps you safe from whsipering tongues. Pleasant, refreshing. Try it and you'll always use it.

decent citizenship. But it proved his undoing. Several newspapers carried brief accounts of the presentation, and by some strange twist of fate a copy fell into the hands of one of Dick's former associates at Sing Sing. This old acquaintance promptly called on Dick and threatened to expose his past to his new friends if he didn't come across with hush money.

"Instead of facing the music, Dick quit his job for parts unknown. He landed in Chicago, and speedily identified himself with the underworld there. He was convinced that an ex-jailbird hadn't a chance with decent people; so he got a new kit of tools and went back into the burglary business. Eventually, he landed in the State prison for five years.

"'This time, I had plenty of spare moments to think things over in,' he told me, in talking about this period of his life. 'I was older too. And then I suppose the taste I got at Harvard of being considered decent had sort of gone to my head. Anyhow, that short association with real men had spoiled me for a crook's life. I made up my mind that when I got out this time, I was going to give the straight folks a chance to quit me cold before I walked out on 'em any more.

"'Of course I knew it was going to be tough to face the music; but it couldn't be any worse than living from penitentiary to penitentiary, as you might say.

"'THINKING over my own case was what give me this bug about helping the other fellow. I knew there were plenty of chaps like me, who had come out with the determination to go straight, and then had taken the wrong fork o' the road simply because they got it into their heads that everybody was down on 'em, or else they didn't have enough steam to make the grade by themselves. Either way, they pretty soon got to thinking, "What's the use!"'

"And," added Mr. Baruc, with his quick smile, "that's the point at which Dick Watson and I became partners. We simply pooled our resources to furnish a little extra steam to help the fellow who couldn't quite make the grade alone. Dick put himself, with his amazing personality, into the company; I contributed most of the working capital and what time I could spare from my business.

"We never worked out any hard-and-fast rules, and we never got tangled up in red tape," Mr. Baruc went on. "We just kept our eyes and our minds open—that's the main thing."

"How do you find men who need help?" I asked.

"That's the least of our troubles," answered Mr. Baruc. "Men are sent to me by policemen, welfare workers, prison chaplains, parole officers, or by other men whom we have befriended. Some of our finest men are sent us by Captain Stanley Shephard, of the Salvation Army, a prince of a chap if there ever was one! Sometimes we just stumble on a fellow who needs a lift. A thing of this sort grows as it goes along. It's like a snowball; as long as you keep it rolling, you can't prevent it from getting bigger."

"But how can you be sure," I insisted, "that a man really rates a 'lift,' as you call it? Aren't you afraid that some unscrupulous fellow will take advantage of your open-handed, open-hearted attitude?"

Mr. Baruc smiled.

"If you remember your Bible," he said, "you will recall that the Good Samaritan who encountered a brother in distress on the way to Jerusalem did not stop to inquire whether or not the man beside the road *deserved* the beating he had got. He simply bound up his wounds and took him to an inn, where he might be cared for until he was able to resume his journey. Maybe you will also recall that the Good Samaritan went down into his own jeans to dig up the money to pay the innkeeper.

"THAT'S what we try to do—the little bunch of us down here in Wall Street that stand ready to pass on Dick Watson's idea of lending a hand. We just do our best to put the chap who's down and out back into the game—fix him up so that he can go on with the journey of life.

"And the biggest thing we can give a man is not money, or even a job; it is faith in himself. A human being without self-respect is like a speeding locomotive without an engineer. At any moment he's likely to jump the track and wind up in a wreck that may injure many others besides himself.

"Not many of the men whom we've pulled out of the wreck and started off on the right track again have become rich or famous. Nearly all of them, however, are living honest, hard-working lives, spending themselves gladly in a gallant effort to make the best possible homes for their families. Which is precisely what the great majority of men who have never seen the inside of a prison are doing!

"Of course there have been a few brilliant exceptions to our usual experience. One man, a bookkeeper who had been sent up for manslaughter—he had shot a man who had slandered his wife—is now a vice president in a substantial Mid-Western bank.

"A boy who had become a habitual drunkard at twenty-two—I literally picked him out of the gutter with my own hands—is a children's specialist in a well-known Eastern hospital. When I got hold of him, seven years ago, he swore that the one decent spot remaining in him was his love for children. He had always 'sort of thought' he would like to be a doctor; so I helped him make up his mind to go to it, and specialize in children's diseases.

"He had barely a high-school education; but he went at his rigorous training like a Spartan. By working winter and summer, day and night, in five years he had completed two years of regular college work, three of general medical work, and one of specialization in his own particular field. He has been practicing only a year, but he is already making a name for himself.

"However, for the simple reason that they *are* the exceptions, these are not the men whose stories I am going to tell you. And, of course," he added, "in the incidents which I am about to relate, I shall not use the real names of the persons involved.

"As you may perhaps guess," Mr. Baruc continued, "the 'repeater' is about the hardest man to make believe in himself again. And yet I have known several men who came back splendidly.

Cool, Rainless, Summer Days

Plan for Them Now!

MAKE this year's vacation the finest you've ever spent.

Motor over 5000 miles of paved boulevards—see quaint Old Spanish Missions—a desert like Sahara—the great Yosemite—rows of tall eucalyptus and pepper trees.

Drive past mile after mile of orange and lemon groves—watch Indians weaving rugs—picnic in a palm-lined canyon beside a mountain stream.

Play golf, ride horseback, hike, sail, swim, fish, hunt, pursue your hobby, whatever it may be. You'll find it here at its best.

And no rain to spoil your fun! Summer is the *rainless* season in Southern California.

Cool too! Let these U. S. Weather Bureau figures speak for themselves. The average mean temperatures for 50 years in a central city of this section are as follows: June, 66 degrees; July, 70; August, 71; September, 69. You'll spend practically every night under blankets. Humidity is always low.

Living accommodations of every kind are offered at very reasonable rates.

When you arrange your trip plan a circle tour to see the entire Pacific Coast from San Diego to Vancouver. Ask your railroad ticket agent. Low rates in effect on all railroads from May 15th to October 31st.

Send coupon for free booklet telling all about Southern California.

Plan now to spend *your vacation* where rain doesn't fall in summer.

The city of Los Angeles, with a population of well over a million, is the largest city on the Pacific Coast and is the hub of one of the country's richest agricultural communities.

The growth, wealth and marvelous resources of Southern California are indicated by the following facts and figures pertaining to the County of Los Angeles alone:

Value of Agricultural and Live Stock Products (1925), $85,912,744; Value of Citrus Products (1925), $23,241,503; Oil Production (1925), 140,000,000 bbls.; Harbor Imports (1925), 4,156,177 tons; Harbor Exports (1925), 16,154,566 tons; Total Harbor Tonnage, 20,310,743.

A producing season of 365 days a year permitting year 'round crops.

Florida

"There was Fred Hastings. When the chaplain of the State prison called my attention to Fred, he was serving the last few weeks of his third term, and he was already in his early forties. The chaplain had discovered many sound qualities in Fred, and believed that all he needed was a steadying hand for a while.

"Fred is an electrician and a good one. Fifteen years ago, when he first jumped the track, he was working as general electrical repair man and watchman in a big wholesale fur house. At the time, he had two small children and his wife was expecting another baby shortly. The woman was quite delicate. In fact, the doctor had told Fred that she could not possibly pull through unless she had every care during the next few months.

"Their little savings had long since gone for doctors' and druggists' bills, and they were heavily in debt. One night, as Fred was closing up after the other employees had left, he accidentally knocked a pile of furs off a table. As he replaced the handsome skins, he thought bitterly of the women who could so carelessly buy and wear such costly luxuries, while his wife would have to go through her coming ordeal without the proper medical attention perhaps.

"Suddenly the thought flashed through his mind that two or three skins out of the immense piles about him would not be missed. And they might save his wife's life. He picked up a couple of fox pelts. The next morning, he carried them away wrapped in his old overcoat. He found it easy to dispose of them in a district where few questions were asked of the man who had anything to sell at a bargain. With the money he received, he made arrangements to have his wife cared for in a good maternity hospital.

"Of course, in a few days the furs were missed. A few more days, and Fred was suspected and arrested. He pleaded guilty in court; but when the judge heard the circumstances he wanted to suspend sentence. However, the enraged employer insisted upon the full penalty of the law, and Fred was sent up.

"WHEN he came out, two years later, he found his wife trying to support the little family by doing piece-work at home for an overall factory. She had managed to pull through, but the baby had died.

"As I said before, Fred is a capable electrician. Even without references, he soon found a job. But no sooner had he got a good start than the man from whom he had stolen the furs reported to his new employer that Fred was a jailbird, and not worthy of trust. Hastings was immediately discharged without the formality of a notice.

"Except for an occasional odd job, he was out of work for three months. It was now mid-winter. Both children had severe colds. There was no money to buy fuel to heat the miserable little flat. On Christmas Eve, the younger child developed pneumonia. Fred deliberately went out and broke into the apartment of a wealthy family who were out of town over the holidays. He stole a considerable amount of table silver.

"Again he was caught, and this time he was given a longer term. When he was released, he took another name, found an excellent job, which paid more than he had ever before made, and moved his wife and children into an entirely different section of the city.

"But again the fur merchant appeared on the scene. He called upon Fred's new boss in person, and assured him that Fred was a dangerous habitual criminal. And this time, Fred went to the fur merchant's store, invaded his office and, despite the interference of a couple of clerks, beat up his former employer pretty thoroughly.

"For a third time, Fred was sent to prison. His faith in himself and in humanity was at extremely low ebb when, at the suggestion of the chaplain, I offered him my friendship. I met him at the prison gate, and told him that I had a good job waiting for him. I also told him that the chaplain believed in him, and I tried to show him that I did, too. He was grateful, but not at all optimistic about the future.

"He made good at his new job, and for several months everything went well. Then one day a man from a commercial reporting firm dropped in at the factory where Fred was employed, and told the superintendent the same old story about Fred's past. Of course he was the agent of the furrier.

"Without any explanation, the superintendent gave Fred two weeks' pay in lieu of notice, and dismissed him. The same day, the man from the reporting firm called at the tenement in which Fred lived and told his story. Fred was given forty-eight hours in which to move out.

"He came to me.

"I IMMEDIATELY got in touch with the secretary of the labor union, with the superintendent of the factory, and with the foreman under whom Fred worked. I asked these men to meet in my office. I stated Fred's case very plainly, omitting no detail of his prison record.

"The men agreed that, since Fred had made good in every way on his job, he was entitled to the same consideration that any workman would receive. About this time, the owner of the factory got wind of the trouble and he came in on the conference. The whole story was rehearsed for his benefit. He not only concurred with the superintendent in his decision to reinstate Fred, but he insisted that Fred be made a present of the two weeks' pay he had received along with the notice of his dismissal.

"I now paid a little visit to the public prosecutor in the district in which the fur merchant lived. He in turn called on the fur merchant. The result was that Fred was relieved of the fear of further persecution.

"All this happened nearly six years ago. Fred is now head electrician in the factory from which he was almost fired. He has never been able to buy his own home, but his family lives in a very comfortable flat. And last fall Fred's eldest boy registered for a course in electrical engineering in one of our best colleges.

"Jim Deland's mistake was the old one of thinking you can get something for nothing. Jim worked for a big corporation in Brooklyn. He was a bookkeeper, and at the time Dick Watson found him in a police magistrate's court, five years ago, he was earning forty dollars a week.

"He and his wife were eager to own a

home. Since their marriage, they had scrupulously saved every penny that Mrs. Jim could spare from her housekeeping expenses. But with an aged mother to support, and a little lame boy who must have the attention of specialists, not to mention the rent on a three-room flat which must be met every month, they couldn't salvage much for their savings.

"At the end of four years, they had exactly one hundred dollars in the bank. The rate at which they were saving seemed like mighty slow work to Jim. One evening, he confided to one of the boys at the office his ambition to have a home of his own. Incidentally, he did some grumbling about how long it had taken him to save up a measly hundred dollars.

"The man to whom Jim told his grievances had a remedy. He knew a place—a sort of club—where a fellow who knew the ropes could play a game that meant a ten-to-one sure thing. This friend assured Jim that he knew the ropes.

"The temptation to see his hundred dollars grow into a thousand overnight was too much for Jim. Accompanied by his adviser, he drew his precious savings out of the bank. He said nothing to his wife, as he wanted to surprise her with his winnings. He pictured her amazement and delight when he should pour the money into her lap. Why, a thousand dollars would be twice the amount required for a deposit on a five-room cottage out in the suburbs, where the little lame fellow could have grass to roll on and a tree to play under! The doctors had said that they would never dare operate on the poor twisted scrap of a leg until the boy was stronger.

"But luck was against Jim.

"THE night on which he made his visit to the gambling club was also the night selected by the police to make a raid on this particular joint. Along with ten others who confidently counted upon cashing in on a sure thing, he was hustled into a patrol wagon and locked in jail. The next day, the judge fined him two hundred dollars and costs.

"Jim could no more have raised two hundred dollars than he could have raised two thousand. It looked like three months on Blackwell Island for him and, in the meantime, nobody to pay the rent and buy the groceries at home.

"Fortunately for Jim Deland and his little family, Dick Watson happened to be in court that day on another errand. Dick was one of the shrewdest judges of character I have ever met. He heard Jim Deland's story and believed it. I was out of the city at the time, but, as was his custom under the circumstances, Dick drew a check on me for the necessary amount to pay the fine. The remnants of poor Jim's savings didn't help much.

"Dick's next step was to accompany Jim home, and then to call on his employer. The head bookkeeper said that Jim was one of the most capable and trustworthy men that he had. Prodded by Dick, he agreed to give Jim a little more responsibility and five dollars more a week in his pay envelope.

"The extra five dollars, Dick made Jim promise to put into the savings bank every week, in addition to his usual savings. Later, Dick arranged with me to lend the Delands five hundred dollars for a down payment on that cottage they had been wanting so long. Since that time, Jim Deland has turned a deaf ear to anybody who suggested that there was a way to get something for nothing. To-day, he and his wife have more than half paid for their pretty cottage in a New Jersey village.

"As for the little lame fellow, who had never taken a step up to the time he was six years old, he is now limping all over the place on his crutches. And the doctors say that in a few more years he will be able to throw away his sticks!

"Speaking of savings and savings banks," laughed Mr. Baruc, "always reminds me of a funny incident in connection with Dick Watson. He invariably insisted that our men begin saving a little something the minute they began earning. His theory was that money in the bank immediately puts a man on the side of law and order.

"I paid Dick one hundred dollars a month for his personal expenses. Out of this amount, he fed and clothed himself and maintained one room on the lower East Side. Here he kept his motley collection of books—including the precious set of Oliver Wendell Holmes presented by his Harvard friends—and here he entertained anybody that needed a night's lodging, or a square meal. I think he did his own cooking.

"Out of his salary—which he himself had named—Dick saved ten dollars a month. This sum he regularly deposited in the Greenwich Savings Bank. I went with him to open his account. As if it were yesterday, I recall the remark he made as we went up the steps together.

"'Well, Mr. Baruc,' he said, with that Irish twinkle of his, 'this is a tee-totally new experience for me. I've been in many a bank to take money *out*, but I never before entered one to put money *in*!'

"THERE'S a special sort of thrill," Mr. Baruc went on, "in saving a boy from prison and the consequent contact with hardened criminals.

"But, right here, I want to make it clear that I have absolutely no sympathy with the professional criminal; that is, the man who deliberately sets out to match his wits against those of his honest fellows. The only way to discourage organized crime is to give it the full penalty of the law. One of the big troubles with America to-day is that we are too lax in enforcing our laws. My point is that, after a man has *paid* for slipping, he ought to be given a chance to go straight. But to get back to the story:

"Young Bert Johnson was an only son who got tired of being tied to his mother's apron strings in a dull New England town. So on his eighteenth birthday he drew out of the bank fifty dollars of the amount that had been set aside for his college education, and ran away to see life in New York.

"On his first evening in the city, he descended upon Greenwich Village—a section supposed to be more or less given over to gay, inconsequential young artists of one sort or another—as being the proper background for skylarking.

"In a restaurant, he scraped an ac-

The happiest words in the world

A SAYING becomes universally popular if its expression recalls an experience of pleasure. "Have a Camel!" are the three happiest smoke words ever uttered because no other cigarette ever gave the world so much enjoyment. To millions of experienced smokers, Camels are contentment realized.

Camel has become the most popular smoke of all time because of quality. Camels contain the choicest Turkish and Domestic tobaccos that nature grows. Then these superb tobaccos are given a blending that can be found in no other cigarette. The largest tobacco organization in the world puts its all and its best into Camels. You could smoke, end to end, a mile of Camels—they will never tire the taste, never leave a cigaretty after-taste.

We invite you now to introduce yourself to the finest made.

Millions of friendly voices are calling you to the mildest, mellowest fragrance that ever came from a cigarette. Once you know what they mean, no words can compare with

"Have a Camel!"

THERE'S SOMETHING WRONG ACROSS THE STREET

YESTERDAY, the little boy across the street did not come out to play. Instead, his young friends saw the doctor go into his house. And later, another man came and tacked a piece of red paper on the door.

Today, all the children go by that sign with awe. They know there's something wrong. What it is they can't grasp. But somehow they've become affected by their parents' evident anxiety.

No wonder! Scarlet fever! And every one of his friends have been exposed to it! Care and worry will haunt many a home before the danger is stamped out!

This is the age of prevention

The pity of it! It happens in so many communities! And it need never occur! For scarlet fever is preventable—and today, parents must share the blame whenever a child falls prey to that disease.

Consult your doctor. By a simple, painless test, he can discover whether your children are liable to contract scarlet fever should they be exposed to it. If this test shows they are susceptible, equally simple injections will protect them against the disease.

In this age of prevention it is unnecessary to take such serious chances. Diphtheria is preventable—typhoid can be guarded against just as vaccination eliminates danger of smallpox.

Guard against the minor emergencies too

For more than seventy years physicians and surgeons have relied on E. R. Squibb & Sons for products used exclusively in their profession. Squibb Products are in use everywhere because of their purity and trustworthiness.

To guard against the emergencies that arise in the home, Squibb also offers you products for your medicine cabinet of better than ordinary purity. Into them are put all the exact care, all the accumulated knowledge, all the efficiency that goes into preparing Squibb vaccines and antitoxins. As a result, such familiar standbys as cod-liver oil, epsom salt, bicarbonate of soda or castor oil seem like new products when you buy them under the Squibb label.

Our booklet, "What Your Medicine Cabinet Should Contain," is full of helpful information on using such products. Send us the coupon at left for a free copy.

You will find distinctive points of superiority in each of the Squibb Products listed below:

SQUIBB'S MILK OF MAGNESIA—An exceptional product of uniform consistency, strength and purity. Free of alkaline, earthy taste.

SQUIBB'S TASTELESS CASTOR OIL—Clear, odorless, tasteless—all that a pure, effective oil should be. Does not revert to the unpleasant taste and odor of ordinary oils as do so many "tasteless" castor oils.

SQUIBB'S COD-LIVER OIL—Protected for you by a special Squibb process against loss of vitamins which occurs in the bottling of ordinary oils. Truly palatable.

SQUIBB'S SODIUM BICARBONATE—Free from all bitterness because it is absolutely pure. Actually easy to take. Cannot irritate the stomach because all impurities have been removed.

SQUIBB'S EPSOM SALT—A salt of the highest efficacy. Largely free from the usual unpleasant, bitter taste because it is absolutely pure.

SQUIBB'S BORIC ACID (Powdered and Granular)—An extremely pure product. In powdered form, especially suitable as a dusting powder for antiseptic dressings. Granular form for the preparation of solutions.

Other Squibb Products

Analgesic Balm	Zinc Ointment
Rochelle Salts	Cold Cream
Talcum Powder	Benzoinated Cream
Nursery Cream	Nursery Powder

quaintance with two girls, who accepted his invitation to dinner. After several hours of dancing, the three set out for a walk. Eventually, they brought up on lower Fifth Avenue. Just outside one of the hotels in this section, the girls spied a big touring car, which they proceeded to admire extravagantly.

"Wishing to impress his companions, who were several years older than he, Bert boasted that the car was his. The girls promptly called his bluff by demanding a ride in it. Unfortunately for the boy, the owner of the car had left the wheel unlocked and the key in the switch. Bert put the girls into the car and sped away, hoping to satisfy them by a turn or so around the block. The young ladies, however, had other ideas. They insisted upon a tour of the city, including several trips across Central Park.

"It was almost midnight when Bert finally got rid of his guests and returned the car to its place in front of the hotel. He was arrested as he stepped out of it.

"THE probation officer before whom the boy was arraigned that night was not inclined to be lenient, but the boy begged so wildly not to be made to sleep in a jail that the officer got Dick out of bed and on the telephone. Dick hustled over and the boy was put in his custody.

"The next morning, Dick brought the boy over for a talk with me. He broke down and sobbed in my office. Among other things, he said that he didn't see how a fellow could get into so much trouble when all he wanted was to have a little fun. He said that he couldn't stand it at home any longer; that his mother treated him like a child, and that he never saw his father except at meal time.

"I put up a bond of five hundred dollars for the reappearance of the boy when called for, bought him a ticket home, and gave him a letter to deliver to his father. I put him on his word of honor to try it at home for a month longer.

"A few days later, I got a letter from his father. He was president of the biggest bank in his town and director in half a dozen important community enterprises. His letter was one of the most pathetic things I have ever read. It said in part:

"'I have devoted my life to amassing money for my son. I am respected for my sagacity. I know every trick of the money-making game and every business man in my county. But I don't know my own boy. I don't think I have really talked to him five minutes in five years. I am not sure that I have really *looked* at him since he used to come to me to tie up a stumped toe. I have been so busy laying up a fortune for my only child that I have never had time to get acquainted with him. I'm getting a late start; but from now on, I'm going to make amends—if I can.'

"You'd be surprised," Mr. Baruc went on earnestly, "at the number of similar situations we run into. Why, I suppose there are annually thousands of instances throughout the country where parents discover, often too late, that they have been so busy with other things that they have failed to become acquainted with their own children.

"Of course," he added presently, "we don't refuse to help folks who haven't a jail record to recommend them. Some of our most interesting cases have nothing whatever to do with prisons or prisoners. I recall one which happened quite early in the game, almost seven years ago.

"One day shortly after we went into partnership, Dick came into my office greatly excited. 'Well, Mr. Baruc,' he exclaimed, 'I've adopted a family for us. Six children, counting both twins. Oldest fifteen, a smart girl named Nellie.'

"It seems that Dick had been walking along a dingy street not far from his room when he bumped into the children huddled on the sidewalk beside their scanty furniture. They were shivering and half-starved. Children always liked and trusted Dick. Under his kindly questioning, they told him everything.

"The mother of the little family had died a few weeks before, leaving a month-old baby. Shortly before the death of the mother, the father had been killed in a mining accident in Pennsylvania.

"During the illness of the mother, a welfare worker had discovered the little family and had cared for it as best she could. But recently she had arranged to divide the responsibility of looking after the six. The baby was to be put in a foundlings' home, the three next younger children in an orphan asylum, while Nellie and the boy next to her were to be 'farmed out' to work for their keep.

"The youngsters had rebelled at the idea of being separated and, under the leadership of Nellie, they were trying to run away. The girl was broken-hearted at the thought of losing her brothers and sisters, and she begged Dick to help her keep them.

"There wasn't any time to lose. An official was coming for the baby and the two younger children any minute. Dick acted promptly and characteristically. He commandeered a passing truck, loaded the scanty furniture, stowed the youngsters in with it, climbed up beside the driver, and rolled away.

"WHEN he started out, he hadn't the faintest notion where he would fetch up, but he strongly suspected that he would be arrested for kidnapping. While he was riding along, however, the thought came to him that it might be well to consult a friend of his, an elderly Italian priest.

"Sure enough, the priest had a solution—a temporary one, at any rate. He knew a well-to-do Italian woman of middle age who had been desolated by the loss of her only son, a brilliant young doctor, during the first year of the war. She owned the small apartment house in which she lived; indeed, most of her income was derived from renting her house. The priest happened to know that at the moment she had a nice four-room flat empty. He got into the truck with Dick and his charges, and the lot of them drove off to this woman's house.

"The priest told the woman the whole story; but at first she refused to have anything to do with such a hazardous undertaking as housing six orphan children, even though Dick assured her that he would be responsible for the rent. But Dick was wily. While they were talking, he thrust the baby into the woman's arms to hold. And the little tad played his part as if he had been coached in it. He buried his button of a nose in the woman's breast and went to sleep!

NOGAR Clothes saved this man's life—

they will save any man's money

Mr. Ottis G. Pruitt, of New York, has made affidavit to the following effect: While setting concrete forms at a height of 182 feet, a plank broke under him. He fell eight feet, when a spike caught in the seat of his NOGAR trousers and supported him until help came.

An extreme instance, of course, but convincing proof of the amazing strength of NOGAR Utility Clothes. When the fabric will stand a test like that, imagine the wear it will give you!

Men's Suits and Topcoats, $12.50 and $13.50. Boys' Suits, $9.85 and $10.85.

There is only one NOGAR Cloth and we make it. Only garments shipped direct to you from our factory at Reading, Pa., are made of genuine NOGAR Cloth. Sold only by our Authorized Representatives.

There's money for you

in selling NOGAR Clothes, either full time or part time. Representatives say they are easier to sell than anything they ever handled, and the work pays well. Write at once to secure territory.

"In the end, the woman capitulated. She agreed to keep the children until a more suitable arrangement could be made. Under the spell of the baby's burrowing nose, she even volunteered to buy the material and help Nellie make some decent clothes for the smaller children.

"Dick and the priest decided between themselves that they had found a satisfactory home for their charges, so they simply neglected to make any further search for living quarters. And, eventually, as the two plotters had anticipated, the Italian woman became so fond of the children that she couldn't bear to part with them. Before the year was up, she had legally adopted the whole bunch of them."

And now we come back to Dick Watson, with whom we began.

"When Dick lay dying in Bellevue Hospital," said Mr. Baruc, "there was at the foot of his bed a picture at which he looked a great deal. This picture showed a shepherd guiding his flock into the fold. One day, just before the end, Dick turned to me and said:

"'I guess they must let *some* sheep into the fold that ain't all white, Mr. Baruc. I got a notion,' he added wistfully, 'that they let in even the black ones that have a little patch o' white on 'em. Come to think of it, I don't believe I ever saw a sheep so black that he didn't have a little white about him somewhere, if you looked hard enough.'

"And somehow," finished the Good Samaritan of Wall Street, "I have a hunch that Dick hit the nail on the head!"

You Are Part Owner of a Hundred Miles of Books

(*Continued from page 15*)

reading-room contain thousands of volumes, and those in the smaller reading-rooms thousands more. But the main body of the books may be approached by only a few accredited students. The ordinary reader hands in a card to a desk attendant, seats himself and waits until his book is brought to him. As I was for the time being a student of the Library itself, I was permitted to wander among the book stacks under the guidance of Mr. Frederick Ashley, the superintendent of the reading-rooms.

"Three million volumes" slips easily from the tongue; but as I walked up and down corridor after corridor of book stacks I knew I had not begun to realize what the phrase meant. Sometimes these stacks rose to the height of sixty-five feet, passing right through floors of marble cut a few inches from the stacks to allow ventilation.

"If all the books in the Library were placed in one straight line," Mr. Ashley informed me, "and nine volumes were run to the foot, they would reach one hundred and two miles."

"One hundred and two miles!" I ejaculated. "Why, you would have to take a train to journey from one end of the line to the other!"

My guide smiled.

"Just the physical care of the volumes is a problem," he said. "There are two thousand windows in the Library, but as air and dust do not agree with books, with a few exceptions the windows are especially constructed to admit light only, and no air. We ventilate by means of forced draft. As sunlight is bad for books, because it fades both covers and paper, there are shades on the windows, controlled by electric buttons.

"But despite the precautions we use the books get dirty. It takes two men with vacuum cleaners six months to go over them all, and by that time those that were first cleaned are in need of a second cleansing. Some of the three million volumes very seldom leave their stacks, others wear out from handling. There is a government printing office in the building that attends to binding and rebinding. We have to bind or rebind about thirty thousand volumes a year. At one time, books were bound mostly in leather. Now, we prefer buckram, as it is unattractive to insects of any kind.

"In using the stacks we have to supplement daylight with electricity, especially as the Library is open from nine in the morning until ten at night, and on Sundays and holidays from two in the afternoon until ten at night. The buttons at the end of the stacks supply three minutes of electricity. When the lights on that row have burned that long they automatically go off; if you want to use them longer you must push the button again.

"Here"—he stopped before a stack containing what seemed to be paper-covered volumes—"is the biggest book in the world." He handed me one of the "volumes," and I found it was in reality a box holding four small volumes printed on very thin paper. I opened one, but not to read, for the characters were Chinese.

"This is what is called the Chinese Encyclopedia," he said. "It contains ten thousand pieces, each piece being a small volume like the one which you hold. The reason why the book is so large is because, instead of a twenty-six-letter alphabet like ours, the Chinese employ about thirty thousand characters. All these shelves contain Chinese books. There are about eighty-seven thousand of them, the largest collection outside of China."

"But are they used?" I asked.

"Indeed they are," Mr. Ashley assured me. "Usually there are about two thousand Chinese students in the country, and they all come here at some time or other and read and study the books of their language.

"Next to the Chinese, the biggest collection of foreign books is Russian. We have eighty thousand books in that language, with a Russian in charge. There are nine thousand volumes in Japanese, five thousand in the Scandinavian, four thousand in Sanskrit, and twenty-two thousand in the Semitic collection. In the whole foreign section there are books in two hundred languages; but we cannot

Your reading problem solved—

CHARLES WILLIAM ELIOT, LL.D.

Forty years President of Harvard University, editor of the famous Five-Foot Shelf of Books (The Harvard Classics)

"Your arrangement of passages for daily reading from the Harvard Classics has resulted in a very enticing bill of fare. I doubt whether any other device would reveal as well the extraordinary variety of material in the collection."

WILLIAM ALLAN NEILSON—President of Smith College.

"It is the Reading Guide, which in my judgment makes the ownership of a set of The Harvard Classics the greatest single source of enjoyment, as well as the chiefest source of self-benefit, that anyone can possess."

GRANT OVERTON—Distinguished Author and Critic.

"'Fifteen Minutes a Day' is indeed a valuable adjunct to The Harvard Classics and I constantly consult it with profit and delight. Here is a college education within the reach of everyone—knowledge stripped of its dull components and presented with attractive succinctness."

H. C. WITWER—Prominent Fiction Writer.

"As I ran through that inimitable reading guide, 'Fifteen Minutes a Day,' I pictured three types of women who would find it invaluable—the woman of leisure with her multiplicity of social obligations; the woman of business whose mind must be keen to meet both professional and social competition; and the club woman who must study constantly or fall behind her co-workers."

ANNA STEESE RICHARDSON—Author of "Standard Etiquette."

(A page from the new Daily Reading Guide)

And you need only turn to the Daily Reading Guide to find reading selections from the Five-Foot Shelf appropriately assigned for every day in the year. Each can be read in about 15 minutes with leisurely enjoyment. The Reading Guide carries a step further the expert selection and guidance of Dr. Eliot.

The Five-Foot Shelf of Books free you from the limitations of your age, of your country, of your personal experience; they give you access to all ages, to all countries, to all experience. They take you out of the rut of life in the town you live in and make you a citizen of the world. They offer you the companionship of the most interesting and influential men and women who have ever lived; they make it possible for you to travel without leaving home, and to have vacations without taking time from your work. They offer you—if you will only accept it—friends, travel, the knowledge of life; they offer you education, the means of making your life what you want it to be.

Since 1875, P. F. Collier and Son Company has published good books and furthers the cause of good reading by offering you the plan which enables you to pay for the books while you are enjoying them.

Since 1875 COLLIER Good Books

You owe it to yourself to act promptly!

WHAT are the few great books really worth reading? How shall a busy man or woman find them? This problem has been wonderfully solved for you by Dr. Eliot from his lifetime of reading, study and teaching. He has made it possible for you, by reading little, still to be well read.

"His influence on America," comments *The Cleveland Times* editorially, "cannot be calculated, but that it was prodigious must be admitted when one considers the thousands of men who passed under his eye and hand in the 40 years he was president of Harvard. But that he reached far beyond the Cambridge walls may be seen in thousands of home libraries throughout the land. Many denied any other guidance have gained a speaking acquaintance with the world's classics through Dr. Eliot's Five-Foot Shelf."

DR. ELIOT'S FIVE-FOOT SHELF *of* BOOKS

(*The Harvard Classics*)

Pleasure, self-satisfaction, entertainment and at the same time the delight of mental growth—these are the ideas behind The Harvard Classics. In all the world there is no other such grouping of the few imperishable writings which picture the whole progress of civilization. Send for the free booklet which gives Dr. Eliot's own plan of reading and tells how he put into the Five-Foot Shelf "the essentials of a liberal education."

Mail this coupon for the famous FREE book

P. F. Collier & Son Company, 250 Park Ave., New York City

By mail, send me the free book about the most famous books in the world, describing Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics), and containing the plan of reading recommended by Dr. Eliot of Harvard. Also, please advise how I may secure the set by small monthly payments.

Soothes, heals, refreshes your skin!

First aid for

UNSEEN NICKS

NO skin is perfectly smooth! Viewed through the microscope there are hundreds of tiny irregularities. These are bound to be roughened by even the sharpest razor.

That is why your skin smarts after shaving.

To overcome this, the tiny cuts must be healed at once. A dash of Pinaud's Lilac on cheeks and chin brings a rush of healing circulation —"first aid" to all those tiny nicks. The quick tingling shows how effective it is! Then, the next second, you feel a smooth, refreshing coolness.

Pinaud's disinfects, too, and protects the skin against chapping.

Get Pinaud's Lilac today at any drug or department store. Or send for a sample, FREE—Pinaud Incorporated, 90 Fifth Avenue, New York.

keep attendants who speak all of these, though one of our men can read fourteen languages!

"Of books in English, the biggest collection covers American history, political and social science, and public law. This part of the Library is chiefly used by people who come here for serious research, and by members of Congress and government employees. About ten thousand employees call upon the Library for help in their work. Members of Congress, naturally, have to consult the history of the country when considering the various measures that come before them. They use the Library daily."

WHEN a congressman in the House of Representatives hears something stated on the floor which he believes incorrect, and wants data on the subject, all he has to do is to summon a page boy. The boy delivers his message to one of the library attendants in the Capitol, and within fifteen minutes the desired book is delivered to him, provided, of course, it is in the designated stack.

Hurry calls from the House are often enigmas. One day a penciled note arrived:

"Dickenson's Notes." The attendant considered a minute and sent "American Notes" by Charles Dickens. He was right. It took still keener powers of divination to decipher a typewritten message from a United States senator. Presumably he had dictated it:

"The Tom Horsement of the Afolca Type."

The attendant rubbed his head thoughtfully. Then he grinned. Above the order he penciled:

"Try 'The Four Horsemen of the Apocalypse.'"

Again he was correct.

"Who's Your Schoolmaster," was readily translated into "Hoosier Schoolmaster," and "The Greatest Thing in the World" was not hard to translate from "The Biggest Thing on Earth."

"Sometimes the orders are large ones," commented Mr. Ashley. "We stand ready to deliver anything needed, from a single book to a wagonload. But the biggest order I ever remember came from Congress. It was from a representative, and read:

"'Send over everything you have on Free Trade.'

"That time we sent the books in a truck."

"What did the congressman do?" I asked eagerly.

"I am not in a position to say," replied Mr. Ashley, "The books were delivered, and after a time they came back."

Congressmen, members of the Supreme Court, the President, and members of the Cabinet may borrow books from the Library for home reading. But the bulk of the ten thousand government employees are supposed to order books for working purposes only. An employee in the Department of Agriculture asked for one of Tolstoy's works, and when refused sent an indignant protest to the effect that there was a certain cherry mentioned in it that he believed would grow in America.

"He was ingenious," admitted Mr. Ashley; "but in the face of many demands we decided to let America go without the cherry.

"Every time some big controversial subject is being aired in the newspapers the Library serves as a barometer for human reaction. For instance, when the controversy on the subject of evolution raged, the Library was hard put to it to furnish sufficient books on that subject. While the Senate was considering the World Court, there was an unprecedented demand for books on international relations.

"Two fashions in reading have grown steadily for some years. We used to supply comparatively few books on economics and religion. Now books on these subjects are widely read and there is a constantly increasing demand for them.

"I have always objected to quoting the number of readers in the Library, because a 'reader' may mean anything from a person who comes in out of the cold while waiting for a friend, to a serious student. There are two hundred readers' desks in the main reading-room, and others all over the building in the various departments. We have a number of fiction readers, who come here steadily and read nothing but fiction. Our national favorite in fiction is, beyond doubt, the detective story. It is the story read by all kinds of people, from those who come in to while away an hour to the biggest officials of the Government. Justices of the Supreme Court send for these stories. Uncle Joe Cannon was a great reader of fiction, and liked mystery and detective tales. President Wilson had a weakness for them, and sent for many. Theodore Roosevelt read them too; but he was also an omnivorous reader of history, natural history, and anything pertaining to outdoor life."

I noticed a number of fat, pudgy books near me, and moved over to see what they were.

"Those," said Mr. Ashley, "are the city directories. We have thirteen thousand two hundred of them here. They occupy over three thousand feet of shelf space, and cover seven hundred and twenty-five cities and towns. We keep every one we get, and it is surprising to see how much they are used. Every day someone comes in to find a friend or relative who lived in some town in some year. Often they are consulted on legal matters.

"Detectives trying to locate missing members of a family frequently consult the directories; but by far the greater number of inquiries come from people who are visiting Washington. A man will come in and remark:

"'I'd like to locate my cousin Joe. He used to live in Dubuque in '85. Then he went to some town in Idaho; but I just can't recollect the name. It began with an H.' As he is in earnest, he will go through all the towns in that state, and often he comes out with a post-office address.

"THE desks you see set about here and there, like this one," said Mr. Ashley, laying his hand upon a desk placed at the side of the room, "represent some of the best work the Library has ever done. They are assigned to serious students who are doing research work, with the idea of writing a treatise or book or article. We have never had enough desks; but when the new building is completed, the one filling the second courtyard, we shall have a whole floor of desks for students. At present they are in alcoves in the main

KRISS-KROSS
Fits All Makes of Blades

Men!

You'll Never Find 100% Shaving Satisfaction Until You Try This Amazing New Invention

I'll Guarantee to Keep You in Keen Razor Blades for Life!

THINK of it! 365 keen, cool shaves a year from the same blade! That's what the revolutionary invention of a St. Louis man is doing for American shavers everywhere!

KRISS-KROSS marks the beginning of a new era in shaving comfort and economy. Its performance is so sensational that it seems hardly fair to call it a stropper. Rather it is a *super*-stropper or blade rejuvenator! Almost literally, it makes a new blade out of an old one every day. No longer do you find that your blades "die" after five or six shaves. KRISS-KROSS "brings 'em to life" a surprising way, week after week and month after month—and endows them with a keenness that they seldom possess when *brand-new!* Actually—you can take a blade right out of a fresh package and improve it almost beyond belief in eleven seconds with KRISS-KROSS! No wonder experts pronounce it one of the greatest inventions ever patented!

INSTANTLY ADJUSTABLE

NEW KIND OF RAZOR GIVEN

Most astonishing razor you ever saw. Really 3 styles of razor in one. Adjustable to any shaving position for either side of the face. Novel KRISS-KROSS feature reduces beard resistance 45%. Simply *zips* through the toughest crop of whiskers and leaves your face satin-smooth and cool. Nothing like it ever on the market before. I'll send you one FREE to introduce KRISS-KROSS super-stropper. Limited offer. Find out about it today.

Magic Diagonal Stroke

Until you've seen KRISS-KROSS, fitted its sturdy, nickeled smoothness into the palm of your hand and tested its uncanny dexterity *yourself*, you'll never know how amazing it really is! It employs the famous *diagonal stroke* same as a master barber uses. Never before has anyone captured the secret of reproducing it automatically. Eight "lucky leather grooves" do the trick in 11 seconds with a precision it takes a master barber years to attain.

But that's not all, KRISS-KROSS embodies still another feature that has hitherto baffled mechanical reproduction. It strops from *heavy* to *light*. It's almost human the way it makes the strokes start with strong pressure and grow lighter and lighter until an adjustable, automatic jig flies up and notifies you that your blade is ready—*ready with the keenest cutting-edge that steel can take!*

FITS ALL BLADES

KRISS-KROSS produces unbelievable sharpness and prolongs the life of any razor blade for months and even years. Fits all brands and makes except Durham. Eliminates 83% of shaving costs and ends all bother about remembering to buy new blades! No more "raking" and scraping with dull ones, either! No more stinging and smarting that has to be relieved with messy lotions and harsh astringents. KRISS-KROSS solves your blade problem for all time and gives you keen, velvet-smooth shaves forever!

SENSATIONAL OFFER

And now for my surprising offer. To introduce KRISS-KROSS to those who have not yet seen it, I am giving with it Free a new kind of razor. Possesses remarkable features. Instantly adjustable to any shaving position. A flip of the finger makes it (1) T-shape; (2) straight (old-style); (3) or diagonal (new way). Gives a *sliding* instead of *pulling* stroke. Made of *rustless* metal. All one connected piece—nothing to assemble or screw up. Comes with 5 special-process blades and is entirely unlike anything you ever saw before!

GET FREE OFFER

Send for details and information on these surprising new KRISS-KROSS inventions today. See for yourself exactly how uncanny and ingenious they are. Read the amazing praise of enthusiastic users. Clip the coupon for illustrated description and free razor offer. Fill it out now! Mail it today!

AGENTS

Make excellent money with KRISS-KROSS. FREE razors boost your profits amazingly. H. King made $66 in one day. N. C. Paige made $104 in 3 days! Others average $350 and up to $750 a month! Many *spare-time* workers, office and factory men make $6-$12 extra a day showing KRISS-KROSS to friends and fellow employes. S. Kantala made $154 extra just working evenings 3 weeks. Get details at once. Check bottom of coupon and mail it tonight!

Every day *thousands* of men

are putting aside their old-fashioned shaving ways and joining the growing ranks of Barbasol—The Modern Way of Shaving.

Your first Barbasol shave will be like riding on the Twentieth Century after "the slow train through Arkansas."

After three shaves with Barbasol, you'll no more go back to your old ways than you'd trade the new car in for a high-wheeled bicycle.

For not even habit can hold out long against progress.

1. Wash the face (but leave it wet)
2. Spread on Barbasol (but don't rub in)
3. Shave

No brush; no rub-in! Barbasol eliminates the soap and brush. And what a pleasant relief.

Barbasol does away with the tedious rub-in. All you need to do is wash your face, spread on a thin film of Barbasol and shave.

It's just as easy as it sounds; no trouble at all and how much better your face feels!

Mister, you're next! Try Barbasol!

reading-room or almost anywhere we can place them."

In a single year one hundred and sixty such students were assisted by the Library in their special fields of research. Twenty-five of these were authors, whose published works include three hundred and seventy titles in the Library catalogue.

"One summer," said Mr. Ashley, "I had seven university professors here at the same time. They were all giving a portion of their Sabbatical year to research. Some students not only do their research work here, but actually write their books. 'The Founding of New England,' by James Truslow Adams, which won the Pulitzer prize for the most notable contribution in the field of American History made in the year of its publication, was entirely written in the Library. Ida Tarbell worked in the Library on her book on Lincoln; Herbert Quick and Hamlin Garland used the Library a great deal while working on their books. Emerson Hough secured here some of the data for 'The Covered Wagon.' Much of the valuable material on historical subjects is contained in the manuscript division, to which I am taking you."

The manuscripts of that division are so valuable that they have special cases and are always kept under glass and lock and key, to prevent handling or deterioration. In these cases are the papers of the Colonies, and of the various Presidents, which have been gathered with infinite care, until the Library has a collection of Americana worthy of a National Library. Washington's papers fill four hundred volumes!

"How could there possibly be so many?" I demanded of the historian in charge, who is himself the author of several books on American history.

"Well, you see," he said, smiling, "we are very thorough. When we keep the papers of a man like Washington they have sufficient value, as his personal possessions, to make it worth while to keep them *all*. I confide to you that they include, in addition to those of intrinsic value, every receipt for pew rent, every bill, notice or program sent to Washington and received by him. These less valuable papers naturally help to swell the total."

THE most precious manuscripts of the collection are the originals of the Declaration of Independence and the Constitution of the United States, which were moved to the Library two years ago from the State Department, and have been placed in a specially designed setting which suggests a shrine. Within a railing of our native marble, the Declaration hangs on a wall in a glass case designed like an altar piece with bronze doors, which usually hang open. Below this is a desk of marble, on the top surface of which, set in glass, are two of the nine sheets of the Constitution. Both documents are apparently brilliant yellow.

"What did you do to them?" I asked, for when I had seen them before they were ordinary parchment.

"That is a gelatin film designed to exclude the actinic rays of the sun," my guide informed me. "With that film, it is supposed that the Constitution and the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Declaration are practically indestructible, and can be kept through uncounted years."

Other manuscripts almost as valuable are displayed in special cases near-by, among them Jefferson's drafts of the Declaration, with penned notes and corrections in the handwriting of Benjamin Franklin and of John Adams; the original journal of the proceedings of the Constitutional Convention. With more modern papers is Lincoln's Gettysburg Address, and the originals of two rough drafts, showing that that famous speech was carefully thought out and prepared, and not, as some Lincoln enthusiasts have claimed, dashed off on a train on the back of an old envelope.

"You see," explained my guide, "these historical documents, of which we do not yet possess the whole, but have acquired by far the greater part, are our only means of accurately recasting our history. Upon them, and not upon the printed works, the historian of the future must rely. Such papers are constantly consulted by our writers of historical textbooks, general histories, biographies, special studies into various phases of American life, and of fiction."

Serious students who cannot come to Washington make use of the National Library by borrowing through their local libraries. Through this inter-library-loan system, begun by the present librarian, Mr. Herbert Putman, the Library loaned three thousand books last year throughout the country.

As we walked along the lower corridor, we stopped a moment at the Library for the Blind, from which forty thousand books were loaned last year to blind readers.

Many of these books are a labor of love, since they are Braille, hand-copied by volunteer workers who come to the Library to give a portion of their time to their blind brothers.

THEN we passed on to the Music division of the Library, which, as I have already said, contains the largest collection of musical scores in the world, not because we are the most musical nation but because private endowment has made it possible for this department to forge ahead.

"And we serve," its energetic head assured me, "a multitude of purposes. Students of music visit us to consult the scores of composers, and those who cannot come here often make use of our photostat service, by which we can send photographs of any score, for a slight charge. Then,"—he waved a letter in his hand—"on the other hand, we answer inquiries like this:

"'My grandfather used to sing a song called, "Muldoon the Solid Man." Can you tell me where I can get the words and music?'

"Here is another: 'Where can I get the song: "Oh, You Hop-Picking Girls"?'

"Our main trouble with correspondents is that the folks who write in to us want us to arrange programs for them. This morning I had a request from the Pacific Coast:

"'Please send a Colonial program, including numbers for a ladies' quartet, solos for high voice and low.' That is the kind of thing we cannot do. We will

A Sad though Moral Affair—Egbert J. Kelp, citizen-commuter and paterfamilias, snitched his wife's bottle of Hinds Cream to soothe his skin after shaving. He said in hospital he never expected she would find out so quick. The two were reconciled at his bedside, when Mme. Kelp brought him a bottle of Hinds for his very own. He found it right nice to rub on the egg on his head.

The cream crime wave!

It's happening every day in the best regulated families—husbands, fathers, sons, discovering that Hinds Cream *will* soothe shave-worn skins, carelessly borrow from the fair sex and borrow trouble!

What this country needs is more comfortable shaves—*after shaving.*

And every man who longs for that thrill will fill out the coupon below for a free ten-shave sample of Hinds—and an admirable non-theft device will be sent with it to keep his Hinds beside his soap and razor!

Made by A. S. HINDS CO., *a division of* Lehn & Fink Products Company

A word to the wives: Do this for *your* husband—buy him a bottle of Hinds Cream for his own. Tell him to put a little Hinds on both hands, then rub his moist hands over his face, until his fingers begin to cling to the skin.

recommend a number of appropriate selections, but the entertainment givers will have to make up their own programs. Some people even ask for wigs and costumes.

"On the other hand, we have requests that it is a pleasure to fill. Certain of the best-known popular singers will come here to go over the scores, pick out some old melodies, try them out on the one old piano we keep here, and incorporate them in next year's program. In that way the best of American (and other) music comes before a large public. We have the largest libretto collection in the world, and not long ago the German Ambassador asked for the score of an early opera of Cherubini, to be produced at the Dresden Opera House at a state function."

BEFORE I left, I wanted to wander back to the print division, where the young couple had traced the plans of their future home. No young couple was there now; but as I looked over the people at the tables I asked the genial chief what they all wanted.

"They come for a great number of purposes," he said. "That man, for instance, is a teacher of architecture who is studying here. There are students of art, young and old, who come to pore over the prints of the old masters, and students of the history of art, for we have prints of every worth-while painting in the world. We have clerics who are going to build new churches, and who go over the prints of old cathedrals.

"This, too, is a camping ground for antique hunters. They come in and study Chippendale and Sheraton, make tracings, get the lines, and go off to hunt for bargains. Often they bring their own antiques. Recently, a wealthy Baltimore woman drove over with a car full of family silver. She wanted to place it, get the history of the silversmith, and also some idea of what her treasure meant. One woman came in with a huge vase under her arm.

"'It belonged to my grandfather,' she said; 'and I always understood that it was good, and of great value. I'm motoring here from Ohio, so I brought it along.

"We hunted up the books that showed vases similar to hers, and she went home rejoiced to find that it was a good specimen.

"The mail is full of inquiries from folks who want to know the value of some home relic.

"Recently we have been overwhelmed by inquiries about prints of ships. Of all the old prints which have become valuable, ships are enjoying the greatest popularity, and everybody in the country who has a print of an old ship seems to be writing us in an endeavor to find out what it is worth. The happy owners of ship's models send in photographs, so that we can report on their artistic value.

"In summer time we have hundreds of students, not only of art but of natural history. The department has one hundred thousand photographs illustrative of birds, beasts, and flowers.

"The service of the Library, however, is not limited to the people who come here. We send sets of photographs of prints to anyone who wishes to buy them, and you would be surprised how many people do

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

wish them. Yesterday, a lady in Wisconsin wrote in for a set of portraits of the signers of the Constitution of the United States, and we are having them made for her. Sets of prints of the Presidents are rephotographed for school use. Indeed, we make hundreds of thousands of photographs of almost everything we have, including art, natural history, architecture, furnishings, and flowers.

"That man across the room is from the United States Post Office. Whenever a new stamp is to be made, they send over a man to study the portraits of the Presidents, and also all the other drawings of the stamps which have been made. He designs the new postage stamp from the portraits. We have here too, the history of many secret societies, such as the Masons. I don't mean their secrets, of course, but their badges and the designs of their costumes and scenery for special events. Last week a man out in the West wrote in:

"'Please send me the scenery for the Scottish Rite, 32d degree.' We had everything for him, to the finest details."

DESPITE the fact that there are a million visitors and readers a year, and that the prints and curios have a high value, the Library has suffered hardly any from vandalism. Occasionally a book is defaced, occasionally a print is cut from a magazine, but, on the whole, the Library is well used. Sometimes missing books turn up after long absences.

Not long ago the Salvation Army sent back a book bearing the Library mark which had been missing from the shelves fifteen years. A congressman had borrowed it; he had died suddenly, and in the settling up of his affairs the book had been carried away as his personal property. It had been sold with his effects, had traveled into parts unknown, and had finally been sent with a collection to the Salvation Army. When the mark was found the Army returned it promptly. One returned book had been off the shelves for thirty years.

By purchase and gift the Library of Congress has become the third largest in the world. Before many years it will automatically become the largest, and without expense to any of us. Through the copyright law, every writer of a book, or play, or composer of music, or photographer or maker of prints must, before securing his copyright, send two copies of his product to the copyright office. Every day these are gone over by a committee of librarians, sifted out, and those thought of sufficient importance are retained for the Library of Congress. If important enough, two copies are kept; if moderately important, one is kept; if unimportant or not desirable, both copies are rejected.

As I passed from the building, I stopped for a moment to appraise the steady stream of people mounting to the doors: Another young couple, two elderly clerics (their collars betrayed them); a florid, robust man with a broad-brimmed felt hat, maybe a congressman; half a dozen youths, students perhaps—all going to a treasure-house. For within those three million volumes is held the greatest inheritance of mankind—the crystallized wisdom of all generations.

Smoke gases do not darken 40-40-20

Smoke is the enemy of a white house. Look at the homes in your neighborhood that once were white. Smoke had a lot to do with their present appearance.

Smoke gases cannot darken a house painted with 40-40-20, because of its chemical composition. It holds its original whiteness from the time it is applied until it is finally necessary to repaint.

Paint with 40-40-20. In addition to its permanent whiteness this paint has all the good qualities you expect in a high grade paint. It spreads easily, covers well, and gives a durable and easily repainted surface. Yet 40-40-20 costs no more than other good paint.

40-40-20

REGISTERED TRADE MARK OF THE NEW JERSEY ZINC CO.

The Permanently White Outside Paint

40-40-20 is made by over 100 paint manufacturers and is readily obtainable from their representatives and dealers. These manufacturers are authorized by The New Jersey Zinc Company to use its registered trade mark, 40-40-20, on paint made from its specified products according to its specially developed formula. 40-40-20 is made in ready-mixed form in white and many beautiful tints and in paste form for the professional painter's use. Look for the genuine which carries 40-40-20 on the label. Booklet giving full information on 40-40-20, and list of authorized manufacturers will be sent on request.

Your money is

SAFE *in*—

SMITH BONDS

6½% *on $10 a month or $10,000 or more*

THE safety of Smith Bonds lies in the essential character of their basic security—modern well-located apartment buildings and office buildings in important cities of the eastern United States.

As long as these large cities exist, there will be a demand, in good localities for large buildings in which to live and to do business. Such properties produce constant and substantial incomes, and give lasting protection to investors in First Mortgage Bonds.

The F. H. Smith Company's record—

No Loss to Any Investor in 54 Years

—is due, largely, to the policy of accepting only conservative first mortgages on high-grade properties, occupying choice sites in safe cities.

Current offerings of Smith Bonds, in $1,000, $500 and $100 denominations, pay 6½%. State and Federal tax provisions increase the yield.

Invest Your Savings Under This Plan

For men and women of moderate means, and others who wish to invest as they save, our Investment Savings Plan offers the opportunity to buy 6½% Smith Bonds by payments of $10, $20, $30, $40, $50 or more a month. *Regular monthly payments earn the full rate of bond interest*—6½%.

Mail the form below for the 1927 edition of our booklet, "How to Build an Independent Income," which shows how your money will grow at 6½%, and for our new, illustrated booklet, "Fifty-four Years of Proven Safety."

"D. M."

(*Continued from page 19*)

his life in a wheel chair. To a man of such abounding vigor the shock must have been terrible.

But he refused to admit that his activities were ended. As soon as he was able to be up, he plunged into business with redoubled energy, as though to make up for the time he had lost. It seemed as though he smiled more broadly than ever, though sometimes, when he thought himself unobserved, the smile became wistful and wan.

NOT by one iota did he relax his grasp on the great enterprises which he had built up from a little country store. Though now a cripple, he manages to accomplish as much as three ordinary men. By means of wheel chairs within his stores, and high-powered motor cars to whirl him from one to another of them, he is able personally to supervise all that is going on. Even when on the road he is never idle. He usually is accompanied by his executives or buyers, holding his business conferences en route; otherwise, he spends the journey in studying the financial reports of his various stores, which are submitted to him daily.

During the summer months Mr. Edwards spends his Sundays at "Friendly Isle," his beautiful estate on the St. Lawrence.

Here is a typical Monday program:

Leave Alexandria Bay	7:00 A. M.
Motor 100 miles	
Arrive Syracuse	9:30 A. M.
Inspect Syracuse store and talk with staff	
Leave Syracuse	11:00 A. M.
Motor 90 miles, lunching en route at wayside "hot dog" stand.	
Arrive Rochester	1:30 P. M.
Inspect Rochester store and talk with staff	
Leave Rochester store	3:00 P. M.
Motor 75 miles	
Arrive Buffalo	5:00 P. M.
Inspect Buffalo store and talk with staff	
Conference with his executives at hotel in evening.	

"D. M." comes by his merchandising instincts naturally, for his great-great-grandfather, Talmage Edwards, an emigrant from Wales, settled in Johnstown, New York, prior to the Revolution, and, having learned the art of dressing deerskins and of making leather breeches, moccasins, and mittens, there began the manufacture of gloves, which is still a principal industry of the Cayadutta Valley. "D. M.'s" great-grandfather was a politician, and served in Congress—the only lapse from merchandising in five generations, for his grandfather, Daniel, opened a general store in Johnstown, New York, in 1832, and eventually became the leading merchant of that town. This business was carried on by Daniel's son, Eleazer, and it was in Johnstown, in March, 1861, that the latter's son, Daniel Murray Edwards, the subject of this story, was born.

Even before he had reached his teens, young Dan had determined to become a merchant, his liking for business being so marked that most of his time when out of school was spent in his father's store.

"Those were the days of personal attention," he told me. "My father always made it a point to shake hands with every customer, and to accompany him—or her—to the door. Under modern conditions it is impossible, of course, for a merchant to maintain such close personal relations with his customers, but I nevertheless try to follow my father's example in this respect, as far as time will permit. As a youngster in Johnstown, I was both clerk and delivery boy. I took pride in delivering purchases promptly.

"I earned my first money," he continued, "when I was twelve years old, by raising and selling three hundred cucumbers. With the money, I hired a horse and buggy from the local liveryman, and took my mother driving for a whole day. It was one of the finest days I ever had."

Upon young Dan's graduation from high school his parents offered to send him to college, but he announced that he preferred to enter the business; so, at the age of twenty, his father gave him a half-interest in the Johnstown store. It was a great day in the young man's life when they raised over the door a sign bearing the legend:

E. W. Edwards & Son

And that is the name under which D. M. Edwards has carried on his business for nearly half a century.

From what he has told me, I gather that in business matters father and son did not always see things eye to eye. The one was intensely conservative, content to let the business jog comfortably along as in the days of Grandfather Dan, whereas "D. M." was intensely progressive, even radical, in his ideas, always eager to introduce new methods of merchandising, never afraid to take a chance.

"I guess that I was pretty hard to get along with as a youngster," he told me on one occasion. "I always insisted on having my own way—and my father usually let me have it. And from the very outset of my business career, I wanted to be my own boss, to go it alone. So, when I was twenty-four years old, I gave up my interest in the Johnstown store, and persuaded my father to back me in the purchase of a store at Gloversville, New York, which I ran for four years under my own name."

THOUGH Gloversville was larger than Johnstown, and though young Edwards made a go of his new business from the start, he continued to scan the horizon for new and broader pastures. The opportunity he was seeking presented itself in 1889—he was then but twenty-eight—when he heard a rumor that, owing to the death of its owner, the Milton S. Price store, in Syracuse, one of the most widely known dry-goods establishments in upstate New York, was about to be offered for sale. He begged his father to buy it; but the elder Edwards replied that he had to attend a funeral, and that there would be time enough to discuss the matter when he returned.

"But I knew that there was no time to lose," said "D. M." in telling me the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

story. "It was too profitable a property to stay on the market long.

"No sooner was my father out of sight, therefore, than I jumped on a train for Syracuse, and the next day, on my own responsibility, bought the Price store. I had some money of my own; but I needed ten thousand dollars more to swing the deal. I had no acquaintance among the Syracuse bankers, so I went to a Syracuse wholesale house, Sperry, Neal and Hyde, with whom my father and I had been doing business for a number of years, and explained the situation. They had confidence in me, and it was to their interest to have the Price store reopened as quickly as possible, so they promptly lent me the ten thousand that I asked for.

"By working night and day, the clerks and I soon got the stock into shape. I ordered enough new goods to fill up the lines in which I was short, and then startled the town with a mammoth bargain sale. It was the biggest sale Syracuse had ever seen up to that time. Not only did I clear out the old stock, but I made enough on that sale to pay back the ten thousand dollars I had borrowed. By the time my father arrived from Johnstown I had cleared off every obligation."

MILTON S. PRICE, the picturesque original owner of the Edwards store in Syracuse, deserves a paragraph to himself: A native of that rugged region in upstate New York which produced the Cardiff Giant hoax and the original of "David Harum," he was a born trader and a born showman, having much in common with his celebrated contemporary, Phineas T. Barnum.

But his appearance was belied by his actions. The stories told of him have passed into local tradition. On one occasion, he rode his great white horse into the store, and went clattering up and down the aisles, giving his orders from the saddle. Another time he assembled all his department heads and buyers in his office, and commanded each of them to recite a verse from the Scriptures under pain of instant dismissal. Tootling vociferously on a mouth organ, he appeared at an auction sale of goods which he wished to buy, and when the din had driven away other prospective buyers, he bid in the goods at his own figures. And "Milt" Price's business methods were as fantastic and spectacular as his social capers. No wonder that when the youthful and unknown Edwards came up from Gloversville and took over the Price store, the good people of Syracuse shook their heads lugubriously, and said, "He's bitten off more than he can chew."

But, as the months passed, the pessimism of the Syracusans began to wane. This young fellow from the country wasn't such a hick or a fool as they had believed, after all. He adjusted and speeded up the machinery of the store, until it was running as smoothly and swiftly as the motor of an airplane. He was hard at work long after most people were at home and abed. He introduced new methods in merchandising and advertising. His chief competitors had been accustomed to take quarter-pages in the local newspapers; he took whole pages. Year by year his store grew, for he was constantly adding new lines, new departments, until it occupied the major portion of a city block, with

entrances on three main thoroughfares.

But the corner which he needed to consolidate his holdings, the keystone of the structure which he had so laboriously built up, was occupied by an ancient hostelry, the Globe Hotel, which was not for sale. From a retailer's point of view, it was the most desirable piece of property in the city. Had it come on the market it would have been snapped up in an hour by speculators. Its owner was a rich old lady, a Mrs. Land, who lived in Philadelphia. One Sunday evening, Mr. Edwards was having supper with the editor of a Syracuse newspaper.

"I have just heard," his host remarked casually, "that Mrs. Land has decided to sell the Globe Hotel."

Mr. Edwards pushed back his chair so abruptly that they thought he had been taken ill.

"I must ask you to excuse me," he said. "I'm going to Philadelphia to-night. I've only twenty minutes in which to catch the train."

The next morning he was ringing Mrs. Land's doorbell while that lady was still at breakfast. He wasted no time in preliminaries.

"I have just learned," he said, "that you have decided to sell the Globe Hotel."

She admitted that such was the case.

"How much are you asking for it?"

"My price is one hundred thousand dollars."

"And you expect to give five per cent of that as commission to the agent who sells it for you?"

"Yes."

"Very well. There are no agents to be considered in this deal. I will give you ninety-five thousand for the property. Here is a check for five thousand to bind the bargain."

This ability to make an instant decision was further illustrated not long ago, when "D. M." bought the piece of property in Main Street on which he has just reared a huge addition to his Rochester store.

"What are you asking for that piece of land?" Edwards inquired casually of one of its owners.

"We're not particularly eager to sell it," was the answer. "At least not at any figure that would interest you. I wouldn't consider an offer of less than a million dollars."

"Do you mean," "D. M." asked quickly, "that that's your price?"

"Why, yes. I may safely say that it is."

Edwards turned to his confidential financial man.

"Just step over to the bank, Sullivan," he ordered, "and get a certified check for ten thousand dollars. Hand it to Mr. Sibley and get an option at the price he has named."

But let us go back a bit.

AS MIGHT have been expected, the staid bankers of Syracuse, once they had recovered from their initial astonishment at the cyclonic methods of the young merchant, began to look at them askance. True, the fellow was doing a roaring business—but was his business on a sound foundation? Wasn't he climbing altogether too fast? Was he a good risk? Hadn't he "over-extended" himself?

There was some talk of calling his loans, and it was plainly intimated to him that the banks would be glad to have them reduced as much and as soon as possible. Soon it was being commonly rumored on the streets that Edwards was being pushed to the wall, that he was on the verge of bankruptcy.

His competitors were not responsible for circulating these reports, but, whatever their origin, they must be disposed of effectively if his credit was to remain unimpaired. So, a day or two later, Syracuse awoke to find an enormous sign stretched along the front of the Edwards store announcing the biggest sale in the city's history.

And it was. It was almost a riot. Prices on everything were slashed to the very bone. The Edwards establishment was choked with a milling mob of buyers. With the proceeds of the sale, Edwards paid up his loans. Bankers, now fearful of losing such a customer, hastened to assure him that they would consider it a privilege to serve him. He was made a director of the largest savings bank in central New York. Since that episode, paper bearing the name of E. W. Edwards & Son has been unquestioned.

Though, shortly after the purchase of the Price store, "D. M.'s" father, E. W. Edwards, gave up his business in Johnstown and moved to Syracuse, he gradually withdrew from active participation in the business and, upon his death, in 1914, it became the sole property of "D. M.," who still retains, however, the firm name of E. W. Edwards & Son.

BUT even the extraordinary rise of his Syracuse store failed to quiet Edwards's restless spirit, to satisfy his thirst for commercial expansion and adventure. He had always maintained that dry goods, like cigars, drugs, and candies, could be sold more profitably in chain stores; and in 1905 he took the first step toward proving the soundness of this theory by opening an establishment in Rochester. The original Rochester store was quite a modest affair, with twenty-eight departments and one hundred and seventy-five employees; but the adjacent properties were gradually acquired, and in 1926 he celebrated the twenty-first anniversary of his Rochester business by opening in Main Street, East, a modern seven-story building with a floor space of more than fourteen acres, this now being the largest of the three Edwards stores.

In 1922 Mr. Edwards pushed his business frontiers still farther westward by acquiring a store in Buffalo. Here he followed his usual policy of buying up the surrounding property, on which he erected an imposing building, opened in 1925, which covers an entire city block. Had his plans not been shattered by ill health, it is reasonably certain that ere this he would have realized his ambition of operating a chain of dry-goods stores stretching from Albany to Detroit. He spends an average of two days a week in each of his three stores.

Though Mr. Edwards is one of the busiest men in America, the door of his office is always open—I mean this literally—and he is accessible to anyone who can find him there. He detests the barriers of formality and red tape.

"I have no use for these 'whoozit 'phones,'" he once said to me. "They are a hindrance to business, and a liability to the man who employs them."

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

"What is a 'whoozit 'phone'?" I asked.

"Well," explained "D. M.", "when someone calls me on the 'phone, my secretaries are never permitted to ask, 'Who is it?' It's none of their business! They have standing orders that, if I am in the store, they are to connect me immediately with the speaker. If I am out, they take the number, and I call up as soon as I return."

"D. M.'s" mind is on business during every waking hour.

Some years ago I met Mr. Edwards at Nassau, in the Bahamas, where he had gone under imperative orders from his doctor to take a rest. For a few days he confined his energies to sea bathing at Hog Island and to seeing the sights of the little town. But it was apparent that he wasn't really enjoying himself. One morning we were strolling along the water front. A sponge-fishing schooner, its decks piled high with sponges, was being warped alongside the wharf. Instantly "D. M." was all interest.

"I'll buy the whole cargo," he announced. "Then, I'll wire to the managers of my stores to announce the biggest sponge sale in the history of the country. We'll put a sponge in every bathroom between Albany and Buffalo!"

It was only when I reminded him that for him business was taboo that I induced him to relinquish the idea. He was as disappointed as a small boy who has been refused something that caught his fancy.

"D. M." will buy anything on earth, provided he can get it at a price which promises a profit. He once bought a whole carload of fruit jars, getting them at a fraction of their value because the ship on which they were loaded happened to be sunk in New York Harbor. On another occasion he bought seven million needles at a fire sale. Again, he bought several carloads of alarm clocks, and sold them at a ridiculously low price. When they proved defective, he employed a whole corps of clock repairers and had them put in order the clock of every purchaser he could locate. It cost him many times what he had made on the clocks; but he retained the good will of his customers.

I HAVE never known a man who is so eager to listen to suggestions, or who, once convinced that he is wrong, so abruptly changes his mind.

"Nothing irritates me more," he said on one occasion, "than 'yes' men. They are the curse of business. If one of my employees doesn't see things as I do, I want him to say so frankly instead of trying to curry favor by agreeing with me. Criticisms are always more valuable than compliments, to a business man."

"D. M." insists on doing things for himself, because he believes that he can do them better. He obtains his knowledge at first-hand and acts accordingly. Not long ago he found that the sales of women's neckwear in his Buffalo store were falling off rapidly. The department head told him he needed a larger stock.

"Wheel me out in front of the store," he ordered; "I want to see for myself what the women are wearing."

The first nineteen women who passed had bare necks; the twentieth, a little old lady, was wearing an antiquated fichu.

"Clear out our whole stock of women's neckwear," he ordered. "Neckwear has gone out of fashion."

Service All the Way

An Advertisement of the American Telephone and Telegraph Company

IT IS impossible for a railroad train or a ship to call at the doorsteps of its passengers when they wish to take a journey. To take even a trolley or bus ride, one must go to some definite point where the conveyance stops. On the other hand, the telephone goes all the way to meet the public's convenience.

Each telephone call may be compared to a taxicab, whose destination is controlled by the subscriber. The telephone company extends its wires to the homes and offices of those who desire service, placing its telephones within immediate reach. The call is made at the time, from the point, and to the place that the subscriber desires. He speaks to the person he wants—wherever he may be.

At the disposal of each telephone subscriber are the talking channels of the entire Bell System. He may make a call a few or thousands of miles, and he may extend his voice to any point, to any person who has a telephone.

This is the essence of communication. Because of it, the number of telephones has increased in the last five years three times as fast as population. Because of it, the Bell System carries more than twenty billion messages in the course of a year.

Scientific Facts About Diet

A CONDENSED book on diet entitled "Eating for Health and Efficiency" has been published for *free distribution* by the Health Extension Bureau of Battle Creek, Mich. Contains set of health rules, many of which may be easily followed right at home or while traveling. You will find in this book a wealth of information about food elements and their relation to physical welfare.

This book is for those who wish to keep physically fit and maintain normal weight. Not intended as a guide for chronic invalids as all such cases require the care of a competent physician. Name and address on card will bring it without cost or obligation.

Strengthen your investment as your Income Increases ~ ~

ADAIR BONDS

Guaranteed by ADAIR REALTY & TRUST CO. *Founded 1865*

INSURABLE AGAINST LOSS OF PRINCIPAL *and* INTEREST

SUCCESSFUL investors are rapidly turning to investments that afford the double advantage of more attractive yield and impregnably guarded safety.

Such investments reach the most desirable form in Adair Guaranteed-Insurable Bonds, yielding from 6% to 6½%, and upholding all the cardinal rules of safety.

These high type bonds are fundamentally safe because of the sound, conservative and time-tried judgment that goes into negotiations for the basic loan—a thorough-going knowledge gained during 61 years' active experience in the real estate and mortgage investment field, a period during which time every dollar of principal and interest on Adair First Mortgages has been paid promptly to investors on the due date.

Adair Bonds are so fundamentally safe, they can be further safeguarded:

[1] These bonds are unconditionally guaranteed as to principal and interest by Adair Realty and Trust Company.

[2] The investor has the optional privilege of insurance against loss of principal or interest in one of America's strongest surety companies, with resources of $30,000,000.

Unless your investments are yielding 6% to 6½% with impregnable safety, your money is not earning the income it deserves.

Write today for literature that will help you *know* the status of your investments and their future possibilities.

Mr. Edwards is a born "mixer." He likes particularly to talk with men who work with their hands—engineers, carpenters, masons, blacksmiths, mechanics, day laborers. He encourages them to come and see him and discuss their problems.

"No one is too humble to give you ideas," he declares. "If you get your views only from one class your outlook on life will be lop-sided. You can't have a broad vision, you can't understand and sympathize with the troubles and perplexities of others, if you shut yourself inside a mahogany railing. Be accessible. Take the door off your office and fire the office boy. Don't keep the public at a distance. Get in personal touch with people in all walks of life. I run three big stores and have three thousand people on my pay rolls, but I'm never too busy to talk to anyone."

"D. M." deplores the fact that more and more girls are leaving their jobs behind the counter for secretarial positions.

"They seem to think that it is beneath their dignity to clerk in a store. The only indignity is in being a *poor* clerk. The truth is that we need shop girls who are more intelligent, better educated, and are prepared to make the retail business a career. Merchandising offers a clever girl a bright future, if she will only have the gumption to stick to it. The secretaries and stenographers and bookkeepers who make two thousand a year are few and far between. But an alert, intelligent, well-educated girl who starts behind the counter and takes a real interest in the business should be earning five thousand a year as a buyer or a department head in a comparatively short time. We can never get enough of them.

"The big trouble with the young people of to-day," he continued, "is that they become discouraged too quickly. They won't stick. Instead of laboriously climbing the stairs, they wait for an elevator to shoot them to the top. If it doesn't come as quickly as they think it should, they get peeved, and quit."

OVER a period of ten days, while traveling with him between his stores or at his place on the St. Lawrence, I asked Mr. Edwards innumerable questions about his ideas on modern merchandising. Here are some of his observations on the subject, jotted down at random:

"A business man is always on trial; the public is both judge and jury.

"Always encourage customers to handle goods. If a woman is attracted by something in a show case the clerk should take it out and ask her to examine it. An article once fingered is half sold.

"The future of the dry-goods business lies in chain stores. In the not far distant future you will see chains of great retail stores, highly centralized, buying in enormous quantities, and selling more cheaply than it would be possible for individual establishments to do.

"No one is indispensable to me. If I find that a man has become indispensable, I must either fire him or get out myself. One of James Gordon Bennett's editors once cabled to his chief, who was in Paris, that a certain man who was indispensable to the New York 'Herald' should have a raise in pay. 'Don't raise him. Fire him.' Bennett cabled back.

"Keep yourself constantly in the public eye; don't be afraid to do things that will attract attention to yourself. To be a good merchant you must be a good showman.

"A store must have personality. People don't like to deal with a sublimated nickel-in-the-slot machine. Mingle with your customers. Talk to as many of them as you possibly can. Dignity is all right in its place, but I would rather have people slap me on the back and call me 'Dan.'

"People will buy things which are heaped together on a counter at one price which they would never consider otherwise. That is why a bargain basement is one of the most profitable departments of a store.

"Look for the weak spots in your organization instead of congratulating yourself on the strong ones.

"It was formerly thought necessary for a merchant to be a 'joiner.' Clubs and organizations for swapping congratulations are all right, but I would rather have someone point out my shortcomings than pat me on the back and tell me what a whale of a fellow I am.

"Shiftlessness is so near to dishonesty that it needs a microscope to distinguish the difference.

"BUSINESS is better in winter than in summer. We always expect a big day after a heavy rain or a snowstorm. There is more money in selling overcoats and galoshes than in calicoes and parasols.

"Floor walkers are getting to be as out of date as the horse and buggy. People don't like to see frock-coated, solemn-faced undertakers standing about. Bright, smart boys in trim uniforms are cheaper, and equally efficient.

"If a man wishes to buy property from me for purposes of speculation, I usually make up my mind that it is good enough to hang on to myself.

"The farmer is harder to please than the city man because he has to work harder for his money and has less of it.

"In my stores there is a standing rule that goods can be exchanged or returned without question. If a man brings in a pair of gloves which split while he was putting them on, it is better to return him his money with a smile than to try to explain to him that glove-leather is not suitable for tug-of-war purposes. But it is hard to make my sales people see the wisdom of this policy.

"I never had a dollar that I couldn't find a dozen ways to spend, or a minute that I couldn't find a dozen ways to use.

"I never give a man a chance to ask for a raise in pay; if he deserves it, I beat him to it. It is cheaper to raise a man voluntarily than to let him name the figure.

"The greatest single influence on the retail business has been the flapper. She has revolutionized the American dry-goods trade. She has virtually done away with corsets, petticoats, hairpins, and cotton stockings. But she has doubled the length of every toilet preparations counter.

"The poor are the quickest pay.

"Business opportunities beckon to us from every street corner. In the history of the world, there has never been a time when there were so many chances to win out.

"Don't worry about something that has already happened. Forget it. Look forward; not backward. Think of to-morrow

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

instead of yesterday. Don't wear yourself out fretting over spilled milk; go out and milk the cow again."

If, from what I have told you of Daniel Murray Edwards, you have gained the impression that he is "hard-boiled," self-centered, ruthless, then I have failed lamentably in my attempt to draw for you a faithful portrait of the man. Hard-boiled? It is to laugh. Though shrewd where business is concerned, he is at heart as naïve and simple as a child, as tender as a woman. He is one of the most generous men I have ever known; his home town is full of stories about his unostentatious charities, his quiet deeds of kindness. He is immersed in his business, it is true; but he nevertheless finds time to serve his church, his city, its university, and many philanthropic institutions. He has always been appreciative of the services of faithful employees, and has never been too busy to look after their welfare. Talk to any one of the three thousand men and women who work for him, and you will quickly get an idea of the genuine affection which they have for him. As a local paper said editorially not long ago, "Daniel M. Edwards is not only a merchant prince; he is a prince of good fellows."

"DON'T worry, Thompson will handle the job." Such was the faith that the president of the Baltimore and Ohio Railroad had in his young engineer, Arthur W. Thompson. Whenever life threw down a challenge, Thompson snatched it up. Next month we show you Thompson in action, swinging bridges into place in record time, achieving what was considered the "impossible" by other engineers, untangling traction problems, and conquering one tough job after another, until he reached the biggest job of all—the presidency of a billion-dollar aggregation, the United Gas Improvement Company, of Philadelphia.

Don't Use Your Waste Basket as a Safe Deposit Vault!

(*Continued from page 45*)

two days sifting all rubbish collected in the vicinity of her home. But luck was against her—and us. We never found the diamond.

"Father's laundry, containing all his best shirts and all but two or three of his collars, is one of the things which oftenest get into the waste basket by mistake. This is usually the fault of a maid. Mrs. Jones wraps up her husband's laundry on Monday morning, and hands it to the maid to give to the laundryman when he calls. It is quite possible that Mrs. Jones herself has forgotten to remove her husband's best studs, his gold collar buttons, and the diamond sleeve links. The maid puts the bundle out at the back entry. She does not want to take any unnecessary steps. Pretty soon the garbage man

The **Kardex man has saved millions**

But what has he saved for you?

HOW much have you benefited by the great economic conservations effected by Kardex experts in every line of commercial activity?

Are you failing to use the expense-eliminating, cost-reducing, profit-assuring suggestions the Kardex Man is ready to place in your hands?

Almost every business man you know is using Kardex to secure better management, prevent waste, and obtain the certainty of increased earnings. The day you have a talk with the Kardex Man will start a new era in your concern, for he will show you where to plug the leaks, cut down mistakes, and provide automatic direction over the daily conduct of every department.

Although his service is priceless, he will come to you merely for the asking. Open the door—use the coupon—and he will come in!

Build Your Home for Economy and Permanence

BEAUTY and convenience are due to architectural design and interior arrangement. Economy and permanence depend upon character of material and method of construction.

Hollow Tile

The Most Economical Form of Permanent Construction

The initial cost is often less than for perishable, inflammable construction and a third or more under the cost of homes built of other types of building material.

Comparative costs of home-owning show amazing facts. On the items of upkeep and depreciation alone the monthly carrying charge often averages 200% lower for Hollow Tile construction than for ordinary frame construction. Then 25% or more is saved in heating cost due to superior Hollow Tile insulation. Other items also provide the utmost economy and savings in ownership.

Safety with Economy

Hollow Tile walls cannot burn and do not sag, warp, crack, or decay and withstand in unequalled measure the ravages of earthquake, cyclonic storm and flood. Hollow Tile homes and structures stand today practically undamaged throughout the entire devastated area of Florida.

Nothing excels Hollow Tile construction in housing comfort and maintaining investment, loan and resale values. A Hollow Tile home is the most economical to build and to own.

A book, "*Hollow Tile for the Home,*" *will be sent postpaid upon receipt of 25c.* A list of manufacturers serving your local material dealer and a leaflet, "Facts and Figures," showing comparative costs, sent free on request.

comes along and carries the laundry away with the waste paper near it.

"When Mrs. Jones gets back from calling, she asks if the laundryman came. No, he hasn't called. But the bundle has vanished. There is nothing to do but try to trace it through the street-cleaning department.

"Every Monday morning hundreds of packages of laundry are lost and returned. But Father never hears anything about it.

"IT IS easy to recover articles put into the waste basket by mistake if the loss is reported within a day or two. After that, the chances of getting property back grow slighter as each day passes. Frequently, however, property has been found in a paper mill hundreds of miles from home many months after it was lost.

"Most of the inquiries about lost articles come from women. They are made during the day when the men-folks are at business. Most wives do not want their husbands to know they have been careless about throwing out things of value.

"A most remarkable case of lost property being returned to its owner many weeks after it had disappeared in the waste basket came to my attention some time ago: A naval captain on duty aboard one of the United States warships stationed in the Hudson River telephoned to me one day. He had lost a bundle of valuable papers, which presumably had fallen into the waste basket by mistake.

"Officials told the officer where the papers from the ships had been dumped. He spent many hours going over the piles of waste paper with the sorters, but without any luck.

"Refusing to be discouraged, he boarded the scow which was to take the paper to Riker's Island. As it was put ashore, he went over every bale with minute care. But still he did not find his list.

"As a last resort, word was sent out to all the paper mills which might have received consignments of paper from New York City about that time. And, sure enough, after several months, the missing papers were mailed to the captain from a paper mill in the South, where a sorter had discovered them.

"Old books thrown into the waste basket as worthless have been known to yield important secrets. Fathers and mothers often select books as the only means of keeping things from their children. Frequently they hoard money in little-used volumes, hiding the books away on the highest and dustiest shelf in the bookcase.

"Sooner or later, one of the parents dies. The other passes on a little later. But neither leaves any trace of deeds to property, insurance papers, wills, or records of business transactions. These are still hidden away in the old books. Later, the grown-up children may decide upon a thorough housecleaning of the old home. Or they may want to move into more modern quarters. It is then that the books are thrown away. And they carry their secrets with them.

"Trophies and heirlooms which have been thrown out on the street are among the richest finds for the sorter of waste paper. These days, it seems as if young folks have very little sentiment about such things.

"I remember a man who called at my office last winter. His request was one of the strangest I ever heard.

"On his way to business that morning he had walked across West Twenty-eighth Street. Passing a certain house, he happened to notice on the sidewalk a mammoth waste basket. On top of the basket was a splendid moose-head.

"This man told me that all his life he had wanted to hunt big game. The nearest he ever came to the jungle, however, was a cashier's cage in a metropolitan bank. If he could get possession of that moose-head, he thought he might feel satisfied with fate. The department promised to help him.

"On investigation, it turned out that the moose-head had been the prized possession of one of New York's oldest citizens, who, as a very young man, had shot the animal. For forty-one years the moose-head had looked down from the walls of his study. When he died, his son had different tastes. So the head went out in the waste basket, and the bank clerk got it.

"Forty years or more ago, it was fashionable to have the members of the family painted in oils by prominent artists. These portraits always had massive gilt frames, often quite costly. Now they frequently end their days on the city dumps. When old frames look dilapidated young people throw the whole thing out. Many water-front trimmers and sorters in paper mills have won real treasures of art from these discards. Rare antiques, too, are often buried in waste baskets.

"Precious stones, particularly diamonds, are common enough winnings among those who pick over waste paper. It is not unusual, I understand, for workers about paper mills to own two or three good diamonds which have come to them in this manner. They get the rubbish from large office buildings, hotels, and hospitals—rubbish which is not picked over in the city and which may prove valuable when it reaches them.

"Diamonds find their way into garbage or old paper in different ways. It is so easy to remove rings or scarf pins from the fingers or ties, and then forget all about where they have been left. If they have been placed on a desk, bureau, or table, a handkerchief, or a newspaper, or a blotter may be placed over them. Later, they may be brushed off into the waste-paper basket, and carried away.

"WHERE diamonds are concerned, finds are keepings in a paper mill. That is, unless some special loss has been widely advertised.

"Last year, a merchant on the Bowery reported the loss of a diamond ring worth six hundred and fifty dollars. He was sure it had been carried away in the rubbish, because he had wrapped it in a piece of paper and left it on top of his desk. Someone had dusted off the blotter, and the ring was gone.

"That case looked hopeless, yet a day or so later the ring was found on the water front.

"If anything of great value is discovered it is not turned over to the person who claims it until the facts in the case are carefully investigated. If the claimant can prove ownership beyond question, his property is returned to him!

"Sorters who live in small hamlets where the chief activity is that of a busy

Manufacturers of Sectional Bookcases since 1899
Branch Office and Warehouse: Kansas City, Mo.

mill are often interested in the romantic side of their finds. An allotment of paper from New York, for example, may bring a bundle of old theatre programs which tell the history of a quarter of a century of play-going on Broadway. Canceled checks representing historic and often gigantic deals in Wall Street finance are not infrequent waste-basket finds. Small-town sorters watch eagerly for paper like this.

"Many of the most sentimental bundles come from college housecleaning after commencement. Recently an undergraduate tried to recover a bundle thrown away by mistake. It contained one hundred and seven pictures of the Prince of Wales and a pair of horn-rimmed spectacles. Twenty-five years ago, the matinée idol was found in many different poses in the campus baskets. Now the motion picture hero has taken his place.

"Love-letters are dry reading these days, even when tied with a blue hair ribbon," declared Commissioner Taylor. "Perhaps that is why so many are thrown away. Or maybe it is because young women have no place to collect them, under present housing conditions.

"Nowadays, young men are more concerned about apartment rentals and the high cost of furniture than they are with composing sonnets to a sweetheart's brown eyes. The average love-letter to-day is short and very much to the point.

"Sentiment is not dead, however. Egg cartons with valentines scribbled on the covers and milk bottles with a message tied on turn up frequently. Sometimes they have the address of a country girl who is lonely. Usually the finder is requested to write if he has the time.

"LOST letters which have never reached the person for whom they were intended tell some of our saddest stories. Pleas for reconciliation between husbands and wives or engaged couples often go astray.

"I remember, two or three years ago, one of the department men brought in a dainty Cinderella slipper. Stuffed into the tiny toe was a crumpled note hastily scrawled on the back of a dance program.

DEAR BESS: I don't see how you can ever forgive me for this dreadful thing. But if you can bear to see me again, send me a message to come to you. I shall be waiting.

Devotedly, HOWARD.

"How differently life might have turned out for a number of people if Bess had found that note!

"Court officials," said Mr. Taylor, "often find valuable criminal evidence among scraps of paper. You may recall that some years ago a prominent society girl was found mysteriously murdered in her room. Weeks of search revealed no clue to the murderer. The victim had no enemies of whom either her family or friends had heard.

"At last, one afternoon a girl chum went to the district attorney with a valuable bit of evidence. The murdered girl had once told her in confidence that a man in Boston, whom she had met at a social function, was annoying in his attentions. This clue did not lead anywhere at the time.

"But it was not long after this that a sorter in a small paper mill in Maine happened to read a scrap of paper which told about the case. Suddenly he remem-

"We must get **CHAMBERLIN** WEATHER STRIPS"

"Just feel that Draught"

FOR permanent protection against dangerous draughts that blow in through cracks around doors and windows—for permanent protection against dust, soot and rain that sift in through the same sources—for yearly savings of 20 to 40% in fuel bills, buy Chamberlin Weather Strips.

Chamberlin Weather Strips are correctly designed and Chamberlin mechanics install every Chamberlin job. These mechanics are trained and supervised to work to a standard. Consequently Chamberlin obtains accurate attention to the many installation details so important to permanent weather strip efficiency. But besides the double protection of correctly designed Weather Strips and correct installation, Chamberlin provides permanent protection as well. Chamberlin guarantees and services its equipment "for the life of the building".

THE ANTISEPTIC LINIMENT

bered that the day before, in going through a bale of paper recently arrived from New York, he had seen an envelope addressed to the murdered girl. It was postmarked Boston.

"Then and there he went over that bale a second time. He found the letter again. It contained a brief threat against the girl's life. He immediately mailed it to the authorities in New York. After that it was easy to trace down the man in Boston.

"Quantities of old gold and silver are found in garbage. Knives and forks, spoons, can openers, ice picks, and old shoes are found in every garbage can at some time or other. Along Riverside Drive and Park Avenue, pickings of this nature are likely to be most valuable. And it is rarely called for. Servants do not care about the loss, and owners are usually ignorant of it until it is too late to reclaim it. In some of the largest apartment houses, the silverware thrown away during the course of a year would equip a small hotel!

"After a big fire it quite often happens that rare jewels are recovered from ashes when they are sifted. Last summer in a Maine resort, a society woman recovered in this way jewels worth nearly eight thousand dollars.

"There was a fire in the Congressional Library in 1851. A stone bust of George Washington, executed a century ago by the French sculptor, Pierre Jean David, was lost, but a blackened bit of stone was carried away in the contractor's rubbish wagon.

"Forty years ago that marble became the property of a man who sold it for junk, a decade ago. One day the new owner decided to wash it. Immediately he recognized a work of art. The bust was sold to a collector recently for a huge sum.

"You would be surprised at the number of fur garments saved by the street cleaners. And lots of fur gloves, caps and neckpieces are found in the snowdumps as they melt away. So are overshoes and umbrellas.

"During a heavy gale countless articles of this sort are swept away from their rightful owners. If the storm is very bad, folks are either unconscious of their loss, or they are unwilling to undergo further cold and hardships to get back the missing articles. When they return home, however, or begin to thaw out beside the radiator of a comfortable office, they are likely to telephone to the inspector to see what can be done.

"Many people will admit they wear imitation pearls or glass diamonds. But when it comes to furs they will never own up that they are wearing dyed coney instead of real Hudson seal. Any little piece of squirrel or catskin may be described to the street cleaning department as sable."

For the street-cleaning department the most critical season of the year is the winter. The regular work of removing ashes, garbage, and refuse is carried on under trying conditions, because of the additional labor of snow removal. In former years regular collections often fell far behind the schedule during a storm.

An expensive winter in New York was that of 1919-1920. It was the worst in fifty years. Fifty-five inches of snow fell. In that season the cost of snow removal was $5,507,000. At that time the street cleaning department was equipped only with picks, shovels, and horse carts.

It was this stormy winter which caused the formation of a committee, at the mayor's suggestion, to handle the city's snow problem. Later, five million dollars was appropriated for the modern scientific, snow-removal apparatus now in use.

Depth of a snowfall does not measure its expense to the city. Getting rid of a twelve-inch fall may cost only half a million dollars, while another of only four inches may mean the expenditure of two millions.

A very heavy snowstorm may cost as much as $100,000 an inch for removal. Between November 15th, 1922, and March 15th, 1923, there were twenty-seven snowstorms, or about two a week. The total fall was fifty-five and one-tenth inches. Removal cost $5,500,000.

Preparations for snow removal are going forward even during the hottest days of the summer. As soon as the first flakes begin to fall, Commissioner Taylor starts his great machinery in the Municipal Building. Within thirty minutes nearly twenty thousand men—if the blizzard threatens to be severe—are at work throughout the city. Four hundred motor-driven plows are running up and down the city's snow routes every two hours. The work is done by two shifts of men.

Twenty-two hundred specially trained, licensed chauffeurs run the plows. They are trained during the summer months in four municipal schools, conducted under the direction of men in the street-cleaning department.

What becomes of the snow after it disappears from the city streets and sidewalks? In New York fifty per cent of it is disposed of in sewers. The other half is carried off in trucks to the water front and dumped into the river.

Real estate is being constantly filled in by accumulations of city waste. Riker's Island, for instance, has been built out to four times its original size. Much of the city's ashes goes to fill in swampy ground in various localities.

"The Wonder and the Mystery of Migration," by Archibald Rutledge, reveals, next month, some of the epic flights made by birds. Every year the Arctic tern wings its way from its winter home in the Antarctic Circle to the Arctic, a distance of eleven thousand miles, to rear its young amid the icebergs of the northern polar regions. During the fourteen weeks of its sojourn in the breeding grounds, the midnight sun never sets. Some migrating birds fly five and one-half miles up in the air; others fly so low that their domestic cousins answer the calls of their wild kin of the sky. Over immense distances, as if their routes had been charted for them, the aërial mariners fly. Sometimes they don their nuptial plumage en route, and find their mates at little stopovers on the passage north.

The Biggest Three Hours in Adolph Zukor's Life

(*Continued from page 37*)

fair skin, and small features, he looks much more like a Scotchman than like a Hungarian Jew, which he is by birth.

I imagine he always thinks at least twice before he speaks. On this occasion, he thought—at any rate, he waited long enough to think—several times. But when he did speak, it was very much to the point.

"What do you want me to tell you?" he asked.

"The whole story!" I said. "I believe you were born in Hungary, in some village whose name I can't pronounce. We might begin right there."

He turned his chair so that he could look at the expanse of blue sky above the Public Library across the street. It was as if that made it easier for him to recall long-ago days in far-off places.

"The unpronounceable village," he said, smiling, "was Ricse. I was born there fifty-four years ago. My father was a merchant. He died when I was only a year old. Of course I stayed with my mother; but my elder brother was adopted by an uncle. When I was seven, my mother also died and I went to live with this same uncle.

"Two other uncles were appointed as my guardians. My father had left some money; and according to legal custom over there this money passed under the control of the Government. My guardians could not obtain any of it, except by certifying that it was to be used for a legitimate purpose, such as buying necessary clothing for me.

"I WENT to school until I was thirteen, when I had finished what corresponds with the eighth grade over here. The uncle with whom I lived was a rabbi. He was educating my brother to be one; and it was taken for granted that I, too, would become a rabbi.

"But I had different ideas. All my instincts were toward business; and I begged my guardians to send me to a school where I could take a commercial course. They finally consented to let me follow a business career. But instead of sending me to a commercial school they decided in favor of a practical training.

"I was apprenticed for three years to a merchant in another little town. I lived in his home, receiving my board and lodging, but no money. Of course, like every apprentice, I did all kinds of work. But I didn't mind that. I wanted to learn, and was glad of the chance.

"But before my three years of service ended, I had made up my mind on one point: I never would be satisfied to keep a shop in a little town! *That* wasn't 'business,' as I imagined it could be. One could go just so far, no farther.

"Of course I had heard of America. I suppose every boy, in every village of Europe, does hear of this country. To them all, it is the Land of Opportunity; the only such land they know of.

How Much Valuable Space Have You Devoted to Storage?

SPACE, like time, is a valuable commodity. It is an item you recognize in terms of dollars and cents. The more you get into your space, the more return you will get from your money invested.

Globe-Wernicke steel shelving puts into each foot of your space bigger time and space saving economies.

Here's why:

It is flexible—fits anywhere. Adaptable for every storage need—with doors for cabinets and lockers—counter high for store display. Steel shelves—adjusted to any height, partitioned to any width.

In addition Globe-Wernicke steel shelving lasts a lifetime—it can be added to as needed—it is indestructible and simple to erect and finally has a high resale value.

Ask your dealer to show you how you can reduce your storage cost with Globe-Wernicke steel shelving—or mail the coupon today for the booklet "Cutting Storage Costs."

"A distant cousin of our family, a doctor, was living then in Brooklyn. I asked my guardians to write and tell him that I wanted to come to America. They did this—but received a very discouraging reply.

"The picture he painted of my prospects over here was a dark one. But my prospects over there were not what I considered bright! I knew the conditions in Hungary. There was at least a chance that my cousin was mistaken about the conditions in America. So I insisted on taking that chance.

"WHEN I reached this country, I went to live with the cousin in Brooklyn. But he couldn't seem to help me much in finding a job. Perhaps he was rather glad to prove that he had been wise in advising me not to come. I'll admit, though, that I had little to recommend me to an employer: I was small for my age, I didn't look strong, and I couldn't speak a word of English when I landed here.

"After a few months with my cousin, I came over to New York and lived on the East Side, with some friends whom I had known in Hungary. I was a visitor in both these homes; so my money—what little I had—was still holding out.

"But I had not come to America to spend my time in visiting! And when my friends proved no more successful than my cousin had been in finding work for me, I went out and got a job myself. That taught me the lesson which every boy needs to learn, sooner or later—the lesson that 'pull' doesn't amount to much.

"The job which I got for myself was in a factory where haircloth couches were made. My work, at first, was tying the springs to the framework. My pay was two dollars a week, and I worked nine hours a day. In the evenings I went to night school to learn English.

"Tying the springs required little skill, so it commanded the lowest wages. I set myself to learn the more difficult parts of the process; and before long I had advanced until I could make a couch, from start to finish.

"Of course that brought me higher pay; but the work was so strenuous that my health was beginning to suffer. I certainly hadn't come to America to lose my health! So I determined to find another job.

"A boy who had been one of my school friends in Hungary was in New York, working in a relative's fur shop. One day, at the noon hour, I hunted up this boy and had him take me to the restaurant where this relative was having luncheon.

"I was then eighteen; and this interview settled my future for the next thirteen years. On the Monday following my visit to the restaurant I went to work in this man's fur shop; and I continued in the fur business until 1904, when I was thirty-one years old.

"I liked it from the very start. At first, as in the furniture factory, I had no skill and my pay was small. But I learned rapidly—because I *wanted* to learn! And by the end of my first year I was as expert a workman as anybody in the shop.

"In the summer of 1892, I began to read in the papers about the coming World's Fair, at Chicago. Up to that time, I had seen nothing of the America which lay outside the limits of New York

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and Brooklyn. Although it had become my country, and its people had become my people, I knew very little about either. I wanted to see both; so I took the money I had saved and bought a cut-rate ticket to Chicago.

"I arrived there in July; and as that month is the height of the fur-manufacturing season, I had no trouble in finding work. I found friends, too; young men who, like myself, had come to this country as immigrants and who were working at the same trade. Seven of us lived together in a boarding-house.

"We spent our days in the fur shop and our evenings in study. We had hunted up a teacher; and fortunately we found a wonderfully good one. We were to pay her a dollar or two for an hour of instruction; but she became so interested in us that she would spend another hour, just talking with us.

"Native-born Americans do not realize how hard it is for an immigrant to fit himself into his new environment. He gets his ideas from other foreign-born people, not much better informed than he is. I was exceptionally fortunate in having the help and interest of an educated American woman, and I have always been very grateful to her.

"As you can imagine, my experience up to this time had not satisfied my hopes and ambitions. Working in factories, for a weekly wage, was as far from my ideas of 'business' as keeping a shop in a little Hungarian town. But I wasn't discouraged. I knew the foundation must come before the building. I put all my effort into two things: work and study. I didn't despise the jobs I had. In the furniture factory and in the fur shop, I made myself an expert workman—even though I didn't intend to *continue* to be a workman. And I spent my spare time in trying to learn what I thought I ought to know. That's a plain and simple program, within the reach of any boy.

"I don't even deserve the credit of my first business venture. The idea originated with one of the young men with whom I was living. He was working in a shop which made fur novelties, such as neckpieces and trimmings; and it was at his suggestion that we two decided to start in business for ourselves. Even then, I was to be only a workman. He was to solicit the orders and I was to make them up.

"BUT I did contribute one business idea," said Mr. Zukor, with a quiet little smile. "We had no capital; not even enough to buy fur for a line of samples. And, of course, if my salesman-partner had no samples to show, it would be hard for him to get any orders.

"We were counting on supplying novelties to some of the manufacturers who had more orders than they could handle in their own shops. So I went to one of these firms with a rather unusual proposition.

"I offered to go into the shop and make up a line of samples, from which they could give us orders. Of course I wasn't to be paid for making the samples. But as they supplied the materials—which we did not have and couldn't afford to buy—it helped us to get on our feet. And so, when I was twenty years old, I made my start in business.

Keeps Your Hair Neat—
Rich-looking and Orderly

IF your hair lacks natural gloss and lustre, or is difficult to keep in place it is very easy to give it that rich, glossy, refined and orderly appearance, so essential to well-groomed men.

Just rub a little Glostora through your hair once or twice a week,—or after shampooing, and your hair will then stay, each day, just as you comb it.

Glostora softens the hair and makes it pliable. Then, even stubborn hair will stay in place of its own accord.

It gives your hair that natural, rich, well-groomed effect, instead of leaving it stiff and artificial looking as waxy pastes and creams do. Glostora also keeps the scalp soft, and the hair healthy by restoring the natural oils from which the hair derives its health, life, gloss and lustre.

Try it! See how easy it is to keep your hair combed any style you like, whether brushed lightly or combed down flat.

If you want your hair to lie down particularly smooth and tight, after applying Glostora, simply moisten your hair with water before brushing it.

A large bottle of Glostora costs but a trifle at any drug store.

A generous sample FREE upon request.

Washington School of Cartooning
Room 352-E, 1113-15th Street, N. W., Washington, D. C.

"It was nothing big at first, although we made some money from the very beginning. After a while, my partner went back to Hungary, and I continued the business by myself.

"One of my friends was an older man, Mr. Kohn; a commission dealer in furs. As I was a manufacturer, and he dealt in the raw materials, we decided to join forces. We formed a partnership; he to handle the commission end, and I the novelty business.

"This partnership was a profitable one. We opened a New York factory and I came here to take charge of it. By that time I was twenty-eight years old. I had married my partner's niece and had two children. Later, we closed the Chicago office and concentrated the business in New York.

"This was the situation in 1904," he went on, after a pause. "I was a fur merchant, with no idea of changing my occupation. I had done nothing spectacular. I had accumulated some money; but I hadn't made a fortune. I liked my work, and wasn't conscious of any lack of satisfaction.

"BUT in that year of 1904, something happened which was destined to bring a great change in me and in my life. It was nothing more than a friendly call from my wife's cousin, Mr. Max Goldstein, who wanted to ask my advice. He was then associated with the late Mitchell H. Mark, who later built the Strand Theatre.

"He had been running some of the penny arcades which were popular at that time. They were so profitable that he wanted to add to his string of them; but he lacked the necessary capital. He came to me because he thought I might know of someone, among my business friends, who would back the enterprise.

"I tried to interest some of my acquaintances, but didn't succeed. However, in trying to 'sell the idea' to them, I sold it to myself. Goldstein had furnished me with facts and figures, which I used in my 'selling talk' to others. Either these figures failed to convince them, or else they hadn't any idle funds at the time. But as I continued to repeat these figures, they did convince me! I happened to have money available. So did my partner. And at my suggestion we decided to back the enterprise ourselves.

"Next to my decision to come to America, this was the most important one I have ever made. Up to that time, I had known nothing about the show business. What's more, I had known *almost* nothing about people. In the fur business, the main thing was to know furs. But in the show business, as I soon realized, the most important thing to know was people.

"I began really to study them; and I soon became so interested I could think of little else. I gave up the fur business, where I had an assured future. In my new enterprise, I didn't know *what* the future would be. But it was a wonderful experience to have a chance of thinking in terms of human nature as well as in terms of business.

"At first I interested myself in choosing locations for the new arcades. Fourteenth Street was then the heart of New York. City. On it, near the corner of Broadway, we opened an arcade which was the largest and finest in the country.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

I used to go there and stand by the hour, watching the people as they passed along the rows of penny peep-shows.

"I studied their faces and listened to their comments. That was the school where I had my first real lessons in human nature. I found it more absorbing than anything else in the world. I had begun by simply putting money into the enterprise. I soon found myself putting my mind and heart into it.

"AFTER a time, another friend turned up, with another idea. This friend was William A. Brady.

"When he came to me with his idea, motion pictures were the ugly duckling of the theatre. If people of taste and refinement thought of them at all, it was with contempt.

"Brady had a novel scheme in connection with this ugly duckling. It was called the Hale Touring Cars, and the idea was this: An imitation 'observation car,' like those which are attached to certain trains, was to be installed in an empty store. The interior of the car would be the theatre where the spectators would sit. At the end, where the observation platform of a real car is placed, would be a screen. And on this screen would be shown motion pictures of tours through various countries.

"Here was something on a much higher plane than penny peep-shows! It was a better class of entertainment, and for a better class of people. As I had already deserted the fur business for the penny arcades, I now sold my interest in the arcades and devoted all my attention to these Hale Touring Cars. We rented stores in good locations, installed the cars, and spectators were taken, for ten cents apiece, on tours through Spain, England, France, Germany, and so on.

"If the world had been larger," laughed Mr. Zukor, "the enterprise might have lived longer. But the supply of countries soon gave out. At least, pictures of the others were not available, so I had to come to some decision about what I should do next.

"The arcades were still going on. So was the fur business. As I had not lost my capital, I might have gone back to one, or both, of these enterprises. But my experience with motion pictures, brief as it was, had made me believe in their future. Here was an opportunity to build and to develop something worth while; and from a human point of view, not merely a financial one.

"So, when the Hale Touring Cars ceased to attract 'passengers,' I moved them out and began to put on 'store shows,' as they were called. The admission was a dime and the shows lasted an hour each. A two-reel picture—the usual length in those days—occupied about fifteen minutes, the rest of the hour being devoted to vaudeville acts.

"In one way, my shows were above the average, for I had picked good locations. I wanted to reach people who liked clean and respectable surroundings. I could give them these surroundings; but I had little choice when it came to the pictures exhibited on the screen. I had to take what films I could get; and these were very crude, both in subject and in execution.

"I used to beg the producers to give

Are you *this person?*

The responsibility of being the leading citizen of a community is very great. If you are the individual in your town or village to whom other people accord unusual respect, whether you are man or woman, an official or merely a citizen, you are the point around which the community revolves.

If you have never been interested in a waterworks, your town has no waterworks—and it will continue to have no waterworks, with inconvenience to everyone and a real peril from the danger of fire and disease.

When you are interested, a waterworks promptly follows.

Several years ago the printing of these advertisements began, in the hope that they would fall under the eyes of the leaders in towns that had no waterworks. Today from literally all over the world come inquiries regarding the cost and method of installing waterworks.

In many towns people are enjoying the comfort and security that come of water in purity and abundance, because a Prominent Citizen of their town read one of these advertisements and wrote for "further information."

If you are a Prominent Citizen—or merely know who he or she is—won't you write us?

THE CAST IRON PIPE PUBLICITY BUREAU
566 Peoples Gas Bldg., Chicago

CAST IRON PIPE

These posters, 8½" x 11", have proven an effective aid in many campaigns for waterworks — we will gladly send a supply of them for any community.

Will Your Child Ever Blame You?

For the Crimes Most Parents Unknowingly Commit Against Their Children?

SOMETHING more than love is due a child. And that is the right training. Unless a child receives this training he has a right, in future years, to blame his parents for the crimes they have unknowingly committed against his happiness.

And now for the first time there is a scientific method of child training. This new system shows you how to correct the *cause* of disobedience, wilfulness, untruthfulness and other dangerous habits.

This system is producing remarkable results for thousands of parents. It is *endorsed by leading educators.*

FREE BOOK—"New Methods in Child Training" is the title of a startling book which describes this new system and outlines the work of the Parents Association. Send letter or postal today and the book will be sent free—but do it now!

The Parents Association, Dept. 92, Pleasant Hill, O.

Music Lessons UNDER MASTER TEACHERS At Home

A Complete Conservatory Course By Mail Wonderful home study music lessons under great American and European teachers. Endorsed by Paderewski. Master teachers guide and coach you. Lessons a marvel of simplicity and completeness.

The only recognized Conservatory of Music giving lessons by the UNIVERSITY EXTENSION METHOD.

The ideal of a genuine Conservatory of Music for home study based upon lessons containing the cream of the life's teaching experience of Master Musicians, reinforced by the individual instruction of specialists, is now attained.

The instruction of a master—the individual touch of an accomplished teacher—is yours to command from the very moment you enroll.

NEW IMPROVED MODEL **Campbell's Automatic**

Electric Fireless Cooker

Range

Let Me Quote You My Factory Price

Wm. Campbell The Original Fireless Cooker Man

Get my special introductory price on this wonder of wonders new electric fireless cooker range. Better yet, let me send you this range upon 30 days approval test so that you can cook and bake and find out just how wonderful it really is. Read my offer below.

Costs Little to Use

The same wires that light your home will do all your cooking. You will be surprised at how little it costs. Electricity in the oven turns on and off automatically.

Better Baking—Better Cooked Foods

Flaky pie crusts—cakes that just melt in your mouth—Roasts done to a juicy tenderness. Large Pyrex window in the oven door. Oven door clamps tightly—no heat wasted. Uses electricity only about ⅓ of the time.

The automatic control insuring steady, even heat uniformly distributed to all sides, top and bottom of the oven takes all the uncertainty out of baking. Once you use this range you'll wonder how you ever got along without it. Easy payments.

Current is used only about one-third of the time. Set the oven control for the heat desired and the automatic regulator keeps the heat at the same temperature. Never too hot—never too cool—always just right for best baking and roasting results. Oven door, large cooking top and splasher back made entirely of aluminum. Range beautifully finished with French Gray enamel. Large electric fireless cooker in the bottom slides in and out like the drawer in a desk. Takes up no extra room in your kitchen—also *automatically* controlled. Put in your cooking—turn on the electricity, when the right cooking heat is reached the electricity automatically shuts off and the cooking continues. Money saving—time saving—cooks foods better.

Write Today and Get My Special Offer

My new low price will amaze you. No dealers. I sell direct from factory. Cash or easy payments. Big illustrated catalog and health book sent free. Send me your name today for special introductory offer.

THE WILLIAM CAMPBELL CO., 1005 Union Ave., Alliance, Ohio

me something better than these. But, like most people at that time, they thought that motion pictures were only a passing novelty. It wouldn't last long. In fact, the public was already losing interest. I tried to convince them that the trouble was with the pictures! If better ones were made, they would appeal to a better and bigger public. But they assured me that they knew their business and that I was wrong.

"The best reels I could get were those made in Europe; especially in France. And finally, in my search for the kind of picture which I wanted to show, I came across a film of the Passion Play, made abroad. One of my store-theatres was in Fourteenth Street, next door to the penny arcade I told you about. I rented the Passion Play film and showed it in this theatre.

"But that wasn't all! I installed an organ and engaged a quartet to sing appropriate music! To you, accustomed to the elaborate motion-picture settings and programs of to-day, this may seem a very simple thing. But at that time it was a startling and extravagant innovation.

"But I found—*just as I had hoped*—that the Passion Play did attract attention. People saw it, told their friends about it, and these friends came too. Not because they simply happened to be passing the theatre; but because I was giving them *something they wanted to see.* That was exactly what I had believed would happen.

"I used to stand in the lobby, at the close of the picture, and watch the people as they came out. I saw by their faces that they had been deeply impressed. I listened to what they said about it. And I was more sure than ever that the public did want better pictures.

"So I would start out again and try to put over this idea with the men who were producing films. But I couldn't convince them; at least, not the ones who controlled the industry at that time.

"Finally, one day I happened to be talking with a director named Porter. The company for which he was working was to be taken over by another firm, leaving him foot-loose. He agreed to come to me then and to help me produce the kind of pictures I wanted. I was determined to try out my ideas; and there seemed to be no way of doing this, except to make pictures myself.

"WHILE I was waiting for Porter, I was told that Sarah Bernhardt had agreed to do a picture, in France, of the life of Queen Elizabeth. The American agent was looking for someone to put up thirty-five thousand dollars to finance the picture. Half the amount was to be paid at once; the other half when a sample of the completed film arrived in this country.

"Here, at last, was a chance to test my convictions! One of the world's greatest actresses, taking part in a dignified production of a drama which would appeal to a cultivated audience! It seemed almost too good to be true. And yet the agent had not succeeded in finding a backer.

"His search ended when I heard of the proposition," said Mr. Zukor. "I immediately offered to put up the money; and in the early part of 1912 the sample film arrived.

"It was four reels; which seemed as

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

long then as a twelve-reel film seems now. Everyone said it was *too* long; people wouldn't sit through it. I believed they would; but, for a while, I was afraid I wouldn't get a chance to find out!

"At that time, the distribution of pictures was controlled by the Picture Patents Company and its subsidiary, the General Film Company. The vaudeville theatres, where motion pictures were shown as a part of the regular program, wouldn't accept a film which was not licensed. These two companies controlled the licenses—and they refused to give me one for the Bernhardt picture.

"This forced me to go in still deeper. I rented a theatre in New York, another in Chicago, and showed the picture myself. Acting on my belief that I could appeal to the best class of people, I selected theatres of high standing. It was the first time that such theatres were used for motion pictures.

"I hadn't enough money to rent theatres all over the country; so I sold the state rights, except for New York and Chicago. But the buyers of these state rights found themselves in the same dilemma I was in. Exhibitors wouldn't take the picture without a license. In this crisis I appealed to Thomas Edison. I knew that he was interested in the future of pictures. In response to my appeal, he interceded, and the license was granted.

"In more ways than one, the Bernhardt film made history in the motion picture world. For instance, I *advertised* it. I put paid notices in the papers. I got out posters and placards, spending money in what then seemed a ridiculously lavish manner.

"People laughed at me for advertising a movie! But the audiences came; and as I watched them, I knew I was not the fool people thought I was. This had been a test of my ideas; and, no matter what anyone else said about it, I was satisfied.

"I didn't make any money out of the Bernhardt picture; but neither did I lose any. Yet I was certainly poorer financially than I would have been if I had stuck to the fur business.

"I didn't worry about that. I was having the satisfaction of helping to build something that would satisfy a real human need and desire; and I was gaining knowledge and experience which were of more value than money profits.

"Convinced, as I said before, that my ideas were right, I engaged James K. Hackett to star in 'The Prisoner of Zenda.' He had made a big hit in the stage production. Here was a fine actor and a famous play; just the combination I wanted. I rented a studio and Edwin S. Porter, with whom I had formed a business association, directed the picture. It was the best picture that was possible at that time."

WITH the completed film under his arm, Mr. Zukor went to the offices of the General Film Company, the "trust" of those days, and sent in his name. That name, now, would instantly open the most jealously guarded door in any motion picture office in the world. But it had no such effect twelve years ago! The quiet little man was waved to a seat on a bench in the anteroom, along with other visitors of no importance.

The gentlemen in the inner offices knew

A PERSONAL MESSAGE to Men Who Want to Earn Big Money Every Year

By J. E. Greenslade

WHEN a factory worker earning only $15 a week suddenly surprises his friends by increasing his earnings to over $7,500 a year—when a stove-mounter earning only $100 a month begins to earn over $5,000 a year—when hundreds of others go from small pay to magnificent earnings—then blame yourself if you do not do equally well.

There is nothing exceptional about any of these men. They'll tell you that themselves. Many had been clerks, bookkeepers, mechanics, farm hands—in fact, they came from all walks of life. And then in a very short period of time they found themselves making more money than they had ever dreamed possible. Today they know the thrill of money-making.

PROOF!

"I was a stove-mounter earning $100 a month before taking your course. My present position as salesman pays me over $5,000 a year. There is nothing too good for me to say about N. S. T. A. It has repaid me 1,000% on my investment."
Frank Fike, Ill.

"A few years ago I was working for $15 a week. Immediately upon completion of my course I was offered a position through N. S. T. A. My earnings were from $5,000 to $6,500 a year. Today I am earning $7,500!"
C. W. Birmingham, Ohio

"Your training has enabled me to learn more, *earn* more and BE more! I am now president of a national organization and my earnings exceed the five-figure mark."
C. V. Champion, Ill.

I Pledge You My Word You Can Do It

What these men have done, hundreds have done, hundreds are doing today and hundreds will do tomorrow. And you can be one of them.

But first let me tell you why the same opportunity exists for you. In 12 months the National Salesmen's Training Association received requests for more than 57,000 salesmen from wholesalers, manufacturers, and jobbers—representative concerns all over the United States and Canada. Surely that is a tribute to the manner in which we train men for Master Salesmanship.

There are countless openings for men who really know how to sell—unlimited opportunities to make real money.

A Foolish Notion About Salesmen

For some reason many men imagine that, in order to make good in selling, they must be "born" salesmen. Nothing could be further from the truth. There is no such thing as a "born" salesman.

There are certain principles, certain rules, certain secrets to selling just as there are certain principles in mathematics and medicine. Once you know these principles you can quickly make good in the selling profession.

Step by step this result-securing system of salesmanship training takes you through every phase of selling.

Then there is the Free Employment Service at your disposal when you are qualified and ready.

Remarkable Book, "Modern Salesmanship," Sent—FREE

With my compliments I want to send you a remarkable book, "Modern Salesmanship." It will show you how you can easily become a Master Salesman—a big money-maker—how the N. S. T. A. System of Salesmanship Training will give you the equivalent of years of selling experience in a few weeks. Mail the coupon today. It may be the turning point in your life.

Eight doctors out of ten advised Nujol type of treatment

DOCTORS from coast to coast were recently asked whether they advised the Nujol type of constipation treatment to their patients. 80.7% of all these doctors answered "Yes".

64% condemned the continued use of laxatives and cathartics. One doctor said, "An almost incalculable amount of injury is done by these intestinal irritants, most of which provide temporary relief only at the cost of permanent injury. Laxatives bring on the laxative habit."

Doctors advise Nujol

Doctors who said they were advising the Nujol type of treatment told us they were advising it in place of laxatives for these reasons: 1. Nujol is not habit-forming; 2. A more natural method; 3. A lubricant is better than a laxative; 4. Does not gripe; 5. Is not irritating; and 6. Nujol gives lasting relief.

Unlike laxatives

Laxatives and cathartics act by irritating the intestinal tract. They cause the bowels to frantically expel the contents of the intestines and thus rid the system of the drugs that pills and potions contain.

Nujol acts entirely differently. It contains no drugs, no medicine. Its action is mechanical. It merely softens the dried waste matter in the intestines and lubricates the passage so that the muscles of the bowels can expel the waste matter regularly, naturally and thoroughly.

Nature-given remedy

Nujol appeals to the medical man because it is a simple, scientific and safe remedy for constipation, no matter how severe the case may be. It is gentle in its action and pleasant to take. Children love it!

Get a bottle of Nujol from your druggist today. Doctors advise it for constipation, whether chronic or temporary.

about Adolph Zukor and his crazy ideas. They already had "turned him down." Why did he keep on bothering them? Perhaps, if they made him sit out on the bench long enough, he would get tired and leave. So they let him wait; one hour . . . two hours . . . three hours.

Finally, when they found that he was still sitting there, they decided that the only way to get rid of him was to let him explain the object of his visit—and to turn him down once more. So they sent for him and asked him what he wanted.

Three hours of waiting had not ruffled his self-control. Perhaps there was a steely glint in his brown eyes, but his voice was perfectly calm and even when he replied to them.

"Gentlemen," he said, "I came to you with a business proposition. But you have kept me waiting three hours, just to show me how big you are. You never will have a chance to do that again.

"I brought you a great film. You could have purchased it for fifty thousand dollars but you can't have it now! Not for all the money in the world! I shall show it independently. And I shall continue to be independent as long as I live. Good-day, gentlemen!"

Having delivered his ultimatum, he walked out—facing the problem of how to make good his threat.

Part of his capital was tied up in "The Prisoner of Zenda." If he had sold that film, he could have used the proceeds to make another picture. But to be a distributor, as well as a producer, required money and an organization.

From one man to another, he went: a prophet preaching his faith in the future of motion pictures. Among the men whom he had converted to his belief was Daniel Frohman, a name that ranked high in the world of the legitimate drama. He had produced the play, "The Prisoner of Zenda," in his own theatre, the Lyceum. With his coöperation, the picture of the play was shown to an invited audience in that same theatre; and it was a sensational success! As a result, the money to finance its distribution was provided. Exchanges were opened, and theatres engaged in other cities. Adolph Zukor had begun to carry out the determination reached during his three hours of waiting on an anteroom bench.

BUT the men who had made him wait there were fighters too. Learning that his next production was to be "The Count of Monte Cristo," with James O'Neill as the star, another firm hurriedly made and released a three-reel film of the same play.

This was a hard blow to Zukor. But he calmly put his own film on the shelf, and started another and different one. True to his firm belief in "better pictures for a bigger and better public," he engaged the best actors and actresses and filmed the most successful plays.

When he signed up Mary Pickford, at a salary of five hundred dollars a week, his competitors gasped. Such a salary as that, for a mere movie actor, had been undreamed of. They gasped again when he produced "Tess of the d'Urbervilles" with no less an actress than Mrs. Fiske as the star. In his growing list of actors was the promise of the name of his present company; for it included such "famous

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

players" as John Barrymore, William Farnum, Cyril Scott, Gaby Deslys, and many others.

Finding that the Zukor ideas, instead of being ridiculously mistaken, were proving to be amazingly right, his competitors began to bid for the stars. He met their bids. Mary Pickford's salary mounted to a dizzy height—two thousand dollars a week! The days of million-dollar stars were not dreamed of then.

The cost of productions was also going up. Zukor had protested against the crude pictures he was forced to exhibit in his "store shows." But some people who are quite willing to tell others what to do lack the ability and the courage to do it themselves! Zukor was not like that. He was ready to take the medicine he had prescribed for somebody else.

In 1912, about $7,500 was the average cost of a picture. It has grown and grown, until it is from $200,000 to $500,000 for a feature film. Some have cost more than $1,000,000; and a few have passed the $2,000,000 mark.

"When I first put my money into the penny arcade enterprise," Zukor said, "I did not think of it only as a business venture. But when I began to see it as a means of influencing people's thoughts and feelings, I had a new conception of 'business.' Since then, I have tried to do two things: to build an industry on a sound foundation; and to make it an industry that will benefit human beings. I have made mistakes; and I probably shall continue to make them. But I never have changed, and I never shall change, my old battle cry of 'Better pictures, for a bigger and better public!'"

Boys Will Be Boisterous

(*Continued from page 55*)

to a restaurant somewheres if you care to go," suggested Mellville at this point.

"That's funny," said Myrtle. "We were just saying before you came, 'Why sardine yourself in one of these crowded food factories, when you can get measured for a hot stack of wheats right here?' Dot's a wonder at tossing the flats."

At this suggestion Dot stirred around in a closet, and soon the spluttering flat disks of white dough were turning to a golden brown on the griddle. Mellville gazed at them with the eyes of a timber wolf.

"Hungry?" inquired Myrtle. "Take off your collar and get ready for the feed bag."

Mellville looked at her sadly, and smiled a little crooked smile that was meant to indicate how totally misunderstood he was.

"Hungry? You ask me? Ah, how well you know! Yes, I'm hungry—but it's a hunger of the heart—not of the stomach!" Saying this, he permitted himself to sink gracefully down upon the piano bench.

"You don't say! My stomach gives me all the trouble of a one-man top, but my heart needs no more attention than a Dutch windmill. Remember one thing, sailor boy, you can always sell out your heart; but it's next to impossible to put

You can buy all materials for a complete home direct from the manufacturer and save four profits on the lumber, millwork, hardware and labor.

Price Includes All lumber cut-to-fit, highest grade interior woodwork, siding, flooring, windows, doors, glass, paints, hardware, nails, lath, roofing. Complete instructions and drawings are also furnished. Safe arrival of complete materials is guaranteed. We pay the freight to destination on all Houses, Summer Cottages and Garages.

Save 18% LUMBER WASTE—30% LABOR COST

The lumber that's wasted costs just as much as the lumber that's used, and the best way to cut your cost is to save the usual waste. The Aladdin System prepares all the lumber in our mills ready to be nailed in place. Cost of lumber is reduced 18 per cent, cost of labor is reduced 30 per cent. Quantity production of standard designs allows us to quote the very low prices we do, and still maintain the High Quality materials for which Aladdin Homes are noted.

Aladdin Certified Lumber

Aladdin homes are all built of beautiful, clear siding, clear flooring, clear interior woodwork, and sound, strong framing. They are permanent, year 'round houses, and are not portable or sectional in any sense. They are just like any other architect-designed, contractor-built homes in your neighborhood, and are warm in winter. You get the finest quality of materials obtainable. Our blue prints and instructions make it easy for anyone familiar with tools to erect an Aladdin. We guarantee safe arrival of complete materials and PAY THE FREIGHT to destination.

Aladdin's 21 Years' Success

is proof that you can do as thousands of other home builders do every year—save from $200.00 to $800.00 by building an Aladdin Home. There is an Aladdin near you wherever you live. Go and see one. SAVE money, time and annoyance by ordering all materials from one reliable manufacturer. Complete shipment guaranteed.

Don't carry a germ-laden throat home!

Fight sore throat All Day Long

—not just a gargle night and morning

"ONLY a sore throat," you say. "I'll gargle when I get home."

You can pay dearly for such a delay! To cure sore throat you should start to treat it instantly. And you should make your treatment *continuous*.

Unchecked, millions of germs breed every hour in an infected throat. Soon you are on the way to grippe, influenza, or a bad case of tonsilitis!

Don't run this risk! Don't rely on a mere gargle night and morning.

Formamint checks the sore throat germs by keeping the throat continuously bathed in an antiseptic of proved germicidal power. Yet Formamint is perfectly harmless to the delicate tissues of the throat.

At the very first sign of sore throat dissolve one of these pleasant-tasting tablets slowly in your mouth. Do this at intervals throughout the day—every hour or so to *treat* sore throat; every two or three hours to help *prevent* it.

Carry a bottle of Formamint Tablets with you and take one the moment you are exposed to disease in crowded street cars, stores, theatres, etc. All druggists. Bauer Chemical Co., Dept. J-1, N.Y.C.

the S. R. O. sign out on your stomach."

With the mention of the word heart, Boathook bestowed a look of disgust upon Mellville, and moved to the other side of the room, as far away as Dot's position in front of the electric grill permitted. He turned to her with admiring eyes.

"You certainly can stack 'em up high like a Chinese pagoda. It's a gift to be able to turn 'em out rapid-fire like that."

Mellville, from the piano bench, was doing his best to be indifferent to the cakes. "What I can't understand," he said, "is why a lot of fellows go raving and tearing on about food and thinking about their meals all the time, and never once give a thought to things like love and their souls."

"Well, I never missed any meals yet through worrying about my soul," said Myrtle.

"Ain't you ever been in love?" ventured Mellville.

"Say, what are you, the advance man for Cupid? No; that's one excitement I never yet paid admission for."

"Don't you think our soul has to have another soul, so that two of them can unite in a perfect union? What is love if it ain't the harmony between two souls?"

Myrtle studied him for a minute in silence.

"That may be so; but when you have the kind of hair I got—straight as a poker and with permanents at a dollar a curl—one damp day would give you more to think about than all the syncopated souls I ever run across!"

BOATHOOK, across the room, gazing at Dot's uncommunicative back while she was busy with the cakes, was running short of conversation; but he heard Myrtle, and her practical attitude reinforced him.

"I don't think a fellow ought to be worrying so much about love and things like that, while there's so many serious problems he's got to solve for himself, and, I might say, for some others as well. Don't you think so?"

Dot didn't want to give the impression of delivering herself of any offhand opinions, so she took her time before replying:

"Well, you may be right. Too many modern girls just go on and think of nothing but love, and forget that life has got a lot of problems that have to be faced."

Boathook continued to gaze dreamily at Dot's back, then suddenly he roused himself. "I guess we better start in on those cakes before you break through the ceiling with them," he said.

They called to Myrtle and Mellville that the cakes were ready; to come and help themselves.

"There are three kinds of love," Mellville was saying just as they were interrupted, "hot, lukewarm, and cold."

"That isn't love, that's running water!" said Myrtle.

"Have some cakes?" urged Dot.

"You bet I will," hastened Mellville, assisting with his plate. "No more than four, thanks. Ah! How I love to see the golden sirup flow!"

"Two will do for me," said Boathook meekly. "I know they're delicious; but I don't seem to have the appetite I used to have."

Three times Mellville's plate made the round trip before Dot noticed that Boathook had not quite completed his first allotment.

"You don't like my cooking," she complained, as if her feelings were hurt.

"That's just it," he replied. "I like it too darned much!"

The few days remaining before the ship's dance raced by like hours. Dot had promised Boathook that she would come; but he was not happy. The news about his civilian outfit had spread throughout the crew, and it was whispered that he had favored a dance, not for the ship's good but because he had turned "hoofer" himself. Some of the crew were just standing by, hoping to see the affair "flop," in order to jump on the promoters.

The first adverse break came when Boathook and Mellville tried to arrange another evening with the Hoffman sisters, and were told that this would be impossible for the time being. Not discouraged, they called up again, and this time they were informed that neither Myrtle nor Dot was at home; furthermore, that they would not be home for an indefinite time.

This was staggering news. Boathook was bewildered and did not know in the least what to make of it, but Mellville had a theory as to the reason behind this unusual conduct.

"To be on the level with you, Boathook, I think that trick costume you pulled the last time we were out there was the reason for our getting the air. And as for that mail-order college out West you tried to get by with, why, that must have given them sore sides laughing at it after we left. I did all I could to jack the conversation up to some kind of afternoon tea level, but what could I do with that trick overcoat of yours barking against me?"

While Mellville's criticism did not quite fix the blame for the sisters' sudden coolness to Boathook's entire satisfaction, it nevertheless made him think that there might be some truth in it. He did not trust his own judgment in such an important personal matter, however, so he went to his dispassionate and unemotional friend Mike, the barber, taking the coat with him.

"MIKE," he pleaded, "tell me the truth about this garment. What does it look like to you?" He put it on and stood before the barber in all the glory of his hairy blanket; but the barber shook his head.

"It won't do, Boathook. You're not built to carry any clown rags like that. What made you go off your compass so bad?"

Boathook hesitated. Exposing his petty vanity in the matter of civilian clothes was one thing, but making the revelation complete, and opening the secret magazine of his heart—even to a trusted shipmate—was a much more serious matter. However, the desperation of the situation at last forced him to confess:

"I might as well spill you the whole story, Mike. . . . I guess I'm in love. Don't kid me about it, but I'm in love with the little one of those two sisters I was telling you about. I held out till I couldn't hold out any more, and then I fell, and I fell hard, and it seems they gave us the sea-breeze. Mellville blames

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it on this coat—and a few of the accessories I bought to go with it."

Mike looked studiously into vacant space, his brows wrinkled. "As far as Mellville goes, I don't worry. He's been given the air so often he ought to be called Balloon Tire; but I guess this is a new experience for you, ain't it?"

"It certainly is. Do you remember the old navy poetry:

> Oh, love, it's a funny thing;
> It fills your soul with passion;
> It has a kick like an army mule,
> And a taste like a navy ration!

Well, that's me. She's the only bimbo I ever looked at more than once in my life."

"Don't worry about it, old-timer. The best thing to do in a case like that is to forget it, and after this stick to your uniform. That's sure-fire."

Boathook took up his coat and started to go. "Maybe you're right. It's tough, though. I was fish enough to want to marry that girl—can you beat that for being wooden, Mike? I might have known it—a high-class girl like that enlisting for life with a sailor! I could get a good laugh out of that if it happened to somebody else. Well, it learned me my lesson—a glue maker should stick to his glue." He walked away, the coat dragging behind him on the deck.

AT EIGHT o'clock the night of the dance the guests began to arrive in swarms; at eight-fifteen the ship was nearly full; at eight-thirty even the most antagonistic of the crew had to admit that the dance was beginning to look like a huge success; and at eight-forty-five it began to rain!

The ship, up to this time, had presented a beautiful appearance. The decorations had succeeded beyond the most expansive imagination. Instead of a battleship, the U. S. S. "Ohio" looked like a city carnival gone mad. And then it rained! It not only rained but it also came down by the barrelful, in torrents, as though a dozen fire hose were turned on this particular ship, with the idea of washing away every lantern, flag, wreath, and leafy branch on board. It was tragic.

The dense crowds tried to brave it out for a while beneath the awnings which were hastily spread; but the rain was far too violent. To avoid being drenched, they had to go below decks. And now in this restricted space they were huddled together, waiting for the cessation of the rain, which seemed as remote as next year's Christmas.

When it became a settled fact that the dance was ruined, the anger of the crew turned against those who were responsible. "If we'd had anything but a dance, we'd 'a' been under cover, and this wouldn't have happened," was heard on all sides. Boathook and Mellville, to escape the general wrath, had to take refuge in the barber shop, where Mike could grant them asylum from the mutterings and threats of their shipmates. It was here that the officer of the deck's messenger found them.

"There's a couple of ladies on deck asking for youse," he announced.

"What's that? Bring them down here right away," yelled Boathook and Mellville in chorus, and in a few minutes Myrtle and Dot appeared, water dripping in rivulets from their rubber coats.

All America is Turning to This New Way to Fight Fire!

NOW a new way to snuff out fire instantly is sweeping America. Now fire protection can be everywhere. A new chemical—the most effective fire fighting force the world has ever seen—multiplies itself hundreds of times in a smothering blanket of gas. Fyr-Fyter equipment shoots this harmless, stainless liquid 20 to 30 feet without the slightest damage to rugs or furniture.

By hundreds and by thousands American homes, factories, hotels, and institutions are turning to this new, sure way to blot out fire at the source. Great organizations like the Standard Oil Company, Packard Motor, General Motors, Firestone Tire, Ford Motor Co., and hundreds of others have already adopted it. The U. S. Government is the largest single user of Fyr-Fyters.

America is buying millions of dollars' worth of Fyr-Fyters yearly! They often pay for themselves in lowered insurance rates, alone! And there are countless records where Fyr-Fyters have saved lives, homes, and irreplaceable business assets.

Complete Equipment

There are Fyr-Fyters of every size for every building in America, approved by the Underwriters Laboratories. Protection costs but a few dollars. Every home should have it, and no business can afford to be without it. Play safe. Have a Fyr-Fyter man call. Write today to the Fyr-Fyter Co., Dayton, Ohio.

AGENTS WANTED

Men to Become Fire Prevention Experts

TRAINING FREE

Throughout the country Fyr-Fyter men are earning $300 to $500 a month. The field is enormous. The surface has hardly been scratched. Thousands of factories, stores, offices, schools, farms, homes, hospitals, etc., need Fyr-Fyters. Countless owners of new buildings will buy almost without question. One city block is capable of sales running into thousands of dollars.

A brand new extinguisher, at a record low price, makes sales easier than ever before. Every property owner wants fire protection at this amazing low price. Agents report any number of $30 and $40 days!

Devices Approved by The Underwriters Laboratories

FYR-FYTER COMPANY

1439 Fyr-Fyter Building Dayton, Ohio

We start you. We train you quickly. We give you a 90-page manual that covers every point. We require no capital. Let us send you a free book—"Building a Permanent Income." See how hundreds have doubled their incomes. Read how scores of men like George, Viles, DePries, Hickey, Gill, Payne, etc., entered this business and suddenly found themselves making $75 and up to $200 every week. See how easy it is to start. We do not demand all of your time. You can make a test that will prove that you can make the biggest money of your life as a **Fyr-Fyter Factory Representative.**

Send for the full facts. Simply mail the coupon.

Packard Motor Car Co. One of the big industrial plants equipped with Fyr-Fyters.

Left: One of the countless American homes protected by Fyr-Fyters.

DISTRIBUTORS WANTED

Because of the rapid growth of the Fyr-Fyter Company, we find it necessary to appoint a number of distributors. These positions should pay $6,000 to $10,000 a year and up, based on records of present distributors. Requirements are some financial responsibility, good standing in your community, and ability to handle sales to all classes of prospects, both urban and rural. The country has been zoned, and choice territories are open in every section.

Heads of organizations now selling Oil Burners, Washing Machines, Water Softeners, Electrical Appliances, etc., are especially invited to write—for they should be able to double their volume by the addition of this line. Splendid opportunity for men who know how to handle other salesmen. An ideal opening, also, for traveling salesmen who desire to locate near home.

Write fully. Address R. C. Iddings, President.

Fyr-Fyter Company, 1439 Fyr-Fyter Bldg., Dayton, Ohio.

Send me your Free Book "Building a Permanent Income as a Fyr-Fyter Representative," and full information on the selling plan.

Learn to Play JAZZ by Ear in 90 Days

Be a master of jazz, syncopation, melody. It is easy to learn at home in your spare time. Wonderful Niagara Method shows you how.

By R. C. JAMES

How I used to wish that I could sit down at the piano and pour out the golden syncopation of American melody, like the jazz piano players I had heard. How I used to wish that I could be the popular one in every crowd.

But I could not play a note. I did not know a thing about music.

Niagara Method Shows the Way

Then somewhere—just as you are reading this—I read of the Niagara Method which makes piano playing wonderfully simple. I sent for Director Wright's book "The Niagara Secret." I read the book, and I knew it was right.

I followed Director Wright's principles, and in no time I had caught on to his ideas.

Simple—Easy—Delightful

And the best part of it all is that there is nothing hard about the Niagara Method. In a short time, by following Director Wright's principles and by devoting a part of my spare time to the practical application of his course, I soon learned to play.

No tiresome scales—no arpeggios to learn—no weary hours of practice—no do-re-mi—no meaningless exercises. If you know the Niagara Method, you can sit down and reel off any popular song which the high-priced orchestra leaders play in the cabarets, clubs, hotels, dance halls, or theaters.

Decide to Begin Now

If you have never played a note, or if you do play—no matter how well—you too may become a master of jazz and melody by learning the simple, wonderful Niagara Method.

FREE BOOK Don't wait another day. Send the coupon now for the "Niagara Secret." This book is yours absolutely FREE. If 10c (coin or stamps) is enclosed you also receive wonderful booklet "How to Entertain at Piano."

Ronald G. Wright, Director
Niagara School of Music
108 Niagara School Bldg., Niagara Falls, N. Y.

CLIP THIS COUPON NOW!

J. B. SIMPSON, INC. 843 W. ADAMS STREET Dept. 1275, Chicago, Ill.

"Well, boys, we just got back to the old town at seven-thirty from Philadelphia—had an awful time swimming over here from the station. When it began to rain we just had time enough to throw on these coats and duck into a deep-water taxi," explained Myrtle.

Dot took up where her sister left off: "We thought you might not expect us—it was such a long time since we had to rush out of town."

"That's all right; I knew you'd come," said Boathook. "I was looking for you every minute."

"You bet," agreed Mellville. "I never thought anything else but that you'd get here, I sure did!"

"And now the dance is ruined," said Boathook. "But I wish you had seen the decorations before they were drenched—they were a knockout."

"It puts us in kind of a tough position," said Mellville, "because a lot of the crew was already sore on us on account of not having a smoker or a theatrical entertainment in the sail loft out there on the dock, and now that the dance is a swamp they're wild, because we didn't have a waterproof entertainment of some kind. We're in bad."

"A theatrical show?" asked Myrtle, suddenly interested.

"Yes; some sort of a vaudeville entertainment they was thinking of."

Dot rushed up to Boathook and grabbed him by both wrists. "This is my chance to tell you something. I had it on my mind to do it anyway, but this makes it easy. Myrtle and me are show girls—we do a sister act on the two-a-day—you know—and we just got back from Philly, where we were booked solid for two weeks.

"You know those Philadelphia audiences—colder than a summer day in Duluth—but we knocked them out of their seats and stretched them flat in the aisles. Our act went great. Dot—in a single—threw the house in a riot with her sentimental number, dressed in ecru net over pink; and by the time she had them flat, I stood them up again with an eccentric dance while she made a rapid-fire change off stage. Then we came on double, and repeated all the way. For a finish we closed with a jazz Charleston, and simply stopped the show. Ain't that so, Dot?"

"If it ain't I hope I never play big time again," corroborated Dot. "Now, if you want us to, we'll go on to-night, if there's a platform in that building you mentioned. We have all our props with us—make-up and all—in two suit-cases we left up-stairs on the deck. Maybe we can please that mob and keep them quiet till the rain stops."

Boathook smiled as happily as though the lemonade concession in the Sahara Desert had been suddenly handed to him.

"Oh, girls, do we want you? You'll save this ship from going right on the rocks, that's all!"

HE DOUBLE-TIMED it upon the quarter deck, and explained the situation to the officer on duty. It took but a few minutes to telephone the commandant, and get permission to use the sail loft. The word was passed, and the crew transferred enough mess benches to provide seats, the quartermasters made a curtain by stringing two large flags on a wire across the platform, the ship's band took seats in front, and in twenty minutes the show was ready to start, Boathook acting as stage manager.

After an impromptu rendition by the ship's quartet and a comic monologue by an ex-tragedian reduced by circumstances to the rank of fireman, first class, the Hoffman girls came on in costume. Their entrance was a sensation. They sang and danced without intermission, except such as the prolonged outbursts of applause provided, for forty-five minutes straight, and by that time the night was saved.

AN HOUR'S general dancing when the seats were cleared away brought the party to the time when supper had to be served; and as the rain had just about spent itself then it was possible to do this on deck, as planned. Everybody was having a wonderful time.

"You were certainly great, Dot. I don't know what would have happened to the ship without you. Why didn't you tell me before that you was on the stage?" Boathook said to Dot, when finally they were able to sit down to a table.

"I'll tell you how it was. That Sunday you met us, it was Myrtle's idea to come over on board this ship like two society girls, and meet some of the officers. Then when we met you, we just kept it up, because we didn't expect ever to see you again."

"Well, you had me fooled, and pretty bad too, for Mellville told me after you had left town that you wouldn't have anything more to do with us on account of us being sailors. Well, I'm glad you're not a society girl; but I guess it's just as bad for me, though, now that I know your life work is dramatic art."

"Dramatic art?" repeated Myrtle, who had overheard the remark from the adjoining seat, in spite of Mellville's flow of romantic declarations. "Sailor boy, you got the wrong dope on this team. What chance at dramatic art does a sister team get when you are booked to play every flag station on the ten-twent-thirt?

"Big time ain't so bad, but playing small time is something wild and frantic. The towns you are routed for wouldn't know the Count of Monte Cristo if they saw him in the movies, and they can just about tell the difference between Doug Fairbanks and Uncle Tom's Cabin. The work we do for our fifty per is art, all right, and you bet it's dramatic; but it ain't dramatic art!"

"Then why keep on with it?" asked Boathook, turning to Dot. To this she was unable to make a reply, so Boathook followed up his advantage.

"If I go back to Dubuque in six weeks, when my enlistment ends, and finish my college career and get my diploma, will you break up the team?"

"Sure I will," said Dot, smiling happily; and, looking at Myrtle, talking so earnestly to Mellville, she added, "unless Myrtle beats me to it."

At the mention of her name Myrtle raised her eyebrows. "Back to the university? Well, I'm delighted to hear it. Not for the learning, Boathook, but you certainly do look all the berries in a coonskin coat!"

The Biography of a Puppy

(*Continued from page 9*)

have him than a dozen prize-winners."

So it was that pup after pup of the five disappeared from the shaded yard, as buyer after buyer came for them. Soon, Sandy alone was left. Twice, people who care more for the inside of a dog's brain than for his mere show points asked half-shamefacedly the price of the blue-eyed and gangling Sandy. Always the Superintendent's answer came:

"There isn't any price on him. He's going to be the Boss's own dog."

But it is one thing to pick out a puppy for one's "own dog," and quite another to make him into a dog worth having for one's own. There is the same difference as between saying that a half-grown boy has a strong legal bent of brain, and in giving that same boy a fifty-thousand-dollar lawsuit to handle. With even the most promising pup, there is much to teach before he can qualify as an ideal house dog; nor is the education a mere matter of weeks or even of months.

Left alone in the puppy yard, Sandy consoled his loneliness by fierce battles with the huge old hiking shoe which the Master had tossed in there for him. It was Sandy's favorite toy; and he used to worry it and gnaw it and tussle with it by the hour. He didn't know he was acquiring thus the scent of the Master's steps, by constant gnawing of his cast-off footgear; nor that he was toughening his jaw muscles on the stiff leather and giving needed exercise to his forty-two teeth. He was learning.

AT FOUR months he was taken out with the grown collies on the shorter of their two daily runs. It was rough pastime. As he sought to join in their romps, he would be knocked over a dozen times a day. The big dogs did not mean to hurt him and did not even admit him to their gay rompings. But one or another of them, unintentionally, would brush against the interfering youngster and bowl him over.

Again, he was learning. He learned that when the Master called or whistled, the grown dogs always came galloping to the summons. Imitatively, Sandy did the same. He was discovering that when the Master whistled or called, it was the correct thing to come scampering up to him.

Besides, he was growing to like the Master more and more. It was fun to be allowed on these runs with the older dogs, and to share with them an occasional scrap of biscuit or other titbit from the Master's pocket.

Even as the newcomer in a boys' school instinctively likes the instructor whom the other and older fellows like best, so Sandy was learning to like the Master. He was learning to come at call, even while he thought it was all a game.

But presently things began to happen which, for a time, made him loathe and fear this Master whom he had learned to like so well. The man seemed to be selecting Sandy as the butt for incessant and cruel teasing. For instance:

How to get 8 hours of Sound Sleep

Now from Switzerland...a safe, natural way to Instant Sleep — that rests and rebuilds—and gives you renewed energy

Modern science has found a natural way (a way without drugs) to instant restful sleep that quickly restores your tired mind and body.

You go to sleep almost as soon as your head touches the pillow—sleep "like a top" until six or seven in the morning—and get up abounding with healthy vigor!

You have the energy to carry you right through the day and into the evening. *That is the experience of most Ovaltine users.* A 3-day test will show you. We urge you to make this test. It is well worth while.

Sound sleep—active days

Taken at night, a cup of Ovaltine brings sound, restful sleep and all-day energy quickly and naturally. This is why:

FIRST—it digests very quickly. Even in cases of impaired digestion. It combines certain vitalizing and building-up food essentials in which your daily fare is often lacking. One cup of Ovaltine has more real food value than 12 cups of beef extract.

SECOND—Ovaltine has the power actually to digest 4 to 5 times its weight in other foods which you eat. Thus, soon after drinking, Ovaltine is turning itself and other foods into rich, red blood.

This quick assimilation of nourishment is restoring to the entire body. Frayed nerves are soothed. Digestion goes on efficiently. Restful sleep comes. And as you sleep you are gathering strength and energy.

Hospitals and doctors recommend it

Ovaltine is a delightful pure food-drink. In use in Switzerland for 30 years. Now in universal use in England and her colonies. During the great war it was included as a standard ration for invalid soldiers.

A few years ago Ovaltine was introduced into this country. Today hundreds of hospitals use it. More than 20,000 doctors recommend it. Not only as a quick "pick-up" beverage, but because of its special dietetic properties, they also recommend it for restless sleep, nerve-strain, malnutrition, backward children and the aged.

A 3-day test

Just make a 3-day test of Ovaltine. Note the difference, not only in your sleep, but in your next day's energy. All druggists sell Ovaltine in 4 sizes for home use. Or they can mix it for you at the soda fountain. But to let you try it we will send a 3-day introductory package for 10c to cover cost of packing and mailing. Just send in the coupon with 10c.

Now more than 20,000 doctors recommend Ovaltine

OVALTINE

Builds Body, Brain and Nerves

© 1926 T.W.C.

I was in a run-down condition—could not sleep at night. Since taking Ovaltine I feel a 100% better and do not get tired during the day. I take Ovaltine three times a day and now sleep very well.

Claude Mitchell
Hibbing, Minn.

Many thanks for the 3-day test of Ovaltine. I think it is wonderful. The first night I took it I had a good night's rest. I know it is going to give me just what I want—good sleep.

M. J. Culford
Philadelphia, Penn.

At first, toward the end of the daily scamper, the Master had picked Sandy up and put him back in the puppy yard. But one day he did not pick up the youngster. Instead, he ordered the other dogs into their yards, and then stood in the puppy yard's open doorway. He called Sandy to him.

Now this was like ordering back into the schoolhouse a boy who is in the midst of play. Sandy had been having a beautiful time, gamboling around with the big dogs. There were a million delightful things to do, around the grounds and in the lake. It was slow, to be cooped up in a yard, with only a torn old shoe to play with. Sandy was not minded to go in.

True, the Master was calling him. But that meant little enough. It was all right to come on call when he and the others were out on their walk. But what was the sense of obeying when obedience meant imprisonment? The idea was absurd. Sandy trotted off.

But the voice of the Master followed him, insistent, compelling, monotonous. It seemed almost as if it had a thin string fastened to it, drawing the puppy toward the yard. Sandy stopped trotting. He looked back at the Master with an ingratiating smirk. He wagged his tail merrily. But still the Master stood beside the yard gate, and still he called. Sandy took a few steps toward him. The voice became encouraging, friendly, coaxing.

But there was the yard, and there was imprisonment. Sandy stopped. The voice did not stop. It kept on calling, quietly, but insistently. This performance began to get on Sandy's nerves. He galloped off. But again he stopped. He could feel the voice pulling him mysteriously backward. He approached, this time to within ten feet of the gate; only to scurry away.

OVER and over were the retreat and the mincing advance repeated. Sometimes the puppy ran almost out of hearing. Sometimes he came within arm's length of the man. But always he would sheer off from entering the prison yard. Once or twice he lay down, turning over on his back and waving his paws and rolling his eyes. But ever the voice hammered quietly away at him.

The Master was not a patient man. Fifty puppies he had broken to this supreme obedience test; and always he dreaded the temper-fraying ordeal of it. He yearned unspeakably to let some of his impatience creep into his monotonous voice; and even to grab the wretched pup by the scruff of the neck and sling him bodily into the yard.

But such loss of self-control would be too expensive a luxury. It would wreck forever his hope of establishing between himself and Sandy the perfect association he was striving to form. There was nothing for it but to assume a serenity he did not possess; and to keep on calling the stubborn youngster—to break the young collie's will, by human patience.

For a solid half-hour the somewhat ludicrous scene continued. Then, with a sound between a gasp and a sob, the puppy ran into the yard.

Instantly, Sandy found himself the recipient of as much patting and extravagant praise as if he had saved fifty heroines from drowning. A handful of gorgeously desirable animal crackers accompanied the praise and petting.

Sandy's nerve-rack fled. He realized that he had done a most remarkably brilliant thing in obeying the order to go into his yard. He grew ecstatically pleased with himself. Nor, ever again, did he refuse to enter the yard at command, or to obey the Master's call. He had no taste for a repetition of that eternal will-breaking, patient voicing of his name and the incessant gesture toward the open gate.

SANDY had learned something more: He had learned that human will power is greater than the dog's. It was a lesson which taught him much, without smashing his self-respect or his spirit. True, the Master might have given the pup a terrific beating for not entering the yard at command; and might then have kicked him into it. But, in doing so, he would have snapped the delicately forming bond between himself and his dog; a bond which one day would be stronger than forged steel.

A collie's mental and psychic mechanism is ten times as sensitive as are the works of a two-thousand-dollar watch.

During the next week or two there were long woodland rambles, alone with the Master; walks that were a prideful delight to the puppy. Then recommenced that seemingly nagging ill-treatment.

On a walk, for instance, Sandy was not allowed to run free, except during the homeward half. For the first half, he was equipped with an uncomfortable soft collar, to which was attached a leash. For a while, collar and leash were torments. Then, bit by bit, the puppy learned that if he kept at a certain pace, and did not tug nor hang back or get between the Master's feet, the leash did not tease him at all.

But, barely had he learned to "lead" when a new imposition was invented. As he trotted ahead of the Master on his leash, he would hear the sharp order, "Heel!" At the same time the leash would draw him quietly but irresistibly backward until his nose was on a line with the man's heel. There seemed no sense at all in this.

Then Sandy thought out a crafty way to avoid the uncomfortable haul on the leash. When he heard the command to "heel," he dropped back instantly without giving the leash a chance to pull him. For some reason, this ruse was rewarded by praise as extravagant as had greeted his entering of the yard gate. Sandy discovered again that he had done something brilliant. Thereafter the call of "heel" was eagerly looked forward to, in order to show off his new trick.

Torment after torment resolved itself, in increasingly brief time, into a mere game; ending with the achieving of some brand-new accomplishment which called forth praise and animal crackers. Presently, Sandy found himself eager to learn. He grew to recognize each successive kind of teasing as the mere preliminary to another delightful trick.

But the world was full of queer and incomprehensible laws—laws that were so easy to break, so hard to remember! To shake and rend a disreputable burlap bag found behind the stables—this was permissible. The pastime was even

221 TAKE A LUDEN'S MILLIONS DO

When quiet should reign—coughing is inexcusable!

Coughing is always annoying, but in public places—churches, theatres, libraries, or wherever quiet should be maintained, a cough is a nuisance to everyone.

A New York man writes:—
"I spend considerable time in libraries where coughing is decidedly objectionable, and, as I suffered from a throat irritation, I formed the habit of carrying Luden's—they control the throat irritation perfectly."

A theatre goer says:—
"I enjoy the movies and the theatre but stayed away because the crowd, or stuffy atmosphere, or perhaps my nerves, caused me to cough distressingly. But since I learned the effectiveness of Luden's, I go often without fear of disturbing others in the audience." *(Original letters on file)*

The exclusive menthol blend in Luden's Cough Drops brought relief over a billion times last year to sufferers from coughs, colds, hoarseness and irritations of the nose, throat and chest. All considerate people have the Luden habit.

Applicants must be between 25 and 40 years of age with Normal School or College training and teaching experience—able to work the entire vacation and free to travel extensively. Give age, training, experience and time you can start. Write today for full details about our interesting Summer Travel Plan.

F. E. COMPTON & CO., Dept. A-90
1000 N. Dearborn St. Chicago, Ill.

Mrs. L. R. PIPER
District Manager
Minneapolis Office
Started work with us one summer. Now one of many high salaried executives who came to us from the schoolroom.

viewed by the humans with amusement. But to try the same merry game with the music-room tiger-skin rug—this brought down on Sandy a fearsome scolding and a day's banishment from the house. Yet, where lay the difference?

To gobble hungrily his dishful of bread and milk, in the kennel yard, was lawful. To assail with the same zest a luncheon dish that had been set down for a moment on the dining-room serving table—this was a black crime, and punishable as such. Why?

To pursue a stable cat up a tree was a legitimate sport. To rush harrowingly at Tippy, the Mistress's fluffy gray Persian house cat, as she drowsed on a living-room couch—this was fiercely forbidden. And so on, for a score of instances.

Bewilderment after bewilderment, blunder after blunder, marked the first month or two of Sandy's apprenticeship as a house dog. More than once, the Master despaired.

Here was no super-puppy, as had been Sunnybank Bobby; knowing by strange instinct the things that may or may not be done, and needing only a single lesson in any accomplishment in order to acquire it for life. Here was no such blameless dog as had been Bruce, Sandy's glorious grandsire, without a flaw of body or of mind; nor as old Sunnybank Lad, who had learned with the same unbelievable quickness and half-human intellect as had Bobby himself.

No, Sandy was in some ways just an average collie pup; and to be labored with as such. Only when the Master noted afresh that stanch look in the pale blue eyes or an occasional instinctive bit of steady nerve or of fine brainwork did he realize he had been right in his early judgment of the young dog.

THERE was an utter absence of fear too, in Sandy; and a lack of the crazy bumptiousness which marks the average lively pup of his age. Besides, he had a way of thinking things out for himself; and of devising games, which he played with solemn ingenuity.

His chief joy, for a time, was to carry magazines and newspapers from the veranda table to the lawn and there to tear them to small fragments. By the time he was broken of this, he had discovered a new and far more fascinating game.

The time was spring. Along the lake shore at the foot of the lawn lay an occasional very dead fish. These fish became the joy of Sandy's life. He did not eat them. But they had a most alluring fragrance, a fragrance which he transferred to himself by rolling on them.

But the pup seemed to realize that this was a selfish pleasure, at best, and that it ought to be shared with someone he loved. Accordingly, he would scour the lake shore for perhaps a half-mile until he came upon a stranded fish of sufficient deadness. This he would pick up tenderly and carry it intact to the Master, wherever the latter might chance to be.

Oftenest, the horrible gift was presented while the Mistress and the Master were at breakfast or at luncheon in a vine-shaded corner of the veranda. If the wind chanced to set in the opposite direction, the Master's first knowledge of Sandy's presence was when the puppy

To such charming ladies as

Billie Burke

St. Valentine's Day is dedicated

SINCE the good old days when every gallant picked some lovely lady for his Valentine, the romantic custom has never waned.

Today, more than ever, it is proper to send Valentines—not only to our friends and relatives, and of course to the children—but also to those we admire—the actresses, the writers, the artists, the singers—all who have given us happiness and inspiration through their artistry.

ST. VALENTINE'S DAY IS FEBRUARY 14

The lives of our friends and relatives are full of occasions when the sending of a message of congratulation, praise, love or encouragement is the correct and kindly thing to do. In any good shop you will find a generous assortment of tasteful cards suitable for each occasion.

Scatter Sunshine with Greeting Cards

Anne Rittenhouse, noted social authority, has written a most interesting book on the modern usage of Greeting Cards, which includes fifteen pages for lists, arranged conveniently. Simply mail 25c with the coupon for your copy.

The Greeting Card Association
354 Fourth Avenue, New York City
Enclosed is 25c. Please send me, prepaid, "Greeting Cards—When and How to Use Them."

HIGH EFFICIENCY TRADE ILG MARK VENTILATING MACHINERY

Ventilation —For Your Kitchen

MAKE your kitchen an inviting spot; remove every trace of cooking odors and greasy atmosphere with an ILGAIR Ventilator — a compact electric exhaust fan that can easily be installed in the kitchen window sash, transom or wall opening of your home. It costs but a few cents a day to operate and the change in the air is delightful. Ask your electrical or plumbing supply dealer for demonstration or send for 48 page illustrated catalog.

FOR OFFICES, STORES, FACTORIES, PUBLIC BUILDINGS, RESTAURANTS, THEATRES, HOMES, ETC.

ILG ELECTRIC VENTILATING CO. 2868 N. Crawford Ave. CHICAGO

Don't Be Ridiculous!

IF you leave the delicate lining of your throat unprotected you're almost as silly as this "snow-bird." Cold air, dust, germs, striking your throat cause coughs and colds. It's dangerous. Why take the risk?

Smith Brothers' cough drops safely protect and gently medicate the throat tissues. They quickly soothe irritation, relieve hoarseness, ease and stop the cough. Your whole throat is cooled, cleared, and refreshed.

Two kinds: S-Bs (licorice) and Menthol (orange box). Keep a box handy always. 5c

"The cheapest health insurance in the world"

SMITH BROTHERS COUGH DROPS

would lay the fish carefully across one of the man's boot toes; then step back with happy pride in his human god's certain rapture at the token.

There was hurt wonder in Sandy's pale eyes as sizzling rebukes, instead of praise, followed upon the gift. Slow was he to grasp the fact that such a delectable morsel could be less welcome to the Master than to himself.

It was a long and discouraging process to make the generous pup understand that the fish were not desirable, and that it was against the Law to bring them up onto the veranda or into the house.

For, by this time Sandy had formed the habit of bringing the Master a dozen presents of various kinds, every day. He rummaged in the stables until he found the rubber boots used by the men in washing cars or dogs. Thoughtfully chewing the foot off one of these boots, he bore it to the Master, and laid it at his feet. Or it would be a bone, whence the meat long since had been gnawed; or a car-cleaning rag or a square of chamois or a defunct mouse.

THE lanky young giant of a collie spent hours a day hunting Sunnybank for any trophy which he could lug to the Master. Then, one noon, he found a genuine prize. He cornered a big and vicious rat behind the stables; and attacked the rodent with enthusiasm. He was not battling for himself, but for the man who was his god.

The rat nipped Sandy again and again on lips and underjaw. But the pup did not flinch. Presently he was able to drive his white teeth into the back of the hotly-fighting rat and, with one shake, to end the duel.

The Master was at lunch on the veranda. Something plopped soggily down across his feet. It was a large and newly-slain rat. Sandy, with eagerly wagging tail, stood there, his mouth badly bitten and scored, but his eyes bright with happiness. He had fought and he had killed, and he had brought his kill to his god. What mattered a bitten mouth?

The Master was in a quandary. He dared not scold or punish Sandy, lest the puppy think he was chastised for killing a rat. Such a course would make him worthless, henceforth, as a rat-catcher. So the pup was praised for the deed. The Master took up the rat by the tail and carried it far out into the garden and buried it there. Somehow, he did not feel a desire for any more lunch. So he went into his study to begin his afternoon work.

Half an hour later he heard a shuffling sound just outside the study. He opened the door. There, on the threshold, and crusted with fresh garden-earth, lay the defunct rat.

Sandy had tracked the Master's steps to the garden. There, he had located the rodent's grave and had dug up his grisly trophy. He had carried it to the study's shut door—as near as he could get to the Master—and he had left it there.

Next day, the Mistress brought back from the village a large and truly magnificent white canton-flannel dog. By the gift of a canton flannel elephant, years agone, she had taught Gray Dawn, Sandy's sire, to desist from bringing her a series of gruesome offerings, such as fish and rats and chewed shoes.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The white flannel dog was presented in due and ancient form to Sandy. The puppy was enraptured with the softly bitable plaything. He carried it everywhere. He brought it to the Master at all and sundry occasions. He would lay it on the lawn and then seek to terrify it by rushes and fierce barks. He would growl over it as over a bone. He would toss it high in air or worry it, or go to sleep with it between his paws.

To his delight, the Master joined in his alluring games with the flannel dog. For instance, the Master would toss the toy far down the lawn. Sandy would dash after it and bring it triumphantly back; laying it, at command, in front of the man's feet. This he would do, delightedly, again and again.

Sandy had not the faintest idea that this was a new bit of education; and that he was learning to retrieve. But, by means of the flannel dog, he taught himself to follow any flung object and to bring it back to the Master, dropping it at the latter's feet. To Sandy it was only a jolly game.

NEXT began a game a little less jolly, but still interesting, a game in which the flannel dog also shared. Sandy was told to lie down. The precious flannel toy was placed between his fore paws. Then came the order: "*Watch* it!" The Master would move away. As Sandy jumped up to follow, he was bidden to lie down again, and the toy was put once more between his paws, with the same incomprehensible command.

Gradually it dawned on the collie that this flannel dog—and incidentally any later thing left thus in his care—must not be deserted; but must be watched over, zealously, until relief should come.

His latent sense of scenting was brought out in a still more enthralling game. The Master would hide the toy, and then tell Sandy to go and look for it. Almost at once, Sandy learned to cast about for the familiar plaything—even as fiery little Sunnybank Wolf, in bygone years, had learned in like manner to find any given object which the Mistress or the Master had touched.

The crash of thunder had no terrors for Sandy; though at its roar Gray Dawn and one or two other Sunnybank collies would crowd close to the mistress, and stand thus, trembling, throughout the storm. Nor did the report of a gun arouse in Sandy either fear or excitement. The Master had not been wrong, at the first, in gauging the quizzical calmness at the back of those pale blue eyes of his. The puppy feared nothing.

Then came to Sunnybank an apparatus which interested all the dogs. It was an automatic lawn-sprinkler. Inquisitively, they would stroll toward it; until a swish of water from one of the nozzles chanced to catch them in the face. Then, in offended disgust, they would withdraw.

But to Sandy the sprinkler was a blend of plaything and mortal foe. He would charge it, gayly; undaunted by the pounds of cold water which its high-power hose hurled against him. Half-drowned, he remained for minutes at a time close to it, biting the sparkling water jets and trying to shake them to pieces. The harder he shook, the more heavily was his head deluged.

A Sure Way to End Dandruff

THERE is one sure way that never fails to remove dandruff completely, and that is to dissolve it. Then you destroy it entirely.

To do this, just apply a little Liquid Arvon at night before retiring; use enough to moisten the scalp and rub it in gently with the finger tips.

By morning, most, if not all, of your dandruff will be gone, and two or three more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find, too, that all itching of the scalp will stop instantly and your hair will be lustrous, glossy, silky and soft, and look and feel a hundred times better.

You can get Liquid Arvon at any drug store, and a four ounce bottle is all you will need.

This simple remedy has never been known to fail.

LIQUID ARVON

DRAWING IS A WAY TO FORTUNE

Ali Hafed, a Persian farmer, sold his acres to go out and seek his fortune. He who bought the farm found it contained a diamond mine which made him fabulously rich. Ali Hafed overlooked the great opportunity at his door to go far afield in search of wealth — which illustrates a great truth.

EARN $200 TO $500 A MONTH

If you like to draw, develop your talent. Your fortune lies in your hand. Present opportunities for both men and women to illustrate magazines, newspapers, etc., have never been excelled. Publishers are buying millions of dollars' worth of illustrations each year. The Federal Home Study Course has been prepared by such famous artists as Neysa McMein, Norman Rockwell, Charles Livingston Bull, Clare Briggs, Sidney Smith, Fontaine Fox and fifty others. Each student gets individual personal attention. No previous training is necessary. Every step is clear and simple.

FREE, illustrated catalog on request. Shows work of students and testimonial letters. Complete outline of course with all the details. Just write your name, age, occupation and address in the margin and send it to us

WRITERS!

The Palmer Institute of Authorship endorsed by

Jesse Lynch Williams

"THE Palmer Course is the best thing of the sort that has been brought to my attention," says Jesse Lynch Williams, former president of the Authors' League of America. "It is better than any system of teaching the writing of fiction in any of our colleges or universities I have personally investigated, although it may be they have been improved since my day."

Jesse Lynch Williams' famous Princeton stories are still bringing in royalties after 31 years. Other books, including Pulitzer-prize play 1917, attest his success. The principles he has applied to make his writings famous, the Palmer Institute can teach you. It can help you write stories that sell!

ALMOST the first thing a man notices about a woman is her hair. It is, indeed, as much discussed these days as prohibition! And as heatedly! But NOT unfavorably *unless it is* DULL *and* LIFELESS. One remembers, too, that all the great beauties of history were extolled for the loveliness of their lustrous tresses. Helen of Troy, Cleopatra, Ninon, Sappho, to say nothing of the Lady Godiva! And most of them had reddish tints imprisoned within those silken tresses. Certainly one never hears them described as drab or sandy blondes! For these women knew the value of gleaming tresses, and one may be sure that if they hadn't come by them naturally, they would have quickly acquired them, when they found how unfailing was their charm. Golden Glint is the magic shampoo word of our day for the woman who cares to charm. 25¢ a package at drug or toilet goods counters or direct. * * *
J. W. KOBI CO., 600A Rainier Ave., Seattle, Wn.

Golden Glint
SHAMPOO
—that magic luster for every shade of hair

One day, the hose was running, just before its adjustment to the sprinkler. An inch-thick stream of water gushed from its nozzle for something like twenty-five feet. Here was Sandy's chance to tackle the enemy-plaything at its liveliest. He rushed it from every conceivable angle; while it drenched him to the skin and all but knocked him over.

Then he stepped back and studied the water, with his head contemplatively on one side. He was thinking—thinking as logically as any six-year-old child. He saw that the strong stream of water all issued from a single small hole at the end of the snakelike hose. Very good. That then was the source of the stream. That was the point whence to attack it if he wanted to put it out of business. Sandy went into action.

With a leap he was at the foe. He caught the nozzle of the hose firmly between his jaws and shook it. The nozzle was pointing straight down his throat. An inch-thick stream, powerful enough to travel twenty-five feet, was banging against his gullet. Gallons and gallons of hard-driven water were tearing their way down his throat.

Strangled and half-blinded, Sandy let go. Back he went, out of reach; coughing and spluttering. There he sat down, and continued his studies of hydraulics from a point of safety. The thing had not thrashed him. He wasn't anywhere nearly through with it. But it had caught him at an irresistible angle and he had had to withdraw for further planning.

Inside of a minute he had worked the problem out: He could not quell the stream by biting it, nor by catching the tip of the nozzle. Both those methods had been tried. But there were other ways.

He approached the stream again, tail awag, eyes glinting. As he neared it, he feinted, then darted to one side and caught up the hose six inches behind the nozzle.

Here the water could neither dowse nor strangle him. He was safe from it. He had seized upon the serpentine rubber thing which caused the mystifying spray. Having caught it he set about demolishing it. His scissor-sharp teeth were half through the stout rubber before the Master called him off.

THAT was the way with humans: just as soon as a pup was having a really good time they always interfered!

But, less and less often, nowadays, did these humans have need to interfere with Sandy. Imperceptibly, but steadily, he was learning the Law. In the depths of his queer pale eyes a quiet wisdom was beginning to dawn; a wisdom which was to last him for life and to make him an ideal pal and guard, and to reward a thousandfold the patience and time used up in teaching him the myriad things a puppy must learn if he would become a decent canine citizen.

Sunnybank Sandstorm was qualifying at last to take his future place in the roster of the great dogs of Sunnybank: Lad and Bruce and Wolf and Treve and Bobby and Gray Dawn. The promise of the pudgy two-months puppy was fulfilling itself in the gauntly-huge, year-old dog. Sandy had "arrived."

You Have Plenty of Energy—But What Do You Do With It?

(*Continued from page 25*)

Many everyday tasks have to be done day after day, come rain or shine.

4. Standardize all pure routine:

These can be standardized, not only so they can be performed quickly but also that they may be picked up and performed at the proper time every day without the need for voluntary decision. Perhaps you know a man, as I do, who shaves himself, but has no definite rules about when or how he shall do it. He hates to shave, and puts it off as long as he can. Several times a day he'll say:

"Well, I guess I'd better shave!"

But he puts it off as long as possible, and all the time it is on his mental horizon, something to worry about. When he finally gets to it, it takes him the greater part of an hour. But he could have finished it in ten minutes! Like the boy who dreaded bringing a bucket of water, he wastes an enormous amount of energy deciding to get started.

5. In order to "arrive," a life, like a ship, must be headed toward a port.

Most failures in life, and the worst inefficiencies, are due to doing the wrong things. Half a man's troubles are over when he knows clearly what he is trying to do. Clearly-defined purposes and ideals provide psychological motive power. From minute to minute they help a man to select, from the many things he might do, the particular and useful things that he will do.

A purposeful life that I have always thought rather impressive is that of a man I knew first when I was a boy on the farm. This man was an immigrant from Germany, and he began working for my father a few weeks after his arrival in this country, at a wage of five dollars and a half a week and his keep. He had one clearly-defined aim, among others: to live within his income and to save something. While he was with us, he made it a rule to save fifty cents each week.

A year later he went to work in a factory at a wage of seven dollars and a half a week. Here he followed the rule of putting two dollars and a half a week in the savings bank.

Within a year he moved to a city, where his expenses were higher than they had been; but his salary was ten dollars a week. He now followed the rule of putting three dollars weekly into the savings bank. By careful buying he was able, he said, to make seven dollars go further than ten dollars went for his fellow workers.

This man never advanced beyond a salaried position, and never realized more than the average rate of interest on his money; yet within fifteen years he had bought and paid for a beautiful home and had several thousand dollars invested in excellent securities. He possessed only average ability. There is nothing miraculous about his career, nothing romantic. But he is worth to-day a good twenty

District Salesmen WANTED

We would like to hear from men who need an immediate income with a promising future. You can start on part time to prove big earning possibilities of our pleasant plan. No experience or capital is needed. Mail coupon for details.

Tom and Huck—

On the hill where men grow young

HAVE you ever heard of Cardiff Hill? It rears above Hannibal, Mo., overlooking the Mississippi River, and on it stands a bronze life-sized statue of two boys.

You probably know these boys. They never lived in the sense that they "felt dawn and saw sunset glow." They dwelt in the pages of books. They are, to those of us who have spent happy hours laughing at them—and perhaps crying a little over them—the eternal symbols of American boyhood.

Can it be that you are one of those who have never read Tom and Huck? Never got lost with Tom and Becky in the cave? Never floated down the Mississippi with Huck on a raft? Never laughed at lovable old Aunt Polly as she tried to discipline the irresponsible Tom? Never listened to Huck's philosophy?

If you have never done these things you are indeed unfortunate. But it is not too late. Read them and never grow old.

These mischievous boys and their friends are only a few of the countless delightfully entertaining Twain characters whom you will encounter in the pages of his wonderful books.

Author's National Edition
MARK TWAIN

Mark Twain's versatile mind gave to the world a perfectly balanced library of humor, adventure, philosophy and inspiration.

To his publishers he said, "Let's make an inexpensive edition of my books so that everybody can have them." This wish has now been fulfilled by the publication of the splendid Author's National Edition in 25 volumes. This is the *only uniform edition* of Mark Twain's writings, including the witty short stories, the novels, the brilliant fighting essays, the humorous ones, the historical ones.

thousand dollars more than ninety per cent of those who began where and when he did, *because he had a purpose and stuck to it.*

Few men and women formulate clearly in early life their life's ideals; if they do, they generally labor over them for years, modifying them gradually as the years increase their wisdom. But there is no reason why we should not seize immediately a major ideal, and follow it until we get further insight.

To define your ideals with perfect clearness, write them down: your major ideals, and your ideals with respect to particular problems. Take your time about it. Think of one point at a time. Clarify your ideas with respect to that. Gradually work along until you cover everything. By such specific attention, your aims in life can be made to emerge from the misty realms of "Wish-I-could," and will begin to direct all your actions and thoughts, stir new feelings of ambition and inspiration, and provide the powerful elements of interest and enthusiasm that help to direct your powers to the ends you desire. The ship, in short, will be headed toward port.

6. Learn to feel an intense interest in whatever you have to do; if you feel none naturally, learn to acquire an interest by thinking with enthusiasm of the other things to which it may be a means.

Within limits, a person can make his interests practically what he will, and the method of doing it is based on a few simple, yet definite, principles. The first thing to do is to find something about the new subject that ties in with something already interesting to you. Once I knew a boy who wanted to be a physician and surgeon; he was deeply attracted to that profession. One of his high-school studies was Latin. He hated it, said frankly he saw no earthly use of studying it, and was failing in it. I tried another little psychological experiment with him.

"Harry," I said, "I want you to go to Harrison's for me."

I named a drug store where Harry regularly loafed.

"Copy the names of fifty drugs from the bottles on the shelf," I said, "and bring me the list to-morrow afternoon. After that I want you to go to Doctor Harvey's office." Harry's favorite physician. "Look into his medical books, and copy the names of fifty important diseases. Bring that list to me at the same time."

I did not need to do much more. Practically all of the names Harry wrote down were either Latin terms, or of direct Latin origin. The fact interested him. It was a sufficient incentive for him to apply himself to the Latin he had detested.

One of the biggest manufacturers in Chicago told his office employees they could have all day Saturday every week for a holiday, if they were able to complete all their work in the remaining five days. They did it easily, and have enjoyed a five-day week for several years.

Dr. H. D. Kitson, of Indiana University, made a study showing how one special incentive, a particular kind of wage, was sufficient to increase almost unbelievably the output of skilled workers of many years' experience. A record of the amount of work these men did was taken at the end of one week after they commenced

That Pleasant Feeling of Independence

You Will Find It Here

WOULDN'T you like to belong to a jolly, friendly club of women and girls — every one American Magazine readers — where you in your spare moments can quickly earn $5 and more in a few hours or of an evening after you have finished your other duties?

If you are the mother of little children and your husband's salary is small, I am sure that you would like your own money to buy things, probably necessary things, for your babies and yourself.

That is what Mrs. Elizabeth P. of Indiana is doing. Here is such a nice letter from her. She writes:

> Thank you, dear Margaret Clarke, for my lovely bracelet watch and for my $9.50 Bonus. In all I have earned $29.50—not so bad, is it?—for my month's work. Since joining the P. M. C. I have enjoyed an independence such as I had never known before.

IF you are a business girl or a schoolteacher with a very slender income, then read this letter from Miss Gladys B., Texas.

> This afternoon I received my Bonus Check and thank you very much for it. I am getting some nice things with that money that I could not otherwise have had, and you know what satisfaction that brings.

I DO indeed, and so does every girl and woman who joins us. I can't begin to tell you, in my small space here in The American Magazine, all the pretty things that have been bought and paid for with dollars earned in the Club, or the bills that have been paid. But I have a beautiful booklet which is filled with the delightful and interesting letters from some of our members. Let me send it to you—also our Gift Shoppe Booklet which tells you about our more than fifty gifts for P. M. C.'ers.

Just a two-cent stamp will bring you the money-making opportunity you have been longing for. Send your letter to

Margaret Clarke

Secretary, Pin Money Club
The American Magazine
Department J
250 Park Avenue New York City

This lovely little bracelet watch is an accurate little timepiece. It is just one of the Pin Money Club's many gifts.

Here's
YOUR Opportunity-Travel *for* Profit *and* Pleasure!

HERE'S an unusual opportunity for you to engage in interesting educational work full of pleasure and profit. For these opportunities we can consider only those of proven ability and undoubted refinement.

Excellent Income Possible Each woman we select will be appointed an exclusive representative. This automatically gives each one appointed our special co-operative help, certain to produce a good income. Many of our special representatives are earning over $3000 annually.

You'll Have Every Advantage If selected, you'll have every advantage, including guaranteed income from the day you start, and railroad fare paid. Your ambition, supplemented by our constant personal help, will start you on a successful business career along educational lines.

Enjoy Travel While Working If you like to travel (and who does not?) that opportunity will be yours. New places, new faces, new experiences will create delightful work such as you may not ever have experienced.

Write Today for Your Opportunity If this sounds like a real opportunity for you, write us today. We'll then send you complete data regarding the position and the Company. For twenty years we have been developing these special positions for people who have quickly forged ahead and made outstanding successes for themselves. Here's an unusual opportunity to do pleasant work, engage in travel (we expect to send many of our people to Southern states this Winter), and to achieve a permanent connection with substantial earnings. In reply, please state your age, education and qualifications. Address Dept. 4-A.

TEACHERS: in connection with our work we have a few special opportunities for the summer vacation months for qualified teachers. Please give the number of years you have taught.

THE S. L. WEEDON CO.
7016 Euclid Ave. · Dept. 4-A · *Cleveland, Ohio*

High School Course in 2 Years

This simplified, complete High School Course—specially prepared for home study by leading professors—meets all requirements for entrance to college, business, and leading professions.

20 Other Courses

Over 200 noted Engineers, Business Men, and Educators helped prepare the special instruction which you need for success. No matter what your inclinations may be, you can't hope to succeed without specialized training. Let us give you the practical training you need.

to work in the plant, before the special incentive began, urging them to improve their methods of work. Records were taken again at the end of their fourth, eighth, twelfth, sixteenth, and twentieth week of service.

It was put up to the men that they could get more pay for all the work they did over and above a certain amount. Every one of them boosted his output above this bonus point; the average rate of improvement was seventy-eight per cent; one man increased his rate of work two hundred and eighty-nine per cent! In other words, the average rate of work of these seasoned men—they were not loafers—was about half what they were easily able to do. We all have hidden stores of interest and incentive we can call on to stir our energies.

7. Acquire the habit of success.

If you want a dog to win fights, be sure he wins his first fight, and most fights thereafter; let him be whipped, and he is likely to be a whipped dog all his life. Men, like animals, can acquire either the habit of failure, or the habit of success. We saw what happened in the case of ten-year-old Helen. Belief in the possibility of success is born directly of previous successes, and its strength is directly in proportion to the strength of the habit of success formed already. The practical application of the principle is simple: Start with easy tasks—succeed with them—go on with harder tasks, succeeding with them, and so on to the hardest. No worker does his best unless he believes it is possible for him to do what he set out to do.

Belief in your ability means more than thumping the chest and saying over and over, "I can!" though even that may have some good effect! It means setting to work and digging up *good reasons* for the belief.

When I was in college, I spent a summer selling books to help pay expenses. I selected a book I thought ought to sell on sight, and tried to master all the arguments given in the handsome prospectus. I started to work with all the confidence in the world. But it was empty confidence; it had no basis but words. Three days passed, and my total was one or two sales. I found myself suddenly paralyzed by fear of failure.

On the afternoon of the fourth day, utterly discouraged, I went for a walk in the country. Under a big tree I lay down to think it over. After a while I began telling myself there must be something wrong with *me;* the book, I was sure, was splendid. Then and there I sat up and began putting in writing my own ideas as to why I thought people ought to buy the book.

That gave me a start. Next, I tried writing these reasons in the most alluring language I knew. Then I arranged them in logical order. Next morning when my mind was fresh, I went over the arguments again and brushed them up still further.

I felt I had done the best I could. My confidence began to return.

That afternoon I started out again, and sold more books in a few hours than in all the previous days. From that moment I managed to keep on selling at a profitable rate.

STOP! I said RADIATOR NEVERLEAK

I don't want to take any chances, George. Radiator Neverleak did such a wonderful job on my last car you couldn't pay me to use anything else!" Every user feels that way about Radiator Neverleak. It's the sure quick *permanent* hole plugger. Works in water, alcohol or glycerine. Prevents scale and rust. No effect on rubber or metal. Does not clog. Money back if it doesn't stop any leak for *good*. Look for the name — there is only one Radiator Neverleak. If your dealer tries to sell you something else send 50c for Ford size, 75c for larger car or $1.00 for truck, postpaid. Keep a can on hand for emergencies.

8. Learn to give your whole mind to what is important to you at the moment.

A good deal of time, as everybody knows, is wasted in noticing things of no consequence to us.

Not long ago I spent an evening with a skilled surgeon; on the following day he was to perform an important operation. I was interested in his preparations. He got out and tested about a hundred instruments, every kind he thought he could possibly need. These were arranged on a table in a certain order, so he could find any instrument without lifting his eyes; and each instrument was tested to make sure it was in perfect condition. The surgeon laid out his materials with equal care.

Next, he reviewed a selected set of drawings of the anatomy of the parts to be worked on on the following day, and consulted some of the best authorities, examining histories of cases dealing with the operation, and emergencies that had arisen in performing it. He reviewed also his own operations of the same sort, and told off aloud to me what would be best to do under any set of conditions that might arise. He even outlined all the routine steps, although the operation was one he had performed many times.

The actual operation the next day was not more skillful than his plans for it. Incidentally, the patient's life was saved by one of the emergency devices which the skilled surgeon had so thoughtfully laid out.

It is possible, of course, to make plans as beautiful as this, then never carry them out. If that happens, all fails. No single factor has so much to do with good work as the effective dispatching of well-laid plans.

It is the only cure for procrastination, and for that fatal indecision which causes the loss of so much time and energy, when we worry over our work before we get at it. *The ability to act promptly and positively in executing plans is a habit; it can be formed in the same way as any other habit.* To acquire it, a man must train himself to start promptly, finish everything begun, and, furthermore, do it without consuming more time than is planned.

Concentration is a habit that can be cultivated, and is aided by numerous things, many of which psychologists know, such as keeping your mind constantly fixed on the purpose most absorbing to you, developing an intense interest in what you are doing, selecting a place to work where there are as few distractions as possible, and so on.

9. Don't wear out your will to keep on trying.

Interest and enthusiasm can be overfatigued, even for objects of the greatest concern to us. Recently I saw young children so exhausted by the excitement around a Christmas tree that, long before the time arrived to pass the presents, they were nearly indifferent to them. Most people fail in life and in their work, when they do fail, not because of a lack of energy, knowledge, proper ideals, purposes and plans, but because they lack the determined strength of will to make the necessary preparation for doing what they most desire.

Try These 3-in-One Household Helps

But first be sure you get the original 3-in-One with the famous Big Red "One" on the label.

To make a perfect Polish Mop for hardwood and painted floors, linoleum and oilcloth, cut the strands of a common kitchen mop to eight-inch length, pour on a tablespoon of 3-in-One. Let stand until oil permeates mop.

Any soft cloth moistened with 3-in-One makes as fine a Dustless Dust Cloth as money can buy.

A cloth wrung from cold water and sprinkled with 3-in-One brightens up fine furniture. Polish with dry cloth.

Oil motor of vacuum cleaner, sewing machine, washing machine, etc., liberally and regularly with 3-in-One. It oils perfectly everything in the house that needs oiling.

Sold everywhere in 1-oz., 3-oz. and ½-pint bottles. The latter is most economical for household use. Also 3-oz. Handy Oil Cans for lubricating.

FREE: Liberal sample and illustrated Folder, "79 Uses In Your Home!" Write for both on a postal.

Give 5 Minutes A Day—Look Years Younger

Book sent FREE tells you how Kathryn Murray's Five-Minute-A-Day Facial Exercises regain and retain the lovely skin texture and roundness of youth for thousands of delighted women. Young looks depend on thousands of tiny muscles just beneath the skin surface. Wrinkles, crow's feet, hollows, loose sagging skin-sluggish circulation, sallow complexion-occur when lack of exercise causes underskin muscles to become weak, flabby, droopy.

KATHRYN MURRAY'S FIVE-MINUTE-A-DAY FACIAL EXERCISES

Thousands of women have turned to Kathryn Murray's Facial Exercises with amazing results. Nothing extra needed. Just your natural beauty and Five-Minutes-A-Day.

RESULTS GUARANTEED

Send for FREE book TODAY! Regain or retain the glorious complexion rightfully yours.

KATHRYN MURRAY, Inc.
Suite 238, 5 So. Wabash Chicago, Illinois

Any of us may get tired of trying. When problems are presented, one after another in rapid succession, each requiring an important decision, you experience greater and greater difficulty in making the later decisions promptly and correctly. If you have tried to do everything coming along every day as well as possible, if you are a teacher or mother, and have been courteous when the children have been persistently restless; if you are an employee, and have been steadfast and faithful to each task under severe difficulties; if you have kept your temper when you have been misrepresented and placed in a false position; if you have kept a steady grip on yourself for a long time—then finally a time comes when you must get off by yourself. You feel, if you don't, you'll break down and yield to the temptation to do everything you shouldn't. This is plain, simple will-fatigue. Your muscles may or may not be tired. But you simply lose your ability to go on at the moment with that problem. It's at such crises that men give up for good and lose the precious chances of lifetimes—or commit irreparable mistakes.

It is possible to conserve the precious powers of will by rest, and steps like these: Do your hardest work first, when your mind is fresh; jump into the job quickly and with zest—remember the boy who became a nervous invalid thinking about carrying one pail of water daily; learn to make your decisions right in the first place, and consider them final—half the time, when men tire of trying, the reason is a doubt whether they are doing the right things; don't drive yourself too long—remember that most successful men and women have learned they can do better by working intensely for fewer hours, and retaining the strength of will to stop when it is time to rest; plan for proper recreation—go to a funny show, dig in your garden, play golf, paint pictures, change to a different kind of work—but do not forget that a change of work is not, as many suppose, equivalent to rest or recreation, but only exercises a different set of brain cells; finally, do not chain yourself to a difficult or impossible task in which you are not and cannot become interested. Some people imagine that is a good way to strengthen the will. It is not. It has the contrary effect, and helps to breed a habit of failure. Work *with* your powers, not against them.

Those who do the great jobs of the world are not necessarily made of stuff so much finer than ordinary; but they have learned, like the faithful servants in the parable, to use wisely the talents given them.

That is the great art of life.

And now here is the tenth rule for working:

A man must earnestly want.

This one, I shall set down without elaboration; it doesn't need any. For it is obvious that what you *earnestly want*, you will strive to get. Perhaps you want to do your work perfectly for its own sake; perhaps the doing of the work is merely a means to something else which your heart is set on. In either case you have a desirable objective—you earnestly want something—and that is a motive power that will take you a long way.

Bathroom Luxury
everyone can afford

$2,000 to $7,500 a year! That's what you'd pay for an apartment on Park Avenue, New York. The Church Sani-White Toilet Seat is used in these luxurious apartments. Nevertheless, it is priced low enough for the most modest cottage.

You can have one. It is low in price. You'll be surprised how much better it makes the bathroom look. You can easily put one on any toilet in a few minutes.

Its white surface is an ivorylike sheathing, as easy to keep clean as porcelain. It won't crack, split, wear off or change color. Phone or visit your neighborhood plumbingstore today. They can supply you. Mail coupon for booklet and cross-section.

Scattergood Deals in Matrimony

(*Continued from page 23*)

later Nellie called Sarah into the workroom. "I'm thinking," she said, "of a way to make the store more attractive to people. Like city stores." Then, as if it were an afterthought, "My, you have no idea how much prettier you look since you changed your way of doing your hair."

"Huh!" sniffed Sarah.

"I'm going to plan a couple of dresses—one for you and one for me. Yours first, because you have to be out front so much where people see you. Then, if it works out, we'll all three have them alike."

"Huh!" Sarah sniffed again.

"I want them as becoming as can be," said Nellie. "It's just business, you understand—and to be worn during working hours."

So Nellie planned the dress, and she and Sarah made it in the workroom, for they were not yet so busy there was no spare time to be disposed of. It was a plain dress; but it had something to it which Nellie had the ability to impart. It had style and snap. Sarah, at last, put it on.

"My dear!" exclaimed Nellie, "you have no idea!"

"Ain't it kind of short?" Sarah asked.

"Not too short. . . . Do you know," she said in a whisper, "you look like Mary's *daughter*."

Sarah sniffed, as was her custom, but she could not draw herself away from the mirror. Presently she went into the showroom with the secret purpose of exhibiting herself to Mary. Mary reared back in her chair.

"Sairy Knox," she exclaimed, "what 'n the world you got on? I kin actually see your legs!"

"They're rather good-looking ankles," said Nellie; "and will be better when we get proper shoes."

"Looks skittish," said Mary. "Hum! Tryin' to look half your age?"

"Sarah's only thirty-five," said Nellie.

"W-al, how old d'ye figger *I* be?" Mary snapped.

As a matter of fact, Sarah did not look more than her age, indeed, she looked rather less. Her eyes were good, her hair, now that it was released from bondage, was ample and pleasing, her figure was slender and satisfying. Even Nellie was surprised. Mary retired into sullen silence, eying her sister malevolently. But her rancor was only at its inception.

For, that afternoon, Mr. Bangs, a salesman representing a wholesale house in the city, dropped in with samples. Nellie was out at the bank. He passed Mary without a glance and approached Sarah.

"Miss Rockwell's out," Sarah said offishly.

"May I wait?"

"No objection."

Mr. Bangs took a chair, upon which he deposited his forty-odd years of bachelorhood and his hundred and eighty pounds, and made himself agreeable. In fact, he

I STOP Foot Pains

or you pay nothing

SLIP a new and amazing band on the most painful feet. Within 10 minutes every trace of pain has vanished. This band acts to strengthen and support the vital muscles whose weakened condition causes 94% of all foot troubles, medical authorities say. Wear stylish shoes again, walk and dance without a twinge.

No stiff props to further weaken the foot. This is a strong, super-elastic yet amazingly thin, light band. It's called the Jung Arch Brace and acts through correct tension and scientific design to strengthen muscles naturally. Soon you do without it—feet are well.

Test it 10 days. If not amazed and delighted your money returned. Go to druggist, shoe store or chiropodist. If they can't supply you use coupon below and pay postman. Send for free book on foot and leg troubles.

Malloch Knitting Mills, 372 Ottawa Avenue, Grand Rapids, Mich.

hitched his chair closer to Sarah and laid himself out to entertain. It was a new experience to Sarah, and she was ill equipped to meet the emergency. However, little was required of her, for Mr. Bangs was loquacious. Presently Nellie returned.

"Not meaning to be impolite or anything," said Mr. Bangs, "but I didn't mind waiting for you a bit. No, siree. It give me a chance to get acquainted with this young lady. We've been getting on real good, haven't we?"

Sarah emitted another sniff—but it was one of the last she had in stock.

Mr. Bangs stood, evidently reluctant to take up matters of business. "We haven't been really introduced," he said to Nellie, "but being a part of the establishment—"

"Miss Knox," said Nellie, "this is Mr. Bangs."

"Now we're all right," said the drummer. "Er—now I don't want to be brash; but, Miss Knox, there's a picture in the town hall to-night."

"What of it?" asked Sarah.

"I was thinking maybe you'd take pity on a man that's all alone in a strange town. I thought maybe you'd have supper with me at the hotel, and then go to the show afterward. . . . Miss Rockwell knows me, and—"

"Mr. Bangs is very well thought of by his firm," said Nellie, with dancing eyes.

"How about it, then?" he asked.

"Why—" said Sarah. "Er—" It was her first invitation—and from this well-dressed, prosperous-looking man from the city!

"I'll come to get you when you close up here," he said.

Half an hour later, having completed his business, Mr. Bangs passed again through the showroom. "I'll be back for you at six," he said.

Sarah sat in silence. Mary sat in more impenetrable silence. At last she spoke. "Of all the impudence!" she exclaimed.

"Who's impudent?" Sarah demanded.

"That travelin' salesman."

"I didn't see anythin' impudent about him," said Sarah, and got up to enter the workroom, where she found some difficulty making her errand known. "Er—I was kind of wonderin', Nellie, if you'd have any objections if I was to wear this dress to-night?"

"Of course not," said Nellie.

NEXT morning, as Nellie was on her way to the bank, Scattergood stopped her.

"I see Sairy out in company last night," he said.

Nellie twinkled her eyes at him.

"How's business?" he asked.

"Improving every day. We're getting word around, and I'm doing some advertising. Why, two women came up from Higgins Bridge yesterday!"

"Buy cheap and sell dear," Scattergood said sententiously.

"The main thing is to get the trade," said Nellie; "and it's beginning to come."

"Um. . . . Now, as to Sairy?"

"She's really quite attractive."

"Never so s'prised in my life."

"I'm much obliged to you," Nellie said somewhat cryptically.

She returned to the shop, and presently Mary whisked into the workroom.

"I'm going to raise his salary"

"I've had my eye on him for some time and I know he can handle bigger work.

"He studies those I. C. S. textbooks every chance he gets, and I want to tell you it has made him a valuable man for this business.

"I'm going to raise his salary and give him that new job we were talking about. I wish we had more men like him."

How do *you* stand when your employer checks up his men for promotion? Does he pass you by as just a routine worker, or does he think of you as a man who is ambitious to get ahead? Won't you be far more likely to get the promotion if he knows you are studying at home and are really preparing yourself to handle bigger work?

Think it over. Then act. It takes only a moment to mark and mail the coupon and find what the International Correspondence Schools can do for you, yet that one simple little step may be the means of changing your whole life. "Do it now."

INTERNATIONAL CORRESPONDENCE SCHOOLS
Box 7462-E, Scranton, Penna.

Is your hair always in place, well-kept?

You *can* subdue unruly hair

This modern hair dressing has pleased more people than any other

Once you combed your hair every morning only to have it get hopelessly out of place an hour or so later. But today! . . .

A mere touch of Stacomb and the most unruly hair lies down, looks just the way you want it to, all day long.

No wonder more people rely on Stacomb than on *any other hair dressing!*

Your hair never looks sticky with Stacomb. Nor dry and "dead," as wetting with water makes it. Stacomb keeps it in condition—alive. Helps counteract dandruff.

Stacomb now comes not only in cream form—in jars and tubes—but in the popular new liquid form as well. All drug and department stores.

FREE OFFER **Stacomb**

Standard Laboratories, Inc.,
Dept. T-38, 113 W. 18th Street, New York

"I'm goin' to get through here," she said.

"Why, Mary?"

"Don't like the way things is goin' on."

"Now, that's too bad—and just when I was planning so many things. I was going to work to-day on a dress for you like Sarah's."

"You was?"

"The goods are here," said Nellie. "Well, I can take them back, I guess."

"You don't need to," said Mary. "I changed my mind about gittin' through."

"Let me see what I can do with your hair now," said Nellie. "I would like to try a hat on you."

"Don't fix it jest like Sairy's," said Mary.

"It'll be altogether different—and so will the dress," said Nellie.

PLINY PICKETT was standing beside Scattergood's specially reinforced chair on the piazza of the hardware store, discussing matters of importance regarding the railroad—of whose sole passenger train Pliny was conductor. Two modish, youngish women passed, and Pliny's eyes followed them. He grunted.

"Hain't that Sairy and Mary?" he demanded.

"Seems as though," said Scattergood.

"Dog-gone!" said Pliny, and turned completely around to follow them with his eyes. "Um. . . . Old maids, too. Dunno how that ever come about."

"Weather's comin' off hot," said Scattergood.

"About as likely-lookin' gals as you see," said Pliny. "I wonder how they come to be overlooked."

"The way that travelin' man Bangs comes runnin' up here to spend Sundays makes it look like Sairy wa'n't overlooked much," said Scattergood.

Just then the twins encountered a gentleman, evidently gotten up for society. He stopped them, turned and accompanied them down the street.

"Huh," grunted Pliny. "Mark Dover's got up regardless. What's he doin' up from Higgins Bridge?"

"He's took to comin' up perty reg'lar lately."

"Who's tendin' his store?"

"Looks like he's got more important business than store-keepin'," said Scattergood. "He's tendin' to it now."

"Mary?" asked Pliny.

"No other," said Scattergood.

"There comes Bert Knox, lookin' glum as usual," said Pliny.

"Um. . . . Was you goin' to the depot, Pliny?"

"Hadn't thought of it."

"Goin' to the depot, Pliny?" Scattergood repeated.

"I could," said Pliny.

"G-by, Pliny," said Scattergood.

The conductor descended the steps as Bert came abreast of the store. Scattergood hailed him. "Afternoon, Bert," he said. "Lost somethin'?"

"What makes you think so, Mr. Baines?"

"You was lookin' kind of downcast."

"Mr. Baines," said Bert, "that dog-gone store's making money."

"Which?"

"The millinery store."

"That hain't nothin' to be glum about."

"She's making more money'n I am."

"Wimmin is able citizens when they make up their minds to be," said Scattergood.

"She'll git to making so much she won't want to git married," said Bert.

"Was she thinkin' of it?"

"You know dum well Nellie 'n' me are engaged."

"But nothin' seemed to come of it."

"She wouldn't marry me and come to live with Sarah and Mary."

"Don't blame her much. What did you calc'late to do about it?"

"I didn't see that the' was anything to do."

"Then you hain't got no call to complain about the store. Now, if you had as much push as she's got—"

"I got the push all right, but my job don't pay so well."

"Ever think of quittin' it?"

"How can I—with Mary and Sarah to support?"

"Don't seem like you could," said Scattergood. "Still and all. . . . Um. Got anythin' saved up?"

"Couple thousand."

"I hear Ike wants to sell the feed and coal business. Why don't you buy it?"

"He wants more'n I'll ever have."

"He wants more'n you'll ever have if you don't git a wiggle onto you. Got the backbone to tackle the business if Ike'll sell it to you?"

"I can run it as well as he can."

"You'd have to run it better."

"He won't let me. Ike's set. He claims he don't want new ideas and newfangled notions."

"Got some, have ye?"

"Plenty," said Bert.

"Um. I was talkin' to Ike. He'll sell for two thousand cash, and take notes for the rest—pervidin' I back 'em."

Bert opened his mouth and shut it again.

"And," said Scattergood, "I'll back 'em if you calc'late you kin make a go of it."

"I can," said Bert. "I can. . . . But even then Nellie won't ever live under the same roof with Mary 'n' Sarah."

"She's got jedgment," said Scattergood. "Go to Johnny Bones. He'll fix up the papers. Ike's anxious to clear out to live in Floridy."

SIX months is a short time, but fortunes have been made and lost in less. Nellie Rockwell had made no fortune, but she had established a business which paid as well as any in town, and held promise of a better future. Already she had added fancy goods to her millinery, and was considering branching out in other lines. Scattergood was delighted with the business prospects.

One afternoon she was surprised to receive a visit from Mr. Bangs.

"Miss Rockwell," he said, "I want to talk business with you. I—well, the fact is, Sarah and I are going to get married. But she don't like the idee of me being off on the road. And I kind of want to settle down. . . . Now, I know this business, and Sarah's kind of interested in it too."

"Yes," said Nellie.

"And I got quite a little saved up. I was wondering if maybe you wouldn't consider selling out."

"Why, I'd never thought of it."

You May Have a Desk

—*but do you get the salary?*

The desk in the private office of Robert Pentland, Jr.—member of the Florida State Board of C. P. A. Examiners and partner in the largest firm of Certified Public Accountants in Florida—is about the same size as the desk he had when a clerk, in 1919. And there's no great difference in *looks*—

But his income today is more than ten times as large. His firm has offices in nine cities, and employs fifteen C. P. A.'s and thirty other accountants. And he is not yet thirty!

"This rapid progress in six short years," writes Mr. Pentland, "is largely due to my LaSalle training."

Send for Free Book—
"Accountancy, the Profession that Pays"

A complete plan whereby you can advance to positions of responsibility and power in the Accountancy field is clearly outlined in LaSalle's new 64-page book, "Accountancy, the Profession that Pays." The information it contains is of priceless value to the man eager to achieve success in business—and LaSalle will send it to you *free.*

If you have the urge and the will to increase your income—clip and mail the coupon NOW.

"Well, seeing you're going to lose both your clerks, I thought maybe you would."

"Both?"

"Uh-huh. Mary's goin' to marry Mark Dover, down at Higgins Bridge. Kind of a double weddin' we're figuring on."

"Both!" repeated Nellie. "Both of them married!" She closed her eyes, and when she opened them again there was a light in them which had not been there for long, long months. She breathed deeply—and then became all business woman.

"I'll consider a sale," she said. "I've built up a nice business here, and have a first-class inventory—and don't owe a penny."

"Make a proposition," said Mr. Bangs.

IN AN hour the deal was closed. Nellie went to Mr. Baines.

"Possibly I should have consulted you," she said; "but I've sold our business."

"Um. Do perty good?"

"I've more than doubled your money," she said.

"Which gives you a perty nice little bit, too?"

"Yes, indeed."

"Got a use for it?"

"I—I haven't thought of that."

"Um. Ever consider the coal and feed business?"

Nellie blushed.

"Nothin' to keep you from marryin' him now, is the'?"

"Nothing."

"He's doin' well with Ike's yard. Gittin' it up to date. Paid off one of his notes. Um. . . . Your profits out of the millinery shop *could* just pay off the rest, so's you 'n' Bert would own it free and clear."

"I— Oh, Mr. Baines, you did it, didn't you? How ever did you know you could marry off Sarah and Mary?"

"You kin sell most anythin'—if you put it up in an attractive package," Scattergood said. "Um. . . . Here comes Bert. If you 'n' him got anythin' to talk over you'd be private in the back of the store."

"I'd like to kiss you," said Nellie.

"'Tain't a common desire," Scattergood said dryly, "but I hain't noways averse to it. I kin spare ye one," he said. He spared it. "Hey, Bert," he called, "I been kissin' your girl. . . . She's got suthin' to say to ye. Back end of the store."

Nellie and Bert walked through the door and disappeared among the stoves and churns and ice boxes of Scattergood's stock. The old hardware merchant sat back in his chair and blinked. He moved first one foot, then the other; he heaved a sigh, and then he said to himself, *sotto voce:*

"I never see so much contrivin' jest to git a couple young folks married. Wuth the trouble, seems as though. And, I calc'late Sairy and Mary didn't take no special harm from it. Um. . . . A fifty-dollar coat of paint frequent adds a thousand dollars to the value of a house."

He leaned back in his chair, content.

"But," he said, "I didn't never *suspect* Sairy and Mary'd dress as good on the hoof as what they done!"

Just a Minister to the Poor

(*Continued from page 34*)

"Altogether, I was the source of more worry than I was worth. My elder brothers had left home and were doing well. My father had hoped that I would stay and carry on the farm. But I had no taste for farming. I wanted to get away. And it seemed to me that the only solution of the problem was the one to which so many thousands of other young men have turned—America! My parents finally agreed with me, and I sailed for this country when I was fifteen years old.

"An uncle of mine was living in Ionia, a little town in Michigan; and as my mother wanted to keep me away from the cities, I was sent out to him. My uncle, who was an old man, was none too pleased at having a wild young Irish lad on his hands, so he took the first chance of placing me elsewhere.

"Fortunately for me, this 'elsewhere' was the home of a Civil War veteran, a kindly man and an ardent patriot. I was to do the 'chores' around the house in return for my board and lodging.

"You see," he went on, "I know, through my own experience, what it means to a stranger from another land if he quickly finds friends here—and of the right sort!

"I went at once into a home; a truly American home, where I could learn the ideas and the ideals of American life. My employer was keenly interested in the history of this country. He gave me books on the subject. And if he saw me engrossed in one of these books, he would quietly proceed to do my work, rather than interrupt me.

"This, my first contact in America, helped me to become, I trust, a good citizen. And because I realize what these contacts mean to other aliens—more lonely, more ignorant, more helpless than I was—I have tried, for their sake, *and for our own sake*, to help them to find friends of the right sort.

"MY DUTIES in my new home brought out one of my few talents. I always had been handy with tools. I still am!" he said with pride. "I can put up almost anything, from a hammock to a house.

"The discovery of my talent with tools led my uncle to apprentice me to a carpenter and builder, with whom I worked for three years. Here, again, I came under good influences. My new employer was a devout Christian. I attended his church and taught a class in the Sunday-school.

"Back in Ireland, my father often had preached in the little chapel on our estate; and now I began to follow in his footsteps. Young as I was, I would go out into the country on Sundays, and preach for the people who were too poor to have a regular minister.

"I think they took kindly to me because of my youth and my Irish brogue. And I —being still the same sociable lad who had

Reclaim cracked ceilings *for all time!*

WHY BE EMBARRASSED by cracked, ugly ceilings?

Apply Upson Board right over the old plaster!

Upson Board comes in big panels that go up in ⅓ the time of plaster—at less cost. One man applies them, even on ceilings.

Then paint, apply decorative wood trim—and your room is permanently beautified. Upson Self-Clinching Fasteners (patented) make Upson Board *the one board that can be applied without ugly nail marks.*

Properly applied, Upson Board should never warp or bulge. And once up, it should last as long as the building. Try Upson Board on just one room—then you will want it all through the house.

One caution—insist upon the genuine blue-center Upson Board. Tests prove it from 40% to 150% stronger than other boards tested—an excellent insulator—the equal of 11 thicknesses of ordinary building paper. Dozens of letters in our files prove it resists fire, moisture, ordinary leaks.

Ask your lumber dealer. Or, we invite you to write, describing the work you plan. Enclose 10c for full-size blue print, helpful literature, samples of Upson Board and Upson Fibre-Tile.

Address The Upson Company, 221 Upson Pt., Lockport, N. Y.

UPSON PROCESSED BOARD

Stop Groping for Words !

IF your words flow easily, if you NEVER have trouble expressing yourself, people see immediately that your thoughts run along smoothly and that you have a sparkling, active mind.

But if you hesitate and stammer, and grope for words, if you say "er" or "what-do-you-call it" or "you know what I mean" instead of using exactly the right word to express your meaning—you tell every one that your mind is asleep. You publish the fact that your education has been sadly neglected. Your limited vocabulary shows clearly that you are dull and uninteresting.

Stop Making Mistakes

Every time you talk, every time you write, you show what you are. When you use the wrong word, when you mispronounce or misspell a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself enormously. A striking command of English enables you to present your ideas clearly, forcefully, convincingly. If your language is incorrect it hurts you more than you will ever know, for people are too polite to tell you about your mistakes.

New Invention Makes Mastering English Easy

For many years Mr. Cody, one of our greatest authorities on English, studied the problem of creating instinctive habits of using good English. After countless experiments he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Now you can stop making the mistakes which have been hurting you. Mr. Cody's students have secured more improvement in five weeks than previously had been obtained by other pupils in two years!

Send for Free Book on English

To achieve your ambitions it is essential that you use good English as instinctively as you tie your shoes. Business today demands men and women who use correct, concise, forceful language. Society demands education, breeding, culture, demonstrated by the use of correct, interesting and convincing language.

A new book explaining Mr. Cody's remarkable method is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if you cannot instantly command the exact words with which to express your ideas, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now.

enjoyed visiting with poor old women over a cup of tea—was very happy in these new friendships.

"Encouraged by this change in their boy, my parents began urging me to return home. I thought, myself, that I ought to do this; so I went back to Ireland.

"But it wouldn't do!" he said, shaking his head. "For one thing, I had too many old friends there—and the old customs still prevailed. I was invited to this house and to that; and always the hospitality that was offered me took liquid form! I, who had not even wanted to drink in America, was getting drunk with my old friends in Ireland.

"While I was at home on that visit, an older friend said to me, 'My boy, I want to ask you something: Most of our lads, who grow up here and *stay* here, don't make anything of themselves. But some of our lads, who seem no different as boys, go out to America; and in a few years we hear that they are getting on in the world, giving a good account of themselves. What makes this difference?'

"'They can't help it!' I told him. 'It's in the air. There's freedom and opportunity in America. Over here, your life is sometimes laid out for you before you are born. That stifles ambition and smothers initiative. But in America one can be whatever one has the ability and the will to become.'

"I JUST couldn't stay!" Doctor Storey went on. "And finally my mother herself told me to come back to this country. I had intended to return to Michigan; but when I landed at New York I found letters from my friends out there, saying that they had arranged to send me to Colgate University, at Hamilton, New York, and that I was to go there directly from the steamer.

"As a matter of fact, I earned a considerable share of my expenses while I was at Colgate by preaching in various churches. These opportunities came so often that they rather interfered with my studies; and I became so interested in this work that I finally gave up my college course and took a church.

"After six months, realizing that this was a mistake, I went back to college. I wanted to be graduated with my class; but on account of my six months' absence, I could not receive the degree of B. A. to which my fellow students were entitled, so the faculty held a meeting and created a special degree to fit my case.

"I was graduated as a Bachelor of Philosophy. Then, having conferred this title on me, the faculty held another meeting, and abolished the degree! So I believe I am the only Colgate Ph. B. in existence.

"I stayed at Colgate another year, as a student in the theological seminary. Then I made a second mistake: I left without completing the course. During that year I had been preaching in a church at Syracuse, and my friends there wanted me to come to them as their regular pastor.

"Perhaps one reason why I consented was a very personal and secular one. Back in Michigan, you see, there was a little girl whom I wanted to marry! As an established minister, with a regular salary, I could do this. So I'm not saying that I didn't take the church as a means toward taking a wife! I did take both; and the wife, at least, was no mistake in judgment. What would have become of me without her I'm sure I don't know. And in return for all her unselfish and loyal devotion," he added, "I'm afraid I've given her a life of much hardship and many anxieties.

"For a year or two," he went on, "we stayed at Syracuse. Then we went to Kingston, New York; and there I began to find the work that satisfied me.

"NEAR the church there was an abandoned mill. With the consent of the owner, we made this old mill into a sort of clubhouse for the boys and young men of the town. There was no Y. M. C. A. in Kingston then, but there were the usual saloons and pool rooms and vicious influences of one sort and another. There, too, as everywhere else, were the poor. And so I began to see the church as an instrument of *service;* not only to those within it, but to those without.

"After six years at Kingston, we went to Buffalo. In that city lived two men: James Stuart, who had begun his business career as a day laborer and later became a great lumber merchant; and Gilbert S. Graves, who had started by sweeping the floors in a factory and later became a successful manufacturer.

"These two men, who had risen from the ranks, wanted to help those who still were at the bottom of the ladder. They were responsible for my taking the church in Buffalo. They wanted what I wanted: to serve the poor, the ignorant, the people who had come from other lands to become citizens—good or bad—of this country.

"For six years, the church did serve these poor and needy people. Then Mr. Graves went to Chicago; and a little later Mr. Stuart died. Almost immediately after his death, the officers of the church held a meeting; and, following that meeting, I was told that my 'outside work' must stop. It was not bringing in a class of people who would contribute financially, or otherwise, to the standing of the church in the community. They said they would be glad to have me stay on as the pastor; but on condition that the church cease to be an institution, with clubs and classes for 'outsiders.'

"I couldn't accept that condition, so I resigned. I imagined that I could easily get another church; and I started, quite cheerfully, to go about 'candidating.' But when the people to whom I preached would write to my former church for information about me, they were cautioned to steer clear of me, because of my unfortunate 'institutional' tendencies.

"The only opening I could find was here in Albany; a church which was in almost as desperate straits as I was. Only a handful of its members remained. Apparently no one except me would take it; and this being the situation, they allowed me to come with a free hand. They imposed no conditions in regard to outside work—probably because they thought this work would be impossible in a church which was too poor to run even itself.

"They could not promise me any salary. I came with the understanding that all contributions should go first to pay the current expenses. I would receive what was left—if there *was* anything left!

"Soon after I came, there was a great business depression, almost a panic. The city was full of unemployed, and there was

Twenty important ways to use "Vaseline" Jelly

As a valuable remedy for

cuts burns sores
scratches scalds windburn
wounds chapped lips and skin

To alleviate

colds in head coughs

To relieve and protect baby from

chafing snuffles
scalp irritations

To beautify and stimulate

hair eyebrows eyelashes

To soften and protect

hands cuticle

To lubricate and protect from rust

household appliances
skates golf clubs guns

OUT of hundreds of uses for "Vaseline" Jelly contributed by over 2,000 people, the twenty featured on this page are perhaps the most valuable for the average family to know about. The following simple directions can easily be remembered.

For scratches, cuts, sores, wash under running water and apply "Vaseline" Jelly. For more serious wounds use an approved antiseptic, dress with "Vaseline" Jelly and bandage lightly. For burns and scalds, cover the affected area with "Vaseline" Jelly spread on clean linen or gauze. Change dressing daily.

For colds place a bit in each nostril before retiring. For tickling coughs, take internally.

For windburn, chapped skin or lips, apply a thin layer and leave on over night. For baby's chapped skin or irritated scalp apply a thin layer after bathing. For cradle cap massage thoroughly before washing.

To beautify the hands, spread on a layer of "Vaseline" Jelly and wear soft cotton or silk gloves over night. To treat the scalp, part the hair lock by lock, apply "Vaseline" Jelly with the fingertips, leave on over night and shampoo.

Lubricate all household appliances with "Vaseline" Jelly. It won't drip like oil. Keep rust off metal by applying a light coating of "Vaseline" Jelly.

"Vaseline" Jelly is a standard product the world over—pure, safe, sanitary. It's soothing and healing for all irritated membranes. And it's an ideal emollient. And remember when you buy that the trade mark "Vaseline" on the package gives you the assurance that you are getting the genuine product of the Chesebrough Manufacturing Company, Cons'd. Write for free booklet of uses. Address Dept. A2-27, Chesebrough Manufacturing Company, 17 State St., New York, N. Y. "Vaseline" Jelly is obtainable at all druggists.

"That's what I call *perfect!*"

HANDIEST package ever invented for paste or mucilage. No cap to unscrew or lose. No brush. No water to supply. No drying up—seals itself when not in use. Clean to handle—no spreading with finger—never leaks. Operates with one hand. Handier than jar, screw-cap tube, ordinary spreader tube or water-well of stiff paste, liquid paste or mucilage.

Patented NEW Spreader Makes Pasting Easy

Just squeeze the rubber tip between thumb and forefinger to open the patented slit in the rubber tip. Then, holding the tube vertically, as you would a paint brush, place the tip on the paper to be pasted, and spread, bearing down a little as you spread. Do not bear down hard. When you paint with a brush, you bear down only enough to make the tips of the bristles bend. So only the very tip of the rubber spreader should bend. The flexible rubber tip is an ideal spreader—works better than a brush. To make paste flow out faster, squeeze tube slightly as you spread. When you stop spreading, the slit closes. The tip will work perfectly as long as there is any paste left in the tube, even though you are months using it up.

Try it—send 10c.

JUST as you use LePage's Glue for a strong joint, use LePage's Spreader Paste for quick, convenient pasting—two different products for different needs. If you ever use PASTE give yourself a chance to try this new package. Send coupon and 10 cents (coin or stamps) today for regular-size tube. Russia Cement Co., Dept. O6, Gloucester, Mass.

great distress among the poor. I asked the officers of the church if I might open the basement and serve a breakfast of bread and coffee to the hungry. They told me that the church could not pay for this; but I might do it if I could finance it myself.

"I went to a coffee merchant, and he agreed to furnish the coffee; to a big baker, and he gave me the bread. At four o'clock every morning—for the homeless and hungry are early risers!—I went down to the church and made the coffee. They themselves helped me to serve the food.

"That was the entering wedge. The work among the poor and the aliens went on growing, thanks to the splendid people of Albany. The church grew also; but in the opinion of many of its members, this so-called outside work was undesirable. The 'outsiders' were of all creeds—or of no creed at all. I did not try to get them into our church, to serve *us*. Inside or outside of the church, I wanted it to serve *them*.

"But after nine years, history repeated itself. The church decided to sell the building for business purposes, and to move to a residence section, among a 'better class' of people. I was asked to go along—but to leave my outside work behind! I couldn't consent to that, so again I resigned.

"In this crisis I remembered an old building in a poor section of the city; Trinity Episcopal Church. It was seldom used, its former members having moved to other parts of town. The building was dilapidated. There were nine thousand dollars in debts. The parish was occupied chiefly by foreigners—Jews, Italians, and other nationalities. But here was the thing I wanted: a place where a church could serve those who were in need.

"The denomination with which I had been connected was not Episcopalian. Mere forms, however, mean little to me. They are only the clothes in which people dress their religion, according to their individual preferences.

"So I went to Bishop Doane, with whom I already was acquainted. I explained all the circumstances; told him that I had been confirmed, as a boy, in the Episcopal Church, and asked him to make me the rector of Trinity.

"'But, my dear Storey,' he replied, 'that parish can't pay anyone a living salary! There are almost no Episcopalians living there.'

"'I don't ask you to pay me,' I told him. 'I'll try to find some source of income for the church and for myself.'

"'All right,' he said; 'if you want to try it, I give you my blessing. It's all I *can* give you.'

"However, he was better than his word. At his suggestion, the other Episcopal churches provided one thousand dollars a year; and with that we started. Inside of a few years, all the debts had been paid, the building had been repaired, my salary had been increased, and our work of service among the people of the district was well established.

"AND now comes the only part of this story which deserves to be told. All that has been accomplished at Trinity Church has been done by its *friends*—the splendid people of this city, who give their time and interest and money to the work of serving others! I am only the medium through which this service has reached those in need of it.

"Take my vestry, for example; the most remarkable one in the whole country!" he declared proudly. "At the beginning, I asked Bishop Doane and Bishop Nelson to let me choose my own vestry.

"'This city is full of young men of wealth and ability,' I said. 'They are the sons of our best families. Their fathers already are serving on the boards of other churches. So long as the fathers live, the sons will not be called on by those churches. Let me try to bring their ability and energy to the aid of Trinity.'

"'But can you persuade these men to serve?' they asked.

"'I believe so,' I told them.

"'Then go ahead!' they said. 'It isn't according to the rules and regulations; but we will forget those for the present.'

"We started with five members of the vestry. In a few years we added three more. We continued to enlarge it, until now we have twenty-four. And they are twenty-four of the finest men in this city."

WHILE I was in Albany, I found that Doctor Storey is not alone in regarding his vestry as remarkable.

One business man said to me, with an expression of mingled amusement and admiration: "That vestry is so unusual that it's almost funny! You'd think there would be only Episcopalians on it. But, believe me! he has men of all creeds—and of none. For all I know, there may be a Jew on it. I do know that he has no warmer friends, no more loyal helpers, than the Jews of this community.

"Several years ago they asked him to be the chaplain of their Masonic Lodge. He couldn't afford the expense of becoming a Mason, so they themselves paid the cost. And there he is; the chaplain of the Jewish Masonic Lodge! Can you beat it?

"His friends want to put up a seventy-five-thousand-dollar parish house as a memorial of his twenty-five years in Albany. In raising the money for it, one of the men who will help most to put it across is a Jew. Another one is a Presbyterian. And so it goes. It seems as if every man of real worth is lined up back of Doctor Storey in anything he wants to do.

"I guess it's because he stands for the things we all believe in—down in our hearts; and he gives us the chance to practice them by helping him in his work.

"I was present one day when a prominent business man gave Doctor Storey a good-sized check. As he handed it to him, he said: 'I'm glad to help your people. But the real reason why I give this is because it helps *me!*'

"Somehow, that's the way a good many of us feel. When we help him in his work, we *get* more than we give."

Another of Doctor Storey's friends said to me: "The man is a marvel. He is simple and quiet and unpretending. He doesn't pester us into doing things. Yet we do them! I know men who are not members of his church, or of any other. But if Storey asks them to come down and usher at Trinity—they go! Kneeling side by side at the altar rail, you will see perhaps a 'wash lady' and a woman of wealth and social position. That's what religion, as Storey practices it, does for people; it

Music! You love it. Why don't you learn to play!

YOU like to have others play for you. There is a personal thrill in *hand played* music that reproductions cannot give.

But the pleasure of listening to good music is not to be compared to the *pleasure of making it.* To put yourself into the creation of something fine; to entertain others as *you* have been entertained; to feel that cordial welcome everywhere you go; these are the pleasures you will enjoy when you learn to play a Buescher True Tone Saxophone.

Would you clip the coupon below if you were sure it would bring to you these things? It will! With just a little effort on your part. You can teach yourself at home, quickly, easily. And a little practice may reveal talents you never dreamed you possess.

But how can you be *really sure* that you can learn to play? Well! Can you beat time to music? Can you hum a tune? Could you step to the piano and thump out "Home, Sweet Home" with one finger?

Then *you can* learn to play a Buescher. But only with the simplified fingering of the Buescher Saxophone is *rapid progress* assured. You don't have to favor and fuss for certain notes. You just open or close the key and blow *normally.* It is almost as easy as the "one finger solo" at the piano, *but oh! how beautiful.*

A small deposit puts any Buescher Instrument in your home for six days' trial. Then, when *you've* tested your skill and *you see* how simple it is to make beautiful music, you pay a little each month, while you're learning. *Easy to Play, Easy to Pay.*

Our beautiful book, "The Story of the Saxophone," tells more of this new world of pleasure, and gives further proof that *you can learn to play.* It is mailed free to anyone interested in purchasing a Saxophone. No obligation. Six days' trial. Easy terms, if you decide to order. Send that "Pleasure Coupon" now.

BUESCHER BAND INSTRUMENT CO.
Everything in Band and Orchestra Instruments
Elkhart, Indiana

Buescher Trumpets, Trombones, and other band instruments are superior in easy playing, perfect tonal qualities, and are used by the leading artists throughout the world. Any instrument sent on six days' trial. Easy terms of payment. Mail the coupon for special catalog of your favorite instrument.

gives them one great thing in common."

Another Albany man said to me, "Ask Storey to tell you about his getting an avowed atheist to serve on his board."

I did ask him; and this is what he told me:

"One day I was in the office of a well-known lawyer here; a good friend of Trinity, although he is not a member. As I was about to leave, he said, 'There's a man up-stairs who ought to be on your board. I'll take you up and introduce you.'

"On the way up-stairs, he told me who the man was: a newcomer, in charge of a big engineering project. After introducing us, my lawyer friend left and I explained my errand. The effect," he laughed, "was as if I had dropped a bomb in the office.

"'That chap must have been kidding us both!' the man exclaimed. 'I'm going to speak frankly. Then you'll see the absurdity of your request. I'm an atheist! I haven't any use for churches. My wife is an atheist too. If anything, she is a more confirmed one than I am. We don't want our children to go to Sunday-school. We don't want them fed on the old hypocritical traditions. We don't believe in the God and the religion that's taught in the churches. Those are the facts, and I guess that ought to settle it.'

"'You say you don't believe in God or the church,' I answered. 'But do you believe in the flag?'

"'Ah!' he exclaimed. 'That's different! That's *my* religion.'

"'Then perhaps you believe in helping others to honor and to serve that flag,' I said. 'That is one of the things we are trying to do at Trinity. Most of the people in our section have come from other lands. They are poor and ignorant; especially ignorant of the ideals of this country. Yet they are going to become *citizens* of this country! It seems to me that we owe it to them, and to our country, to help them to become *good* citizens.'

"'Now you're talking!' he exclaimed. 'If *that's* what you're doing, you can count on me!'

"He made good on that promise," Doctor Storey went on. "He organized and conducted a club of one hundred and fifty boys. His wife organized a similar club of girls. For two years they worked with us. Then his business took him to a distant city.

"A LITTLE while before they were to leave, I said to him: 'You are going to a new field; but I believe I know you well enough to be sure that you will want to go on with this work, wherever you may be. We can't tell what the future holds. Don't you think you will feel better able to face it if there is an acknowledged bond between you and the people who stand for the things you believe in? Don't you think that the church, which you have helped so much, can also help you?'

"He said he would think it over; and that evening I received a telephone message asking me to come to his house. I went; and as a result of our talk that evening, I baptized his wife and children the next day. On the following Sunday, they were confirmed by the bishop. The man himself remained outside the church; in form, at least. But in the *essentials*, he was *not* outside, and he realized this. He had learned to look at *religion itself;* not at the imperfect way in which we human beings *practice* religion.

"That seems to be the trouble with a great many people. They don't try to study the divine and perfect original. They read a false and garbled translation—and contemptuously declare that there's no value in it. They bother over details of form and of creed, not realizing that underneath them all, the real heart of religion is the same."

One of the men with whom I talked in Albany is a business leader in that city. He is not "pious," not much of a churchgoer; but he is one of that extraordinary phalanx of the community's "best people" who stand solidly behind Doctor Storey and his work. He told me that one day the rector of Trinity asked him if he wouldn't take communion at church the following Sunday.

"Oh, I couldn't do that!" said the man. "There are things in the Creed that I can't accept."

"Perhaps there are," was Doctor Storey's quiet reply. "But you have some creed of your own, in which you can and do believe. Have you ever cheated anyone?"

"Why—no; I don't think I ever have," said the man. "I've *tried* not to."

"Well," smiled Doctor Storey, "if you insist on having a creed, that one seems to me a very good one to live by. And I think the church can help you to live by it."

IN THIS article, I have not tried to describe what I might call the *surface* of Doctor Storey's work: the clubs and classes; the camps for boys and for girls; the lunches for poor and under-nourished school children; all that sort of thing.

I have tried to show something far less tangible; the spirit underneath the surface! It is the story of how one simple and sincere life, dedicated to a religion of *service*, has power to influence an entire community. That influence reaches both ways; up as well as down; and it is hard to tell in which direction it does the greater good.

The house where the Storeys live in Catalpa Drive—hard to find because it is a street only one block long—is a modest little cottage. But that little white cottage will not have another tenant, I fancy, so long as Doctor Storey lives. He has his poor, who need help. And he has that extraordinary legion of friends who, with and through him, *give* this help.

"You mustn't give the impression that I could go to richer and larger parishes," he cautioned me. "I really don't know of any other place where people would put up with me."

"Would you go to one of these rich churches if you had the chance?" I asked.

"And leave my people here?" he replied. "No! As long as I can serve them, I belong to them."

As I left the parish house, I noticed groups of children playing on the steps of the church. They were plainly of different nationalities; and, just as plainly, they were poor. But they were happily at home under the shadow of the friendly walls within which a man preaches his *religion of service;* a man who has tried to live that religion and to help others to live it.

These Sheep Started it

A Tragic Telegram
A Gun Duel in the Sagebrush —
and the Race for a Girl

EVEN a sheep gets desperate when it's looking for a drink and a bite to eat—so you can't blame these woolly lambs. And yet there is another side to it. What would you do if you found you had killed your sweetheart's uncle —and a sheep made you do it? Read this story and decide what your actions would have been—

"JIM *the* CONQUEROR"
by PETER B. KYNE

When you begin this fascinating new serial you'll find the tired old business world fading away. You'll be out on a windswept prairie following the adventures of Roberta and Jim, two of the most captivating characters Kyne has ever created. Starting NOW don't miss a line of it.

If you want to be sure of a year that will have no dull evenings, subscribe to Collier's—just fill out the coupon in the corner of this page and mail TODAY.

OTHER FEATURES

E. PHILLIPS OPPENHEIM begins a series of ten intriguing stories in an entirely new vein. He tells of a nobleman and a detective who joined forces and the adventures they had—some humorous—some thrilling—some mysterious, and all of them intensely interesting.

H. C. WITWER and "One Punch McTague" continue with new *"Classics in Slang."*

And ALBERT PAYSON TERHUNE, GEORGE WESTON, STEPHEN MOREHOUSE AVERY, OCTAVUS ROY COHEN, RUPERT HUGHES, SAMUEL MERWIN, RICHARD CONNELL, DANA BURNET, CHARLES BRACKETT, are a few of the authors whose stories will entertain you during the year.

And don't forget the famous Collier's short features

The Gentleman at the Keyhole, JACK BINNS' Radio articles, EDWIN SLOSSON, *"Catching Up with the World,"* TOM MASSON and all the others.

The Shoe

you're always hearing about

EVERYWHERE you go, women are talking about the wonderful comfort of the Arch Preserver Shoe — how this shoe *combines* foot happiness with lovely appearance. No wonder the Arch Preserver Shoe in ten years has become the most widely accepted in America!

THE

ARCH PRESERVER SHOE

is different in that it has a concealed, built-in arch bridge to support the delicate foot structure. There can be no straining or sagging of the arch. The Arch Preserver Shoe is also different because it has a flat inner sole (crosswise) that prevents pinching of the nerves and blood-vessels. These two features are patented and exclusive. They are found in no other shoe.

The Arch Preserver Shoe has become famous because it has given to women a new idea of foot comfort and usefulness. It will do as much for you — and for your children. You'll be delightfully surprised when you realize that you may have the smartest of styles in such a shoe.

ARCH PRESERVER SHOE
REG. U.S. PAT. OFFICE

(*Continued from page 61*)

time for thinking how best to approach Ben. It had not occurred to her, until Judge Franklidge made the suggestion, that he might get a warped version of the affair from Dillon. She decided to wait and see if Dillon had already talked to him.

Hettie had some shopping to do, and after that had been accomplished she passed on down the street, presently to encounter Ben.

"Ina is at the dressmaker's," he said, after greeting her. "Reckon it's a good time for you to go to the bank with me."

"Bank! What for?" she queried, as they turned back up the street.

"I'm having a certified check made out for your interest in the ranch."

"Ben!" she cried, in amazed reproach.

"Yes, 'Ben,'" he returned, a little testily. "Hettie, I can't have you doing things without my knowledge. Besides, to be honest with you, I don't want to see you lose that money. And I'm pretty certain I'll lose all I put in cattle."

"Ben, something has happened since I saw you," said Hettie quickly.

"Reckon it has," returned Ben, dropping his head so she could not meet his eyes. "California Red is gone!"

"Gone? Oh, no, Ben," she cried. "Stolen?"

"We don't know. He disappeared from the pasture. Raidy swears Red was stolen, that he couldn't jump the fence. I know he could jump over the moon if he took a notion. Dillon agrees with me that Red just got away."

"But you don't *know?*"

"That's the rub, Hettie. We don't. And there isn't a man in my outfit who could track Red. Sure disgusted me. I tried to track him myself. Had to give up. . . . Reckon there never was but one horse hunter who *could* have done it."

"Ben, you'll get Red back," said Hettie, earnestly.

"You're game, Hettie," he returned, squeezing her arm. "With you and Ina and the kid I can beat this rotten deal. Reckon it'll help some if you consent to withdraw from it."

"I'll consent to anything that will relieve or help you."

THEY reached the bank, where presently Hettie received a certified check for her share in the transaction, and she immediately deposited it to her account. Then he drew her to a seat and said in a low voice, "Dillon just told me you'd discharged him."

"Yes?" queried Hettie, lifting her chin, while the tingle and heat of battle ran along her nerves.

"Hettie, I had to countermand your order," he went on gravely. "Now, we won't argue about it. Dillon is the best man available. I can't get along without him. He knows it too. I had some trouble conciliatin' him."

"Oh, indeed," retorted, Hettie, biting her lips. "May I ask what Mr. Dillon told you?"

"Not much. He was sore; but he laughed, at that. Said he loved you, an' had been coaxin' you to look upon him favorably. Then last night—at the dance—he asked you to marry him. Said you weren't very encouragin'. Then he tried to kiss you, an' you made a fuss, an' took it upon yourself to fire him."

"If you believe him, Ben, why, there's no need in my bothering you with my side of the story," rejoined Hettie.

"Reckon there's no call to think Dillon's a liar," went on Ben. "The truth is, Hettie, you're a little of a man-hater. Oh, I know—I remember, an' I sure don't blame you for bein' true—to—to *him.* But you're hard on all these poor devils who fall in love with you."

"Ben Ide, I am not a man-hater," protested Hettie.

"We won't argue the question," said Ben wearily. "You an' Ina always beat me. But please don't misunderstand. I don't want you to marry Dillon. He seems a fine fellow who'll make a big man in Arizona some day. Just the same I'd want to know him better before I'd let him have you."

"Thank you, Ben. I can forgive you now," murmured Hettie.

"I'D LIKE to ask you somethin'," went on Ben, with both concern and mirth in his look. "Did you strike Dillon last night—when he tried to kiss you?"

"Strike him? No, I certainly did not. I wouldn't soil my hands on— But why do you ask that?"

"Well, he had a beautiful black eye," replied Ben ponderingly. "He told me he had stumbled in the dark—in his room—an' hit a chair. Sure it could have happened. But it looked to me like a black eye that had come from a good swing an' a hard fist. I've been wonderin' if he lied to me."

"Well, I'm wondering who gave him just what he deserved," said Hettie, as she arose. "I've got more shopping to do. And time flies. You wanted me to meet you at twelve. How about Marvie?"

"He'll be there. Marvie hunted me up an' asked for money. I'd just given him some, before we left. The kid was all excited about some girl. Wanted to buy her candy an' presents. But, by George, I forgot I promised not to give him away. . . . So long, till twelve. I'll pick you up at Brydon's store."

"Well," said Hettie, "as to Marvie—I think he's in love. I saw the girl. Tell you more later."

It lacked five minutes to twelve when Hettie labored to the front of the dry-goods store, burdened with packages. She deposited her bundles on a window seat beside the door, and looked out for Ben. He had not arrived yet.

Suddenly a man, hatless and coatless, dashed by, yelling, "*Keep off the street!*"

"What's the matter with him?" asked Hettie, amused.

Several clerks came hurriedly to peek out.

"Looks like another street fight," said one of them excitedly.

Shouts and trampling of feet followed. Across the street pedestrians hurriedly ran into the first open doorway they

A Twin Service for Ambitious Men

O. C. MILLER
Director Extension Work

Training
Preparing you for a better job and a Raise in Pay

Employment
Placing you in a good, well-paid Position

A Million Dollar Institution Back of This GUARANTEE

Get this straight—the American School was chartered in 1897 as an *educational* institution, *not for profit*. So you will find the same standards of service here as in the best resident schools and colleges. Over 200 of the leading Engineers, Executives and Educators of the U. S. prepared the instruction we offer. Their standing vouches for its *quality*. This is available to you on terms of only a few dollars a month. *Write for our souvenir book, "White Magic,"* given FREE in celebration of our 30th Anniversary.

IF You Are Now Earning $40 a Week or Less—

I guarantee to *prepare* you for a fine Drafting position, right in your home, in your spare time; then I guarantee to help you find such a position paying at least 50% *more than you earn today*, within 60 days after you complete this training, or I will refund the small amount you pay for tuition. We make this agreement to prove this instruction *will* make you a *real Draftsman*. Back of this guarantee are the entire resources and reputation of this million dollar institution.

O C Miller

Go into Drafting!

Learn Drafting—how to *make* and *read* plans, and the doors of opportunity in all mechanical, building, and engineering lines swing open for you! There are as many well-paid Drafting jobs open today as in any other one profession or trade. There's a variety, a fascination to Drafting that will grip you. No other work is so interesting—the field offers opportunities for quick promotion.

The Draftsman is the Boss of the Works!

Destroy blue-prints and *plans*, and the wheels of all Industry will stop until new ones can be made. Every move of every workman on the job is *controlled* by the Draftsman through his plans. Railroads, public works, buildings of a hundred sorts, machinery, electricity, automobiles—all manufacturing and construction *start* on the Drafting table! That's the kind of work to get into, friend. Where you have the same chance as anybody else to make a *quick success!*

3 Drafting Lessons Actually FREE

—to prove you can learn at home in spare time!

You'll be surprised how *quickly* you can learn Drafting by our new one-step-at-a-time method. We start your training on actual Drafting room jobs from the very beginning. Before you know it, you are batting out professional plans like a veteran. Get the first three lessons—the coupon brings them. *Do them.* Test your ability to master Drafting at home. Without cost or obligation.

Free Job Service

The American School is the first in the home-study field to recognize the need of guaranteeing its courses with a money-back contract, if the training fails to accomplish the benefits you expect. Thus all risk and doubt are eliminated—**either the training will help you to a better job and a raise in pay or it will cost you nothing.** To better carry out this important service, we maintain a **National** employment department which keeps in touch with the employers of Draftsmen all over the U. S. All this without extra charge to our students and graduates.

Professional Outfit GIVEN!

You will naturally expect the American School to give you the best kind of instruments and tools with the best kind of training. This outfit is good enough to use professionally after you finish your training. Mail coupon for description.

happened upon. The noise ceased. Then a man entered the door where Hettie stood, transfixed and thrilling.

"Hello, Matt, what's doin'?" queried the clerk.

"Darned if I know," replied the man. "I seen people run off the street, so I ducked in here. Just before, I heard Jim Lacy was in town."

"Who?" shouted his questioner.

"Jim Lacy. Don't know how true it is. But somebody's in town, you can gamble on that."

Faces appeared at all doors and windows. Some peeped down the street, then jerked back. How ridiculous it seemed to Hettie! Yet there she stood likewise, her heart throbbing, her whole being in a state of suspense.

A shot rang out, deep and ringing. Another followed, almost like an echo. Silence ensued, palpitating, stifling to Hettie. A single shout came from far down the street.

The man beside Hettie peeped out.

"By heaven!" he ejaculated, in husky accents.

The clerk, frightened as he was, had to look. He jerked in his head, with face pale and eyes starting, and began to jabber.

Hettie obeyed an irresistible instinct. She looked out. The street appeared empty. No, there was a man, lying face down, not fifty feet from the door. His arms were outstretched.

"It's Jim Lacy. I never saw him; but I know them who has," said the man beside Hettie.

"Oh, how dreadful! . . . the dead man—there in the road—Jim Lacy?" whispered Hettie.

"No. Jim Lacy is the one comin' up the street. . . . See his gun. It's smokin'."

THEN Hettie espied a man in rider's garb, gun in hand, stalking toward his victim. He passed him with only a downward glance. He sheathed the gun. He strode toward the sidewalk.

His walk! His shape! Had she been horrified out of her senses? Was she mad? What flashed so swiftly in memory? But this man—this Jim Lacy! He was coming. He would pass the door.

Hettie drew back with the last of failing strength. She reeled. Her mind had halted. The quivering of her body ceased as if paralysis had set in. Cold, numb, awful suspense held her upright, waiting, as if for death itself.

The man in rider's garb passed the doorway, erect, stone-faced, with eyes of lightning set ahead.

Nevada! Hettie's faculties leaped out of terror and stupefaction to recognize him. Nevada! Jim Lacy? . . . *Nevada!*

She had a sense of sinking down. All went blank—then slipped into black oblivion.

Hettie recovered consciousness before she had strength enough to open her eyes. She was lying down, with someone supporting her head. Cold water had been dashed in her face. She felt it trickling down her neck.

"It's Miss Ide," said someone. "She fainted. . . . Fell right down! Hadn't we better call a doctor?"

Whereupon Hettie opened her eyes, to whisper weakly, "I'll be—all right."

She lay on the window seat with her head supported by the young clerk. Several persons, one a woman, stood around sympathetically.

"There! She's come to."

A bewildering complexity and whirling of thought suddenly left Hettie with her mind clear.

"Is my brother here?" she asked, trying to sit up.

"No. Better set still a little, miss. You're awful white yet," said the woman kindly.

"But I'm not hurt," returned Hettie. "You're all very kind. . . . It was silly of me to—to keel over like that!"

While she talked there seemed to be an awful question hammering at her consciousness. When Ben and Marvie entered at that moment, she understood what that question was: Ben did not know what she knew. Her relief was so great that it overcame her, and when she tried to rise she only sank back again.

"Why, Hettie!" cried Ben, in sharp concern, as he sat down to grasp her. Then Marvie knelt on the seat at her other side. Hettie smiled wanly at them, and closed her eyes. She felt dizzy, and then feared to look at them.

"It's nothin' serious, Mr. Ide," spoke up the clerk hastily. "She just fainted. It was the shootin'."

"Whew, Hettie! You gave me a scare," said Ben. "But you're all right. I'm surprised at you. Anyone would think you'd never heard a gun back in California. . . . Come, brace up, Hettie!"

"Take me home," replied Hettie, opening her eyes again. "I—I want to get out of this town."

"Wal, I should smile. Me too," joined in Marvie, squeezing her hand. Hettie had never seen the lad look quite as he did then. She did not dare ask him if he had seen the participants of the street duel. She feared he had.

"Marvie, you fetch these bundles," said Ben, as he lifted Hettie to her feet. He had to support her, and almost lift her into the back seat of the buckboard. "There, you're all right. . . . Marvie, put the bundles under the seats. Then get in beside Hettie an' hang on to her."

HETTIE did not look to right or left, yet she saw and heard the excited people passing, talking, down the street. Ben drove rapidly. Soon the center of town lay behind. The streets were quiet. Hettie lost the cold dread of seeing a lithe, stone-faced man in rider's garb. Ben halted the horses before a house well back in a green yard, and as he leaped to the ground Ina appeared.

"Hello, you-all," she called merrily. But as she reached the buckboard she suddenly halted, aghast. "Why, Hettie! You look terrible. Are you ill? Oh, what has happened?"

"Nothin' to upset you, Ina," replied Ben. "Hettie had a scare. There was a shootin' fray down-town. An' she fainted. Climb up, an' we'll be off pronto. These ponies are sure rarin' to go."

As soon as Ina had climbed up she turned solicitously to Hettie and reached for her hand. "You poor dear! I never saw you look like this. Fainted! That's strange. You never fainted in your life. Did you see the fight?"

"No. I didn't see—the fight," replied Hettie, shutting her eyes tight. "But I heard it. . . . Then I peeped out—to see a—a dead man lying in the street."

"How dreadful! Did you see this fight, Ben?"

"No. I missed it."

"Did you know the fighters?"

"No. Someone told me Jim Lacy had come to town, lookin' for trouble. He gave a rustler named Hardy Rue choice of leavin' town or throwin' a gun. Rue chose to stick, an' it cost him his life. They met in the street. Even break, of course, as these Arizonians call a fair fight. But Rue was fallin' when his gun went off."

"Terrible," said his wife, shuddering. "But a rustler cannot be a very great loss to the community."

"Ina, I sure hope Mr. Jim Lacy sticks around for a while," replied Ben. "Tom Day told me Hardy Rue might be the leader of the rustlers who've been pinchin' me so hard. But Dillon scouted the idea."

DURING this conversation Hettie was glad to have the support of Marvie's arm and shoulder. She had not opened her eyes. But her ears rang with the words she heard.

"Ben, I reckon you an' sis might shut-up yourselves," declared Marvie, significantly, "or talk about somethin' else."

"Sure, sonny," agreed Ben. "It's no pleasant subject."

The spirited team drew the light buckboard at a rapid pace over the smooth, hard road. The breeze stirred by this pace was cool and pleasant to Hettie's throbbing brow. After a long rest she opened her eyes and sat up again. Already the dark line of cedars was in sight, and beyond them the uneven timbered ridges that ran up to the black, frowning Mongollons.

While her gaze strained out over the yellow and green prairie land, and the rolling ridges with their slopes of sage, and the miles of white grass where herds of cattle grazed, and on and on, and ever upward to the purple ranges, Hettie Ide was confronting herself with the staggering truth:

She had seen Nevada. She could not torture herself with a thought of doubt—that she might have been mistaken. Sight and heart and mind, her whole being had recognized him in one terrible instant. He was in Winthrop. He was Jim Lacy. Jim Lacy, whom range rumor had long made mysterious, famous, ruthless. Jim Lacy was Nevada. Back in those Forlorn River days, when she and Ben and Ina and Marvie had loved him as Nevada, even then he had been Jim Lacy.

Why was she stunned? Ever since Nevada had killed Setter, and ridden away never to be heard of again, Hettie had realized that he had borne a name he could not endure for her or Ben to know. That was not so astounding. Nevada might have been any one of the noted desperadoes of the West. The overwhelming thing was that Nevada was here in Arizona, alive, virile, stone-faced as she had never seen him but once; here in Winthrop, close to the home she and Ben had chosen almost solely in the hope that they might find him some day.

A sickening, helpless impotence assailed her. All the longing of years wasted! All the hope and prayer and faith wasted! Vain oblations! Nevada had been false to her, false to the best she had helped to

raise in him, false to the blessed conviction she had always entertained—that, whoever he was and whatever he had done, out of love for her and assurance of her faith, he would go on to disappear from the evil roads of the West and turn to an honest life. Hettie would have gambled her soul on that. And now the soul she would have staked grew sick with horror and revulsion. Nevada was a consort of rustlers, a bloodthirsty killer, a terrible creature of fire and stone, of hate and ice.

And yet how could she be faithless in hope, in trust? Had she not sworn, with her lips close to his, that she would die before she ever failed him? What if he had used his deadly gun again? He had killed once before, a worthless, wicked man, whose death had served a good purpose. Nevada had once saved her and Ben and Ina, all of them, from grief and misery. Who could tell what the killing of Hardy Rue might be to someone?

Over and over again this stream of consciousness eddied through Hettie's mind, like conflicting tides, now rushing, now receding, now full and devastating.

Through the waning afternoon—through sunset, twilight, dusk, on into the night—Hettie acquired deeper insight into the gulf which yawned beneath her.

The swift horses had swung into the home stretch, over the short-cut road that had been one of Ben's achievements. How the night wind moaned in the lofty pines! It seemed the moan of the world. The fragrance of sage filled the air. Down through the pale aisle of the forest moved shadows, unreal, grotesque—things as strange as shadows of the mind.

When at last they arrived at the ranch, Hettie crept exhausted to her room, and, falling upon her bed, she lay quiet, wanting to rest and think before she undressed. But she fell asleep.

WHEN she awakened the sun was shining gold in at her window, and the fresh, sweet, cool fragrance of the forest blew over her. Instead of being beautiful, they seemed dreadful to her. She dreaded wakefulness, the daylight, the many duties to be met, the imperative need of action, the facing of her family and of life. But she could not keep them back. And with the truth, there surged over her new realization of the castastrophe that had fallen.

Hettie sensed then that her greatest trial was yet to come, and a faint intimation of what it might be appalled her. It roused her to battle. Dragging her aching body off the bed, she undressed, bathed her hot face, brushed out her tangled hair, and put on her outdoor clothes.

Then she slipped out without awakening her mother in the adjoining room. What was it that she must do? Find him, save him, or perish! All that she faced in the golden morning light seemed to mingle in one subtle whisper: There was no deceit, no blindness, no vacillation in the nature that spoke to her.

Only the birds and the wild game, and the calves in the pasture, the roosters in the barnyard, the burros out on the range shared with Hettie those perfect, uplifting, clarifying moments of the sunrise.

Golden gleams of light crossed the brown boles of the stately pines; low down through the foliage shone patches of pink sky; to the north and west opened the vast slant down to the desert, illimitable and magnificent in the shadowy soft dawn. Deer and antelope grazed with the cows in the pasture. Squirrels barked from the trees, hawks sent down their piercing cries, wild turkeys gobbled from over the ridge. Joy of life, radiance of creation, peace and solitude, wholesomeness and sweetness of nature, exquisite beauty of woodland and wasteland at the break of day, and a marvelous, inscrutable Divine Will pervaded that wilderness scene.

Hettie absorbed it. She lifted up her head to the one black dome of the Mongollons. The misery of the night faded away like a nightmare. She had been a coward. She had failed to be grateful for the very thing that has been the beginning and end of her prayers. Could she be so slight and shallow a woman as to succumb to heartbreak? A terrible ordeal faced her, the outcome of which she could not divine. She could only endure, and fight whatever fate had in store.

"Oh, if I can cling to this blessed strength!" she cried. "To hold it fast when I'm distracted! To have it in hours of gloom!"

THAT day Hettie did not cross the picturesque log bridge that spanned the brook between her cabin and the beautiful rambling residence of her brother.

She did not see Ben all day. Late in the afternoon, when she went out to walk a little in the open air, she espied Marvie sitting on the porch, a most abject-looking lad.

"Hello, Marvie. Come and walk with me," she said brightly.

"Aw, I want to die," replied Marvie.

"Goodness gracious! Well, don't do that on my porch!"

She dragged him to his feet, and locking an arm with his led him off into the woods, until they were out of sight of anyone at the house. Then she bade him sit with her under an old pine where the fragrant brown-needle mat looked so inviting.

"Now, Marv, I'm through teasing," she said, with a gravity that suited his mood. "What's the trouble?"

"I had a run-in with Ben," replied the lad. "First one we ever had."

"You did? Well, I've had a thousand. When Ben gets sulky and cross a good run-in clears him up, as a thunderstorm does a sultry day. Where did Ben go today?"

"We finally rode off to a deserted homestead over here, five miles or so. Someone found tracks of California Red, and that news upset Ben. Then waited 'round hours for Dillon, who didn't come. Raidy, who's on the outs with Dillon, said some things that made Ben sorer. Well, dog-gone it, Ben pretty soon pitched into me."

"What for?" queried Hettie practically.

"Nothin'. Not a darn thing. 'Cept I moped along at a job he gave me. Fixin' fence. If there's any job I hate it's that. He swore at me. Then I told him to go to thunder—I'd quit and go home."

"What did Ben say?" asked Hettie.

"He said, 'Go ahead, you bull-headed, lop-eared little jackass.' So I rode off home. And I reckon I'll quit. I'm goin' to be a rustler."

"All right. You want to become a rustler," returned Hettie, accepting the statement. "What for?"

Marvie did not reply for a long while, during which his head sank lower.

"Hettie, I'm terrible—in love," he said at last, with an effort.

"Rose Hatt?"

"Yes. It couldn't be anybody else!"

"Does Rose love you?" asked Hettie softly, her hand going to Marvie's.

"I thought she did, at first," replied the boy, writhing. "She let me kiss her—kissed me back. But last night, when I asked her to meet me again, she said no. I got mad. But she stuck to it. When I accused her of flirtin', and me dead in earnest, she said, 'Marvie, I've a bad name. I belong to the Hatts. You've a lovely sister' (she'd seen you), 'and a proud family. I'm only a backwoods girl. It won't do. I'll not see you any more.' She ran away from me then, an' I couldn't find her. She'd hidden or left the dance. In the mornin' I tried again. No luck."

"Marvie, I admire Rose for that," said Hettie earnestly. "I think she's a square girl, even if she is a Hatt."

"Now, Hettie, don't you go talkin' like Dad or Mother," burst out Marvie.

"Oh, Marvie, I won't," declared Hettie, ashamed of the fact that she had been about to do so. By Marvie's warning she estimated his regard for her.

"I don't care a darn about myself—even when I do love her terrible," went on Marvie, passionately. "But what's to become of Rose?"

In the sincerity and inevitableness of youth he had hit upon the thing that mattered most.

"I understand, Marvie," said Hettie gravely. "You make me ashamed. Rose is not to blame for her family, for her surroundings, for—anything."

"Now you're talkin' like Hettie Ide," returned Marvie fervently. "And I'm givin' you a hunch. If Rose really loves me I'll stick to her. In spite of Dad or Ben or anyone!"

HETTIE dropped her head. Here was a problem. What should she say? Marvie's confidence in her suddenly meant more than ever before.

"What knocks me flat is—I'm afraid she doesn't love me," went on the lad. "I'm goin' to find out though, if I have to ride right under Cedar Hatt's nose. Last night I believed she didn't. This mornin' I thought she did. If not, if she was only a little hussy, why'd she say she wouldn't meet me any more?"

Hettie had no quick reply to his passionate query. Owing to her own stress of emotion the last twenty-four hours, she was far from being her old logical self. But she was fighting a conviction that Rose Hatt had shown nobility and sacrifice in her attitude toward Marvie's advances.

"Tell me, Hettie," begged Marvie, with soul-searching eyes that hurt her, "don't you think Rose cared really? Wasn't that good in her—givin' me up? Wasn't it because she—she liked me too well to go on with what she thought might disgrace me an' you an' Ben?"

"Marv, I can't be sure, but I think so."

"Thanks, Hettie," choked the lad, sitting up straight and facing ahead. A light crossed his somber, youthful face. "You hit me right here!" And he put his hand to his breast. "Sure, I couldn't tell anybody else but you. It's helped a lot."

Here's the way the picture was made and—

Here's the actual picture—made, as illustrated above with a Kodak and Kodak Portrait Attachment.

Close-ups with a Kodak

Close-ups with a Kodak give new zest to picture-making. Just slip a Kodak Portrait Attachment over the regular lens equipment—it's done as soon as said—and the subject is brought into sharp focus at close-up range, within arm's length if you like.

Kodak Portrait Attachment is just an extra lens. Price $0.50 and $0.75.

The result is big images—informal head-and-shoulder portraits fill the print; studies of flowers, of family heirlooms and other relatively small subjects register in satisfying size.

And informal portraiture is just something more added to the day in and day out pleasure of picture-making the Kodak way—just another reason why you'll want to get your Kodak out and keep it busy.

Price of Kodak Portrait Attachment is $0.50 and $0.75 according to size.

Autographic Kodaks $5 up. At your dealer's.

Eastman Kodak Company, Rochester, N.Y., *The Kodak City*

"Marvie, how in the world did all this come about?" asked Hettie, in wondering sympathy.

"Like a story, Hettie. I met Rose over a month ago. Went huntin' on a Sunday. Rode a long way, then walked. I got after some turkeys. They were awful wild. I followed them a long ways, down into a big grassy canyon where a stream ran. Most beautiful place. Deer, elk, beaver all along. But I wanted one of those big old gobblers. So I kept on. And I run plump into a girl. She was cryin'. I spoke to her—sat down with her. After a while she began to talk. First she was sore an' hot at her brother, Cedar Hatt, who beat her. Showed me black and blue marks on her bare legs. I said somebody like Jim Lacy ought to come along and kill him. Funny, wasn't it, me sayin' that?

"Well, we got real friendly. She said she'd meet me again, but farther away. That place was too near home. So she told me where a trail ran, and how I could find it. I never told her who I was that time. Forgot. Anyway, I kept the day she set and, sure enough, she came. . . . It was different that day. I reckon I fell in love then—not the first day. And she—but never mind. . . . I met her three times more. And last time, night before last at the dance. That's all."

"It's quite enough, isn't it, Marvie?"

"It sure is. I forgot to tell you. At the dance, when she said first she wouldn't meet me any more, I said I was goin' to our place Wednesday at the same time as before. I'm goin', too!"

"Marv, if what I know of girls holds true—if she really cares—she'll come. Rose is too young to stick to a hard decision like that, if her heart's involved."

"Hettie, you're a comfort," cried Marvie, gratefully, almost hugging her. "I'll hope she'll come. I'll believe it. Maybe that'll let me eat and sleep."

"You'll tell me everything?"

"You bet I will! Now I'll go and crawl to Ben!"

SEVERAL days passed. Hettie took to horseback riding again, venturing perhaps farther away from the ranch than Ben would have allowed, had he known. On Wednesday she rode with Marvie for five miles of his journey, back into the forest toward the brakes.

On the last stretch back home, where the trail was fairly level and open, she urged her horse to his best speed. That race satisfied, for the time being, a restlessness and need of violence. Her blood danced hot; wind and sun burned her cheeks; the tang of the woods acted like wine. Thus she rode down into the clearing, and on to the barn and corrals. And she ran pell-mell into Ben, Raidy, Dillon, and Tom Day, scattering them like quail.

Hettie reined her mount and, wheeling him, trotted back, and slid from the saddle.

"He's a—fine horse, Ben," she declared, patting the wet neck.

"Wal, he suits you, lass," said Tom Day admiringly, as he took her in from boots to sombrero.

"Miss Hettie, strikes me this hyar Arizonie has got into your blood," added old Raidy, shaking his head dubiously. "Reckon I don't like it. Day says it ain't safe for you to ride out alone. So does Dillon."

"What do *you* say, Ben?"

"Not a darn thing. I quit long ago tryin' to run you," returned Ben.

Dillon leaned against the corral, in the background, without entering into the conversation. The discoloration around his eye had not wholly disappeared.

"Miss, can't you be happy ridin' on the ranch, without headin' off into the woods? asked Raidy.

"Do you think I'd ride inside a fence? But seriously, what's the danger?"

"Wal, lass, mebbe there ain't any real danger," replied Day thoughtfully. "But we're sort of locoed these days. Reckon it's far-fetched to think hoss thieves an' rustlers might take a notion to steal you."

"Kidnap me for ransom?" queried Hettie incredulously.

"Wal, yes, an' for other reasons, too," rejoined the old cattleman significantly. "You don't 'pear to know it, but you're a mighty handsome girl."

"Thank you, Uncle Tom. That's a fine compliment. But it's not scaring me."

"HETTIE, look here," interposed Ben gravely, stepping to her with a piece of paper in his hand. "Read this."

Hettie took the coarse, dirty paper and read:

Ben Ide:
Sir—Fire your foreman Dillon or dig a grave for him. X

Without a word Hettie returned the slip to her brother.

"We found that nailed on the bunkhouse door," he said angrily. "It's a threat. Dillon recovered another bunch of my cattle yesterday. Only a few head, but enough to make these rustlers sore. To-day we found where they'd been campin' in an old cabin, on my own land."

"See, Miss Hettie?" added Raidy. "That's why it ain't safe for you to ride out so far."

"I'll be careful hereafter," replied Hettie soberly, handing her horse over to Raidy.

She was proceeding up the lane, revolving in her mind that threatening note Ben had showed her, when he caught up with her and fell in to her step.

"Hettie, I don't like this situation I'm in," he said.

'Neither do I, Ben," retorted Hettie. "But nobody can tell you anything."

"Aw now, Hettie, that's not nice of you," said Ben reproachfully. "I told Ina about your affair with Dillon—your side of it, mind you. She pitched into me like sixty. I can't stand havin' both of you against me."

"We're not against you, Ben."

"Yes, you are," he said doggedly. "An' I'm gettin' sore at everybody. I'm goin' against your advice an' Ina's, even Tom Day's. I've offered a reward of one thousand dollars for the return of California Red. Posted notices along the trails. Tom didn't like that. Said someone would bring the horse back, then steal him again."

"What did Dillon say?"

"He approved me offerin' the reward. You know, Dillon said he could get Red back. An' he was away two days, after he returned from Winthrop. I don't know where he went. He's worked with most of these outfits along the Mongollons. He knows them all, anyway, an' no doubt some of them are clanny with the horse an' cattle thieves. That's the worst of this country. You really don't know who is honest. Well, Dillon came back an' said he couldn't find out anythin' about Red. So I decided to offer a reward. An' Dillon himself took the notices out on the range."

"You'll get Red back," returned Hettie hopefully.

"I've got another idea," he went on. "I want to send for several well-known sheriffs an' put them on the track of these rustlers. Pat Garrett, of New Mexico. If I could get him, an' a couple from Phoenix, an' hire a gang of hard-shootin' cowboys, I'll bet they'd clean out the rustlers. But Tom Day yelled murder at the very idea. An' Dillon, he hit the roof. Swore they'd burn me out, instead of just rustlin' a few cattle. *Few?* By George, I'd like to know what Dillon would call a *lot* of cattle."

"Ben, you should listen to Tom Day, at least," replied Hettie. "He knows the country."

"I'm listenin', Hettie. But I want some action," he retorted. "If I don't get Red back inside of ten days there'll be murder to pay by somebody!"

MARVIE did not come back to the ranch till late. Hettie sat up waiting for him, trying to read, but mostly gazing into the wood fire. She heard his swift step on the porch, then a quick knock.

"Come in, Marvie," she called.

In he rushed, like the wind, but quietly, and he startled her with his pale face crossed by black smudges, and his piercing, radiant eyes. He carried a rifle and quirt and gloves in his hands; and altogether he was a striking figure. Hettie knew before he spoke what had happened.

"She was there!" he said.

"I knew that the instant you entered," replied Hettie, with a smile. There was a contagion in his spirit.

"Hettie, I'm sure the happiest an' miserablest man in the world!"

"Sit down, Marvie, and tell me all about it."

"Not a great deal to tell, but what there is of it is terrible," he returned, coming to the seat beside her. Then in a low voice, full of suppressed emotion, he went on:

"Rose was there. She'd been there for hours, waitin' 'n' cryin' fearin' I wouldn't come. She said her heart broke. She'd found out she loved me. I was the only one who'd ever cared for her—been good to her. She said she could give me up—to save me disgrace—but she'd have to kill herself. I swore I'd stick to her—marry her. I talked an' talked. An' then I told her I'd fetch you down the trail next Wednesday. She was terrible scared at that. But I told her you'd help us. An' finally she agreed. She's to ride down a trail we know, till we meet her. . . . That's all, Hettie. An' for heaven's sake—"

Marvie broke off huskily, his voice failing.

Hettie impulsively kissed him. "Marvie, I think you're pretty much of a man," she said. "I'll go! And I'll find *some* way to solve your problem."

(*To be continued*)

Safeguard *all* your teeth *with the* Pro-phy-lac-tic

HEALTH for every tooth depends on getting a brush that reaches every tooth. This is almost impossible with an ordinary tooth brush.

But try a Pro-phy-lac-tic! You will then find out how *easy* it is to reach every tooth. The bristle curve, terminating in the big end tuft, makes it possible for you to bring this brush in contact with every tooth.

Consider the curved handle on the Pro-phy-lac-tic. If you were to design a tooth brush yourself, there is no doubt that you would have the handle bent like the Pro-phy-lac-tic. You would see that a curved jaw structure requires a curved handle. Get a Pro-phy-lac-tic today at your druggist's.

Sold by all dealers in the United States, Canada, and all over the world. Three sizes—Adult, Small and Baby; and with white handles or colored transparent handles—red, green, or orange. Prices in the United States and Canada are: Pro-phy-lac-tic Adult, 50c; Pro-phy-lac-tic Small, 40c; Pro-phy-lac-tic Baby, 25c. Also made in three different bristle textures—hard, medium, and soft. Always sold in the yellow box.

DO YOU NEED A NEW TOOTH BRUSH?

A Pro-phy-lac-tic is made so well that it doesn't look worn out even when it should be replaced by a new one. The bristles appear as good as ever. But the best bristles will lose their elasticity. Pro-phy-lac-tic bristles are the best that nature provides, but three or four months of steady twice-daily use will take away their liveliness.

Don't try to wear out your Pro-phy-lac-tic. Get a new one every three months. Keep several on hand.

How One Man Is Building a Fortune

FIFTEEN years ago, a young man came to us with $1,000 to make his first investment. He wanted safety, 6% interest, and freedom from worry.

Together we worked out an investment plan for him. Every year, for fifteen years, he has bought $1,200 in bonds, reinvesting the interest. Now he has $31,100 in Straus Bonds, of which $12,200—more than one-third—was purchased out of his *interest*.

You, too, can build a fortune as easily as this man. Determine how much you can set aside and invest each year, and stick by that determination. Let us help you solve your investment problem. Write today for our booklet and special letter telling how Straus Bonds may be used to build *your* fortune. Ask for

THE FAMILY'S PROBLEMS

"Our Problem Was Loaded With Dynamite—But It Didn't Go Off"

THE problem in my family was the kind that is loaded with dynamite; and once it appeared that the fuse was sputtering! But, thanks to the good sense of my wife, there was no explosion. Perhaps the explosion will come from you who read this! Here's the story:

When I was a small boy I went to Sunday-school, where all boys *should* go. But I was unlucky in one of my teachers, and my bad luck was increased by the fact that she taught me for many years. She was a good woman, and no doubt she helped mold and strengthen the characters of most of those who attended her classes. Yet I am perfectly sure she did me no service. Instead, she filled my young mind with fear—fear of life, fear of death, fear of the dark, fear of everything. I was introspective, even as a child, which accounts for the deep impression her teaching had upon me.

"Bad boys," she would say, "go to the bad place," and then she would tell us what things were bad. She mentioned such acts as dodging work at home, playing hooky from school, missing Sunday-school, and a long list of others. Some of the acts she presented as evil were evil. Others were merely mischievous, or not even that. All of which would have done no harm if my mind had not been more logical than rational in its workings.

SHE often illustrated her theory with the following bit of false reasoning: "If you put one rotten apple in a barrel of good apples, all the good ones cannot make the bad apple good. But that one rotten apple will make *all* the others rotten." (So far, she may have been correct; but the analogy she made was incorrect.) "And it is the same," she would go on, "in life. If one bad boy joins a crowd of good boys, he will make them *all* bad. They will not make him good."

Thus, at one "swell whoop," she gave us—or me—the impression that evil is much more powerful than righteousness, that the "bad man" is stronger than God; and she tried to prove something by an analogy that has no meaning. Apples and boys are not the same; so what is true of one is not necessarily true of the other.

"Bad boys go to the bad place," said this teacher of mine. I believed her. Then she told what bad boys do. I had done some of those things. The conclusion, therefore, was inescapable for me—I was bound for the "bad place." It is true, I might repent and be saved, and often I resolved to do so. But a boy's memory for abstractions is sometimes a short memory. Mine was, except in the case of horrible fear that the "bad man" would some day get me. And my teacher had us keep before us always the belief that Death was hiding somewhere near. I was fairly bold in daylight, figuring that Death could not overtake me, if I saw him coming. But nighttime was something else again. The monster might creep up on me in my sleep!

How I dreaded the night! How I fought off sleep, which seemed to me the forerunner of doom! All because my teacher did not recognize the possibilities of an introspective child's mind.

So I resolved that my children should be spared the terror I had endured.

When our eldest child was big enough to attend Sunday-school the problem came up. I told my wife I did not want her to attend. And I told her why.

"YOU are condemning one of the best of institutions because one person made a mistake," said my wife.

"Our little girl is the same as I was," I replied. "She is introspective, logical, serious. I'm trying to protect her."

"It's a curious kind of protection," she answered, "to deny her religious training."

"I can teach her."

"Yes, you can; but will you?" was my wife's come-back to that.

The battle went on; the problem remained with us for months. Then my wife hit upon the solution.

"You haven't been to Sunday-school in fifteen years," she said. "Maybe they have improved since you were a boy. Anyway, you might attend, and find out. In that way you can be sure what Alice will learn."

My wife is persistent, and extraordinarily wise. She kept at me to return to my early church habits.

"That's the only way you can be sure what they will teach Alice," she urged.

As I have said, my mind worked logically when I was a boy, and it still has a tendency to do so. Therefore, I had to admit my wife's proposal was a fair one. That admission was the beginning of the end of our problem. I met the local minister; met many members of his church. I began to attend. So did our little girl, and I'm bound to admit that I like the ways of that church, Sunday-school included! So I, who had set out to keep our daughter at home, wound up by leading her to Sunday-school.

But if I had found the kind of Sunday-school I used to attend, where stark fear was planted in the minds of small and impressionable children, I most certainly would have kept her at home. Wouldn't you?

L. N. R.

EDITOR'S NOTE: Beginning with the present issue, this department becomes "The Family's Problems," instead of "The Family's Money." Heretofore, it has dealt with money matters only; hereafter, it will deal with any problem common to the average family, money matters included. Educating the children is sometimes a problem. And there are innumerable others, such as getting on with touchy relatives; supervising the selection of children's companions; controlling bad tempers, and so on. All of our readers are invited to contribute articles of about 1,200 words. Those accepted will be paid for promptly.

THE "RIGHT THING" IN CHOCOLATES FOR VALENTINE'S

As typified in the smartest gathering places of smartest America

The St. Valentine's Ball at Lake Placid is noted for its smartness, and for the exclusiveness of those who are included. This famed resort is the winter rendezvous of the Haute Monde of America.

YET — *Obtainable, in an instant, at a neighbourhood store no more than a few squares away from where you are at the moment!*

IN some matters of social custom, there may be an option: but in chocolates it is Johnston's . . . at Palm Beach, at Del Monte, along the Lake Shore Drive in Chicago, in the fashionable Park and Lexington districts of New York; on Nob Hill in San Francisco and Peachtree Street in Atlanta—wherever graceful social amenities are observed.

The Valentine Heart Package, illustrated, is one of the most popular of all assortments offered under this famous name. Many kinds of chocolates are contained, assuring variety . . . and the certainty of pleasing *her*.

Obtainable at authorized Johnston Candy Departments in the better class stores throughout America, and thus available at a moment's notice.

Johnstons
CHOCOLATES

You will find a wide variety of Johnston's Chocolates at one of the better class stores in your neighbourhood.

Hereafter new Colors in this Exquisite Hosiery will be created by

LUCILE Paris

Stylist to Royalty
Prophet of the Mode

Direct from Lucile's come these designing room sketches. Above is a black crepe Georgette frock in three tones of gray. Lucile suggests Holeproof Hosiery in three shades: Celeste, Atmosphere, Fanchon.

A famous doorway in the world of fashion—11 Rue de Penthievre—through which step the smartest women in Paris, to select Lucile-Paris costumes. This handsome stone entrance leads into one of the most charming old court gardens in France.

This dinner gown of mauve and gray is an especially fortunate color scheme for the woman with gray hair. Lucile permits a choice in Holeproof Hosiery colors: Fanchon, Celeste.

© H. H. Co.

An evening wrap of black velvet, fur trimmed; fan-like sleeves of flowered lamé. In completing the ensemble, Lucile suggests the new Holeproof colors: Atmosphere, Lido or Maxine.

TO know the hosiery shades that fashion's court will favor . . . to know and simultaneously to wear original shades created by the world's supreme modiste in Paris. That's a joy of sophistication *Lucile-Paris* now holds out to women of America.

For, Holeproof, famous maker of fine stockings, receives in advance Lucile's style prophecies . . . original sketches of the coming mode in gowns and wraps. And with each trend in dress a hosiery style and color to complement and finish that design. Ordinary shades may seem to match the style, but Lucile asserts that in twenty nudes often one alone will be artistically correct. That is why Lucile has been secured to give the perfect cast to every color. There is but one Lucile blonde—Maxine; but one Lucile flesh—Fanchon. Thus you will have in Holeproof's shades authority no other maker of fine hosiery can offer you. And this, plus five famous style points that have gained widespread distinction, impart an elegance unsurpassed by hosiery far more expensive.

Holeproof prices are $1.00 to $2.95, including full-fashioned sheer and service chiffons $1.95, $2.95.

All have the five fashion features mentioned here. Note them carefully.

1—A unique dyeing process keeps Lucile-Paris colors clear and bright . . . protects each delicate shade from fading.

2—Clearness depends on uniformly even thread. So, at greater expense, silk judged the world's finest is selected.

3—Superlative transparency—without shadow rings or streaks. Loose ends are trimmed from each stocking by hand.

4—Full-fashioned numbers in every color, and every weight, impart slender, graceful lines to charming ankles.

5—No imperfections, because of nine separate inspections. There are few other fine hose so uniformly perfect.

"Its performance is gorgeous—amazing."
—Maria Jeritza.

The human voice *is* human on the New Orthophonic Victrola

A great artist sings in concert, and thousands press for admittance. Many wait in line for hours. Some are turned away, disappointed. Attend the concerts, by all means, but enjoy these same golden voices in your own home . . . whenever you wish . . . through the new Orthophonic Victrola.

This amazing instrument brings you vocal music in all its original purity and power. Tones of correct, natural volume. Tones neither too thin nor too loud, but full, round and mellow. The new Orthophonic Victrola catches the very personality of the artist. You can even hear the singer inhale for the next note, so realistic is Orthophonic reproduction!

The Orthophonic Victrola furnishes the finest music for the home. The Credenza (above) is $300.

The world's best music always at your finger-tips

In no other way *can* you have such singing in your home, for the Orthophonic Victrola is based upon the new scientific principle—"matched impedance"—which makes possible the full, free flow of sound, undiminished and unmarred. This revolutionary principle is controlled exclusively by the Victor Talking Machine Co.!

Another Victor achievement, equaling that of the Orthophonic instrument, is the new Orthophonic Victor Record. It has new beauty and depth, a richer resonance. Recorded by microphone, and made from an improved material, practically all foreign noises have been eliminated. The new Victor Records are living re-creations of the artists themselves. They play on *any* instrument . . . and greatly *improve* its playing quality.

Words can give you but the faintest impression of the thrill in store for you at the nearest Victor dealer's. Have a demonstration today. Go . . . in your most skeptical mood! There are many beautiful models of the Orthophonic Victrola, from $300 down to $95. Electric motor ($35 extra) eliminates winding. Convenient!

FISHER BODIES

GENERAL MOTORS

FISHER PIONEERED AND DEVELOPED THE CLOSED BODY. TODAY THE SYMBOL, "BODY BY FISHER," IS ON ALL CARS WHICH LEAD IN BEAUTY AND SALES

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

BUICK

Quality-Guards Buick Leadership

One refinement after another suggests the loyalty to quality which prevails in the manufacture of the Buick motor car.

For years volume savings have been devoted to the enrichment of Buick quality and value, until—

Today, the Buick engine is *vibrationless beyond belief*, performance that startled the motor car industry.

Today, Buick is the only car with the "Sealed Chassis," to guard the efficiency of every working part—

And the car with the Vacuum Ventilator, which prevents oil dilution and keeps noxious engine fumes out of closed car interiors.

Many other excellent and exclusive features testify to the never ending search by Buick for the new and better thing.

Quality is the strength of Buick, and a dominating reason for leadership in sales. Only an extraordinary product could deserve the universal public approval which today belongs to Buick.

This professional shopper buys clothes in 300 New York shops!

"These modern, wispy things," *she says,* "need *extra*-protection . . . a soap safe enough for your face."

NIGHT LETTER from Pinehurst, N. C., to Miss A. T. Holliday, New York City*—Telegram from Birmingham, Ala., to Miss A. T. Holliday, New York City*—

Messages like those shown in the illustration, letters from everywhere, telephone calls from smart New York addresses—all with one plea: "Help us buy clothes"—in they come to the brisk, bright-eyed lady to whom we talked a short time ago.

For this is her business—helping women buy clothes. She has accounts in over 300 New York shops and she knows just the right shop for whatever one wishes—whether it be sets of trousseau crepe de chine, or a woolly skating costume.

In the smartest shops, she says, salespeople advise Ivory suds for the finer silks and woolens

Knowing her to be an authority on clothes we asked her about cleansing the lovely things she buys. And she said: "In practically every shop where I buy, salespeople recommend Ivory for cleansing delicate silks and woolens.

"Just this morning, for instance, I bought a silk sport dress at . .," naming an exclusive specialty shop. "The material was a new one they had imported—a silk with a texture almost like tweed. When I asked the saleswoman whether it would wash, she said, 'Indeed it will. If it is dipped in Ivory suds, it will look just as well as it does now—color, and texture too.'

"Of course, salespeople have this confidence in Ivory," she went on, "because they know it is so pure and mild—really a face soap. It will not fade colors, it will not yellow silks, it will not shrink the wide meshed laces we are using today.

"And the marvelous flexible girdles of silk elastic or with woven elastic inserts, that cost $18 or $25—clean *those* with Ivory—so Helene up at . . ., said the other day. 'Put them in the bathtub,' said she, 'and scrub them with a flesh brush dipped in cool Ivory suds—and you'll be sure to keep the life of the elastic.'"

Ivory purity means extra-safety!

This experienced shopper confirms the evidence that comes in from smart shops all over the country that: Salespeople who are constantly asked concerning the finer silks and woolens, "Will they wash?" constantly answer, "Yes, if you use Ivory. Ivory is *safe*."

Ivory Flakes is Ivory soap in feathery flake form for instant suds and *extra* safety. Your grocer and department store sell it in two generous sizes.

The Ten Greatest Thinkers

By Will Durant

THOUGHT baffles definition, because it includes everything through which it might be defined. It is the most immediate fact that we know, and the supreme mystery of our being. All other things come to us as forms of thought, and all human achievements find in thought their source and their goal.

It was through thought that man overcame the beasts that surrounded him; through thought that he freed himself from a thousand obstructive superstitions and a thousand stupefying fears. It was through thought that he accomplished at last his mastery over matter and nature, until now his proud courage bridges the widest streams with great poems of steel and stone, links the distant ports of the world with ships that are floating cities, and gives him wings to fling his challenge to bird and sky. It was through thought that man was made man.

When did the miracle really get under way?

Perhaps when the great surges of ice came down relentlessly from the Pole, chilling the air, destroying vegetation almost everywhere, eliminating countless species of helpless and unadaptable animals, and pushing the survivors into a narrow tropical belt, where for generations they clung to the Equator, waiting for the wrath of the North to melt. Probably it was in those critical days, when all the old and wonted ways of life were nullified by the invading ice, and inherited or traditional patterns of behavior found no success in an environment where everything was altered, that the animals, with comparatively complete but inflexible instinctive equipment, were weeded out, because they could not change; while man, dowered with a precarious plasticity, learned the arts of fire, of cooking and of clothing, weathered the storm, and rose to an unquestioned supremacy over all the species of the forest and the field.

It was in some such life-and-death emergency as this, presumably, that human reasoning received its great stimulus.

From that obscure age to our own place and time, the history of civilization has been the adventure of human reason. At every step on the stairway of progress, it was thought that lifted us, slowly and tentatively, to a larger power and a higher life. If ideas do not determine history, inventions do; and inventions are determined by ideas. Certainly it is desire, the restlessness of our insatiable wants, that agitates us into thinking; but however motived or inspired, it is thought that finds a way.

WE NEED not settle, then, the ancient dispute between those hero-worshipers, like Carlyle and Nietzsche, who interpret history in terms of great men, and those hero-scorners who, like Spencer and Marx, see only economic causes behind historical events; we may be sure that no pressure of economic circumstance would ever have sufficed to advance mankind if the illuminating spark of thought had not intervened.

Perhaps Tarde and James are right, and all history is a succession of inventions made by genius and turned into conventions by the people, a series of initiatives taken by adventurous leaders and spread among the masses of mankind by the waves of imitation. There is no doubt that at the summit of every age some heroic genius stands, the voice and index of his time, the inheritor and interpreter of the past, the guide and pioneer into the future.

If we could find in each epoch of unfolding civilization the representative and dominating figure in its thought, we should

DOCTOR DURANT is one of the outstanding scholars of the times. His love always has been for learning, his passion for philosophy. From his boyhood days—when he saved his pennies until he had accumulated fourteen cents, and walked four miles to buy a book—up to the present, when his own book, "The Story of Philosophy," has become one of the most popular non-fiction "best sellers" of our generation, he has lived with the great minds of all the ages. For years he read an average of sixteen books a week; yet he did not lose himself in them, but more and more came out of books into the realities of life. He has read Spinoza's masterpiece, "The Ethics," so many times that he could almost restore it if, by some chance, all copies should be destroyed; and he has read Plato's "Republic" and other great works of the thinkers until he is as familiar with them as a baseball fan is with the batting averages of his favorite players.

Out of such a background as this—a background perhaps unequaled by that of any other present-day writer—grew the accompanying article. Here you have a chance to read in boiled-down form what Doctor Durant has learned through many years of unremitting study. He is truly a great scholar, but also he is a man in love with life, with humanity. He is intensely human in his conversation and in his writing. He makes the great thinkers real to you, makes them human beings.

Spinoza is Doctor Durant's favorite philosopher; but such is his mental honesty that he could not include Spinoza in this list of the Ten Greatest Thinkers. "It breaks my heart to leave him out, yet I must," he writes.

Rarely is a magazine privileged to print an article such as this. It is a liberal education in itself.

THE EDITOR.

have a living panorama of our history.

But as we face the task of selecting these persons of the drama about whom the great play revolves, a dozen difficulties daunt us. What shall be our test of greatness? How, in the great roster of human genius, shall we know whom to omit and whom to name?

Well, we shall be ruthless and dogmatic here; and though it break our hearts, we shall admit no hero to our list whose thought, however subtle or profound, has not had *an enduring influence upon mankind.* This must be our supreme test. We shall try to take account of the originality and scope, the veracity and depth, of each thinker's thought; but what we must bear in mind above all is the extent and persistence of his influence upon the lives and minds of men. Only so can we control in some measure our personal prejudices, and arrive at some moderate impartiality in our choice.

And now, how shall we define a thinker? Presumably, the word will embrace philosophers and scientists; but only these? Shall we include men like Euripides, or Lucretius, or Dante, or Leonardo, or Shakespeare, or Goethe? No; we shall bow humbly to such great names, and class them, despite the reach and fathom of their thought, as only secondarily thinkers, as artists first and above all.

Shall we include such immensely influential religious figures as Jesus, or Buddha, or Augustine, or Luther? No; these great founders and renewers of religion would overlap our term; it was not only thought or reason, but also feeling and noble passion, a mystic vision and an unyielding faith that made them move the world.

Shall we admit into our council of ten those great men of action whose names ring down the corridor of history—men like Pericles, or Alexander, or Cæsar, or Charlemagne, or Cromwell, or Napoleon, or Lincoln? No; if we spread the word *thinker* to catch such heroes in its net, we shall deprive it of its distinctive meaning, and shall fail to catch the significance of thought. We must embrace within it *philosophers* and *scientists* alone. We shall seek for those men who by their thinking, rather than by their action or their passion, have most influenced mankind. We shall search for them in the quiet places of the world, far from the madding crowd; in those obscure corners where great thoughts came to them "as on dove's feet," and where for a moment they saw, as in a transfiguration, the countenance of truth.

Who then shall be first?

CONFUCIUS. At once our doubts and quarrels begin. By what canon shall we include Confucius and omit Jesus or Buddha? By this alone, that he was a moral philosopher rather than a preacher of religious faith; that his call to the noble life was based upon secular motives rather than supernatural considerations; that he far more resembles Socrates than Jesus.

Born (552 B. C.) in an age of chaos, in which the old power and glory of China had passed into feudal disintegration and factional strife, Kung-fu-tse (Confucius) undertook to restore health and order to his country. How? Let him speak:

The illustrious ancients, when they wished to make clear and to propagate the highest virtues in the world, put their states in proper order. Before putting their states in proper order, they regulated their families. Before regulating their families, they cultivated their own selves. Before cultivating their own selves, they perfected their souls. Before perfecting their souls, they tried to be sincere in their thoughts. Before trying to be sincere in their thoughts, they extended to the utmost their knowledge. Such investigation of knowledge lay in the investigation of things, and in seeing them as they really were. When things were thus investigated, knowledge became complete. When knowledge was complete, their thoughts became sincere. When their thoughts were sincere, their souls became perfect. When their souls were perfect, their own selves became cultivated. When their selves were cultivated, their families became regulated. When their families were regulated, their states came to be put into proper order. When their states were in proper order, then the whole world became peaceful and happy.

HERE is a sound moral and political philosophy within the compass of a paragraph. It was a highly conservative system; it exalted manners and etiquette, and scorned democracy; despite its clear enunciation of the Golden Rule, it was nearer to Stoicism than to Christianity. A pupil having asked him should one return good for evil, Confucius replied: "With what then will you recompense kindness? Return good for good, and for evil, justice." He did not believe that all men were equal; it seemed to him that intelligence was not a universal gift. "That whereby man differs from the lower animals is little. Most people throw it away." The greatest fortune of a people would be to keep ignorant persons from public office, and secure their wisest men to rule them.

A great city, Chung-tu, took him at his word and made him magistrate. "A marvelous reformation," we are told, "ensued in the manners of the people. . . . There was an end of crime. . . . Dishonesty and dissoluteness hid their heads. Loyalty and good faith became the characteristic of the men, chastity and docility of the women." It is too good to be true; and probably it did not last very long. But even in his lifetime Confucius's followers understood his greatness, and foresaw the timeless influence he was to have in molding the courtesy and poise and placid wisdom of the Chinese. "His disciples buried him with great pomp. A multitude of them built huts near his grave and remained there, mourning as for a father, for nearly three years. When all the others were gone, Tse-Kung, who had loved him beyond the rest, continued by the grave for three years more, alone."

And now we are faced with new problems. Whole civilizations confront us in which we can find no dominating name, no powerful secular personality voicing and forming his people. It is so in India, and among the Jews, and among the nomad races of Asia Minor's "Fertile Crescent": we have a Buddha, an Isaiah, a Jesus, and a Mohammed, but we have no world-scientists, no world-philosopher. And in another case—perhaps the most lasting and marvelous civilization the world has ever known—we have a hundred Pharaohs, and innumerable relics of a varied art; but no name stands out as that of one who brought the past into the perspective of wisdom, and stamped his influence upon the intellectual development of his nation. We have to pass respectfully by these peoples and these centuries, and consider Periclean Greece.

Why do we love Plato? Because Plato himself was a lover: lover of comrades, lover of the intoxication of dialectical revelry, passionate seeker of the elusive reality behind thoughts and things. We love him for his unstinted energy, for the wild, nomadic play of his fancy, for the joy which he found in life in all its unredeemed and adventurous complexity. We love him because he was alive every minute of his life, and never ceased to grow; such a man can be forgiven for whatever errors he has made. We love him because of his high passion for social reconstruction through intelligent control; because he retained throughout his eighty years that zeal for human improvement which is for most of us the passing luxury of youth; because he conceived philosophy as an instrument not merely for the interpretation but for the remolding of the world. We love him because he worshiped beauty as well as truth, and gave to ideas the living movement of drama, and clothed them in all the radiance of art.

Here in the "Republic" and the "Dialogues" is such a riotous play of the creative imagination as might have made a Shakespeare; here is imagery squandered with lordly abandon; here is humor such as one misses in our ponderous, modern philosophers; here is no system but *all* systems; here is one abounding fountainhead of European thought; here is prose strong and beautiful as the great temples where Greek joy disported itself in marble; here literary prose is born, and born adult.

Plato, then, must be our second name. But we shall have to defend him against a very reasonable challenge. What of old Socrates, almost the father, and surely the greatest martyr, of philosophy? It will seem ridiculous to omit him from a list which will include heroes not half so great as he. The reader must not be shocked to learn that Socrates is half a myth, and only half a man. A learned Frenchman, M. Dupreel (in "La Legende Socratique"), has reduced the noble gadfly to the misty historical status of Achilles, Œdipus, Romulus, and Siegfried. We may be certain that in good measure Socrates owes his fame as a philosopher to the creative imagination of Plato, who used the magnificent idler as the mouthpiece of his views. How much of Plato's Socrates was Socrates, and how much of it was Plato, we shall probably never know. Let us take Plato as implying both.

AS TO Plato's influence, how can we doubt? Consider the Academy which he founded, the first and longest-lived of the universities of the world. Consider the repeated revival of Plato's philosophy, from the Neo-Platonists of Alexandria to the Cambridge Platonists of England. Consider the permeation of modern theology with Platonic thought and symbolism, and the dominance of Plato in the culture of the earlier Middle Ages. Consider the enthusiastic Platonism of the Renaissance, when Lorenzo's table recaptured some of the glory of the Symposium, and Pico della Mirandola burned candles devoutly before the Master's image. Consider that at this moment, in a hundred countries and a thousand cities,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

one hundred thousand students, young and old, are absorbed in the "Republic" or the "Dialogues," are being slowly and gratefully molded into a sensitive wisdom by the ardor and subtlety of Plato. Here is an immortality of the soul which makes almost insignificant the passing of the flesh. His "Dialogues" are among the precious possessions of mankind. Here for the first time philosophy took form; and by the passion and exuberance of youth achieved a perfection unrivaled in later days.

Do you wish to hear noble discourse of love and friendship and the quest of beauty? Read the "Lysis," the "Charmides," and the "Phædrus." Would you know what a great and tender soul thought of another life? Read the "Phædo," whose final pages are one of the peaks in the history of prose. Are you interested in the puzzles of the mind, in the elusive mystery of knowledge? Read the "Parmenides" and the "Theætetus." Are you interested in anything? Read the "Republic": here you shall find metaphysics, ethics, psychology, theology, theory of education, theory of statesmanship, theory of art; here you shall find feminism and birth control, communism and socialism, with all their virtues and their difficulties, eugenics and libertarian education, aristocracy and democracy, vitalism and psychoanalysis—what shall you not find here? No wonder Emerson awarded to the "Republic" the words which the occasionally pious Omar had written of the "Koran": "Burn the libraries, for their value is in this book."

PHOTOGRAPH BY OTTO SARONY CO.

Dr. Will Durant was born in North Adams, Massachusetts, forty-one years ago. He was graduated from Columbia University with the Doctor of Philosophy degree in 1917, and for a time taught in that institution. He is now director of Labor Temple School, one of New York's most successful experiments in adult education. This picture shows him with his little daughter

ALL the world would agree that Aristotle must be in our list. The Middle Ages called him "The Philosopher," as if to say that he embodied the type at the summit of its perfection. It is not that we love him; the texts he has left behind him expound so monotonously a passionless moderation that, after feeling the radiance of Plato, we freeze at the touch of the Stagirite's tempered mind. But it is unfair to rate him by his books; we know now that they were but hasty notes made sometimes by himself, sometimes by his students, for the guidance or remembrance of his lectures; it would be absurd to judge him by comparing these technical fragments with the vivid dialogues through which Plato won for the first time a public audience for philosophy.

But let us once overcome this barrier of scholastic terminology and scornfully concentrated thought, and we shall find ourselves in the presence of an intellect of almost unbelievable depth and range. Here is a circumnavigation of the globe such as no mind has accomplished since; here every problem in science and philosophy has its consideration, its illumination, and a defensible solution; here knowledge is brought together as if through a thousand spies, and coördinated into a united vision of the world. Here the phraseology of philosophy is born; to-day it is hardly possible to think without using the mintage of Aristotle's brain.

Here is wisdom; calm, temperate, and wellnigh complete, as of a limitless intelligence majestically overspreading life. Here are new sciences, founded with almost casual ease, as if these supreme creations of the human intellect were but the recreations of a philosopher; here it is that biology appears, and embryology, and logic. Not that no man had ever thought of these matters before; but that none had controlled his thinking with patient observation, careful experiment, and systematic formulation of results. Barring astronomy and medicine, the history of science begins with the encyclopedic labors of the tireless Stagirite.

OF THOSE whom I am listing, Confucius alone has had as great an influence. Everybody knows how, at Alexandria and in Imperial Rome, the work of Aristotle became the foundation of advancing science; how, in the thirteenth century, his philosophical writings, brought by the invading Moors to reawakened Europe, played a fertilizing rôle in the development of Scholastic philosophy; how the great "Summæ" of that virile age were only adaptations of the "Metaphysics" and the "Organon;" how Dante placed Aristotle first among all thinkers—"master of those who know;" how the westward migration of Byzantine teachers after the fall of Constantinople brought the last lost treasures of his thought to the eager students of the Renaissance; and how this quiet sovereignty of one man over a millennium of intellectual history came to an end only with the audacious irreverence of Occam and Ramus, the experimental science of Roger Bacon, and the innovating philosophy of Francis Bacon. We shall not find again, in this tour of the world upon which we are engaged, another name that for so long inspired and enthralled the minds of men.

So Greece flits by, and we come to Rome. Who were the great thinkers there? Lucretius first and finest of all. Yet, because his philosophy was not his own, but with modest candor was ascribed to Epicurus, and because his influence upon his time and upon posterity was esoteric and sporadic, touching only the topmost minds, we shall have to (*Continued on page 103*)

The Sloane Temper

A story of a young wife who would not admit defeat

By Sophie Kerr

ILLUSTRATED BY GAYLE HOSKINS

RHODA SLOANE was getting supper and contemplating her bogy. It *was* a bogy, she supposed, though she found it hard to believe in its existence. She had not actually encountered it, but so many people assured her it was there; and now and then, at long intervals, she heard the scrape of its claws, or caught a glimpse of the least dark edge of its shadow. Yet she couldn't quite think it was real, and she couldn't quite think it was unreal.

Now, it is not exceptional to find a young wife with a bogy—Mrs. Bluebeard set the fashion, many, many years ago, and it has always had followers, though most of them have escaped Mrs. Bluebeard's tragic fate. Some of these bogies are real enough, and bad enough. Some of them live, I regret to say, mostly in the realm of overstimulated feminine imagination. And Rhoda Sloane was not at all sure that hers did not live there. That shows what a sensible girl she was, for most women with vivid fancies prefer to keep them overstimulated rather than to test their truth.

She was hurrying supper, because Arthur would be very hungry. He had gone to mend the bridge of the creek that meandered through the Sloane acres; it had been washed askew by a violent storm. It was Arthur's way to make repairs at once, when anything went wrong. Rhoda smiled at the apples she was peeling, not because of the excellence of the fruit but because she was thinking of Arthur, his quick eagerness, his impulsive rushing at everything, his haste to get at things and get them done. He was a darling, Arthur! And hers, her very own.

She was not quite accustomed to the idea that this tall, good-looking dark young man was her husband, that she was Mrs. Arthur Sloane, and living on a farm; she, who, until her wedding day six months before, had known the country only from a car window, or an occasional short visit to some up-state cousins.

The country—what hadn't she not known about the country! She was greener than the grass in her own front yard when she arrived at her new home after the wedding trip. Arthur was out in the fields all day, so she had to struggle alone with the cooking stove that burned only wood—she'd always used a gas range; with oil lamps, where she was accustomed to electricity; with a water supply that must be pumped into a tank by a coughing gasolene engine of which she was mortally afraid; with a vegetable and flower garden, when her sole experience of making plants grow was with Chinese lily bulbs in a bowl of water.

Thank heaven there was a telephone, and her neighbors' wives were more than kind in advice and help and direction. She had never let Arthur know of the questions she had asked them—he would have teased her so.

But she had learned, oh, she had learned so much! She could start and stop the gasolene engine now, without a flicker of uneasiness. She could drive the flivver. She had learned the elements of emergency farm meals, so different from emergency city meals. She had the cook stove pretty well tamed. She actually enjoyed getting up nearly three hours earlier than she had ever done before. She had brought her two gardens flourishingly through a dry summer, and she had canned and dried and preserved and jellied and pickled, with a success that surprised no one so much as herself. Oh, she had become a good farmer's wife, all right. Only, now and then, she forgot things. There were so many, many details, each so different, so new.

But Arthur had been wonderful. He had helped her; he had never said a word when she cooked meals that were uneatable, or ran the flivver into a ditch, or didn't remember about the chickens, or failed in a hundred other ways that had cost her hot tears of chagrin. He had comforted her, petted her, told her it didn't matter, that she was doing splendidly, that if she cried he'd feel that he wasn't making her happy, and so on and so on.

She put her apples into a saucepan and flaunted these memories before her bogy. "He's just as kind and good and thoughtful and dear as he can be—all the time! Never so much as one impatient look, and I was such a *simpleton!*"

IT WAS all the more amazing, because they had known each other only two months before they married, had met twice only. A real romance, her girl friends called it. A jump in the dark, her married sister, with whom she lived, had warningly suggested. But Arthur and Rhoda called it love, and that was good enough for them.

He had come to the city to consult a lawyer about various delayed claims against the railroad, and Rhoda was the secretary of the firm to which he had been directed. No sooner had he seen her than, click, it happened.

"When you came walking out of that office and said Mr. Eldredge would see me in a few minutes," he told her later, "and you looked at me with those round blue eyes, I almost picked you up and kissed you. I wanted to snatch you and run away with you. I knew you were my girl!"

Rhoda cherished that speech in the deeps of her own heart as a miser cherishes a bag of gold. His girl! Well, she knew it too as soon as he did. She wouldn't have cared if he *had* picked her up and run away with her that morning. Only a woman who has been courted tempestuously, imperiously, can know the joy and thrill of it. Rhoda never even suspected the bogy—then.

SHE couldn't understand it when her brother-in-law remarked dubiously that Arthur looked very self-willed, very headstrong, when her sister said, right out, "bad-tempered," and the two of them agreed that she was running a great risk to marry him and go away off among strange people, and on a farm, too. She liked him to be self-willed; she liked him to be headstrong, and rush her off her feet. As for temper— "Well, I'm no angel child myself, Sis," was her answer to that.

She had felt a serious doubt or two about the farm, though she didn't admit it openly. Arthur was a real farmer, not a farmer *de luxe*, he assured her. But when she saw the place, the comfortable, substantial brick house where generations of Sloanes had lived, the trees, the garden, the wide and fertile fields, the mighty barns, the contented cattle, she had warmed to it with all her heart. After the little city apartment, the daily battle with the subway, this was glorious.

But she soon found out that her sister had sensed the thing that was to be her bogy when she said that Arthur looked bad-tempered. Some of the older women among her neighbors spoke, half jokingly but half fearfully, of "the Sloane temper." Little drifts of comment came to her, half-sentences she had not been intended to hear, and keenly inquisitive looks that went from her to Arthur and back again to her, looks that were not justified in their curiosity even by her place as a stranger in the community. Sometimes there was solicitude in those looks too, and pity. All this gave the bogy shape and substance, even if she had not met him personally.

At last she could endure it no longer. She went deliberately to see Mrs. Bristol, her nearest neighbor and the best-hearted, kindest soul who ever made herself mentor, guide, and teacher to a young wife, and asked her whether the Sloanes really did have such awful tempers, and why people talked so about it.

Mrs. Bristol was as frank in her answer. "All the Sloane men," she said, "have been high-steppers from 'way back. They go along easy and pleasant as the next one, full of fun, jolly; and then some little thing, the most unlikely, absurd little thing, something you'd never dream of, will upset 'em, and then—"

She paused: "I don't want to scare you, or give you a wrong impression. But if Art ever blazes out at you over nothing at all, and talks so mean and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Rhoda could have screamed, for sheer nerves. The moment was a lifetime of restraint

cruel you can hardly believe it's him, and then has one of his long silent spells, don't worry. He can't help his temper any more than he can help having black hair and those long, curly black lashes, pretty, like a girl's. Temper's in the Sloane family, and Art got a double dose, for his mother was as flary as his father. She was a Sloane too, in a way, a distant connection, and they—well, cat and dog would be a sweet dream to the life they led. And finally he went off out West and got in a quarrel with a man, and got shot. You knew about that?"

"Yes; Arthur told me." Rhoda tried not to feel appalled.

"And his mother died when he was twenty; but before that there'd been some mighty high ructions betwixt mother and son. There can't be but one temper in the house with a Sloane temper, that's certain. But otherwise they're the salt of the earth."

"But Arthur never shows a sign; he wasn't even peeved when I broke the separator, or when I burnt up the dinner for the threshing crew. It doesn't seem possible that he's got anything like that, underneath!"

"Maybe marrying you has driven his devil out," said Mrs. Bristol. "I hope so. But—anyway, you know now, and won't be surprised if he does fly off some time. Don't you make any mistake, Rhoda; I love Art 'most as well as if he were one of my own. I've known him since the day he was born, and he's a grand boy, honest and straight and smart, and a worker. He can't help it if he was born marked with the Sloane temper, twice over, you see, on account of his mother. But what's temper? I'd a heap rather be married to a bad-tempered man than to a lazy one, and none of us is perfect, or likely to be."

AFTER this conversation Rhoda had gone home feeling that she was married to a man she didn't know at all. Her bogy had now taken definite form. In a word, it was a relief to know exactly what she dreaded. Why she had not talked it out with Arthur instead of with Mrs. Bristol was a question she did not dare ask herself, for in the answer lay an acknowledgment of weakness—and of something more. It meant that she suspected, was aware of this part in Arthur's nature which was unfathomable, even by her affection, which was unapproachable, even by her faith.

And yet, and yet—when she came home and found him energetically filling her wood box to kill time until she arrived and he could take her out to view six Jersey Red shoats he'd just bought at a bargain, she couldn't believe it. Arthur, the owner of a frightful temper! Arthur, bitter of speech, harsh, dour! Arthur, in a spell of cruel, disregarding silence, dumb with rage against her! Impossible to believe! She figuratively made a face at the bogy, and baked popovers for supper as a silent apology to Arthur for talking about him to Mrs. Bristol.

and suspense. At last he reached out slowly, put his hand on the cover, and set it aside

And yet—and yet—only the week afterward, a little black rift of fear broke the blue sky of her serenity. She heard him telling one of the hired hands what he thought of some neglect in feeding the cattle, and his voice held such cold venom, his words were so barbed and poisoned that Rhoda put her hands over her ears and ran away to the house to wait there fearfully until he came in. His black brows were still bent in a scowl, but he relaxed when he saw her. "Had to bawl Miller out again," he said. "If anything makes me sore it's a man who isn't on the square with the stock. He knows they can't tell on him—that's what makes it so dog-mean!"

Certainly, she couldn't blame him for scolding Miller for such a reason, but she knew his rebuke had far outweighed the offense.

There had been something in his voice akin to murder. She felt that if he ever spoke like that to her, she would die, drop right down dead with horror and anguish. But—he never did—he never, never would!

Yet the memory of that day had recurred, in spite of her will to cast it out forever; and even now, as she bustled about to put the last touches on the supper table, it was with her. She lit the big lamp in the kitchen. She cut bread for toast. She beat eggs into ground-up bits of meat and bread and seasoning, and slipped the dish into the oven, where it would turn into a soufflé, though Arthur persisted in calling it "angel hash." She brought out a dish of cole slaw, crisply fresh and delicately creamy. She dashed cold water into the boiling coffee and moved it to the back of the stove to settle.

ALONG with the soufflé in the oven were escalloped tomatoes, and potatoes baking to dry mealiness. The dairy outside yielded cream, butter, cottage cheese. There were raisin cookies to eat with apple sauce and cream, for dessert. A good supper for a hungry man who had been working outdoors all day; and with a look at the clock, Rhoda realized that it was high time for the hungry man to appear. A moment later she heard his step outside.

He came bursting in at the side door as if the November wind had blown him there. "Hello, darling girl!" he said gayly. "Any news? I'm starving!"

She flung him a kiss. "I was just getting worried about you—thought you'd fallen into the creek. Supper's ready. Are you all through with your chores?"

"Every one."

He went to wash his hands, and Rhoda brought the food to the little round table. She hummed a tune, it was so jolly to be young and happy and capable. She loved her warm kitchen, with its shining brown floor, its clear yellow walls, its curtains of dotted muslin, its handy shelves and twinkling pans, and it was all brightened and cheered since Arthur had come in.

Over their cozy meal they talked. Rhoda had news (*Continued on page 166*)

"Think It'll Rain?"

Some of the old weather signs and proverbs may help you answer that question, but most of them are useless—The moon doesn't control weather, and there's nothing to the ground hog as a prophet—Tips for amateur forecasters

By Stuart Mackenzie

ILLUSTRATED BY NORMAN PRICE

HERE and now, for the first time, I confess that I always have yearned to be a weather prophet. A good one, I mean, like Anna Nordberg, who has presided over our kitchen for an incredible period—almost twelve years.

Anna will cock a wise eye, give the heavens the once-over, and calmly issue edicts which we unhesitatingly follow. If Anna says it will rain, we go forth armed with umbrellas, even though the sun is shining. If she says "frost," our tomato vines pass the night under a blanket of newspapers.

Anna came from Finland, where she acquired weather lore in the school which Nature holds in the fields and under the open sky. That school has been going on since the days of the cave-man; and the lessons which have been learned there have come down to us in the form of "weather proverbs."

But when Anna Nordberg came to this country, she found that some weather proverbs, which were all right in Finland, were all wrong in America. So she promptly took a sort of post-graduate weather course over here, and learned to meet local conditions.

Unfortunately, many of your pet weather signs have not been put to this test. You glibly repeat the old, old proverbs, not knowing that some of them came from lands whose weather habits are totally unlike those of your own locality. Naturally, your predictions often prove to be misfits.

Worse still, some of the weather sayings in which you have blind faith are absolutely worthless, because they are based on superstition. Perhaps, for example, you are one of the millions who stubbornly cling to the idea that the weather changes when the moon changes.

I say "stubbornly," because men of science have told us, over and over again, that the changes of the moon do not affect the weather. The facts are stated in a verse which says:

The moon and the weather
May change together;
But change of the moon
Does *not* change the weather.

This has been proved by countless records. Yet some of the most intelligent people among my own friends go right on assuring me that the weather will change on a certain night, "because the moon will change then."

As if the moon did not "change" as much one night as another! It does not leap abruptly, say, on Friday night, from third quarter to full moon. For that matter, even if it were only a slender crescent on one night and a great full moon on the next, this sudden transition would not alter the weather.

ACCORDING to popular belief, the power of the moon works either way. If rain is needed, just wait till the moon changes! If there is too much rain, it will stop when the moon changes! These blind believers don't try to explain this contradiction. They merely assert it.

They declare also that the moon has a mysterious power over growing things, such as crops and even human hair! According to some prophets, the former must be planted and the latter cut, "in the dark of the moon." According to others, it must be done "in the light of the moon."

These are nothing but superstitious notions. Men who are scientifically weather-wise dismiss them with contempt. With equal scorn, they brush aside other old favorites among our weather proverbs. *But not all of them!* Some of these time-honored sayings are, as one authority puts it, nuggets of pure gold among those which are only fool's gold. And, since the weather is of absorbing interest to every one of us, this article will supply you with some of these genuine nuggets of wisdom.

The first contribution to your stock will be a proverb which has both rhyme and reason. In various forms it has been current for thousands of years. You will find it even in the Bible, where it is quoted by Jesus Himself in His reply to the Pharisees and Sadducees when they asked for a sign from heaven. He answered them:

When it is evening, ye say, "It will be fair weather; for the sky is red." And in the morning, "It will be foul weather to-day; for the sky is red and lowering."

Even then, apparently, these two weather signs were time-honored ones. To-day, almost two thousand years later, they have lost none of their prestige. We express the same idea in such rhymes as:

Red at night, sailors' delight.
Red in the morning, sailors take warning.

Evening red and morning gray
Help the traveler on his way.
Evening gray and morning red.
Bring down rain upon his head.

This is one popular proverb which has a basis of truth—as the scientists will explain to you in a dozen pages sprinkled with "furthermore" and "therefore" and "hence, we see." To boil down their twenty pages into a few paragraphs, here are the main facts:

DIFFERENT colors have different wave lengths. Sunlight, passing through our atmosphere, always encounters myriads of dust particles, innumerable air molecules, and more or less moisture, or water vapor. All these things affect the passage of the various wave lengths; and the color of the sky, as we see it, depends on the wave lengths which finally reach our eyes.

Most of our storms come from a westerly quarter. When the atmospheric conditions to the west of us are those which accompany rain, the effect on the rays of light is such that the sky, in that direction, looks to us grayish or whitish. So, when the western sky is gray at sunset, it indicates that there are rain conditions approaching. If, the next morning, the sunrise is red, lighting up the under surface of the clouds that have crept up from the west, it indicates that the fair weather is in the east—where it will do us no good, since rain may be coming from the west.

Conditions are reversed

As a weather prophet the ground hog is a fake

when the sky is red at evening; for this means that the red wave lengths, which accompany fair-weather conditions, are in the direction from which our weather is approaching.

There are similar proverbs about rainbows; and these, too, are based on truth. If we see a rainbow in the morning, it must be in the west; for a rainbow is always *opposite* the sun. Most of our showers come from the west. Consequently, a morning rainbow, since it is in the west, means that the shower is approaching. But when we see one in late afternoon or early evening, it is in the east, and the sun is in the west. So the rain—at least that shower—has passed beyond us.

In asserting that the moon has no control over our weather, I did not mean to imply that all our moon proverbs must be thrown into the discard. The moon has no appreciable effect on our atmosphere; but our atmosphere does affect the *appearance* of the moon, as we see it. Hence, as our friends the scientists would say, there are some perfectly good weather proverbs along that line.

"Clear moon, frost soon" is one of these. The earth's surface radiates at night the heat it has absorbed during the day; and it radiates it much *faster* on a clear night than on a cloudy one. Hence, the temperature near the ground falls much lower, and we may have frost. Of course, this has nothing to do with the moon. It depends on the "clearness" of the air, its relative lack of humidity.

Here are other moon proverbs which have been officially approved:

Pale moon doth rain,
Red moon doth blow,
White moon doth neither
rain nor snow.

If the moon show a silver shield,
Be not afraid to reap your field;
But if she rises haloed 'round,
Soon we'll tread on deluged ground.

The pale moon, in this case, is not the same as the clear white or silver one. The latter indicates that the air is comparatively dry. But the "pale" moon is wan and misty; and this appearance, as well as a halo around the moon, is caused by very thin clouds which are the advance agents of rain. In other cases, much moisture in the atmosphere makes the moon appear red; and this humidity is likely to result later in rain.

EVERY four weeks we have a new moon. Unless you are incredibly unobserving, you know that sometimes it hangs at one angle, sometimes at another. According to most amateur weather prophets, this angle is an important weather sign.

If the crescent is in a position where its hollow will "hold water," they say it is a dry moon, and that the month will be a fair one. But if the crescent is at an angle which would spill water out of its hollow, it is a wet moon, and we are in for a rainy month.

This is a poetic fancy; but it contains less truth than poetry. In fact, it is all poetry and no truth, except when mere chance coincidence occasionally makes it seem true.

Sometimes we do have a rainy month following one of these "wet moons," and a fair month following a "dry moon." But, just as often, we have *exactly the reverse*. There is absolutely no connection between the two. If you go on repeating this old adage, you may be a poet, but you are no weather prophet.

"THE old moon in the new moon's arms" is another weather sign which, in the popular proverbs, accommodatingly works both ways. Some people assert that this phenomenon is a portent of foul weather. Others claim that it promises fine weather.

In this case, the sign actually does work both ways, depending on *why* the old moon is seen in the new moon's arms.

This can be relied upon as a sure sign of wind

Sometimes it is visible because the air is exceptionally free from dust and water vapor; so crystal clear, so uniform in density and temperature, that even the feeble light rays from the "old moon" reach us. Then, since these air conditions favor fair weather, we are likely to have it.

But we may see the old moon in the embrace of the new because masses of clouds west of us are reflecting an unusual amount of light from the earth to the moon. In that case, the foul weather prediction is likely to come true; for these western clouds are headed our way.

However, the phenomenon is probably due more to great clearness of the air rather than to reflected light; and so whatever slight value it has as a sign is chiefly on the fair-weather side.

Occasionally, as you must have noticed, a very clear sky is followed by a change to bad weather. But in this case, the clear air, which enables you to glimpse the old moon, is rushing down in advance of a swiftly approaching storm.

Since you can hardly be expected to figure out these various conditions, the less you say about this particular sign the better record you will make as a prophet.

You won't score so many misses if you pin your faith to proverbs like this one:

When the stars begin to huddle
The earth will soon become a puddle.

That is a jingle which really has the ring of truth. Of course the stars never "huddle" together; but Dr. W. J. Humphreys, of the United States Weather Bureau, gives an interesting explanation of the use of the word in this connection.

"When a mist forms over the sky," he says, "as it does on the forward side of a storm, the smaller stars cease to be visible, and the brighter ones shine dimly, with a blur of light about them, each looking like a small confused *cluster* of stars. Hence the erroneous idea that stars huddle together, just before a rain, and scatter about at another time.

"Possibly 'huddle,' in this proverb, has the obsolete meaning of 'hide;' and it is usually true that, 'When the stars begin to hide, soon the rain will betide.' These fading, hiding, huddling stars do indicate rain, because they show increasing humidity and haze."

Science has robbed us of so many pretty fancies about the weather that I am almost pathetically grateful for those I am permitted to keep. For instance, there is one which I hope you are as fond of as I am. It is the one about the stars which are visible inside of a halo around the moon. According to tradition, the number of days before a storm comes will be the same as the number of stars you can count between the moon and the ring surrounding it.

The scientists admit that this is "more or less" true. If conditions favor rain, we see only the brightest stars; and the nearer the rain, the fewer the stars. Of course, this applies to the sky in general, with or without a moon or a halo around it. But I like to count those encircled stars. If it happens to be a Sunday night, I say, "That one is Monday; and that is Tuesday; and there's Wednesday;" and so on. They are not stars, but the shining symbols of pleasant days to come—perhaps.

ONE of the weather signs which used to puzzle me was the twinkling of the stars. In the first place, I didn't understand why they twinkled, anyway; or why they twinkled more on some nights than on others.

It seems that the stars twinkle, or do not twinkle, according to the conditions of the air through which we see them. Our atmosphere is always in layers of different density and temperature. If these contrasts are strong, and if the layers are moved about and mixed by wind, the amount of refraction of the rays of light from a star is constantly changing. In other words, it appears to twinkle. Look at it through a telescope, and it seems to be doing a regular jazz dance.

Now, a storm is often preceded by these movements (*Continued on page 173*)

"Don't Worry— Thompson Will Handle The Job!"

So spoke the president of the Baltimore and Ohio Railroad, when asked how a particularly difficult piece of construction was to be managed—And Arthur W. Thompson handled it, with the same speed and sureness that have enabled him to meet numerous critical situations in his work as an engineer and as a public utility executive

By William S. Dutton

TWENTY-ODD years ago a reporter, wise in men and the world, sat at a battered desk in a newspaper city room in Baltimore and made a prophecy regarding Arthur W. Thompson, a young civil engineer of the Baltimore and Ohio Railroad.

Said he, "When a man can smile at six o'clock in the morning, with a toothache, the foreman drunk, the bridge down, a snowstorm coming up, and the coffee cold, —well, he'll be general manager of the railroad some day. And if he keeps that smile he'll go much further than that."
